

"Taking Stock"

"Taking Stock" is a project to analyse resource flows and create an ecological footprint for the South East region, providing the data backbone for sustainability strategies. More than a research project, Taking Stock has been devised to link into the heart of policy development - to be used as a tool by policy-makers to ascertain the impact of their decisions on South East sustainability.

Centre for Urban & Regional Ecology (CURE)

The Centre for Urban and Regional Ecology (CURE) was established within the Department of Planning and Landscape, University of Manchester, in 1999. Research at the Centre focuses on the organisation and activity of complex communities, both natural and human. The multidisciplinary team is committed to providing & promoting high quality research in relation to the new academic agendas of regionalism, sustainability and the re-building of environmental capital.
