This means that in an anarchist society every effort would be made to reduce boring, unpleasant activity to a minimum and ensure that whatever productive activity is required to be done is as pleasant as possible and based upon voluntary labour. However, it is important to remember Cornelius Castoriadis point that a *“Socialist society will be able to reduce the length of the working day, and will have to do so, but this will not be the fundamental preoccupation. Its first task will be to . . . transform the very nature of work. The problem is not to leave more and more ‘free’ time to individuals — which might well be empty time — so that they may fill it at will with ‘poetry’ or the carving of wood. The problem is to make all time a time of liberty and to allow concrete freedom to find expression in creative activity.”* Essentially, *“the problem is to put poetry into work.”* [**Workers’ Councils and the Economics of a Self-Managed Society**, p. 14 and p. 15]

This is why anarchists desire to abolish *“work”* (i.e. wage labour), to ensure that whatever *“work”* (i.e. economic activity) is required to be done is under the direct control of those who do it. In this way it can be liberated and so become a means of self-realisation and not a form of self-negation. In other words, anarchists want to abolish work because *“[l]ife, the art of living, has become a dull formula, flat and inert.”* [A. Berkman, **Op. Cit.**, p. 27] Anarchists want to bring the spontaneity and joy of life back into productive activity and save humanity from the dead hand of capital.

All this does not imply that anarchists think that individuals will not seek to *“specialise”* in one form of productive activity rather than another. Far from it, people in a free society will pick activities which interest them as the main focal point of their means of self-expression. *“It is evident,”* noted Kropotkin, *“that all men and women cannot equally enjoy the pursuit of scientific work. The variety of inclinations is such that some will find more pleasure in science, some others in art, and other again in some of the numberless branches of the production of wealth.”* This *“division of work”* is commonplace in humanity and can be seen under capitalism — most children and teenagers pick a specific line of work because they are interested, or at least desire to do a specific kind of work. This natural desire to do what interests you and what you are good at will be encouraged in an anarchist society. As Kropotkin argued, anarchists *“fully recognise the necessity of specialisation of knowledge, but we maintain that specialisation must follow general education, and that general education must be given in science and handicraft alike. To the division of society into brain workers and manual workers we oppose the combination of both kinds of activities . . . we advocate the **education integrale** [integral education], or complete education, which means the disappearance of that pernicious division.”* He was aware, however, that both individuals and society would benefit from a diversity of activities and a strong general knowledge. In his words, *“[b]ut whatever the occupations preferred by everyone, everyone will be the more useful in his [or her] branch is he [or she] is in possession of a serious scientific knowledge. And, whosoever he [or she] might be . . . he would be the gainer if he spent a part of his life in the workshop or the farm (the workshop **and** the farm), if he were in contact with humanity in its daily work, and had the satisfaction of knowing that he himself discharges his duties as an unprivileged producer of wealth.”* [**Fields, Factories and Workshops Tomorrow**, p. 186, p. 172 and p. 186]

However, while specialisation would continue, the permanent division of individuals into manual or brain workers would be eliminated. Individuals will

manage all aspects of the “work” required (for example, engineers will also take part in self-managing their workplaces), a variety of activities would be encouraged and the strict division of labour of capitalism will be abolished.

In other words, anarchists want to replace the division of labour by the division of work. We must stress that we are not playing with words here. John Crump presents a good summary of the ideas of the Japanese anarchist Hatta Shuzo on this difference:

“[W]e must recognise the distinction which Hatta made between the ‘division of labour’ . . . and the ‘division of work’ . . . he did not see anything sinister in the division of work . . . On the contrary, Hatta believed that the division of work was a benign and unavoidable feature of any productive process: ‘it goes without saying that within society, whatever the kind of production, there has to be a division of work.’” [Hatta Shuzo and Pure Anarchism in Interwar Japan, pp. 146–7]

As Kropotkin argued:

*“while a **temporary** division of functions remains the surest guarantee of success in each separate undertaking, the **permanent** division is doomed to disappear, and to be substituted by a variety of pursuits — intellectual, industrial, and agricultural — corresponding to the different capacities of the individual, as well as to the variety of capacities within every human aggregate.”* [Fields, Factories and Workshops Tomorrow, p. 26]

As an aside, supporters of capitalism argue that **integrated** labour must be more inefficient than **divided** labour as capitalist firms have not introduced it. This is false for numerous reasons.

Firstly, we have to put out the inhuman logic of the assertion. After all, few would argue in favour of slavery if it were, in fact, **more** productive than wage labour but such is the logical conclusion of this argument. If someone did argue that the only reason slavery was not the dominant mode of labour simply because it was inefficient we would consider them as less than human. Simply put, it is a sick ideology which happily sacrifices individuals for the sake of slightly more products. Sadly, that is what many defenders of capitalism do, ultimately, argue for.

Secondly, capitalist firms are not neutral structures but rather a system of hierarchies, with entrenched interests and needs. Managers will only introduce a work technique that maintains their power (and so their profits). As we argue in section J.5.12, while workers’ participation generally see a rise in efficiency managers generally stop the project simply because it undercuts their power by empowering workers who then can fight for a greater slice of the value they produce. So the lack of integrated labour under capitalism simply means that it does not empower management, not that it is less efficient.

Thirdly, the attempts by managers and bosses to introduce “flexibility” by eliminating trade unions suggests that integration **is** more efficient. After all, one of the major complaints directed towards trade union contracts were that they explicitly documented what workers could and could not do. For example,

union members would refuse to do work which was outside their agreed job descriptions. This is usually classed as an example of the evil of regulations.

However, if we look at it from the viewpoint of contract, it exposes the inefficiency and inflexibility of contract as a means of co-operation. After all, what is this refusal actually mean? It means that the worker refuses to do what is not specified in his or her contract! Their job description indicates what they have been contracted to do and anything else has not been agreed upon in advance. It specifies the division of labour in a workplace by means of a contract between worker and boss.

While being a wonderful example of a well-designed contract, managers discovered that they could not operate their workplaces because of them. Rather, they needed a general “*do what you are told*” contract (which of course is hardly an example of contract reducing authority) and such a contract **integrates** numerous work tasks into one. The managers diatribe against union contracts suggests that production needs some form of integrated labour to actually work (as well as showing the hypocrisy of the labour contract under capitalism as labour “*flexibility*” simply means labour “*commodification*” — a machine does not question what its used for, the ideal for labour under capitalism is a similar unquestioning nature for labour). The union job description indicates that not only is the contract not applicable to the capitalist workplace but that production needs the integration of labour while demanding a division of work. As Cornelius Caastoriadis argued:

“Modern production has destroyed many traditional professional qualifications. It has created automatic or semi-automatic machines. It has thereby itself demolished its own traditional framework for the industrial division of labour. It has given birth to a universal worker who is capable, after a relatively short apprenticeship, of using most machines. Once one gets beyond its class aspects, the ‘posting’ of workers to particular jobs in a big modern factory corresponds less and less to a genuine division of labour and more and more to a simple division of tasks. Workers are not allocated to given areas of the productive process and then riveted to them because their ‘occupational skills’ invariably correspond to the ‘skills required’ by management. They are placed there . . . just because a particular vacancy happened to exist.” [Political and Social Writings, vol. 2, p. 117]

Of course, the other option is to get rid of capitalism by self-management. If workers managed their own time and labour, they would have no reason to say “*that is not my job*” as they have no contract with someone who tells them what to do. Similarly, the process of labour integration forced upon the worker would be freely accepted and a task freely accepted always produces superior results than one imposed by coercion (or its threat). This means that “[u]nder socialism, factories would have no reason to accept the artificially rigid division of labour now prevailing. There will be every reason to encourage a rotation of workers **between shops and departments** and between production and office areas.” The “*residues of capitalism’s division of labour gradually will have to be eliminated*” as “*socialist society cannot survive unless it demolishes this division.*” [Ibid.]

Division of tasks (or work) will replace division of labour in a free society. “The main subject of social economy,” argued Kropotkin, is “the *economy of energy required for the satisfaction of human needs.*” These needs obviously expressed both the needs of the producers for empowering and interesting work and their need for a healthy and balanced environment. Thus Kropotkin discussed the “advantages” which could be “derive[d] from a combination of industrial pursuits with intensive agriculture, and of brain work with manual work.” The “greatest sum total of well-being can be obtained when a variety of agricultural, industrial and intellectual pursuits are combined in each community; and that man [and woman] shows his best when he is in a position to apply his usually-varied capacities to several pursuits in the farm, the workshop, the factory, the study or the studio, instead of being riveted for life to one of these pursuits only.” [Fields, Factories and Workshops Tomorrow, pp. 17–8]

By replacing the division of labour with the division of work, productive activity can be transformed into an enjoyable task (or series of tasks). By integrating labour, all the capacities of the producer can be expressed so eliminating a major source of alienation and unhappiness in society.

One last point on the abolition of work. May 1st — International Workers’ Day — which, as we discussed in section A.5.2, was created to commemorate the Chicago Anarchist Martyrs. Anarchists then, as now, think that it should be celebrated by strike action and mass demonstrations. In other words, for anarchists, International Workers’ Day should be a non-work day! That sums up the anarchist position to work nicely — that the celebration of workers’ day should be based on the rejection of work.

I.4.3 How do anarchists intend to abolish work?

Basically by workers’ self-management of production and community control of the means of production. It is hardly in the interests of those who do the actual “work” to have bad working conditions, boring, repetitive labour, and so on. Therefore, a key aspect of the liberation from work is to create a self-managed society, “a society in which everyone has equal means to develop and that all are or can be at the time intellectual and manual workers, and the only differences remaining between men [and women] are those which stem from the natural diversity of aptitudes, and that all jobs, all functions, give an equal right to the enjoyment of social possibilities.” [Errico Malatesta, **Anarchy**, p. 40]

Essential to this task is decentralisation and the use of appropriate technology. Decentralisation is important to ensure that those who do work can determine how to liberate it. A decentralised system will ensure that ordinary people can identify areas for technological innovation, and so understand the need to get rid of certain kinds of work. Unless ordinary people understand and control the introduction of technology, then they will never be fully aware of the benefits of technology and resist advances which may be in their best interests to introduce. This is the full meaning of appropriate technology, namely the use of technology which those most affected feel to be best in a given situation. Such technology may or may not be technologically “advanced” but it will be of the kind which ordinary people can understand and, most importantly, control.

The potential for rational use of technology can be seen from capitalism. Under capitalism, technology is used to increase profits, to expand the economy,

not to liberate **all** individuals from useless toil (it does, of course, liberate a few from such “*activity*”). As Ted Trainer argues:

“Two figures drive the point home. In the long term, productivity (i.e. output per hour of work) increases at about 2 percent per annum, meaning that each 35 years we could cut the work week by half while producing as much as we were at the beginning. A number of OECD . . . countries could actually have cut from a five-day work week to around a one-day work week in the last 25 years while maintaining their output at the same level. In this economy we must therefore double the annual amount we consume per person every 35 years just to prevent unemployment from rising and to avoid reduction in outlets available to soak up investable capital.

“Second, according to the US Bureau for Mines, the amount of capital per person available for investment in the United States will increase at 3.6 percent per annum (i.e. will double in 20-year intervals). This indicates that unless Americans double the volume of goods and services they consume every 20 years, their economy will be in serious difficulties

*“Hence the ceaseless and increasing pressure to find more business opportunities” [“What is Development”, p 57–90, **Society and Nature**, Issue No. 7, p. 49]*

And, remember, these figures include production in many areas of the economy that would not exist in a free society — state and capitalist bureaucracy, weapons production, and so on. In addition, it does not take into account the labour of those who do not actually produce anything useful and so the level of production for useful goods would be higher than Trainer indicates. In addition, goods will be built to last and so much production will become sensible and not governed by an insane desire to maximise profits at the expense of everything else.

The decentralisation of power will ensure that self-management becomes universal. This will see the end of division of labour as mental and physical work becomes unified and those who do the work also manage it. This will allow “*the free exercise of **all** the faculties of man*” both inside and outside “work.” [Peter Kropotkin, **The Conquest of Bread**, p. 148] The aim of such a development would be to turn productive activity, as far as possible, into an enjoyable experience. In the words of Murray Bookchin it is the **quality** and **nature** of the work process that counts:

*“If workers’ councils and workers’ management of production do not transform the work into a joyful activity, free time into a marvellous experience, and the workplace into a community, then they remain merely formal structures, in fact, **class** structures. They perpetuate the limitations of the proletariat as a product of bourgeois social conditions. Indeed, no movement that raises the demand for workers’ councils can be regarded as revolutionary unless it tries to promote sweeping transformations in the environment of the work place.” [Post-Scarcity Anarchism, p. 146]*

Work will become, primarily, the expression of a person's pleasure in what they are doing and become like an art — an expression of their creativity and individuality. Work as an art will become expressed in the workplace as well as the work process, with workplaces transformed and integrated into the local community and environment (see section I.4.15 — “*What will the workplace of tomorrow be like?*”). This will obviously apply to work conducted in the home as well, otherwise the “*revolution, intoxicated with the beautiful words, Liberty, Equality, Solidarity, would not be a revolution if it maintained slavery at home. Half [of] humanity subjected to the slavery of the hearth would still have to rebel against the other half.*” [Peter Kropotkin, **The Conquest of Bread**, p. 128]

In other words, anarchists desire “*to combine the best part (in fact, the only good part) of work — the production of use-values — with the best of play . . . its freedom and its fun, its voluntariness and its intrinsic gratification*” — the transformation of what economists call production into productive play. [Bob Black, **Smokestack Lightning**]

In addition, a decentralised system will build up a sense of community and trust between individuals and ensure the creation of an ethical economy, one based on interactions between individuals and not commodities caught in the flux of market forces. This ideal of a “*moral economy*” can be seen in both social anarchists desire for the end of the market system and the individualists insistence that “*cost be the limit of price.*” Anarchists recognise that the “*traditional local market . . . is essentially different from the market as it developed in modern capitalism. Bartering on a local market offered an opportunity to meet for the purpose of exchanging commodities. Producers and customers became acquainted; they were relatively small groups . . . The modern market is no longer a meeting place but a mechanism characterised by abstract and impersonal demand. One produces for this market, not for a known circle of customers; its verdict is based on laws of supply and demand.*” [Man for Himself, pp. 67–68]

Anarchists reject the capitalist notion that economic activity should be based on maximising profit as the be all and end all of such work (buying and selling on the “*impersonal market*”). As markets only work through people, individuals, who buy and sell (but, in the end, control them — in the “*free market*” only the market is free) this means that for the market to be “*impersonal*” as it is in capitalism it implies that those involved have to be unconcerned about personalities, including their own. Profit, not ethics, is what counts. The “*impersonal*” market suggests individuals who act in an impersonal, and so unethical, manner. The morality of what they produce, why they produce it and how they produce it is irrelevant, as long as profits are produced.

Instead, anarchists consider economic activity as an expression of the human spirit, an expression of the innate human need to express ourselves and to create. Capitalism distorts these needs and makes economic activity a deadening experience by the division of labour and hierarchy. Anarchists think that “*industry is not an end in itself, but should only be a means to ensure to man his material subsistence and to make accessible to him the blessings of a higher intellectual culture. Where industry is everything and man is nothing begins the realm of a ruthless economic despotism whose workings are no less disastrous than those of any political despotism. The two mutually augment one another, and they are fed from the same source.*” [Rudolph Rocker, **Anarcho-Syndicalism**, p. 11]

Anarchists think that a decentralised social system will allow “*work*” to be abolished and economic activity humanised and made a means to an end

(namely producing useful things and liberated individuals). This would be achieved by, as Rudolf Rocker puts it, the “*alliance of free groups of men and women based on co-operative labour and a planned administration of things in the interest of the community.*” [Op. Cit., p. 62]

However, as things are produced by people, it could be suggested that a “*planned administration of things*” implies a “*planned administration of people*” (although few who suggest this danger apply it to capitalist firms which are like mini-centrally planned states). This objection is false simply because anarchism aims “*to reconstruct the economic life of the peoples from the ground up and build it up anew in the spirit of Socialism*” and, moreover, “*only the producers themselves are fitted for this task, since they are the only value-creating element in society out of which a new future can arise.*” Such a reconstructed economic life would be based on anarchist principles, that is “*based on the principles of federalism, a free combination from below upwards, putting the right of self-determination of every member above everything else and recognising only the organic agreement of all on the basis of like interests and common convictions.*” [Op. Cit., p. 61 and p. 53]

In other words, those who produce also administer and so govern themselves in free association (and it should be pointed out that any group of individuals in association will make “*plans*” and “*plan,*” the important question is who does the planning and who does the work. Only in anarchy are both functions united into the same people). Rocker emphasises this point when he writes that:

“Anarcho-syndicalists are convinced that a Socialist economic order cannot be created by the decrees and statutes of a government, but only by the solidaric collaboration of the workers with hand and brain in each special branch of production; that is, through the taking over of the management of all plants by the producers themselves under such form that the separate groups, plants, and branches of industry are independent members of the general economic organism and systematically carry on production and the distribution of the products in the interest of the community on the basis of free mutual agreements.” [Op. Cit., p. 55]

In other words, the “*planned administration of things*” would be done by the producers **themselves**, in independent groupings. This would likely take the form (as we indicated in section I.3) of confederations of syndicates who communicate information between themselves and respond to changes in the production and distribution of products by increasing or decreasing the required means of production in a co-operative (i.e. “*planned*”) fashion. No “*central planning*” or “*central planners*” governing the economy, just workers co-operating together as equals (as Kropotkin argued, free socialism “*must result from thousands of separate local actions, all directed towards the same aim. It cannot be dictated by a central body: it must result from the numberless local needs and wants.*” [Act for Yourselves, p. 54]).

Therefore, an anarchist society would abolish work by ensuring that those who do the work actually control it. They would do so in a network of self-managed associations, a society “*composed of a number of societies banded together for everything that demands a common effort: federations of producers for all kinds of production, of societies for consumption . . . All these groups will*

unite their efforts through mutual agreement . . . Personal initiative will be encouraged and every tendency to uniformity and centralisation combated.” [Peter Kropotkin, quoted by Buber in **Paths in Utopia**, p. 42]

In response to consumption patterns, syndicates will have to expand or reduce production and will have to attract volunteers to do the necessary work. The very basis of free association will ensure the abolition of work, as individuals will apply for “work” they enjoy doing and so would be interested in reducing “work” they did not want to do to a minimum. Such a decentralisation of power would unleash a wealth of innovation and ensure that unpleasant work be minimised and fairly shared (see section I.4.13).

Now, any form of association requires agreement. Therefore, even a society based on the communist-anarchist maxim “*from each according to their ability, to each according to their need*” will need to make agreements in order to ensure co-operative ventures succeed. In other words, members of a co-operative commonwealth would have to make and keep to their agreements between themselves. This means that the members of a syndicate would agree joint starting and finishing times, require notice if individuals want to change “jobs” and so on within and between syndicates. Any joint effort requires some degree of co-operation and agreement. Moreover, between syndicates, an agreement would be reached (in all likelihood) that determined the minimum working hours required by all members of society able to work. How that minimum was actually organised would vary between workplace and commune, with work times, flexi-time, job rotation and so on determined by each syndicate (for example, one syndicate may work 8 hours a day for 2 days, another 4 hours a day for 4 days, one may use flexi-time, another more rigid starting and stopping times).

As Kropotkin argued, an anarchist-communist society would be based upon the following kind of “*contract*” between its members:

“We undertake to give you the use of our houses, stores, streets, means of transport, schools, museums, etc., on condition that, from twenty to forty-five or fifty years of age, you consecrate four or five hours a day to some work recognised as necessary to existence. Choose yourself the producing group which you wish to join, or organise a new group, provided that it will undertake to produce necessities. And as for the remainder of your time, combine together with whomsoever you like, for recreation, art, or science, according to the bent of your taste . . . Twelve or fifteen hundred hours of work a year . . . is all we ask of you. For that amount of work we guarantee to you the free use of all that these groups produce, or will produce.”
[**The Conquest of Bread**, pp. 153–4]

With such work “*necessary to existence*” being recognised by individuals and expressed by demand for labour from productive syndicates. It is, of course, up to the individual to decide which work he or she desires to perform from the positions available in the various associations in existence. A union card would be the means by which work hours would be recorded and access to the common wealth of society ensured. And, of course, individuals and groups are free to work alone and exchange the produce of their labour with others, including the confederated syndicates, if they so desired. An anarchist society will be as flexible as possible.

Therefore, we can imagine a social anarchist society being based on two basic arrangements — firstly, an agreed minimum working week of, say, 20 hours, in a syndicate of your choice, plus any amount of hours doing “work” which you feel like doing — for example, art, experimentation, DIY, playing music, composing, gardening and so on. The aim of technological progress would be to reduce the basic working week more and more until the very concept of necessary “work” and free time enjoyments is abolished. In addition, in work considered dangerous or unwanted, then volunteers could trade doing a few hours of such activity for more free time (see section I.4.13 for more on this).

It can be said that this sort of agreement is a restriction of liberty because it is “man-made” (as opposed to the “natural law” of “supply and demand”). This is a common defence of the free market by individualist anarchists against anarcho-communism, for example. However, while in theory individualist-anarchists can claim that in their vision of society, they don’t care when, where, or how a person earns a living, as long as they are not invasive about it the fact is that any economy is based on interactions between individuals. The law of “supply and demand” easily, and often, makes a mockery of the ideas that individuals can work as long as they like — usually they end up working as long as required by market forces (i.e. the actions of other individuals, but turned into a force outwith their control, see section I.1.3). This means that individuals do not work as long as they like, but as long as they have to in order to survive. Knowing that “market forces” is the cause of long hours of work hardly makes them any nicer.

And it seems strange to the communist-anarchist that certain free agreements made between equals can be considered authoritarian while others are not. The individualist-anarchist argument that social co-operation to reduce labour is “authoritarian” while agreements between individuals on the market are not seems illogical to social anarchists. They cannot see how it is better for individuals to be pressured into working longer than they desire by “invisible hands” than to come to an arrangement with others to manage their own affairs to maximise their free time.

Therefore, free agreement between free and equal individuals is considered the key to abolishing work, based upon decentralisation of power and the use of appropriate technology.

I.4.4 What economic decision making criteria could be used in anarchy?

Firstly, it should be noted that anarchists do not have any set idea about the answer to this question. Most anarchists are communists, desiring to see the end of money, but that does not mean they want to impose communism onto people. Far from it, communism can only be truly libertarian if it is organised from the bottom up. So, anarchists would agree with Kropotkin that it is a case of not “determining in advance what form of distribution the producers should accept in their different groups — whether the communist solution, or labour checks, or equal salaries, or any other method” while considering a given solution best in their opinion. [**Kropotkin’s Revolutionary Pamphlets**, p. 166] Free experiment is a key aspect of anarchism.

While certain anarchists have certain preferences on the social system they want to live in and so argue for that, they are aware that objective circumstances and social desires will determine what is introduced during a revolution (for example, while Kropotkin was a communist-anarchist and considered it essential that a revolution proceed towards communism as quickly as possible, he was aware that it was unlikely it would be introduced immediately — see section I.2.2 for details).

However, we will outline some possible means of economic decision making criteria as this question is an important one (it is the crux of the “*libertarian socialism is impossible*” argument, for example). Therefore, we will indicate what possible solutions exist in different forms of anarchism.

In a mutualist or collectivist system, the answer is easy. Prices will exist and be used as a means of making decisions. Mutualism will be more market orientated than collectivism, with collectivism being based on confederations of collectives to respond to changes in demand (i.e. to determine investment decisions and ensure that supply is kept in line with demand). Mutualism, with its system of market based distribution around a network of co-operatives and mutual banks, does not really need a further discussion as its basic operations are the same as in any non-capitalist market system. Collectivism and communism will have to be discussed in more detail. However, all systems are based on workers’ self-management and so the individuals directly affected make the decisions concerning what to produce, when to do it, and how to do it. In this way workers retain control of the product of their labour. It is the social context of these decisions and what criteria workers use to make their decisions that differ between anarchist schools of thought.

Although collectivism promotes the greatest autonomy for worker associations, it should not be confused with a market economy as advocated by supporters of mutualism (particularly in its Individualist form). The goods produced by the collectivised factories and workshops are exchanged not according to highest price that can be wrung from consumers, but according to their actual production costs. The determination of these honest prices is to be by a “*Bank of Exchange*” in each community (obviously an idea borrowed from Proudhon). These “*Banks*” would represent the various producer confederations and consumer/citizen groups in the community and would seek to negotiate these “*honest*” prices (which would, in all likelihood, include “*hidden*” costs like pollution). These agreements would be subject to ratification by the assemblies of those involved.

As Guillaume puts it “*the value of the commodities having been established in advance by a contractual agreement between the regional co-operative federations [i.e. confederations of syndicates] and the various communes, who will also furnish statistics to the Banks of Exchange. The Bank of Exchange will remit to the producers negotiable vouchers representing the value of their products; these vouchers will be accepted throughout the territory included in the federation of communes.*” [Bakunin on Anarchism, p. 366] These vouchers would be related to hours worked, for example, and when used as a guide for investment decisions could be supplemented with cost-benefit analysis of the kind possibly used in a communist-anarchist society (see below).

Although this scheme bears a strong resemblance to Proudhonian “*People’s Banks*,” it should be noted that the Banks of Exchange, along with a “*Communal Statistical Commission*,” are intended to have a “*planning*” function as

well to ensure that supply meets demand. This does not imply a “command” economy, but simple book keeping for “each Bank of Exchange makes sure in advance that these products are in demand [in order to risk] nothing by immediately issuing payment vouchers to the producers.” [Op. Cit., p. 367] The workers syndicates would still determine what orders to produce and each commune would be free to choose its suppliers.

As will be discussed in more depth later (see section I.4.8) information about consumption patterns will be recorded and used by workers to inform their production and investment decisions. In addition, we can imagine that production syndicates would encourage communes as well as consumer groups and co-operatives to participate in making these decisions. This would ensure that produced goods reflect consumer needs. Moreover, as conditions permit, the exchange functions of the communal “banks” would (in all likelihood) be gradually replaced by the distribution of goods “in accordance with the needs of the consumers.” In other words, most supporters of collectivist anarchism see it as a temporary measure before anarcho-communism could develop.

Communist anarchism would be similar to collectivism, i.e. a system of confederations of collectives, communes and distribution centres (“Communal stores”). However, in an anarcho-communist system, prices are not used. How will economic decision making be done? One possible solution is as follows:

*“As to decisions involving choices of a general nature, such as what forms of energy to use, which of two or more materials to employ to produce a particular good, whether to build a new factory, there is a . . . technique . . . that could be [used] . . . ‘cost-benefit analysis’ . . . in socialism a points scheme for attributing relative importance to the various relevant considerations could be used . . . The points attributed to these considerations would be subjective, in the sense that this would depend on a deliberate social decision rather than some objective standard, but this is the case even under capitalism when a monetary value has to be attributed to some such ‘cost’ or ‘benefit’ . . . In the sense that one of the aims of socialism is precisely to rescue humankind from the capitalist fixation with production time/money, cost-benefit analyses, as a means of taking into account other factors, could therefore be said to be more appropriate for use in socialism than under capitalism. Using points systems to attribute relative importance in this way would not be to recreate some universal unit of evaluation and calculation, but simply to employ a technique to facilitate decision-making in particular concrete cases.” [Adam Buick and John Crump, **State Capitalism: The Wages System Under New Management**, pp. 138–139]*

This points system would be the means by which producers and consumers would be able to determine whether the use of a particular good is efficient or not. Unlike prices, this cost-benefit analysis system would ensure that production and consumption reflects social and ecological costs, awareness and priorities. Moreover, this analysis would be a **guide** to decision making and not a replacement of human decision making and evaluation. As Lewis Mumford argues:

“it is plan that in the decision as to whether to build a bridge or a

tunnel there is a human question that should outweigh the question of cheapness or mechanical feasibility: namely the number of lives that will be lost in the actual building or the advisability of condemning a certain number of men [and women] to spend their entire working days underground supervising tunnel traffic. As soon as our thought ceases to be automatically conditioned by the mine, such questions become important. Similarly the social choice between silk and rayon is not one that can be made simply on the different costs of production, or the difference in quality between the fibres themselves: there also remains, to be integrated in the decision, the question as to difference in working-pleasure between tending silkworms and assisting in rayon production. What the product contributes to the labourer is just as important as what the worker contributes to the product. A well-managed society might alter the process of motor car assemblage, at some loss of speed and cheapness, in order to produce a more interesting routine for the worker: similarly, it would either go to the expense of equipping dry-process cement making plants with dust removers — or replace the product itself with a less noxious substitute. When none of these alternatives was available, it would drastically reduce the demand itself to the lowest possible level.” [The Future of Technics and Civilisation, pp. 160–1]

Obviously, today, we would include ecological issues as well as human ones. However Mumford’s argument is correct. Any decision making process which disregards the quality of work or the effect on the human and natural environment is a deranged process. However, this is how capitalism operates, with the market rewarding capitalists and managers who introduce de-humanising and ecologically harmful practices. Indeed, so biased against labour and the environment is capitalism that economists and pro-capitalists argue that reducing “*efficiency*” by such social concerns is actually **harmful** to an economy, which is a total reversal of common sense and human feelings (after all, surely the economy should satisfy human needs and not sacrifice those needs to the economy?). The argument is that consumption would suffer as resources (human and material) would be diverted from more “*efficient*” productive activities and so reduce, over all, our economic well-being. What this argument ignores is that consumption does not exist in isolation from the rest of the economy. What we what to consume is conditioned, in part, by the sort of person we are and that is influenced by the kind of work we do, the kinds of social relationships we have, whether we are happy with our work and life, and so on. If our work is alienating and of low quality, then so will our consumption decisions. If our work is subject to hierarchical control and servile in nature then we cannot expect our consumption decisions of totally rational — indeed they may become an attempt to find happiness via shopping, a self-defeating activity as consumption cannot solve a problem created in production. Thus rampant consumerism may be the result of capitalist “*efficiency*” and so the objection against socially aware production is question begging.

Of course, as well as absolute scarcity, prices under capitalism also reflect relative scarcity (while in the long term, market prices tend towards their production price plus a mark-up based on the degree of monopoly in a market, in the short term prices can change as a result of changes in supply and de-

mand). How a communist society could take into account such short term changes and communicate them through out the economy is discussed in section I.4.5 (“What about ‘*supply and demand*’?”). Needless to say, production and investment decisions based upon such cost-benefit analysis would take into account the current production situation and so the relative scarcity of specific goods.

Therefore, a communist-anarchist society would be based around a network of syndicates who communicate information between each other. Instead of the “*price*” being communicated between workplaces as in capitalism, actual physical data will be sent. This data is a summary of the use values of the good (for example labour time and energy used to produce it, pollution details, relative scarcity and so forth). With this information a cost-benefit analysis will be conducted to determine which good will be best to use in a given situation based upon mutually agreed common values. The data for a given workplace could be compared to the industry as a whole (as confederations of syndicates would gather and produce such information — see section I.3.5) in order to determine whether a specific workplace will efficiently produce the required goods (this system has the additional advantage of indicating which workplaces require investment to bring them in line, or improve upon, the industrial average in terms of working conditions, hours worked and so on). In addition, common rules of thumb would possibly be agreed, such as agreements not to use scarce materials unless there is no alternative (either ones that use a lot of labour, energy and time to produce or those whose demand is currently exceeding supply capacity).

Similarly, when ordering goods, the syndicate, commune or individual involved will have to inform the syndicate why it is required in order to allow the syndicate to determine if they desire to produce the good and to enable them to prioritise the orders they receive. In this way, resource use can be guided by social considerations and “*unreasonable*” requests ignored (for example, if an individual “*needs*” a ship-builders syndicate to build a ship for his personal use, the ship-builders may not “*need*” to build it and instead builds ships for the transportation of freight). However, in almost all cases of individual consumption, no such information will be needed as communal stores would order consumer goods in bulk as they do now. Hence the economy would be a vast network of co-operating individuals and workplaces and the dispersed knowledge which exists within any society can be put to good effect (**better** effect than under capitalism because it does not hide social and ecological costs in the way market prices do and co-operation will eliminate the business cycle and its resulting social problems).

Therefore, production units in a social anarchist society, by virtue of their autonomy within association, are aware of what is socially useful for them to produce and, by virtue of their links with communes, also aware of the social (human and ecological) cost of the resources they need to produce it. They can combine this knowledge, reflecting overall social priorities, with their local knowledge of the detailed circumstances of their workplaces and communities to decide how they can best use their productive capacity. In this way the division of knowledge within society can be used by the syndicates effectively as well as overcoming the restrictions within knowledge communication imposed by the price mechanism.

Moreover, production units, by their association within confederations (or Guilds) ensure that there is effective communication between them. This results

in a process of negotiated co-ordination between equals (i.e. horizontal links and agreements) for major investment decisions, thus bringing together supply and demand and allowing the plans of the various units to be co-ordinated. By this process of co-operation, production units can reduce duplicating effort and so reduce the waste associated with over-investment (and so the irrationalities of booms and slumps associated with the price mechanism, which does not provide sufficient information to allow workplaces to efficiently co-ordinate their plans — see section C.7.2).

Needless to say, this issue is related to the “*socialist calculation*” issue we discussed in section I.1.2. To clarify our ideas, we shall present an example.

Consider two production processes. Method A requires 70 tons of steel and 60 tons of concrete while Method B requires 60 tons of steel and 70 tons of concrete. Which method should be preferred? One of the methods will be more economical in terms of leaving more resources available for other uses than the other but in order to establish which we need to compare the relevant quantities.

Supporters of capitalism argue that only prices can supply the necessary information as they are heterogeneous quantities. Both steel and concrete have a price (say \$10 per ton for steel and \$5 per ton for concrete). The method to choose is clearly B as it has a lower price than A (\$950 for B compared to \$1000 for A). However, this does not actually tell us whether B is the more economical method of production in terms of minimising waste and resource use, it just tells us which costs less in terms of money.

Why is this? Simply because, as we argued in section I.1.2, prices do not totally reflect social, economic and ecological costs. They are influenced by market power, for example, and produce externalities, environmental and health costs which are not reflected in the price. Indeed, passing on costs in the form of externalities and inhuman working conditions actually are rewarded in the market as it allows the company so doing to cut their prices. As far as market power goes, this has a massive influence on prices, directly in terms of prices charged and indirectly in terms of wages and conditions of workers. Due to natural barriers to entry (see section C.4), prices are maintained artificially high by the market power of big business. For example, steel could, in fact cost \$5 per ton to produce but market power allows the company to charge \$10 per ton,

Wage costs are, again, determined by the bargaining power of labour and so do not reflect the real costs in terms of health, personality and alienation the workers experience. They may be working in unhealthy conditions simply to get by, with unemployment or job insecurity hindering their attempts to improve their conditions or find a new job. Nor are the social and individual costs of hierarchy and alienation factored into the price, quite the reverse. It seems ironic that an economy which its defenders claim meets human needs (as expressed by money, of course) totally ignores individuals in the workplace, the place they spend most of their waking hours in adult life.

So the relative costs of each production method have to be evaluated but price does not, indeed cannot, provide an real indication of whether a method is economical in the sense of actually minimising resource use. Prices do reflect some of these costs, of course, but filtered through the effects of market power, hierarchy and externalities they become less and less accurate. Unless you take the term “*economical*” to simply mean “*has the least cost in price*” rather than the sensible “*has the least cost in resource use, ecological impact and human*

pain” you have to accept that the price mechanism is not a great indicator of economic use.

What is the alternative? Obviously the exact details will be worked out in practice by the members of a free society, but we can suggest a few ideas based on our comments above.

When evaluating production methods we need to take into account as many social and ecological costs as possible and these have to be evaluated. Which costs will be taken into account, of course, be decided by those involved, as will how important they are relative to each other (i.e. how they are weighted). Moreover, it is likely that they will factor in the desirability of the work performed to indicate the potential waste in human time involved in production (see section I.4.13 for a discussion of how the desirability of productive activity could be indicated in an anarchist society). The logic behind this is simple, a resource which people **like** to produce will be a better use of the scarce resource of an individual’s time than one people hate producing.

So, for example, steel may take 3 person hours to produce one ton, produce 200 cubic metres of waste gas, 2000 kilo-joules of energy, and has excellent working conditions. Concrete, on the other hand, may take 4 person hours to produce one ton, produce 300 cubic metres of waste gas, uses 1000 kilo-joules of energy and has dangerous working conditions due to dust. What would be the best method? Assuming that each factor is weighted the same, then obviously Method A is the better method as it produces the least ecological impact and has the safest working environment — the higher energy cost is offset by the other, more important, factors.

What factors to take into account and how to weigh them in the decision making process will be evaluated constantly and reviewed so to ensure that it reflects real costs and social concerns. Moreover, simply accounting tools can be created (as a spreadsheet or computer programme) that takes the decided factors as inputs and returns a cost benefit analysis of the choices available.

Therefore, the claim that communism cannot evaluate different production methods due to lack of prices is inaccurate. Indeed, a look at the actual capitalist market — marked as it is by differences in bargaining and market power, externalities and wage labour — soon shows that the claims that prices accurately reflect costs is simply not accurate.

One final point on this subject. As social anarchists consider it important to encourage all to participate in the decisions that affect their lives, it would be the role of communal confederations to determine the relative points value of given inputs and outputs. In this way, **all** individuals in a community determine how their society develops, so ensuring that economic activity is responsible to social needs and takes into account the desires of everyone affected by production. In this way the problems associated with the “*Isolation Paradox*” (see section B.6) can be over come and so consumption and production can be harmonised with the needs of individuals as members of society and the environment they live in.

I.4.5 What about “*supply and demand*”?

Anarchists do not ignore the facts of life, namely that at a given moment there is so much a certain good produced and so much of is desired to be consumed or

used. Neither do we deny that different individuals have different interests and tastes. However, this is not what is usually meant by “*supply and demand*.” Often in general economic debate, this formula is given a certain mythical quality which ignores the underlying realities which it reflects as well as some unwholesome implications of the theory. So, before discussing “*supply and demand*” in an anarchist society, it is worthwhile to make a few points about the “*law of supply and demand*” in general.

Firstly, as E.P. Thompson argues, “*supply and demand*” promotes “*the notion that high prices were a (painful) remedy for dearth, in drawing supplies to the afflicted region of scarcity. But what draws supply are not high prices but sufficient money in their purses to pay high prices. A characteristic phenomenon in times of dearth is that it generates unemployment and empty purses; in purchasing necessities at inflated prices people cease to be able to buy inessentials [causing unemployment] . . . Hence the number of those able to pay the inflated prices declines in the afflicted regions, and food may be exported to neighbouring, less afflicted, regions where employment is holding up and consumers still have money with which to pay. In this sequence, high prices can actually withdraw supply from the most afflicted area.*” [Customs in Common, pp. 283–4]

Therefore “*the law of supply and demand*” may not be the “*most efficient*” means of distribution in a society based on inequality. This is clearly reflected in the “*rationing*” by purse which this system is based on. While in the economics books, price is the means by which scarce resources are “*rationed*” in reality this creates many errors. Adam Smith argued that high prices discourage consumption, putting “*everybody more or less, but particularly the inferior ranks of people, upon thrift and good management.*” [cited by Thompson, *Op. Cit.*, p. 284] However, as Thompson notes, “[h]owever persuasive the metaphor, there is an elision of the real relationships assigned by price, which suggests. . . ideological sleight-of-mind. Rationing by price does not allocate resources equally among those in need; it reserves the supply to those who can pay the price and excludes those who can’t. . . The raising of prices during dearth could ‘ration’ them [the poor] out of the market altogether.” [Op. Cit., p. 285]

In other words, the market cannot be isolated and abstracted from the network of political, social and legal relations within which it is situated. This means that all that “*supply and demand*” tells us is that those with money can demand more, and be supplied with more, than those without. Whether this is the “*most efficient*” result for society cannot be determined (unless, of course, you assume that rich people are more valuable than working class ones **because they are rich**). This has an obvious effect on production, with “*effective demand*” twisting economic activity. As Chomsky notes, “[t]hose who have more money tend to consume more, for obvious reasons. So consumption is skewed towards luxuries for the rich, rather than necessities for the poor.” George Barrett brings home of the evil of such a “*skewed*” form of production:

“To-day the scramble is to compete for the greatest profits. If there is more profit to be made in satisfying my lady’s passing whim than there is in feeding hungry children, then competition brings us in feverish haste to supply the former, whilst cold charity or the poor law can supply the latter, or leave it unsupplied, just as it feels disposed. That is how it works out.” [Objections to Anarchism]

Therefore, as far as “*supply and demand*” is concerned, anarchists are well

aware of the need to create and distribute necessary goods to those who require them. This, however, cannot be achieved under capitalism. In effect, supply and demand under capitalism results in those with most money determining what is an “*efficient*” allocation of resources for if financial profit is the sole consideration for resource allocation, then the wealthy can outbid the poor and ensure the highest returns. The less wealthy can do without.

However, the question remains of how, in an anarchist society, do you know that valuable labour and materials might be better employed elsewhere? How do workers judge which tools are most appropriate? How do they decide among different materials if they all meet the technical specifications? How important are some goods than others? How important is cellophane compared to vacuum-cleaner bags?

It is answers like this that the supporters of the market claim that their system answers. However, as indicated, it does answer them in irrational and dehumanising ways under capitalism but the question is: can anarchism answer them? Yes, although the manner in which this is done varies between anarchist threads. In a mutualist economy, based on independent and co-operative labour, differences in wealth would be vastly reduced, so ensuring that irrational aspects of the market that exist within capitalism would be minimised. The workings of supply and demand would provide a more just result than under the current system.

However, collectivist, syndicalist and communist anarchists reject the market. This rejection often implies, to some, central planning. As the market socialist David Schweickart puts it, “[*i*]f profit considerations do not dictate resource usage and production techniques, then central direction must do so. If profit is not the goal of a productive organisation, then physical output (use values) must be.” [Against Capitalism, p. 86]

However, Schweickart is wrong. Horizontal links need not be market based and co-operation between individuals and groups need not be hierarchical. What is implied in this comment is that there is just two ways to relate to others — namely, by bribery or by authority. In other words, either by prostitution (purely by cash) or by hierarchy (the way of the state, the army or capitalist workplace). But people relate to each other in other ways, such as friendship, love, solidarity, mutual aid and so on. Thus you can help or associate with others without having to be ordered to do so or by being paid cash to do so — we do so all the time. You can work together because by so doing you benefit yourself and the other person. This is the **real** communist way, that of mutual aid and free agreement.

So Schweickart is ignoring the vast majority of relations in any society. For example, love/attraction is a horizontal link between two autonomous individuals and profit considerations do not enter into the relationship. Thus anarchists argue that Schweickart’s argument is flawed as it fails to recognise that resource usage and production techniques can be organised in terms of human need and free agreement between economic actors, without profits or central command. This system does not mean that we all have to love each other (an impossible wish). Rather, it means that we recognise that by voluntarily co-operating as equals we ensure that we remain free individuals and that we can gain the advantages of sharing resources and work (for example, a reduced working day and week, self-managed work in safe and hygienic working conditions and a free selection of the product of a whole society). In other words, a self-interest

which exceeds the narrow and impoverished “*egotism*” of capitalist society. In the words of John O’Neil:

“[F]or it is the institutions themselves that define what counts as one’s interests. In particular, the market encourages egoism, not primarily because it encourages an individual to be ‘self-interested’ — it would be unrealistic not to expect individuals to act for the greater part in a ‘self-interested’ manner — but rather because it defines an individual’s interests in a particularly narrow fashion, most notably in terms of possession of certain material goods. In consequence, where market mechanism enter a particular sphere of life, the pursuit of goods outside this narrow range of market goods is institutionally defined as an act of altruism.” [The Market, p. 158]

Thus free agreement and horizontal links are not limited to market transactions — they develop for numerous reasons and anarchists recognise this. As George Barret argues:

*“Let us imagine now that the great revolt of the workers has taken place, that their direct action has made them masters of the situation. It is not easy to see that some man in a street that grew hungry would soon draw a list of the loaves that were needed, and take it to the bakery where the strikers were in possession? Is there any difficulty in supposing that the necessary amount would then be baked according to this list? By this time the bakers would know what carts and delivery vans were needed to send the bread out to the people, and if they let the carters and vanmen know of this, would these not do their utmost to supply the vehicles... If ... [the bakers needed] more benches [to make bread] ... the carpenters would supply them [and so on] ... So the endless continuity goes on — a well-balanced interdependence of parts guaranteed, because **need** is the motive force behind it all... In the same way that each free individual has associated with his brothers [and sisters] to produce bread, machinery, and all that is necessary for life, driven by no other force than his desire for the full enjoyment of life, so each institution is free and self-contained, and co-operates and enters into agreements with other because by so doing it extends its own possibilities. There is no centralised State exploiting or dictating, but the complete structure is supported because each part is dependent on the whole ... It will be a society responsive to the wants of the people; it will supply their everyday needs as quickly as it will respond to their highest aspirations. Its changing forms will be the passing expressions of humanity.”* [The Anarchist Revolution, pp. 17–19]

To make productive decisions we need to know what others need and information in order to evaluate the alternative options available to us to satisfy that need. Therefore, it is a question of distributing information between producers and consumers, information which the market often hides (or actively blocks) or distorts due to inequalities in resources (i.e. need does not count in the market, “*effective demand*” does and this skews the market in favour of the wealthy).

This information network has partly been discussed in the last section where a method of comparison between different materials, techniques and resources based upon use value was discussed. However, the need to indicate the current fluctuations in production and consumption needs to be indicated which complements that method.

In a non-Mutualist anarchist system it is assumed that confederations of syndicates will wish to adjust their capacity if they are aware of the need to do so. Hence, price changes in response to changes in demand would not be necessary to provide the information that such changes are required. This is because a *“change in demand first becomes apparent as a change in the quantity being sold at existing prices [or being consumed in a moneyless system] and is therefore reflected in changes in stocks or orders. Such changes are perfectly good indicators or signals that an imbalance between demand and current output has developed. If a change in demand for its products proved to be permanent, a production unit would find its stocks being run down and its order book lengthening, or its stocks increasing and orders falling . . . Price changes in response to changes in demand are therefore not necessary for the purpose of providing information about the need to adjust capacity.”* [Pat Devine, **Democracy and Economic Planning**, p. 242]

To indicate the relative changes in scarcity of a given good it will be necessary to calculate a *“scarcity index.”* This would inform potential users of this good whether its demand is outstripping its supply so that they may effectively adjust their decisions in light of the decisions of others. This index could be, for example, a percentage figure which indicates the relation of orders placed for a commodity to the amount actually produced. For example, a good which has a demand higher than its supply would have an index value of 101% or higher. This value would inform potential users to start looking for substitutes for it or to economise on its use. Such a scarcity figure would exist for each collective as well as (possibly) a generalised figure for the industry as a whole on a regional, “national,” etc. level.

In this way, a specific good could be seen to be in high demand and so only those producers who **really** required it would place orders for it (so ensuring effective use of resources). Needless to say, stock levels and other basic book-keeping techniques would be utilised in order to ensure a suitable buffer level of a specific good existed. This may result in some excess supply of goods being produced and used as stock to buffer out unexpected changes in the aggregate demand for a good.

Such a buffer system would work on an individual workplace level and at a communal level. Syndicates would obviously have their inventories, stores of raw materials and finished goods *“on the shelf,”* which can be used to meet excesses in demand. Communal stores, hospitals and so on would have their stores of supplies in case of unexpected disruptions in supply. This is a common practice even in capitalism, although it would (perhaps) be extended in a free society to ensure changes in supply and demand do not have disruptive effects.

Communes and confederations of communes may also create buffer stocks of goods to handle unforeseen changes in demand and supply. This sort of inventory has been used by capitalist countries like the USA to prevent changes in market conditions for agricultural products and other strategic raw materials producing wild spot-price movements and inflation. Post-Keynesian economist Paul Davidson argued that the stability of commodity prices this produced

“was an essential aspect of the unprecedented prosperous economic growth of the world’s economy” between 1945 and 1972. US President Nixon dismantled these buffer zone programmes, resulting in *“violent commodity price fluctuations”* which had serious economic effects. [**Controversies in Post-Keynesian Economics**, p. 114 and p. 115]

Again, an anarchist society is likely to utilise this sort of buffer system to iron out short-term changes in supply and demand. By reducing short-term fluctuations of the supply of commodities, bad investment decisions would be reduced as syndicates would not be misled, as is the case under capitalism, by market prices being too high or too low at the time when the decisions were being made. Indeed, if market prices are not at their equilibrium level then they do not (and cannot) provide adequate knowledge for rational calculation. The misinformation conveyed by disequilibrium prices can cause very substantial macroeconomic distortions as profit-maximising capitalists respond to unsustainable prices for, say, tin, and over-invest in a given branch of industry. Such mal-invest could spread through the economy, causing chaos and recession.

This, combined with cost-benefit analysis described in section I.4.4, would allow information about changes within the *“economy”* to rapidly spread throughout the whole system and influence all decision makers without the great majority knowing anything about the original causes of these changes (which rest in the decisions of those directly affected). The relevant information is communicated to all involved, without having to be ordered by an *“all-knowing”* central body as in a Leninist centrally planned economy. As argued in section I.1.2, anarchists have long realised that no centralised body could possibly be able to possess all the information dispersed throughout the economy and if such a body attempted to do so, the resulting bureaucracy would effectively reduce the amount of information available to society and so cause shortages and inefficiencies.

To get an idea how this system could work, let us take the example of a change in the copper industry. Let us assume that a source of copper unexpectedly dries up or, what amounts to the same thing, that the demand for copper increases. What would happen?

First, the initial difference would be a diminishing of stocks of copper which each syndicate maintains to take into account unexpected changes in requests for copper. This would help *“buffer out”* expected, and short lived, changes in supply or requests. Second, naturally, there is an increase in demand for copper for those syndicates which are producing it. This immediately increases the *“scarcity index”* of those firms, and so the *“scarcity index”* for the copper they produce and for the industry as a whole. For example, the index may rise from 95% (indicating a slight over-production in respect to current demand) to 115% (indicating that the demand for copper has risen in respect to the current level of production).

This change in the *“scarcity index”* (combined with difficulties in finding copper producing syndicates which can supply their orders) enters into the decision making algorithms of other syndicates. This, in turn, results in changes in their plans (for example, substitutes for copper may be used as they have become a more efficient resource to use).

This would aid a syndicate when it determined which method of production to use when creating a consumer good. The cost-benefit analysis outlined in the last section would allow a syndicate to determine the costs involved between

competing productive techniques (i.e. to ascertain which used up least resources and therefore left the most over for other uses). Producers would already have an idea of the absolute costs involved in any good they are planning to use, so relative changes between them would be a deciding factor.

In this way, requests for copper products fall and soon only reflects those requests that need copper and do not have realistic substitutes available for it. This would result in the demand falling with respect to the current supply (as indicated by requests from other syndicates and to maintain buffer stock levels). Thus a general message has been sent across the “*economy*” that copper has become (relatively) scarce and syndicates plans have changed in light of this information. No central planner made these decisions nor was money required to facilitate them. We have a decentralised, non-market system based on the free exchange of products between self-governing associations.

Looking at the wider picture, the question of how to respond to this change in supply/requests for copper presents itself. The copper syndicate federation and cross-industry syndicate federations have regular meetings and the question of the changes in the copper situation present themselves. The copper syndicates, and their federation, must consider how to respond to these changes. Part of this is to determine whether this change is likely to be short term or long term. A short term change (say caused by a mine accident, for example) would not need new investments to be planned. However, long term changes (say the new requests are due to a new product being created by another syndicate or an existing mine becoming exhausted) may need co-ordinated investment (we can expect syndicates to make their own plans in light of changes, for example, by investing in new machinery to produce copper more efficiently or to increase efficiency). If the expected changes of these plans approximately equal the predicted long term changes, then the federation need not act. However, if they do then investment in new copper mines or large scale new investment across the industry may be required. The federation would propose such plans.

Needless to say, the future can be guessed, it cannot be accurately predicted. Thus there may be over-investment in certain industries as expected changes do not materialise. However, unlike capitalism, this would not result in an economic crisis as production would continue (with over investment within capitalism, workplaces close due to lack of profits, regardless of social need). All that would happen is that the syndicates would rationalise production, close down relatively inefficient plant and concentrate production in the more efficient ones. The sweeping economic crises of capitalism would be a thing of the past.

Therefore, each syndicate receives its own orders and supplies and sends its own produce out. Similarly, communal distribution centres would order required goods from syndicates it determines. In this way consumers can change to syndicates which respond to their needs and so production units are aware of what it is socially useful for them to produce as well as the social cost of the resources they need to produce it. In this way a network of horizontal relations spread across society, with co-ordination achieved by equality of association and not the hierarchy of the corporate structure. This system ensures a co-operative response to changes in supply and demand and so reduces the communication problems associated with the market which help causes periods of unemployment and economic downturn (see section C.7.2).

While anarchists are aware of the “*isolation paradox*” (see section B.6) this does not mean that they think the commune should make decisions **for** people

on what they were to consume. This would be a prison. No, all anarchists agree that is up to the individual to determine their own needs and for the collectives they join to determine social requirements like parks, infrastructure improvements and so on. However, social anarchists think that it would be beneficial to discuss the framework around which these decisions would be made. This would mean, for example, that communes would agree to produce eco-friendly products, reduce waste and generally make decisions enriched by social interaction. Individuals would still decide which sort goods they desire, based on what the collectives produce but these goods would be based on a socially agreed agenda. In this way waste, pollution and other “*externalities*” of atomised consumption could be reduced. For example, while it is rational for individuals to drive a car to work, collectively this results in massive **irrationality** (for example, traffic jams, pollution, illness, unpleasant social infrastructures). A sane society would discuss the problems associated with car use and would agree to produce a fully integrated public transport network which would reduce pollution, stress, illness, and so on.

Therefore, while anarchists recognise individual tastes and desires, they are also aware of the social impact of them and so try to create a social environment where individuals can enrich their personal decisions with the input of other people’s ideas.

On a related subject, it is obvious that different collectives would produce slightly different goods, so ensuring that people have a choice. It is doubtful that the current waste implied in multiple products from different companies (sometimes the same company) all doing the same job would be continued in an anarchist society. However, production will be “*variations on a theme*” in order to ensure consumer choice and to allow the producers to know what features consumers prefer. It would be impossible to sit down beforehand and make a list of what features a good should have — that assumes perfect knowledge and that technology is fairly constant. Both these assumptions are of limited use in real life. Therefore, co-operatives would produce goods with different features and production would change to meet the demand these differences suggest (for example, factory A produces a new CD player, and consumption patterns indicate that this is popular and so the rest of the factories convert). This is in addition to R&D experiments and test populations. In this way consumer choice would be maintained, and enhanced as consumers would be able to influence the decisions of the syndicates as producers (in some cases) and through syndicate/commune dialogue.

Therefore, anarchists do not ignore “*supply and demand.*” Instead, they recognise the limitations of the capitalist version of this truism and point out that capitalism is based on **effective** demand which has no necessary basis with efficient use of resources. Instead of the market, social anarchists advocate a system based on horizontal links between producers which effectively communicates information across society about the relative changes in supply and demand which reflect actual needs of society and not bank balances. The response to changes in supply and demand will be discussed in section I.4.8 (*What about investment decisions?*) and section I.4.13 (*Who will do the dirty or unpleasant work?*) will discuss the allocation of work tasks.

I.4.6 Surely anarchist-communism would just lead to demand exceeding supply?

It's a common objection that communism would lead to people wasting resources by taking more than they need. Kropotkin stated that "*free communism . . . places the product reaped or manufactured at the disposal of all, leaving to each the liberty to consume them as he pleases in his own home.*" [**The Place of Anarchism in the Evolution of Socialist Thought**, p. 7]

But, some argue, what if an individual says they "*need*" a luxury house or a personal yacht? Simply put, workers may not "*need*" to produce for that need. As Tom Brown puts it, "*such things are the product of social labour. . . Under syndicalism. . . it is improbable that any greedy, selfish person would be able to kid a shipyard full of workers to build him a ship all for his own hoggish self. There would be steam luxury yachts, but they would be enjoyed in common*" [**Syndicalism**, p. 51]

Therefore, communist-anarchists are not blind to the fact that free access to products is based upon the actual work of real individuals — "*society*" provides nothing, individuals working together do. This is reflected in the classic statement of communism — "*From each according to their ability, to each according to their needs.*" Therefore, the needs of both consumer **and** producer are taken into account. This means that if no syndicate or individual desires to produce a specific order an order then this order can be classed as an "*unreasonable*" demand — "*unreasonable*" in this context meaning that no one freely agrees to produce it. Of course, individuals may agree to barter services in order to get what they want produced if they **really** want something but such acts in no way undermines a communist society.

Communist-anarchists recognise that production, like consumption, must be based on freedom. However, it has been argued that free access would lead to waste as people take more than they would under capitalism. This objection is not as serious as it first appears. There are plenty of examples within current society to indicate that free access will not lead to abuses. Let us take three examples, public libraries, water and pavements. In public libraries people are free to sit and read books all day. However, few if any actually do so. Neither do people always take the maximum number of books out at a time. No, they use the library as they need to and feel no need to maximise their use of the institution. Some people never use the library, although it is free. In the case of water supplies, it's clear that people do not leave taps on all day because water is often supplied freely or for a fixed charge. Similarly with pavements, people do not walk everywhere because to do so is free. In such cases individuals use the resource as and when they need to.

We can expect a similar result as other resources become freely available. In effect, this argument makes as much sense as arguing that individuals will travel to stops **beyond** their destination if public transport is based on a fixed charge! And only an idiot would travel further than required in order to get "*value for money.*" However, for many the world seems to be made up of such idiots. Perhaps it would be advisable for such critics to hand out political leaflets in the street. Even though the leaflets are free, crowds rarely form around the person handing them out demanding as many copies of the leaflet as possible. Rather, those interested in what the leaflets have to say take them, the rest ignore them.

If free access automatically resulted in people taking more than they need then critics of free communism would be puzzled by the lack of demand for what they were handing out!

Part of the problem is that capitalist economics have invented a fictional type of person, **Homo Economicus**, whose wants are limitless: an individual who always wants more and more of everything and so whose needs could only be satisfied if resources were limitless too. Needless to say, such an individual has never existed. In reality, wants are not limitless — people have diverse tastes and rarely want everything available nor want more of a good than that which satisfies their need.

Communist Anarchists also argue that we cannot judge people's buying habits under capitalism with their actions in a free society. After all, advertising does not exist to meet people's needs but rather to create needs by making people insecure about themselves. Simply put, advertising does not amplify existing needs or sell the goods and services that people already wanted. Advertising would not need to stoop to the level of manipulative ads that create false personalities for products and provide solutions for problems that the advertisers themselves create if this was the case.

Crude it may be, but advertising is based on the creation of insecurities, preying on fears and obscuring rational thought. In an alienated society in which people are subject to hierarchical controls, feelings of insecurity and lack of control and influence would be natural. It is these fears that advertising multiplies — if you cannot have real freedom, then at least you can buy something new. Advertising is the key means of making people unhappy with what they have (and who they are). It is naive to claim that advertising has no effect on the psyche of the receiver or that the market merely responds to the populace and makes no attempt to shape their thoughts. Advertising creates insecurities about such matter-of-course things and so generates irrational urges to buy which would not exist in a libertarian communist society.

However, there is a deeper point to be made here about consumerism. Capitalism is based on hierarchy and not liberty. This leads to a weakening of individuality and a loss of self-identity and sense of community. Both these senses are a deep human need and consumerism is often a means by which people overcome their alienation from their selves and others (religion, ideology and drugs are other means of escape). Therefore the consumption within capitalism reflects **its** values, not some abstract "*human nature*." As Bob Black argues:

“what we want, what we are capable of wanting is relative to the forms of social organisation. People ‘want’ fast food because they have to hurry back to work, because processed supermarket food doesn’t taste much better anyway, because the nuclear family (for the dwindling minority who have even that to go home to) is too small and too stressed to sustain much festivity in cooking and eating — and so forth. It is only people who can’t get what they want who resign themselves to want more of what they can get. Since we cannot be friends and lovers, we wail for more candy.” [Smokestack Lighting]

Therefore, most anarchists think that consumerism is a product of a hierarchical society within which people are alienated from themselves and the means

by which they can make themselves **really** happy (i.e. meaningful relationships, liberty, work, and experiences). Consumerism is a means of filling the spiritual hole capitalism creates within us by denying our freedom.

This means that capitalism produces individuals who define themselves by what they have, not who they are. This leads to consumption for the sake of consumption, as people try to make themselves happy by consuming more commodities. But, as Erich Fromm points out, this cannot work for and only leads to even more insecurity (and so even more consumption):

*“If I am what I have and if what I have is lost, who then am I? Nobody but a defeated, deflated, pathetic testimony to a wrong way of living. Because I **can** lose what I have, I am necessarily constantly worried that I **shall** lose what I have.” [To Have Or To Be, p. 111]*

Such insecurity easily makes consumerism seem a “*natural*” way of life and so make communism seem impossible. However, rampant consumerism is far more a product of lack of meaningful freedom within an alienated society than a “*natural law*” of human existence. In a society that encouraged and protected individuality by non-hierarchical social relationships and organisations, individuals would have a strong sense of self and so be less inclined to mindlessly consume. As Fromm puts it: “*If I am what I am and not what I have, nobody can deprive me of or threaten my security and my sense of identity. My centre is within myself.*” [Op. Cit., p. 112] Such self-centred individuals do not have to consume endlessly to build a sense of security or happiness within themselves (a sense which can never actually be created by those means).

In other words, the well-developed individuality that an anarchist society would develop would have less need to consume than the average person in a capitalist one. This is not to suggest that life will be bare and without luxuries in an anarchist society, far from it. A society based on the free expression of individuality could be nothing but rich in wealth and diverse in goods and experiences. What we are arguing here is that an anarchist-communist society would not have to fear rampant consumerism making demand outstrip supply constantly and always precisely because freedom will result in a non-alienated society of well developed individuals.

Of course, this may sound totally utopian. Possibly it is. However, as Oscar Wilde said, a map of the world without Utopia on it is not worth having. One thing is sure, if the developments we have outlined above fail to appear and attempts at communism fail due to waste and demand exceeding supply then a free society would make the necessary decisions and introduce some means of limiting supply (such as, for example, labour notes, equal wages, and so on). Whether or not full communism **can** be introduced instantly is a moot point amongst anarchists, although most would like to see society develop towards a communist goal eventually.

I.4.7 What will stop producers ignoring consumers?

It is often claimed that with a market producers would ignore the needs of consumers. Without the threat (and fear) of unemployment and destitution and the promise of higher profits, producers would turn out shoddy goods. The

holders of this argument point to the example of the Soviet Union which was notorious for terrible goods and a lack of consumer goods.

Capitalism, in comparison to the old Soviet block, does, to some degree make the producers accountable to the consumers. If the producer ignores the desires of the producer then they will lose business to those who do not and be forced, perhaps, out of business (large companies, of course, due to their resources can hold out far longer than smaller ones). Thus we have the carrot (profits) and the stick (fear of poverty) — although, of course, the carrot can be used as a stick against the consumer (no profit, no sale, no matter how much the consumer may need it). Ignoring the obvious objection to this analogy (namely we are human beings, **not** donkeys!) it does have contain an important point. What will ensure that consumer needs are met in an anarchist society?

In an Individualist-Mutualist anarchist system, as it is based on a market, producers would be subject to market forces and so have to meet consumers needs. Of course, there are three problems with this system. Firstly, those without money have no access to the goods produced and so the ill, the handicapped, the old and the young may go without. Secondly, inequalities may become more pronounced as successful producers drive others out of business. Such inequality would skew consumption as it does in capitalism, so ensuring that a minority get all the good things in life (Individualist anarchists would claim that this is unlikely, as non-labour income would be impossible). Lastly, there is the danger that the system would revert back to capitalism. This is because unsuccessful co-operatives may fail and cast their members into unemployment. This creates a pool of unemployed workers, which (in turn) creates a danger of wage-labour being re-created as successful firms hire the unemployed but do not allow them to join the co-operative. This would effectively end self-management and anarchy. Moreover, the successful could hire “*protection agencies*” (i.e. thugs) to enforce capitalist ideas of property rights.

This problem was recognised by Proudhon, who argued for an agro-industrial federation to protect self-management from the effects of market forces, as well as the collectivist-anarchists. In both these schemes, self-management would be protected by agreements between co-operative workplaces to share their resources with others in the confederation, so ensuring that new workers would gain access to the means of life on the same terms as those who already use it. In this way wage-labour would be abolished. In addition, the confederation of workplaces would practice mutual aid and provide resources and credit at cost to their members, so protecting firms from failure while they adjust their production to meet consumer needs.

In both these systems producers would be accountable to consumers by the process of buying and selling between co-operatives. As James Guillaume put it, the workers’ associations would “*deposit their unconsumed commodities in the facilities provided by the [communal] Bank of Exchange . . . The Bank of Exchange would remit to the producers negotiable **vouchers** representing the value of their products*” (this value “*having been established in advance by a contractual agreement between the regional co-operative federations and the various communes*”). [**Bakunin on Anarchism**, pp. 366] If the goods are not in demand then the producer associations would not be able to sell the product of their labour to the Bank of Exchange and so they would adjust their output accordingly. Overtime Guillaume hopes that this system would evolve into free communism as production develops and continually meets demand [**Op. Cit.**,

p. 368].

While mutualist and collectivist anarchists can argue that producers would respond to consumer needs otherwise they would not get an income, communist-anarchists (as they seek a moneyless society) cannot argue their system would reward producers in this way. So what mechanism exists to ensure that “*the wants of all*” are, in fact, met? How does anarcho-communism ensure that production becomes “*the mere servant of consumption*” and “*mould itself on the wants of the consumer, not dictate to him conditions*”? [Peter Kropotkin, **Act for Yourselves**, p. 57]

Libertarian communists argue that in a **free** communist society consumers’ needs would be met. This is because of the decentralised and federal nature of a communist-anarchist society.

So what is the mechanism which makes producers accountable to consumers in a libertarian communist society? Firstly, communes would practice their power of “*exit*” in the distributive network. If a syndicate was producing sub-standard goods or refusing to change their output in the face of changing consumer needs, then the communal stores would turn to those syndicates which **were** producing the goods desired. The original syndicates would then be producing for their own stocks, a pointless task and one few, if any, would do. After all, people generally desire their work to have meaning, to be useful. To just work, producing something no-one wanted would be such a demoralising task that few, if any, sane people would do it (under capitalism people put up with spirit destroying work as some income is better than none, such an “*incentive*” would not exist in a free society).

As can be seen, “*exit*” would still exist in libertarian communism. However, it could be argued that unresponsive or inefficient syndicates would still exist, exploiting the rest of society by producing rubbish (or goods which are of less than average quality) and consuming the products of other people’s labour, confident that without the fear of poverty and unemployment they can continue to do this indefinitely. Without the market, it is argued, some form of bureaucracy would be required (or develop) which would have the power to punish such syndicates. Thus the state would continue in “*libertarian*” communism, with the “*higher*” bodies using coercion against the lower ones to ensure they meet consumer needs or produced enough.

While, at first glance, this appears to be a possible problem on closer inspection it is flawed. This is because anarchism is based not only on “*exit*” but also “*voice*.” Unlike capitalism, libertarian communism is based on association and communication. Each syndicate and commune is in free agreement and confederation with all the others. Thus, if a specific syndicate was producing bad goods or not pulling its weight, then those in contact with them would soon realise this. First, those unhappy with a syndicate’s work would appeal to them directly to get their act together. If this did not work, then they would notify their disapproval by refusing to “*contract*” with them in the future (i.e. they would use their power of “*exit*” as well as refusing to provide the syndicate with any goods it requires). They would also let society as a whole know (via the media) as well as contacting consumer groups and co-operatives and the relevant producer and communal confederations which they and the other syndicate are members of, who would, in turn, inform their members of the problems (the relevant confederations could include local and regional communal confederations, the general cross-industry confederation, its own industrial/communal confeder-

ation and the confederation of the syndicate not pulling its weight). In today's society, a similar process of "word of mouth" warnings and recommendations goes on, along with consumer groups and programmes. Our suggestions here are an extension of this common practice (that this process exists suggests that the price mechanism does not, in fact, provide consumers with all the relevant information they need to make decisions, but this is an aside).

If the syndicate in question, after a certain number of complaints had been lodged against it, still did not change its ways, then it would suffer non-violent direct action. This would involve the boycotting of the syndicate and (perhaps) its local commune with products and investment, so resulting in the syndicate being excluded from the benefits of association. The syndicate would face the fact that no one else wanted to associate with it and suffer a drop in the goods coming its way, including consumption products for its members. In effect, a similar process would occur to that of a firm under capitalism that loses its customers and so its income. However, we doubt that a free society would subject any person to the evils of destitution or starvation (as capitalism does). Rather, it would provide a bare minimum of goods required for survival would still be available.

In the unlikely event this general boycott did not result in a change of heart, then two options are left available. These are either the break-up of the syndicate and the finding of its members new work places or the giving/selling of the syndicate to its current users (i.e. to exclude them from the society they obviously do not want to be part of). The decision of which option to go for would depend on the importance of the workplace in question and the desires of the syndicates' members. If the syndicate refused to disband, then option two would be the most logical choice (unless the syndicate controlled a scare resource). The second option would, perhaps, be best as this would drive home the benefits of association as the expelled syndicate would have to survive on its own, subject to survival by selling the product of its labour and would soon return to the fold.

Kropotkin argued in these terms over 100 years ago. It is worthwhile to quote him at length:

"First of all, is it not evident that if a society, founded on the principle of free work, were really menaced by loafers, it could protect itself without the authoritarian organisation we have nowadays, and without having recourse to wagedom [or payment by results]?"

"Let us take a group of volunteers, combining for some particular enterprise. Having its success at heart, they all work with a will, save one of the associates, who is frequently absent from his post. . . some day the comrade who imperils their enterprise will be told: 'Friend, we should like to work with you; but as you are often absent from your post, and you do your work negligently, we must part. Go and find other comrades who will put up with your indifference!'"

"This is so natural that it is practised everywhere, even nowadays, in all industries . . . [I]f [a worker] does his work badly, if he hinders his comrades by his laziness or other defects, if he is quarrelsome, there is an end of it; he is compelled to leave the workshop.

"Authoritarian pretend that it is the almighty employer and his over-

seers who maintain regularity and quality of work in factories. In reality . . . it is the factory itself, the workmen [and women] who see to the good quality of the work . . .

“Not only in industrial workshops do things go in this way; it happens everywhere, every day, on a scale that only bookworms have as yet no notion of. When a railway company, federated with other companies, fails to fulfil its engagements, when its trains are late and goods lie neglected at the stations, the other companies threaten to cancel the contract, and that threat usually suffices.

“It is generally believed . . . that commerce only keeps to its engagements from fear of lawsuits. Nothing of the sort; nine times in ten the trader who has not kept his word will not appear before a judge. . . the sole fact of having driven a creditor to bring a lawsuit suffices for the vast majority of merchants to refuse for good to have any dealings with a man who has compelled one of them to go to law.

“This being so, why should means that are used today among workers in the workshop, traders in the trade, and railway companies in the organisation of transport, not be made use of in a society based on voluntary work?” [**The Conquest of Bread**, pp. 152–3]

Thus, to ensure producer accountability of production to consumption, no bureaucratic body is required in libertarian communism (or any other form of anarchism). Rather, communication and direct action by those affected by unresponsive producers would be an effective and efficient means of ensuring the accountability of production to consumption.

I.4.8 What about investment decisions?

Obviously, a given society needs to take into account changes in consumption and so invest in new means of production. An anarchist society is no different. As G.D.H Cole points out, “*it is essential at all times, and in accordance with considerations which vary from time to time, for a community to preserve a balance between production for ultimate use and production for use in further production. And this balance is a matter which ought to be determined by and on behalf of the whole community.*” [**Guild Socialism Restated**, p. 144]

How this balance is determined varies according to the school of anarchist thought considered. All agree, however, that such an important task should be under effective community control.

The mutualists see the solution to the problems of investment as creating a system of mutual banks, which reduce interest rates to zero. This would be achieved “[b]y the organisation of credit, on the principle of reciprocity or mutualism. . . In such an organisation credit is raised to the dignity of a social function, managed by the community; and, as society never speculates upon its members, it will lend its credit . . . at the actual cost of transaction.” [Charles A. Dana, **Proudhon and his “Bank of the People”**, p. 36] This would allow money to be made available to those who needed it and so break the back of the capitalist business cycle (i.e. credit would be available as required, not when it was profitable for bankers to supply it) as well as capitalist property relations.

So under a mutualist regime, credit for investment would be available from two sources. Firstly, an individual's or co-operative's own saved funds and, secondly, as zero interest loans from mutual banks, credit unions and other forms of credit associations. Loans would be allocated to projects which the mutual banks considered likely to succeed and repay the original loan.

Collectivist and communist anarchists recognise that credit is based on human activity, which is represented as money. As the Guild Socialist G.D.H. Cole pointed out, the "*understanding of this point [on investment] depends on a clear appreciation of the fact that all real additions to capital take the form of directing a part of the productive power of labour and using certain materials not for the manufacture of products and the rendering of services incidental to such manufacture for purposes of further production.*" [**Guild Socialism Restated**, p. 143] So collectivist and communist anarchists agree with their Mutualist cousins when they state that "[a]ll credit presupposes labour, and, if labour were to cease, credit would be impossible" and that the "legitimate source of credit" was "the labouring classes" who "ought to control it" and "whose benefit [it should] be used" [Charles A. Dana, **Op. Cit.**, p. 35]

Therefore, in collectivism, investment funds would exist for syndicates, communes and their in community ("*People's*") "*banks.*" These would be used to store depreciation funds and as well as other funds agreed to by the collectives for investment projects (for example, collectives may agree to allocate a certain percentage of their labour notes to a common account in order to have the necessary funds available for major investment projects). Similarly, individual syndicates and communes would also create a store of funds for their own investment projects. In this, collectivist anarchism is like mutualism, with communal credit banks being used to facilitate investment by organising credit and savings on a non-exploitative basis (i.e. issuing credit at zero interest).

However, the confederations of syndicates to which these "*People's Banks*" would be linked would have a defined planning function as well — i.e. taking a role in investment decisions to ensure that production meets demand (see below). This would be one factor in deciding which investment plans should be given funding (this, we stress, is hardly "*central planning*" as capitalist firms also plan future investments to meet expected demand).

In a communist-anarchist society, things would be slightly different as this would not have the labour notes used in mutualism and collectivism. This means that the collectives would agree that a certain part of their output and activity will be directed to investment projects. In effect, each collective is able to draw upon the sums approved of by the Commune in the form of an agreed claim on the labour power of all the collectives (investment "*is essentially an allocation of material and labour, and fundamentally, an allocation of human productive power.*" [Cole, **Op. Cit.**, pp. 144–5]). In this way, mutual aid ensures a suitable pool of resources for the future from which all benefit.

How would this work? Obviously investment decisions have implications for society as a whole. The implementation of these decisions require the use of **existing** capacity and so must be the responsibility of the appropriate level of the confederation in question. Investment decisions taken at levels above the production unit become effective in the form of demand for the current output of the syndicates which have the capacity to produce the goods required. This would require each syndicate to "*prepare a budget, showing its estimate of requirements both of goods or services for immediate use, and of extensions*

and improvements.” [Cole, **Op. Cit.**, p. 145] These budgets and investment projects would be discussed at the appropriate level of the confederation (in this, communist-anarchism would be similar to collectivist anarchism).

The confederation of syndicates/communes would be the ideal forum to discuss (communicate) the various investment plans required — and to allocate scarce resources between competing ends. This would involve, possibly, dividing investment into two groups — necessary and optional — and using statistical techniques to consider the impact of an investment decision (for example, the use of input-output tables could be used to see if a given investment decision in, say, the steel industry would require investment in energy production). In this way social needs **and** social costs would be taken into account and ensure that investment decisions are not taken in isolation from one another, so causing bottle-necks and insufficient production due to lack of inputs from other industries.

Necessary investments are those which have been agreed upon by the appropriate confederation. It means that resources and productive capacity are prioritised towards them, as indicated in the agreed investment project. It will not be required to determine precisely **who** will provide the necessary goods for a given investment project, just that it has priority over other requests. When a bank gives a company credit, it rarely asks exactly where that money will be built. Rather, it gives the company the power to command the labour of other workers by supplying them with credit. Similarly in an anarcho-communist society, except that the other workers have agreed to supply their labour for the project in question by designating it a “*necessary investment*.” This means when a request arrives at a syndicate for a “*necessary investment*” a syndicate must try and meet it (i.e. it must place the request into its production schedule before “*optional*” requests, assuming that it has the capacity to meet it). A list of necessary investment projects, including what they require and if they have been ordered, will be available to all syndicates to ensure such a request is a real one.

Optional investment is simply investment projects which have not been agreed to by a confederation. This means that when a syndicate or commune places orders with a syndicate they may not be met or take longer to arrive. The project may go ahead, but it depends on whether the syndicate or commune can find workers willing to do that work. This would be applicable for small scale investment decisions or those which other communes/syndicates do not think of as essential.

This we have two inter-related investment strategies. A communist-anarchist society would prioritise certain forms of investment by the use of “*necessary*” and “*optional*” investment projects. This socialisation of investment will allow a free society to ensure that social needs are met while maintaining a decentralised and dynamic “economy.” Major projects to meet social needs will be organised effectively, but with diversity for minor projects. In addition, it will also allow such a society to keep track of what actual percentage of resources are being used for investment, so ensuring that current needs are not sacrificed for future ones and vice-versa.

As for when investment is needed, it is clear that this will be based on the changes in demand for goods in both collectivist and communist anarchism. As Guillaime puts it, “[b]y means of statistics gathered from all the communes in a region, it will be possible to scientifically balance production and consumption.

In line with these statistics, it will also be possible to add more help in industries where production is insufficient and reduce the number of men where there is a surplus of production.” [Bakunin on Anarchism, p. 370] Obviously, investment in branches of production with a high demand would be essential and this would be easily seen from the statistics generated by the collectives and communes. Tom Brown states this obvious point:

“Goods, as now, will be produced in greater variety, for workers like producing different kinds, and new models, of goods. Now if some goods are unpopular, they will be left on the shelves. . . Of other goods more popular, the shops will be emptied. Surely it is obvious that the assistant will decrease his order of the unpopular line and increase his order of the popular.” [Syndicalism, p. 55]

As a rule of thumb, syndicates that produce investment goods would be inclined to supply other syndicates who are experiencing excess demand before others, all other things being equal. Because of such guidelines and communication between producers, investment would go to those industries that actually required them. In other words, customer choice (as indicated by individuals choosing between the output of different syndicates) would generate information that is relevant to investment decisions.

As production would be decentralised as far as it is sensible and rationale to do so, each locality/region would be able to understand its own requirements and apply them as it sees fit. This means that large-scale planning would not be conducted (assuming that it could work in practice, of course) simply because it would not be needed.

This, combined with an extensive communications network, would ensure that investment not only did not duplicate unused plant within the economy but that investments take into account the specific problems and opportunities each locality has. Of course, collectives would experiment with new lines and technology as well as existing lines and so invest in new technologies and products. As occurs under capitalism, extensive consumer testing would occur before dedicating major investment decisions to new products.

In addition, investment decisions would also require information which showed the different outcomes of different options. By this we simply mean an analysis of how different investment projects relate to each other in terms of inputs and outputs, compared to the existing techniques. This would be in the form of cost-benefit analysis (as outlined in section I.4.4) and would show when it would make economic, social and ecological sense to switch industrial techniques to more efficient and/or more empowering and/or more ecologically sound methods. Such an evaluation would indicate levels of inputs and compare them to the likely outputs. For example, if a new production technique reduced the number of hours worked in total (comparing the hours worked to produce the machinery with that reduced in using it) as well as reducing waste products for a similar output, then such a technique would be implemented.

Similarly with communities. A commune will obviously have to decide upon and plan civic investment (e.g. new parks, housing and so forth). They will also have the deciding say in industrial developments in their area as it would be unfair for syndicate to just decide to build a cement factory next to a housing co-operative if they did not want it. There is a case for arguing that the

local commune will decide on investment decisions for syndicates in its area (for example, a syndicate may produce X plans which will be discussed in the local commune and 1 plan finalised from the debate). For regional decisions (for example, a new hospital) would be decided at the appropriate level, with information fed from the health syndicate and consumer co-operatives. The actual location for investment decisions will be worked out by those involved. However, local syndicates must be the focal point for developing new products and investment plans in order to encourage innovation.

Therefore, under social anarchism no capital market is required to determine whether investment is required and what form it would take. The work that apologists for capitalism claim currently is done by the stock market can be replaced by co-operation and communication between workplaces in a decentralised, confederated network. The relative needs of different consumers of a product can be evaluated by the producers and an informed decision reached on where it would best be used.

Without a capital market, housing, workplaces and so on will no longer be cramped into the smallest space possible. Instead, housing, schools, hospitals, workplaces and so on will be built within a “green” environment. This means that human constructions will be placed within a natural setting and no longer stand apart from nature. In this way human life can be enriched and the evils of cramming as many humans and things into a small a space as is “economical” can be overcome.

In addition, the stock market is hardly the means by which capital is actually raised within capitalism. As Engler points out, “[s]upporters of the system . . . claim that stock exchanges mobilise funds for business. Do they? When people buy and sell shares, ‘no investment goes into company treasuries . . . Shares simply change hands for cash in endless repetition.’ Company treasuries get funds only from new equity issues. These accounted for an average of a mere 0.5 per cent of shares trading in the US during the 1980s.” [Apostles of Greed, pp. 157–158] Indeed, Doug Henwood argues that “the signals emitted by the stock market are either irrelevant or harmful to real economic activity, and that the stock market itself counts little or nothing as a source of finance. Shareholders . . . have no useful role.” [Wall Street, p. 292]

Moreover, the existence of a stock market has serious (negative) effects on investment. As Henwood notes, there “are serious communication problems between managers and shareholders.” This is because “[e]ven if participants are aware of an upward bias to earnings estimates [of companies], and even if they correct for it, managers would still have an incentive to try to fool the market. If you tell the truth, your accurate estimate will be marked down by a sceptical market. So, it’s entirely rational for managers to boost profits in the short term, either through accounting gimmickry or by making only investments with quick paybacks.” So, managers “facing a market [the stock market] that is famous for its preference for quick profits today rather than patient long-term growth have little choice but to do its bidding. Otherwise, their stock will be marked down, and the firm ripe for takeover.” While “[f]irms and economies can’t get richer by starving themselves” stock market investors “can get richer when the companies they own go hungry — at least in the short term. As for the long term, well, that’s someone else’s problem the week after next.” [Op. Cit., p. 171]

Ironically, this situation has a parallel with Stalinist central planning. Under that system manager of State workplaces had an incentive to lie about their

capacity to the planning bureaucracy. The planner would, in turn, assume higher capacity, so harming honest managers and encouraging them to lie. This, of course, had a seriously bad impact on the economy. Unsurprisingly, the similar effects caused by capital markets on economies subject to them as just as bad, downplaying long term issues and investment.

And it hardly needs to be repeated that capitalism results in production being skewed away from the working class and that the “*efficiency*” of market allocation is highly suspect.

Only by taking investment decisions away from “*experts*” and placing it in the hands of ordinary people will current generations be able to invest according to their, and future generations’, self-interest. It is hardly in our interest to have a institution whose aim is to make the wealthy even wealthier and on whose whims are dependent the lives of millions of people.

I.4.9 Should technological advance be seen as anti-anarchistic?

Not necessarily. This is because technology can allow us to “*do more with less*,” technological progress can improve standards of living for all people, and technologies can be used to increase personal freedom: medical technology, for instance, can free people from the scourges of pain, illness, and a “*naturally*” short life span; technology can be used to free labour from mundane chores associated with production; advanced communications technology can enhance our ability to freely associate. The list goes on and on. Therefore, most anarchists agree with Kropotkin when he pointed out that the “*development of [the industrial] technique at last gives man [sic!] the opportunity to free himself from slavish toil.*” [Ethics, p. 2]

For example, increased productivity under capitalism usually leads to further exploitation and domination, displaced workers, economic crisis, etc. But it does not have to in an anarchist world. By way of example, consider a commune in which all resources are distributed equally amongst the members. Let us say that this commune has 5 people who desire to be bakers (or 5 people are needed to work the communal bakery) and, for the sake of argument, 20 hours of production per person, per week is spent on baking bread for the local commune. Now, what happens if the introduction of automation, **as desired, planned and organised by the workers themselves**, reduces the amount of labour required for bread production to 15 person-hours per week, including the labour cost spent in creating and maintaining the new machinery? Clearly, no one stands to lose — even if someone’s work is “*displaced*”, that person will continue to receive the same resource income as before — and they might even gain. This last is due to the fact that 5 person-hours have been freed up from the task of bread production, and those person-hours may now be used elsewhere or converted to leisure, either way increasing each person’s standard of living.

Obviously, this happy outcome derives not only from the technology used, but also (and critically) from its use in an equitable economic and social system. Certainly, a wide variety of outcomes would be possible under alternative social systems. Yet, we have managed to prove our point: in the end, there is no reason why the use of technology cannot be used to empower people and increase their

freedom!

Of course technology can be used for oppressive ends. Human knowledge, like all things, can be used to increase freedom or to decrease it, to promote inequality or reduce it, to aid the worker or to subjugate them, and so on. Technology, as we argued in section D.10, cannot be considered in isolation from the society it is created and used in. In a hierarchical society, technology will be introduced that serves the interests of the powerful and helps marginalise and disempower the majority (*“technology is political,”* to use David Noble’s expression), it does not evolve in isolation from human beings and the social relationships and power structures between them. *“Capitalism has created,”* Cornelius Castoriadis correctly argued, *“a capitalist technology, for its own ends, which are by no means neutral. The real essence of capitalist technology is not to develop production for production’s sake: it is to subordinate and dominate the producers.”* This means that in an anarchist society, technology would have to be transformed and/or developed which empowered those who used it, so reducing any oppressive aspects of it. In the words of Cornelius Castoriadis, the *“conscious transformation of technology will . . . be a central task of a society of free workers.”* [**Workers’ Councils and the Economics of a Self-Managed Society**, p. 13]

However, as Kropotkin argued, we are (potentially) in a good position, because *“[f]or the first time in the history of civilisation, mankind has reached a point where the means of satisfying its needs are in excess of the needs themselves. To impose, therefore, as hitherto been done, the curse of misery and degradation upon vast divisions of mankind, in order to secure well-being and further development for the few, is needed no more: well-being can be secured for all, without placing on anyone the burden of oppressive, degrading toil and humanity can at last build its entire social life on the basis of justice.”* [**Ethics**, p. 2] The question is, for most anarchists, how can we humanise and modify this technology and make it socially and individually liberatory, rather than destroying it (where applicable, of course, certain forms of technology will probably be eliminated due to their inherently destructive nature).

For Kropotkin, like most anarchists, the way to humanise technology and industry was for *“the workers [to] lay hands on factories, houses and banks”* and so *“present production would be completely revolutionised by this simple fact.”* This would be the start of a process which would **integrate** industry and agriculture, as it was *“essential that work-shops, foundries and factories develop within the reach of the fields.”* [**The Conquest of Bread**, p. 190] Such a process would obviously involve the transformation of both the structure and technology of capitalism rather than its simple and unthinking application.

There is another reason for anarchists seeking to transform rather than eliminate current technology. As Bakunin pointed out, *“to destroy . . . all the instruments of labour [i.e. technology and industry] . . . would be to condemn all humanity — which is infinity too numerous today to exist. . . on the simple gifts of nature . . . — to . . . death by starvation.”* His solution to the question of technology was, like Kropotkin’s, to place it at the service of those who use it, to create *“the intimate and complete union of capital and labour”* so that it would *“not . . . remain concentrated in the hands of a separate, exploiting class.”* Only this could *“smash the tyranny of capital.”* [**The Basic Bakunin**, pp. 90–1]

Thus, most anarchists seek to transform technology and industry rather than get rid of it totally.

Most anarchists are aware that “*Capital invested in machines that would re-enforce the system of domination [within the capitalist workplace], and this decision to invest, which might in the long run render the chosen technology economical, was not itself an economical decision but a political one, with cultural sanction.*” [David Noble, **Progress Without People**, p. 6] But this does not change the fact that we need to be in possession of the means of production before we can decide what to keep, what to change and what to throw away as inhuman. In other words, it is not enough to get rid of the boss, although this is a necessary first step!

It is for these reasons that anarchists have held a wide range of opinions concerning the relationship between human knowledge and anarchism. Some, such as Peter Kropotkin, were themselves scientists and saw great potential for the use of advanced technology to expand human freedom. Others have held technology at arm’s length, concerned about its oppressive uses, and a few have rejected science and technology completely. All of these are, of course, possible anarchist positions. But most anarchists support Kropotkin’s viewpoint, but with a healthy dose of practical Luddism when viewing how technology is (ab)used in capitalism (“*The worker will only respect machinery **in the day** when it becomes his friend, shortening his work, rather than as **today**, his enemy, taking away jobs, killing workers.*” [Emile Pouget quoted by David Noble, **Op. Cit.**, p. 15]).

Anarchists of all types recognise the importance of critically evaluating technology, industry and so on. The first step of any revolution will be the seizing of the means of production. The second **immediate** step will be the start of their radical transformation by those who use them and are affected by them (i.e. communities, those who use the products they produce and so on). Few, if any, anarchists seek to maintain the current industrial set-up or apply, unchanged, capitalist technology. We doubt that many of the workers who use that technology and work in industry will leave either unchanged. Rather, they will seek to liberate the technology they use from the influences of capitalism, just as they liberated themselves. In Kropotkin’s words “*if most of the workshops we know are foul and unhealthy, it is because the workers are of no account in the organisation of factories*” and “[s]laves can submit to them, but free men will create new conditions, and their will be pleasant and infinitely more productive.” [**The Conquest of Bread**, p. 121 and p. 123]

This will, of course, involve the shutting down (perhaps instantly or over a period of time) of many branches of industry and the abandonment of such technology which cannot be transformed into something more suitable for use by free individuals. And, of course, many workplaces will be transformed to produce new goods required to meet the needs of the revolutionary people or close due to necessity as a social revolution will disrupt the market for their goods — such as producers of luxury export goods or suppliers of repressive equipment for state security forces. Altogether, a social revolution implies the transformation of technology and industry, just as it implies the transformation of society.

This process of transforming work can be seen from the Spanish Revolution. Immediately after taking over the means of production, the Spanish workers started to transform it. They eliminated unsafe and unhygienic working conditions and workplaces and created new workplaces based on safe and hygienic working conditions. Working practices were transformed as those who did the

work (and so understood it) managed it. Many workplaces were transformed to create products required by the war effort (such as weapons, ammunition, tanks and so on) and to produce consumer goods to meet the needs of the local population as the normal sources of such goods, as Kropotkin predicted, were unavailable due to economic disruption and isolation. Needless to say, these were only the beginnings of the process but they clearly point the way any libertarian social revolution would progress, namely the total transformation of work, industry and technology. Technological change would develop along new lines, ones which will take into account human and ecological needs rather the power and profits of a minority.

Explicit in anarchism is the believe that capitalist and statist methods cannot be used for socialist and libertarian ends. In our struggle for workers' and community self-management is the awareness that workplaces are not merely sites of production — they are also sites of **reproduction**, the reproduction of certain social relationships based on specific relations of authority between those who give orders and those who take them. The battle to democratise the workplace, to place the collective initiative of the direct producers at the centre of any productive activity, is clearly a battle to transform the workplace, the nature of work and, by necessity, technology as well.

As Kropotkin argued, a *“revolution is more than a mere change of the prevailing political system. It implies the awakening of human intelligence, the increasing of the inventive spirit tenfold, a hundredfold; it is the dawn of a new science . . . It is a revolution in the minds of men, as deep, and deeper still, than in their institutions . . . the sole fact of having laid hands on middle-class property will imply the necessity of completely re-organising the whole of economic life in the workplaces, the dockyards, the factories.”* [**The Conquest of Bread**, p. 192] And some think that industry and technology will remain unchanged by such a process and that workers will continue doing the same sort of work, in the same way, using the same methods!

For Kropotkin *“all production has taken a wrong direction, as it is not carried on with a view to securing well-being for all”* under capitalism. [**Op. Cit.**, p. 101] Well-being for all obviously includes those who do the producing and so covers the structure of industry and the technological processes used. Similarly, well-being also includes a person's environment and surroundings and so technology and industry must be evaluated on an ecological basis. Thus Kropotkin supported the integration of agriculture and industry, with *“the factory and workshop at the gates of your fields and gardens.”* These factories would be *“airy and hygienic, and consequently economical, factories in which human life is of more account than machinery and the making of extra profits.”* [**Fields, Factories and Workshops Tomorrow**, p. 197]

Technological progress in an anarchist society, needless to say, will have to take into account these factors as well as others people think are relevant, otherwise the ideal of *“well-being for all”* is rejected.

Capitalism has developed many technologies, some of them harmful or dangerous, but those technologies do not develop by themselves. The technology of cheap solar power, for example, has scarcely moved at all because the capitalists have not chosen to invest in it. Chainsaws do not cut down rain forests, people do; and they do so because they have irresistible economic incentives to do so (whether they be capitalists who stand to make profits or workers who have no other way to survive). Until the economic system is abolished, these incentives

will continue to drive technological progress and change.

So, technology always partakes of and expresses the basic values of the social system in which it is embedded. If you have a system (capitalism) that alienates everything, it will naturally produce alienated forms of technology and it will orient those technologies so as to reinforce itself. As we argued in section D.10, capitalists will select technology which re-enforces their power and profits and skew technological change in that direction rather than in those which empower individuals and make the workplace more egalitarian.

This does not mean that we have to reject all technology and industry because it has been shaped by, or developed within, class society. Certain technologies are, of course, so insanely dangerous that they will no doubt be brought to a prompt halt in any sane society. Similarly, certain forms of technology and industrial process will be impossible to transform as they are inherently designed for oppressive ends. Many other industries which produce absurd, obsolete or superfluous commodities will, of course, cease automatically with the disappearance of their commercial or social rationales. But many technologies, however they may presently be misused, have few if any inherent drawbacks. They could be easily adapted to other uses. When people free themselves from domination, they will have no trouble rejecting those technologies that are harmful while adapting others to beneficial uses.

So if it is true that technology reflects the society which creates it, then technology cannot be inherently bad. A liberated, non-exploitative society will naturally create liberating, non-exploitative technologies, just as the present alienated social system naturally produces alienated forms (or uses) of technology.

Does this argument mean that most anarchists are against the “*abolition of work*”? No, unless you confuse all kinds of productive activity with work. It always takes some “*work*” to create a product (even only if it is food) but that work does not necessarily have to be wage labour or otherwise alienated or subject to domination and hierarchy. A life without dead time does not mean a life where you never have to move a muscle or use your head.

And, of course, different communities and different regions would choose different priorities and different lifestyles. As the CNT’s Zaragoza resolution on libertarian communism made clear, “*those communes which reject industrialisation . . . may agree upon a different model of co-existence.*” Using the example of “*naturists and nudists,*” it argues that they “*will be entitled to an autonomous administration released from the general commitments*” agreed by the communes and their federations and “*their delegates to congresses of the . . . Confederation of Autonomous Libertarian Communes will be empowered to enter into economic contacts with other agricultural and industrial Communes.*” [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 106]

(See Ken Knabb’s **The Poverty of Primitivism** for more details — we have extracted some of the above arguments from this excellent text).

All this means, of course, that technological progress is not neutral but dependent on who makes the decisions. As David Noble argues, “[*t*]echnological determinism, the view that machines make history rather than people, is not correct . . . If social changes now upon us seem necessary, it is because they follow not from any disembodied technological logic, but from a social logic.” Technology conforms to “*the interests of power*” but as “*technological process is a*

social process” then “*it is, like all social processes, marked by conflict and struggle, and the outcome, therefore, is always ultimately indeterminate.*” Viewing technological development “*as a social process rather than as an autonomous, transcendent, and deterministic force can be liberating . . . because it opens up a realm of freedom too long denied. It restores people once again to their proper role as subjects of the story, rather than mere pawns of technology . . . And technological development itself, now seen as a social construct, becomes a new variable rather than a first cause, consisting of a range of possibilities and promising a multiplicity of futures.*” [Forces of Production, pp. 324–5]

Change society and the technology introduced and utilised will likewise change. By viewing technological progress as a new variable, dependent on those who make the decisions and the type of society they live in, allows us to see that technological development is not inherently anti-anarchist. A non-oppressive, non-exploitative, ecological society will develop non-oppressive, non-exploitative, ecological technology just as capitalism has developed technology which facilitates exploitation, oppression and environmental destruction. Thus an anarchist questions technology: The best technology? Best for whom? Best for what? Best according to what criteria, what visions, according to whose criteria and whose visions?

For most anarchists, technological advancement is important in a free society in order to maximise the free time available for everyone and replace mindless toil with meaningful work. The means of doing so is the use of **appropriate** technology (and **not** the worship of technology as such). Only by critically evaluating technology and introducing such forms which empower, are understandable and are controllable by individuals and communities as well as minimising ecological distribution (in other words, what is termed appropriate technology) can this be achieved. Only this critical approach to technology can do justice to the power of the human mind and reflect the creative powers which developed the technology in the first place. Unquestioning acceptance of technological progress is just as bad as being unquestioningly anti-technology.

Whether technological advance is a good thing or sustainable depends on the choices we make, and on the social, political, and economic systems we use. We live in a universe that contains effectively infinite resources of matter and energy, yet at the moment we are stuck on a planet whose resources can only be stretched so far. Anarchists (and others) differ as to their assessments of how much development the earth can take, and of the best course for future development, but there’s no reason to believe that advanced technological societies per se cannot be sustained into the foreseeable future if they are structured and used properly.

I.4.10 What would be the advantage of a wide basis of surplus distribution?

We noted earlier that competition between syndicates can lead to “*petty-bourgeois co-operativism,*” and that to eliminate this problem, the basis of collectivisation needs to be widened so that surpluses are distributed industry-wide or even society-wide. We also pointed out another advantage of a wide surplus distribution: that it allows for the consolidation of enterprises that would otherwise

compete, leading to a more efficient allocation of resources and technical improvements. Here we will back up this claim with illustrations from the Spanish Revolution.

Collectivisation in Catalonia embraced not only major industries like municipal transportation and utilities, but smaller establishments as well: small factories, artisan workshops, service and repair shops, etc. Augustin Souchy describes the process as follows:

“The artisans and small workshop owners, together with their employees and apprentices, often joined the union of their trade. By consolidating their efforts and pooling their resources on a fraternal basis, the shops were able to undertake very big projects and provide services on a much wider scale . . . The collectivisation of the hairdressing shops provides an excellent example of how the transition of a small-scale manufacturing and service industry from capitalism to socialism was achieved.”

“Before July 19th, 1936 [the date of the Revolution], there were 1,100 hairdressing parlours in Barcelona, most of them owned by poor wretches living from hand to mouth. The shops were often dirty and ill-maintained. The 5,000 hairdressing assistants were among the most poorly paid workers. . . Both owners and assistants therefore voluntarily decided to socialise all their shops.

“How was this done? All the shops simply joined the union. At a general meeting they decided to shut down all the unprofitable shops. The 1,100 shops were reduced to 235 establishments, a saving of 135,000 pesetas per month in rent, lighting, and taxes. The remaining 235 shops were modernised and elegantly outfitted. From the money saved, wages were increased by 40%. Everyone having the right to work and everyone received the same wages. The former owners were not adversely affected by socialisation. They were employed at a steady income. All worked together under equal conditions and equal pay. The distinction between employers and employees was obliterated and they were transformed into a working community of equals — socialism from the bottom up.” [“Collectivisations in Catalonia,” in Sam Dolgoff, **The Anarchist Collectives**, pp. 93–94]

Therefore, co-operation ensures that resources are efficiently allocated and waste is minimised by cutting down needless competition. As consumers have choices in which syndicate to consume from as well as having direct communication between consumer co-operatives and productive units, there is little danger that rationalisation in production will hurt the interests of the consumer.

Another way in which wide distribution of surplus can be advantageous is in investment and research and development. By creating a fund for research and development which is independent of the fortunes of individual syndicates, society as a whole can be improved by access to useful new technologies and processes.

Therefore, in a libertarian-socialist society, people (both within the workplace and in communities) are likely to decide to allocate significant amounts of resources for basic research from the available social output. This is because

the results of this research would be freely available to all enterprises and so would aid everyone in the long term. In addition, because workers directly control their workplace and the local community effectively “owns” it, all affected would have an interest in exploring research which would reduce labour, pollution, raw materials and so on or increase output with little or no social impact.

This means that research and innovation would be in the direct interests of everyone involved. Under capitalism, this is not the case. Most research is conducted in order to get an edge in the market by increasing productivity or expanding production into new (previously unwanted) areas. Any increased productivity often leads to unemployment, deskilling and other negative effects for those involved. Libertarian socialism will not face this problem.

It should also be mentioned here that research would be pursued more and more as people take an increased interest in both their own work and education. As people become liberated from the grind of everyday life, they will explore possibilities as their interests take them and so research will take place on many levels within society — in the workplace, in the community, in education and so on.

In addition, it should be noted that basic research is not something which capitalism does well. The rise of the Pentagon system in the USA indicates that basic research often needs state support in order to be successful. As Kenneth Arrow noted over thirty years ago that market forces are insufficient to promote basic research:

“Thus basic research, the output of which is only used as an informational input into other inventive activities, is especially unlikely to be rewarded. In fact, it is likely to be of commercial value to the firm undertaking it only if other firms are prevented from using the information. But such restriction reduces the efficiency of inventive activity in general, and will therefore reduce its quantity also.”
[“Economic Welfare and the Allocation of Resources for Inventiveness,” in National Bureau of Economic Research, **The Rate and Direction of Inventive Activity**, p. 618]

Would modern society have produced so many innovations if it had not been for the Pentagon system, the space race and so on? Take the Internet, for example — it is unlikely that this would have got off the ground if it had not been for the state. Needless to say, of course, much of this technology has been developed for evil reasons and purposes and would be in need of drastic change (and, in many cases, abolition) before it could be used in a libertarian society. However, the fact remains that it is unlikely that a pure market based system could have generated most of the technology we take for granted. As Noam Chomsky argues:

“[Alan] Greenspan [head of the US Federal Reserve] gave a talk to newspaper editors in the US. He spoke passionately about the miracles of the market, the wonders brought by consumer choice, and so on. He also gave examples: the Internet, computers, information processing, lasers, satellites, transistors. It’s an interesting list: these are textbook examples of creativity and production in the public sector. In the case of the Internet, for 30 years it was designed,

developed and funded primarily in the public sector, mostly the Pentagon, then the National Science Foundation — that's most of the hardware, the software, new ideas, technology, and so on. In just the last couple of years it has been handed over to people like Bill Gates . . . In the case of the Internet, consumer choice was close to zero, and during the crucial development stages that same was true of computers, information processing, and all the rest . . .

“In fact, of all the examples that Greenspan gives, the only one that maybe rises above the level of a joke is transistors, and they are an interesting case. Transistors, in fact, were developed in a private laboratory — Bell Telephone Laboratories of AT&T — which also made major contributions to solar cells, radio astronomy, information theory, and lots of other important things. But what is the role of markets and consumer choice in that? Well, again, it turns out, zero. AT&T was a government supported monopoly, so there was no consumer choice, and as a monopoly they could charge high prices: in effect a tax on the public which they could use for institutions like Bell Laboratories . . . So again, it's publicly subsidised. As if to demonstrate the point, as soon as the industry was deregulated, Bell Labs went out of existence, because the public wasn't paying for it any more . . . But that's only the beginning of the story. True, Bell invented transistors, but they used wartime technology, which, again, was publicly subsidised and state-initiated. Furthermore, there was nobody to but transistors at that time, because they were very expensive to produce. So, for ten years the government was the major procurer . . . Government procurement provided entrepreneurial initiatives and guided the development of the technology, which could then be disseminated to industry.” [Rogue States, pp. 192–3]

As well as technological developments, a wide basis of surplus generation would help improve the skills and knowledge of the members of a community. As Keynesian economist Michael Stewart points out, “[t]here are both theoretical and empirical reasons to suppose that market forces under-provide research and development expenditures, as well as both education and training.” [Keynes in the 1990s, p. 77]

If we look at vocational training and education, a wide basis of surplus distribution would aid this no end. Under free market capitalism, vocational training suffers due to the nature of the market. The argument is simple. Under free market capitalism, if companies stood to gain, in terms of higher profits, from training more workers, they would train them. If they did not, that just proves that training was not required. Unfortunately, this piece of reasoning overlooks the fact that profit maximising firms will not incur costs that will be enjoyed by others. This means that firms will be reluctant to spend money on training if they fear that the trained workers will soon be poached by other firms which can offer more money because they had not incurred the cost of providing training. This means that few firms will provide the required training as they could not be sure that the trained workers will not leave for their competitors (and, of course, a trained work force also, due to their skill, have more workplace power and are less replaceable).

By socialising training via confederations of workplaces, syndicates could in-

crease productivity via increasing the skill levels of their members. Higher skill levels will also tend to increase innovation and enjoyment at “*work*” when combined with workers’ self-management. This is because an educated workforce in control of their own time will be unlikely to tolerate mundane, boring, machine-like work and seek ways to eliminate it, improve the working environment and increase productivity to give them more free time.

The free market can also have a negative impact on innovation. This is because, in order to please shareholders with higher share prices, companies may reduce funds available for real investment and R&D, which would also depress growth and employment in the long term. What shareholders might condemn as “*uneconomic*” (investment projects and R&D) can, and does, make society as a whole better off. However, these gains are over the long term and, within capitalism, it is short-term gains which count. Higher share prices in the here and now are essential in order to survive and so see the long-run.

In a more socialised economy, wide-scale collectivisation could aid in allocating resources for Research and Development, long term investment, innovation and so on. Via the use of mutual banks or confederations of syndicates and communes, resources could be allocated which take into account the importance of long-term priorities, as well as social costs, which are not taken into account (indeed, are beneficial to ignore) under capitalism. Rather than penalise long term investment and research and development, a socialised economy would ensure that adequate funds are available, something which would benefit everyone in society in some way.

In addition to work conducted by syndicates, education establishments, communes and so on, it would be essential to provide resources for individuals and small groups to pursue “*pet projects*.” Of course, syndicates and confederations will have their own research institutions but the innovatory role of the interested “*amateur*” cannot be over-rated. As Kropotkin argued:

“What is needed to promote the spirit of innovation is . . . the awakening of thought, the boldness of conception, which our entire education causes to languish; it is the spreading of a scientific education, which would increase the numbers of inquirers a hundred-fold; it is faith that humanity is going to take a step forward, because it is enthusiasm, the hope of doing good, that has inspired all the great inventors. The Social Revolution alone can give this impulse to thought, this boldness, this knowledge, this conviction of working for all.

“Then we shall have vast institutes . . . immense industrial laboratories open to all inquirers, where men will be able to work out their dreams, after having acquitted themselves of their duty towards society; . . . where they will make their experiments; where they will find other comrades, experts in other branches of industry, likewise coming to study some difficult problem, and therefore able to help and enlighten each other — the encounter of their ideas and experiences causing the longed-for solution to be found.” [**The Conquest of Bread**, p. 117]

In addition, unlike under capitalism, where inventors often “*carefully hide their inventions from each other, as they are hampered by patents and Capitalism*

— *that bane of present society, that stumbling-block in the path of intellectual and moral progress,*” inventors within a free society will be able to build upon the knowledge of everyone and past generations. Rather than hide knowledge from others, in case they get a competitive advantage, knowledge would be shared, enriching all involved as well as the rest of society [**Ibid.**]. As John O’Neil argues:

“There is, in a competitive market economy, a disincentive to communicate information. The market encourages secrecy, which is inimical to openness in science. It presupposes a view of property in which the owner has rights to exclude others. In the sphere of science, such rights of exclusion place limits on the communication of information and theories which are incompatible with the growth of knowledge . . . science tends to grow when communication is open. . . [In addition a] necessary condition for the acceptability of a theory or experimental result is that it pass the public, critical scrutiny of competent scientific judges. A private theory or result is one that is shielded from the criteria of scientific acceptability.”
[**The Market**, p. 153]

Thus socialisation would aid innovation and scientific development. This is two fold, by providing the necessary resources for such work and by providing the community spirit required to push the boundaries of science forward.

Lastly, there is the issue of those who cannot work and general provision of public goods. With a wide distribution to surplus, communal hospitals, schools, universities and so on can be created. This simple fact is that any society has members who cannot (indeed, should not) work. For example, the young, the old and the sick. In a mutualist society, particularly an Individualist Anarchists mutualist society, there is no real provision for these individuals unless someone (a family member or friend) provides them with the money required for hospital fees and so on. However, with a communal basis for distribution every member of the commune can receive an education, health care and so on as a right — and so live a fully human life as a right, rather than a privilege. Moreover, the experience of capitalist countries suggests that socialising, say, health care, leads to a service with lower costs than one which is predominately privatised. For example, the administrative costs of the British National Health Service are a fraction of the U.S. or Chilean systems (where a sizeable percentage of income ends up as profit rather than as health care).

This tendency for the use of surplus for communal services (such as hospitals and education) can be seen from the Spanish Revolution. Many collectives funded new hospitals and colleges for their members, providing hundreds of thousands with services they could never have afforded by their own labour. This is a classic example of co-operation helping the co-operators achieve far more than they could by their own isolated activities.

I.4.11 If libertarian socialism eliminates the profit motive, won’t creativity and performance suffer?

Firstly, just to be totally clear, by the profit motive we mean money profit. As anarchists consider co-operation to be in our self-interest — i.e. we will

“profit” from it in the widest sense possible — we are **not** dismissing the fact people usually act to improve their situation. However, money profit is a **very** narrow form of “*self-interest*,” indeed so narrow as to be positively harmful to the individual in many ways (in terms of personal development, interpersonal relationships, economic and social well-being, and so on). In other words, do not take our discussion in this section of the FAQ on the “*profit motive*” to imply a denial of self-interest, quite the reverse. Anarchists simply reject the “*narrow concept of life which consist[s] in thinking that **profits** are the only leading motive of human society.*” [Peter Kropotkin, **Fields, Factories and Workshops Tomorrow**, p. 25]

Secondly, we cannot hope to deal fully with the harmful effects of competition and the profit motive. For more information, we recommend Alfie Kohn’s **No Contest: The Case Against Competition and Punished by Rewards: The Trouble with Gold Stars, Incentive Plans, A’s, Praise and Other Bribes**. He documents the extensive evidence accumulated that disproves the “*common sense*” of capitalism that competition and profits are the best way to organise a society.

According to Alfie Kohn, a growing body of psychological research suggests that rewards can lower performance levels, especially when the performance involves creativity. [“*Studies Find Reward Often No Motivator*,” **Boston Globe**, Monday 19 January 1987] Kohn notes that “*a related series of studies shows that intrinsic interest in a task — the sense that something is worth doing for its own sake — typically declines when someone is rewarded for doing it.*”

Much of the research on creativity and motivation has been performed by Theresa Amabile, associate professor of psychology at Brandeis University. One of her recent experiments involved asking elementary school and college students to make “*silly*” collages. The young children were also asked to invent stories. Teachers who rated the projects found that those students who had contracted for rewards did the least creative work. “*It may be that commissioned work will, in general, be less creative than work that is done out of pure interest*,” Amabile says. In 1985, she asked 72 creative writers at Brandeis and at Boston University to write poetry:

“Some students then were given a list of extrinsic (external) reasons for writing, such as impressing teachers, making money and getting into graduate school, and were asked to think about their own writing with respect to these reasons. Others were given a list of intrinsic reasons: the enjoyment of playing with words, satisfaction from self-expression, and so forth. A third group was not given any list. All were then asked to do more writing.

“The results were clear. Students given the extrinsic reasons not only wrote less creatively than the others, as judged by 12 independent poets, but the quality of their work dropped significantly. Rewards, Amabile says, have this destructive effect primarily with creative tasks, including higher-level problem-solving. ‘The more complex the activity, the more it’s hurt by extrinsic reward, she said.’” [Ibid.]

In another study, by James Gabarino of Chicago’s Erikson Institute for Advanced Studies in Child Development, it was found that girls in the fifth and sixth grades tutored younger children much less effectively if they were promised

free movie tickets for teaching well. “*The study, showed that tutors working for the reward took longer to communicate ideas, got frustrated more easily, and did a poorer job in the end than those who were not rewarded*” [Ibid.]

Such studies cast doubt on the claim that financial reward is the only effective way — or even the best way — to motivate people. As Kohn notes, “[t]hey also challenge the behaviourist assumption that any activity is more likely to occur if it is rewarded.” Amabile concludes that her research “*definitely refutes the notion that creativity can be operantly conditioned.*”

These findings re-enforce the findings of other scientific fields. Biology, social psychology, ethnology and anthropology all present evidence that support co-operation as the natural basis for human interaction. For example, ethnological studies indicate that virtually all indigenous cultures operate on the basis of highly co-operative relationships and anthropologists have presented evidence to show that the predominant force driving early human evolution was co-operative social interaction, leading to the capacity of hominids to develop culture. This is even sinking into capitalism, with industrial psychology now promoting “*worker participation*” and team functioning because it is decisively more productive than hierarchical management. More importantly, the evidence shows that co-operative workplaces are more productive than those organised on other principles. All other things equal, producers’ co-operatives will be more efficient than capitalist or state enterprises, on average. Co-operatives can often achieve higher productivity even when their equipment and conditions are worse. Furthermore, the better the organisation approximates the co-operative ideal, the better the productivity.

All this is unsurprising to social anarchists (and it should make individualist anarchists reconsider their position). Peter Kropotkin argued that, “[i]f we . . . ask Nature: ‘*Who are the fittest: those who are continually at war with each other, or those who support one another?*’ we at once see that those animals which acquire habits of mutual aid are undoubtedly the fittest. They have more chances to survive, and they attain, in their respective classes, the highest development of intelligence and bodily organisation.” [Mutual Aid, p. 24] From his observation that mutual aid gives evolutionary advantage to those who practice it, he derived his political philosophy — a philosophy which stressed community and co-operative endeavour.

Modern research has reinforced his argument. For example, as noted, Alfie Kohn is also the author of **No Contest: The Case Against Competition** and he spent seven years reviewing more than 400 research studies dealing with competition and co-operation. Prior to his investigation, he believed that “*competition can be natural and appropriate and healthy.*” After reviewing research findings, he radically revised this opinion, concluding that, the “*ideal amount of competition . . . in any environment, the classroom, the workplace, the family, the playing field, is none . . . [Competition] is always destructive.*” [Noetic Sciences Review, Spring 1990]

Here we present a very short summary of his findings. According to Kohn, there are three principle consequences of competition:

Firstly, it has a negative effect on productivity and excellence. This is due to increased anxiety, inefficiency (as compared to co-operative sharing of resources and knowledge), and the undermining of inner motivation. Competition shifts the focus to victory over others, and away from intrinsic motivators such as curiosity, interest, excellence, and social interaction. Studies show that co-

operative behaviour, by contrast, consistently predicts good performance — a finding which holds true under a wide range of subject variables. Interestingly, the positive benefits of co-operation become more significant as tasks become more complex, or where greater creativity and problem-solving ability is required (as indicated above).

Secondly, competition lowers self-esteem and hampers the development of sound, self-directed individuals. A strong sense of self is difficult to attain when self-evaluation is dependent on seeing how we measure up to others. On the other hand, those whose identity is formed in relation to how they contribute to group efforts generally possess greater self-confidence and higher self-esteem.

Finally, competition undermines human relationships. Humans are social beings; we best express our humanness in interaction with others. By creating winners and losers, competition is destructive to human unity and prevents close social feeling.

Social Anarchists have long argued these points. In the competitive mode, people work at cross purposes, or purely for (material) personal gain. This leads to an impoverishment of society and hierarchy, with a lack of communal relations that result in an impoverishment of all the individuals involved (mentally, spiritually, ethically and, ultimately, materially). This not only leads to a weakening of individuality and social disruption, but also to economic inefficiency as energy is wasted in class conflict and invested in building bigger and better cages to protect the haves from the have-nots. Instead of creating useful things, human activity is spent in useless toil reproducing an injustice and authoritarian system.

All in all, the results of competition (as documented by a host of scientific disciplines) shows its poverty as well as indicating that co-operation is the means by which the fittest survive.

Moreover, as Kohn discusses in **Punished by Rewards**, the notion that material rewards result in better work is simply not true. Basing itself on simple behaviourist psychology, such arguments fail to meet the test of long-term success (and, indeed, can be counter-productive). Indeed, it means treating human beings as little better than pets or other animals (he argues that it is “*not an accident that the theory behind ‘Do this and you’ll get that’ derives from work with other species, or that behaviour management is frequently described in words better suited to animals.*”) In other words, it “*is by its very nature dehumanising.*” [**Punished by Rewards**, p. 24 and p. 25]

Rather than simply being motivated by outside stimuli like mindless robots, people are not passive. We are “*beings who possess natural curiosity about ourselves and our environment, who search for and overcome challenges, who try and master skills and attain competence, and who seek new levels of complexity in what we learn and do . . . in general we act on the environment as much as we are acted on by it, and we do not do so simply in order to receive a reward.*” [**Op. Cit.**, p. 25]

Kohn presents extensive evidence to back upon his case that rewards harm activity and individuals. We cannot do justice to it here. We will present a few examples. One study with college students showed that those paid to work on a puzzle “*spent less time on it than those who hadn’t been paid*” when they were given a choice of whether to work on it or not. “*It appeared that working for a reward made people less interested in the task.*” Another study with children showed that “*extrinsic rewards reduce intrinsic motivation.*” Scores of other

studies confirmed this. This is because a reward is effectively saying that a given activity is not worth doing for its own sake — and why would anyone wish to do something they have to be bribed to do? [Op. Cit., p. 70 and p. 71]

In the workplace, a similar process goes on. Kohn presents extensive evidence to show that extrinsic motivation also does not work in the workplace. Indeed, he argues that “*economists have it wrong if they think of work as a ‘disutility’ — something unpleasant we must do in order to be able to buy what we need, merely a means to an end.*” Kohn stresses that “*to assume that money is what drives people is to adopt an impoverished understanding of human motivation.*” Moreover, “*the risk of **any** incentive or pay-for-performance system is that it will make people less interested in their work and therefore less likely to approach it with enthusiasm and a commitment to excellence. Furthermore, **the more closely we tie compensation (or other rewards) to performance, the most damage we do.***” [Op. Cit., p. 131, p. 134 and p. 140]

Kohn argues that the idea that human’s will only work for profit or rewards “*can be fairly described as dehumanising*” if “*the capacity for responsible action, the natural love of learning, and the desire to do good work are already part of who we are.*” Also, it is “*a way of trying to control people*” and so to “*anyone who is troubled by a model of human relationships founded principally on the idea of one person controlling another must ponder whether rewards are as innocuous as they are sometimes made out to be.*” He uses the example of a workplace, where “*there is no getting around the fact that ‘the basic purpose of merit pay is manipulative.’ One observer more bluntly characterises incentives as ‘demeaning’ since the message they really convey is, ‘Please big daddy boss and you will receive the rewards that the boss deems appropriate.’*” [Op. Cit., p. 26]

Given that much work is controlled by others and can be a hateful experience under capitalism does not mean that it has to be that way. Clearly, even under wage slavery most workers can and do find work interesting and seek to do it well — not because of possible rewards or punishment but because we seek meaning in our activities and try and do them well. Given that research shows that reward orientated work structures harm productivity and excellence, social anarchists have more than just hope to base their ideas. Such research confirms Kropotkin’s comments:

*“Wage-work is serf-work; it cannot, it must not, produce all it could produce. And it is high time to disbelieve the legend which presents wagedom as the best incentive to productive work. If industry nowadays brings in a hundred times more than it did in the days of our grandfathers, it is due to the sudden awakening of physical and chemical sciences towards the end of the [18th] century; not to the capitalist organisation of wagedom, but **in spite** of that organisation.”*
[The Conquest of Bread, p. 150]

For these reasons, social anarchists are confident that the elimination of the profit motive within the context of self-management will not harm productivity and creativity, but rather **enhance** them (within an authoritarian system in which workers enhance the power and income of bureaucrats, we can expect different results). With the control of their own work and workplaces ensured, all

working people can express their abilities to the full. This will see an explosion of creativity and initiative, not a reduction.

I.4.12 Won't there be a tendency for capitalist enterprise to reappear in any socialist society?

This is a common right-libertarian objection. Robert Nozick, for example, imagines the following scenario:

“[S]mall factories would spring up in a socialist society, unless forbidden. I melt some of my personal possessions and build a machine out of the material. I offer you and others a philosophy lecture once a week in exchange for yet other things, and so on . . . some persons might even want to leave their jobs in socialist industry and work full time in this private sector. . . [This is] how private property even in means of production would occur in a socialist society.”

Hence Nozick claims that *“the socialist society will have to forbid capitalist acts between consenting adults.”* [**Anarchy, State and Utopia**, pp. 162–3]

As Jeff Stein points out, however, *“the only reason workers want to be employed by capitalists is because they have no other means for making a living, no access to the means of production other than by selling themselves. For a capitalist sector to exist there must be some form of private ownership of productive resources, and a scarcity of alternatives. The workers must be in a condition of economic desperation for them to be willing to give up an equal voice in the management of their daily affairs and accept a boss.”* [“Market Anarchism? Caveat Emptor!”, a review of **A Structured Anarchism : An Overview of Libertarian Theory and Practice** by John Griffin, **Libertarian Labour Review** #13, Winter 1992–93, pp. 33–39]

In an anarchist society, there is no need for anyone to *“forbid”* capitalist acts. All people have to do is **refrain** from helping would-be capitalists set up monopolies of productive assets. This is because, as we have noted in section B.3.2, capitalism cannot exist without some form of state to protect such monopolies. In a libertarian-socialist society, of course, there would be no state to begin with, and so there would be no question of it *“refraining”* from doing anything, including protecting would-be capitalists’ monopolies of the means of production. In other words, would-be capitalists would face stiff competition for workers in an anarchist society. This is because self-managed workplaces would be able to offer workers more benefits (such as self-government, better working conditions, etc.) than the would-be capitalist ones. The would-be capitalists would have to offer not only excellent wages and conditions but also, in all likelihood, workers’ control and hire-purchase on capital used. The chances of making a profit once the various monopolies associated with capitalism are abolished are slim.

It should be noted that Nozick makes a serious error in his case. He assumes that the *“use rights”* associated with an anarchist (i.e. socialist) society are identical to the *“property rights”* of a capitalist one. This is **not** the case, and so his argument is weakened and loses its force. Simply put, there is no such thing as an absolute or *“natural”* law of property. As John Stuart Mill

pointed out, “*powers of exclusive use and control are very various, and differ greatly in different countries and in different states of society.*” [“*Chapters on Socialism,*” **Principles of Political Economy**, p. 432] Therefore, Nozick slips an ideological ringer into his example by erroneously interpreting socialism (or any other society for that matter) as specifying a distribution of private property rights (like those he, and other supporters of capitalism, believes in) along with the wealth. As Mill argued, “[*o*]ne of the mistakes oftenest committed, and which are the sources of the greatest practical errors in human affairs, is that of supposing that the same name always stands for the same aggregation of ideas. No word has been subject of more of this kind of misunderstanding than the word *property.*” [Ibid.] Unfortunately, this error seems particularly common with right-wing libertarians, who assume any use of the word “*property*” means what they mean by the word (this error reaches ridiculous levels when it comes to their co-option of the Individualist Anarchists based on this error!).

In other words, Nozick assumes that in **all** societies property rights must replace use rights in both consumption **and** production (an assumption that is ahistorical in the extreme). As Cheyney C. Ryan comments, “[*d*]ifferent conceptions of justice differ not only in how they would apportion society’s holdings but in what rights individuals have over their holdings once they have been apportioned.” [“*Property Rights and Individual Liberty*”, in **Reading Nozick**, p. 331]

In effect, what possessions someone holds within a libertarian socialist society will not be his or her property (in the capitalist sense) any more than a company car is the property of the employee under capitalism. This means that as long as an individual remained a member of a commune and abided by the rules they helped create in that commune then they would have full use of the resources of that commune and could use their possessions as they saw fit (even “*melt them down*” to create a new machine, or whatever). Such lack of **absolute** “*ownership*” does not reduce liberty any more than the employee and the company car he or she uses (bar destruction and selling it, the employee can use it as they see fit).

This point highlights another flaw in Nozick’s argument. If his argument is true, then it applies equally to capitalist society. For 40 hours plus a week, workers are employed by a boss. In that time they are given resources to use, under instructions of their boss. They are most definitely **not** allowed to melt down these resources to create a machine or use the resources they have been given access to further their own plans. In other words, “*capitalist society will have to forbid capitalist acts between consenting adults.*” This can apply equally to rented accommodation as well, for example when landlords ban working from home or selling off the furniture that is provided. Thus, ironically, capitalism forbids capitalist acts between consenting adults all the time.

Of course, Nozick’s reply to this point would be that the individual’s involved have “*consented*” to these rules when they signed their contract. But the same can be said of an anarchist society — it is freely joined and freely left. To join a communist-anarchist society it would simply be a case of agreeing to “*exchange*” the product of ones labour freely with the other members of that society. Thus you could smelt down personal possessions and create a machine, exchange your time with others and so on. However, if wage labour becomes involved then the individuals involved have ceased being members of “*the socialist society*” by their actions. They have violated their agreements with their fellows and so it is

not a case of “*forbidding*” certain acts. Rather it is a case of individuals meeting their self-created obligations. If this is “*authoritarian*” then so is capitalism — and we must stress that at least anarchist associations are based on self-management and so the individuals involved have an equal say in the obligations they live under.

Notice also that Nozick confuses exchange with capitalism (“*I offer you a lecture once a week in exchange for other things*”). This is a telling mistake by someone who claims to be an expert on capitalism, because the defining feature of capitalism is not exchange (which obviously took place long before capitalism existed) but labour contracts involving capitalist middlemen who appropriate a portion of the value produced by workers — in other words, wage labour. Nozick’s example is merely a direct labour contract between the producer and the consumer. It does not involve any capitalist intermediary taking a percentage of the value created by the producer. Nor does it involve exploitative wage labour, what makes capitalism capitalism. It is only this latter type of transaction that libertarian socialism prevents — and not by “*forbidding*” it but simply by refusing to maintain the conditions necessary for it to occur, i.e. protection of capitalist property.

In addition, we must note that Nozick also confuses “*private property in the means of production*” with capitalism. Liberation socialism can be easily compatible with “*private property in the means of production*” when that “*private property*” is based on **possession** rather than capitalistic property. This can be seen from Kropotkin’s arguments that peasant and artisan workers, those who “*exploit nobody,*” would **not** be expropriated in an anarchist revolution. [**Act for Yourselves**, pp. 104–5] Nozick, in other words, confuses private property with possession and confuses pre-capitalist forms of production with capitalist ones. Thus possession of the means of production by people outside of the free commune is perfectly acceptable to social anarchists (see also section I.6.2).

Lastly, we must also note that Nozick also ignores the fact that acquisition **must** come before transfer, meaning that before “*consenting*” capitalist acts occur, individual ones must precede it. As argued above, for this to happen the would-be capitalist must steal communally owned resources by barring others from using them. This obviously would restrict the liberty of those who currently used them and so be hotly opposed by members of a community. If an individual did desire to use resources to employ wage labour then they would have effectively removed themselves from “*socialist society*” and so that society would bar them from using **its** resources (i.e. they would have to buy access to all the resources they currently took for granted).

Thus an anarchist society would have a flexible approach to Nozick’s (flawed) argument. Individuals, in their free time, could “*exchange*” their time and possessions as they saw fit. These, however, are not “*capitalist acts*” regardless of Nozick’s claims. However, the moment an individual employs wage labour then, by this act, they have broken their agreements with their fellows and, therefore, no longer part of “*socialist society.*” This would involve them no longer having access to the benefits of communal life and to communal possessions. They have, in effect, placed themselves outside of their community and must fair for themselves. After all, if they desire to create “*private property*” (in the capitalist sense) then they have no right of access to communal possessions without paying for that right. For those who become wage slaves, a socialist society would, probably, be less strict. As Bakunin argued:

*“Since the freedom of every individual is inalienable, society shall never allow any individual whatsoever legally to alienate his [or her] freedom or engage upon any contract with another on any footing but the utmost equality and reciprocity. It shall not, however, have the power to disbar a man or woman so devoid of any sense of personal dignity as to contract a relationship of voluntary servitude with another individual, but it will consider them as living off private charity and therefore unfit to enjoy political rights **throughout the duration of that servitude.**”* [Michael Bakunin: Selected Writings, pp. 68–9]

It should also be noted here that Nozick’s theory does not provide any support for such appropriation of commonly held resources, meaning that his (right) libertarianism is totally without foundations (see section B.3.4 for details). His argument in favour of such appropriations recognises that certain liberties are very definitely restricted by private property (and it should be kept in mind that the destruction of commonly held resources, such as village commons, were enforced by the state — see section F.8.3). As Cheyney C. Ryan points out, Nozick *“invoke[s] personal liberty as the decisive ground for rejecting patterned principles of justice [such as socialism] and restrictions on the ownership of capital. . . [b]ut where the rights of private property admittedly restrict the liberties of the average person, he seems perfectly happy to **trade off** such liberties against material gain for society as a whole.”* [“Property Rights and Individual Liberty”, in **Reading Nozack**, p. 339]

Again, as pointed out in section F.2 (“What do ‘anarcho’-capitalists mean by ‘freedom?’”) right-libertarians would better be termed *“Propertarians.”* Why is liberty accorded a primary importance when arguing against socialism but not when private property restricts liberty? Obviously, Nozick considers the liberties associated with private property as more important than liberty **in general**. Likewise, capitalism must forbid corresponding socialist acts by individuals (for example, squatting unused property or trespassing on private property) and often socialist acts between consenting individuals (for example, the formation of unions against the wishes of the property owner who is, of course, sovereign over their property and those who use it, or the use of workplace resources to meet the needs of the producer rather than the owner).

So, to conclude, this question involves some strange logic (and many question-begging assumptions) and ultimately fails in its attempt to prove libertarian socialism must “ban” *“capitalistic acts between individuals.”* In addition, the objection undermines capitalism because it cannot support the creation of private property out of communal property in the first place.

I.4.13 Who will do the *“dirty”* or unpleasant work?

This problem affects every society, including capitalism of course. Under capitalism, this problem is *“solved”* by ensuring that such jobs are done by those at the bottom of the social pile. In other words, it does not really solve the problem at all — it just ensures that some people are subject to this work the bulk of their working lives. However, most anarchists reject this flawed solution in favour of something better, one that shares the good with the bad and so ensure everyone’s life is better.

How this would be done depends on the kind of libertarian community you are a member of. Obviously, few would argue against the idea that individuals will voluntarily work at things they enjoyed doing. However there are some jobs that few, if any, would enjoy (for example, collecting rubbish, processing sewage, dangerous work, etc.). So how would an anarchist society deal with it?

It will be clear what is considered unpleasant work in any society — few people (if any) will volunteer to do it. As in any advanced society, communities and syndicates who required extra help would inform others of their need by the various form of media that existed. In addition, it would be likely that each community would have a “*division of activity*” syndicate whose work would be to distribute information about these posts and to which members of a community would go to discover what placements existed for the line of “work” they were interested in. So we have a means by which syndicates and communes can ask for new hands and the means by which individuals can discover these placements. Obviously, some work will still require qualifications and that will be taken into account when syndicates and communes “advertise” for help.

For “work” placements in which supply exceeded demand, it would be easy to arrange a work share scheme to ensure that most people get a chance to do that kind of work (see below for a discussion of what could happen if the numbers applying for a certain form of work were too high for this to work). When such placements are marked by an excess of demand by supply, its obvious that the activity in question is not viewed as pleasant or desirable. Until such time as it can be automated away, a free society will have to encourage people to volunteer for “work” placements they do not particularly want to do.

So, it is obvious that not all “jobs” are equal in interest or enjoyment. It is sometimes argued that people would start to join or form syndicates which are involved in more fun activities. By this process excess workers would be found in the more enjoyable “jobs” while the boring and dangerous ones would suffer from a scarcity of willing workers. Hence, so the argument goes, a socialist society would have to force people to do certain jobs and so that requires a state. Obviously, this argument ignores the fact that under capitalism usually it is the boring, dangerous work which is the least well paid with the worse working conditions. In addition, this argument ignores the fact that under workers self-management boring, dangerous work would be minimised and transformed as much as possible. Only under capitalist hierarchy are people in no position to improve the quality of their work and working environment. As George Barrett argues:

“Now things are so strangely organised at present that it is just the dirty and disagreeable work that men will do cheaply, and consequently there is no great rush to invent machines to take their place. In a free society, on the other hand, it is clear that the disagreeable work will be one of the first things that machinery will be called upon to eliminate. It is quite fair to argue, therefore, that the disagreeable work will, to a large extent, disappear in a state of anarchism.”

[Objections to Anarchism]

Moreover, most anarchists would think that the argument that there would be a flood of workers taking up “*easy*” work placements is abstract and ignores the dynamics of a real society. While many individuals would try to create new

productive syndicates in order to express themselves in innovative work outwith the existing research and development going on within existing syndicates, the idea that the majority of individuals would leave their current work at a drop of a hat is crazy. A workplace is a community and part of a community and people would value the links they have with their fellow workers. As such they would be aware of the impacts of their decisions on both themselves and society as a whole. So, while we would expect a turnover of workers between syndicates, the mass transfers claimed in this argument are unlikely. Most workers who did want to try their hand at new work would apply for work places at syndicates that required new people, not create their own ones. Because of this, work transfers would be moderate and easily handled.

However, the possibility of mass desertions does exist and so must be addressed. So how would a libertarian socialist society deal with a majority of its workers deciding to all do interesting work, leaving the boring and/or dangerous work undone? It, of course, depends on the type of anarchism in question and is directly related to the question of who will do the “*dirty work*” in an anarchist society. So, how will an anarchist society ensure that individual preferences for certain types of work matches the requirements of social demand for labour?

Under mutualism, those who desired a certain form of work done would reach an agreement with a workers or a co-operative and pay them to do the work in question. Individuals would form co-operatives with each co-operative would have to find its place on the market and so this would ensure that work was spread across society as required. Individuals desiring to form a new co-operative would either provide their own start up credit or arrange a interest free loan from a mutual bank. However, this could lead to some people doing unpleasant work all the time and so is hardly a solution. As in capitalism, we may see some people doing terrible work because it is better than no work at all. This is a solution few anarchists would support.

In a collectivist or communist anarchist society, such an outcome would be avoided by sharing such tasks as fairly as possible between a community’s members. For example, by allocating a few days a month to all fit members of a community to do work which no one volunteers to do, it would soon be done. In this way, every one shares in the unpleasant as well as pleasant tasks (and, of course, minimises the time any one individual has to spend on it). Or, for tasks which are very popular, individuals would also have to do unpleasant tasks as well. In this way, popular and unpopular tasks would balance each other out.

Another possible solution could be to follow the ideas of Josiah Warren and take into account the undesirability of the work when considering the level of labour notes received or communal hours worked. In other words, in a collectivist society the individuals who do unpleasant work may be “rewarded” (along with social esteem) with a slightly higher pay — the number of labour notes, for example, for such work would be a multiple of the standard amount, the actual figure being related to how much supply exceeds demand (in a communist society, a similar solution could be possible, with the number of necessary hours required by an individual being reduced by an amount that corresponds to the undesirability of the work involved). The actual levels of “reward” would be determined by agreements between the syndicates.

To be more precise, in a collectivist society, individuals would either use their own savings and/or arrange loans of community labour banks for credit in order to start up a new syndicate. This will obviously restrict the number of new

syndicates being formed. In the case of individuals joining existing syndicates, the labour value of the work done would be related to the number of people interested in doing that work. For example, if a given type of work has 50% more people wanting to do it than actually required, then the labour value for one hours work in this industry would correspondingly be less than one hour. If fewer people applied than required, then the labour value would increase, as would holiday time, etc.

In this way, “*supply and demand*” for workers would soon approximate each other. In addition, a collectivist society would be better placed than the current system to ensure work-sharing and other methods to spread unpleasant and pleasant tasks equally around society due to its organs of self-management and the rising social awareness via participation and debate within those organs.

A communist-anarchist society’s solution would be similar to the collectivist one. There would still be basic agreements between its members for work done and so for work placements with excess supply of workers the amount of hours necessary to meet the confederations agreed minimum would correspondingly increase. For example, an industry with 100% excess supply of volunteers would see its minimum requirement increase from (say) 20 hours a week to 30 hours. An industry with less applicants than required would see the number of required hours of “*work*” decrease, plus increases in holiday time and so on. As G.D.H. Cole argues in respect of this point:

“Let us first by the fullest application of machinery and scientific methods eliminate or reduce . . . ‘dirty work’ that admit to such treatment. This has never been tried. . . under capitalism. . . It is cheaper to exploit and ruin human beings. . . Secondly, let us see what forms of ‘dirty work’ we can do without . . . [and] if any form of work is not only unpleasant but degrading, we will do without it, whatever the cost. No human being ought to be allowed or compelled to do work that degrades. Thirdly, for what dull or unpleasant work remains, let us offer whatever special conditions are required to attract the necessary workers, not in higher pay, but in shorter hours, holidays extending over six months in the year, conditions attractive enough to men who have other uses for their time or attention to being the requisite number to undertake it voluntarily.” [Guild Socialism Restated, p. 76]

By these methods a balance between industrial sectors would be achieved as individuals would balance their desire for interesting work with their desires for free time. Over time, by using the power of appropriate technology, even such time keeping would be minimised or even got eliminated as society developed freely.

And it is important to remember that the means of production required by new syndicates do not fall from the sky. Other members of society will have to work to produce the required goods. Therefore it is likely that the syndicates and communes would agree that only a certain (maximum) percentage of production would be allocated to start-up syndicates (as opposed to increasing the resources of existing confederations). Such a figure would obviously be revised periodically in order to take into account changing circumstances. Members of the community who decide to form syndicates for new productive tasks or

syndicates which do the same work but are independent of existing confederations would have to get the agreement of other workers to supply them with the necessary means of production (just as today they have to get the agreement of a bank to receive the necessary credit to start a new business). By budgeting the amounts available, a free society can ensure that individual desires for specific kinds of work can be matched with the requirements of society for useful production.

And we must point out (just to make sure we are not misunderstood) that there will be no group of “*planners*” deciding which applications for resources get accepted. Instead, individuals and associations would apply to different production units for resources, whose workers in turn decide whether to produce the goods requested. If it is within the syndicate’s agreed budget then it is likely that they will produce the required materials. In this way, a communist-anarchist society will ensure the maximum amount of economic freedom to start new syndicates and join existing ones plus ensure that social production does not suffer in the process.

Of course, no system is perfect — we are sure that not everyone will be able to do the work they enjoy the most (this is also the case under capitalism, we may add). In an anarchist society every method of ensuring that individuals pursue the work they are interested in would be investigated. If a possible solution can be found, we are sure that it will. What a free society would make sure of was that neither the capitalist market redeveloped (which ensures that the majority are marginalised into wage slavery) or a state socialist “*labour army*” type allocation process developed (which would ensure that free socialism did not remain free or socialist for long).

In this manner, anarchism will be able to ensure the principle of voluntary labour and free association as well as making sure that unpleasant and unwanted “*work*” is done. Moreover, most anarchists are sure that in a free society such requirements to encourage people to volunteer for unpleasant work will disappear over time as feelings of mutual aid and solidarity become more and more common place. Indeed, it is likely that people will gain respect for doing jobs that others might find unpleasant and so it might become “*glamorous*” to do such activity. Showing off to friends can be a powerful stimulus in doing any activity. So anarchists would agree with Albert and Hahnel when they say that:

*“In a society that makes every effort to depreciate the esteem that derives from anything other than conspicuous consumption, it is not surprising that great income differentials are seen as necessary to induce effort. But to assume that only conspicuous consumption can motivate people because under capitalism we have strained to make it so is unwarranted. There is plenty of evidence that people can be moved to great sacrifices for reasons other than a desire for personal wealth. . . there is good reason to believe that for nonpathological people wealth is generally coveted only as a **means** of attaining other ends such as economic security, comfort, social esteem, respect, status, or power.”* [The Political Economy of Participatory Economics, p. 52]

We should note here that the education syndicates would obviously take into account the trends in “*work*” placement requirements when deciding upon

the structure of their classes. In this way, education would respond to the needs of society as well as the needs of the individual (as would any productive syndicate).

I.4.14 What about the person who will not work?

Anarchism is based on voluntary labour. If people do not desire to work then they cannot (must not) be forced to. The question arises of what to do with those (a small minority, to be sure) who refuse to work.

On this question there is some disagreement. Some anarchists, particularly communist-anarchists, argue that the lazy should not be deprived of the means of life. Social pressure, they argue, would force those who take, but do not contribute to the community, to listen to their conscience and start producing for the community that supports them. Other anarchists are less optimistic and agree with Camillo Berneri when he argues that anarchism should be based upon “*no compulsion to work, but no duty towards those who do not want to work.*” [“*The Problem of Work*”, in **Why Work?**, Vernon Richards (ed.), p. 74] This means that an anarchist society will not continue to feed, clothe, house someone who can produce but refuses to. Most anarchists have had enough of the wealthy under capitalism consuming but not producing and do not see why they should support a new group of parasites after the revolution.

Obviously, there is a difference between not wanting to work and being unable to work. The sick, children, the old, pregnant women and so on will be looked after by their friends and family (or by the commune, as desired by those involved). As child rearing would be considered “*work*” along with other more obviously economic tasks, mothers and fathers will not have to leave their children unattended and work to make ends meet. Instead, consideration will be given to the needs of both parents and children as well as the creation of community nurseries and child care centres.

We have to stress here that an anarchist society will not deny anyone the means of life. This would violate the voluntary labour which is at the heart of all schools of anarchism. Unlike capitalism, the means of life will not be monopolised by any group — including the commune. This means that someone who does not wish to join a commune or who does not pull their weight within a commune and are expelled will have access to the means of making a living outside the commune.

We stated that we stress this fact as many supporters of capitalism seem to be unable to understand this point (or prefer to ignore it and so misrepresent the anarchist position). In an anarchist society, no one will be forced to join a commune simply because they do not have access to the means of production and/or land required to work alone. Unlike capitalism, where access to these essentials of life is dependent on buying access to them from the capitalist class (and so, effectively, denied to the vast majority), an anarchist society will ensure that all have access and have a real choice between living in a commune and working independently. This access is based on the fundamental difference between possession and property — the commune possesses as much land as it needs, as do non-members. The resources used by them are subject to the usual possession rationale — they possess it only as long as they use it and cannot bar others using it if they do not (i.e., it is not property).

Thus an anarchist commune remains a voluntary association and ensures the end of all forms of wage slavery (see also section I.1.4). The member of the commune has the choice of working as part of a community, giving according to their abilities and taking according to their needs (or some other means of organising production and consumption such as equal income or receiving labour notes, and so on), or working independently and so free of communal benefits as well as any commitments (bar those associated with using communal resources such as roads and so on).

So, in most, if not all, anarchist communities, individuals have two options, either they can join a commune and work together as equals, or they can work as an individual or independent co-operative and exchange the product of their labour with others. If an individual joins a commune and does not carry their weight, even after their fellow workers ask them to, then that person will possibly be expelled and given enough land, tools or means of production to work alone. Of course, if a person is depressed, run down or otherwise finding it hard to join in communal responsibilities then their friends and fellow workers would do everything in their power to help and be flexible in their approach to the problem.

Some anarchist communities may introduce what Lewis Mumford termed “*basic communism*.” This means that everyone would get a basic amount of “*purchasing power*,” regardless of productive activity. If some people were happy with this minimum of resources then they need not work. If they want access to the full benefits of the commune, then they could take part in the communal labour process. This could be a means of eliminating all forces, even communal ones, which drive a person to work and so ensure that all labour is fully voluntary (i.e. not even forced by circumstances). What method a community would use would depend on what people in that community thought was best.

It seems likely, however, that in most anarchist communities people will have to work, but how they do so will be voluntary. If people did not work then some would live off the labour of those who do work and would be a reversion to capitalism. However, most social anarchists think that the problem of people trying not to work would be a very minor one in an anarchist society. This is because work is part of human life and an essential way to express oneself. With work being voluntary and self-managed, it will become like current day hobbies and many people work harder at their hobbies than they do at “*real*” work (this FAQ can be considered as an example of this!). It is the nature of employment under capitalism that makes it “*work*” instead of pleasure. Work need not be a part of the day that we wish would end. As Kropotkin argued (and has been subsequently supported by empirical evidence), it is **not** work that people hate. Rather it is overwork, in unpleasant circumstances and under the control of others that people hate. Reduce the hours of labour, improve the working conditions and place the work under self-management and work will stop being a hated thing. In his own words:

“Repugnant tasks will disappear, because it is evident that these unhealthy conditions are harmful to society as a whole. Slaves can submit to them, but free men create new conditions, and their work will be pleasant and infinitely more productive. The exceptions of today will be the rule of tomorrow.” [**The Conquest of Bread**, p.

This, combined with the workday being shortened, will help ensure that only an idiot would desire to work alone. As Malatesta argued, the *“individual who wished to supply his own material needs by working alone would be the slave of his labours.”* [**The Anarchist Revolution**, p. 15]

So, enlightened self-interest would secure the voluntary labour and egalitarian distribution anarchists favour in the vast majority of the population. The parasitism associated with capitalism would be a thing of the past. Thus the problem of the *“lazy”* person fails to understand the nature of humanity nor the revolutionising effects of freedom and a free society on the nature and content of work.

I.4.15 What will the workplace of tomorrow look like?

Given the anarchist desire to liberate the artist in all of us, we can easily imagine that a free society would transform totally the working environment. No longer would workers be indifferent to their workplaces, but they would express themselves in transforming them into pleasant places, integrated into both the life of the local community and into the local environment. After all, *“no movement that raises the demand for workers’ councils can be regarded as revolutionary unless it tries to promote sweeping transformations in the environment of the work place.”* [Murray Bookchin, **Post-Scarcity Anarchism**, p. 146]

A glimpse of the future workplace can be seen from the actual class struggle. In the 40 day sit-down strike at Fisher Body plant #1 in Flint, Michigan in 1936, *“there was a community of two thousand strikers . . . Committees organised recreation, information, classes, a postal service, sanitation . . . There were classes in parliamentary procedure, public speaking, history of the labour movement. Graduate students at the University of Michigan gave courses in journalism and creative writing.”* [Howard Zinn, **A People’s History of the United States**, p. 391] In the same year, during the Spanish Revolution, collectivised workplaces also created libraries and education facilities as well as funding schools, health care and other social necessities (a practice, we must note, that had started before the revolution when C.N.T. unions had funded schools, social centres, libraries and so on).

Therefore the workplace would be expanded to include education and classes in individual development (and so following Proudhon’s comment that we should *“[o]rganise association, and by the same token, every workshop becoming a school, every worker becomes a master, every student an apprentice.”* [**No Gods, No Masters**, vol. 1, pp. 62–3]). This would allow work to become part of a wider community, drawing in people from different areas to share their knowledge and learn new insights and ideas. In addition, children would have part of their school studies with workplaces, getting them aware of the practicalities of many different forms of work and so allowing them to make informed decisions in what sort of activity they would be interested in pursuing when they were older.

Obviously, a workplace managed by its workers would also take care to make the working environment as pleasant as possible. No more *“sick building*

syndrome” or unhealthy and stressful work areas. Buildings would be designed to maximise space and allow individual expression within them. Outside the workplace, we can imagine it surrounded by gardens and allotments which were tended by workers themselves, giving a pleasant surrounding to the workplace. There would, in effect, be a break down of the city/rural divide — workplaces would be placed next to fields and integrated into the surroundings:

“Have the factory and the workshop at the gates of your fields and gardens, and work in them. Not those large establishments, of course, in which huge masses of metals have to be dealt with and which are better placed at certain spots indicated by Nature, but the countless variety of workshops and factories which are required to satisfy the infinite diversity of tastes among civilised men [and women] . . . factories and workshops which men, women and children will not be driven by hunger, but will be attracted by the desire of finding an activity suited to their tastes, and where, aided by the motor and the machine, they will choose the branch of activity which best suits their inclinations.” [Peter Kropotkin, **Fields, Factories and Workshops Tomorrow**, p. 197]

This vision of rural and urban integration is just part of the future anarchists see for the workplace. As Kropotkin argued, “[w]e proclaim *integration*. . . a society of integrated, combined labour. A society where each individual is a producer of both manual and intellectual work; where each able-bodied human being is a worker, and where each worker works both in the field and the industrial workshop; where every aggregation of individuals, large enough to dispose of a certain variety of natural resources — it may be a nation, or rather a region — produces and itself consumes most of its own agricultural and manufactured produce.” [Op. Cit., p. 26]

The future workplace would be an expression of the desires of those who worked there. It would be based around a pleasant working environment, within gardens and with extensive library, resources for education classes and other leisure activities. All this, and more, will be possible in a society based upon self-realisation and self-expression and one in which individuality is not crushed by authority and capitalism. To re-quote Kropotkin, “if most of the workshops we know are foul and unhealthy, it is because the workers are of no account in the organisation of factories” and “[s]laves can submit to them, but free men will create new conditions, and their will be pleasant and infinitely more productive.” [The Conquest of Bread, p. 121 and p. 123]

“So in brief,” argued William Morris, “our buildings will be beautiful with their own beauty of simplicity as workshops . . . [and] besides the mere workshops, our factory will have other buildings which may carry ornament further than that, for it will need dinning-hall, library, school, places for study of different kinds, and other such structures.” Such a vision is possible and is only held back by capitalism which denounces such visions of freedom as “*uneconomic*.” However, as William Morris points out:

“Impossible I hear an anti-Socialist say. My friend, please to remember that most factories sustain today large and handsome gardens, and not seldom parks . . . only the said gardens, etc. are twenty miles away from the factory, out of the smoke, and are kept up

for one member of the factory only, the sleeping partner to wit”
[**A Factory as It Might Be**, p. 9 and pp. 7–8]

Pleasant working conditions based upon the self-management of work can produce a workplace within which economic “*efficiency*” can be achieved without disrupting and destroying individuality and the environment (also see section I.4.9 for a fuller discussion of anarchism and technology).

I.4.16 Won’t a libertarian communist society be inefficient?

It is often argued that anarcho-communism and other forms of non-market libertarian-socialism would promote inefficiency and unproductive work. The basis of this argument is that without market forces to discipline workers and the profit motive to reward them, workers would have no incentive to work in a way which minimises time or resources. The net effect of this would be inefficient use of resources, particularly individual’s time.

This is a valid point in some ways; for example, a society can (potentially) benefit from increasing productivity as the less time it takes to produce a certain good, the more time it gains for other activities (although, of course, in a class society the benefits of increased productivity generally accrue to, first and foremost, to those at the top). Indeed, for an individual, a decent society depends on people having time available for them to do what they want, to develop themselves in whatever way they want, to enjoy themselves. In addition, doing more with less can have a positive environment impact as well. And it is for these reasons that an anarchist society would be interested in promoting efficiency and productiveness during production.

While capitalism has turned improvements in productivity as a means of increasing work, enriching the few and generally proletarianising the working class, a free society would take a different approach to the problem. As argued in section I.4.3, a communist-anarchist society would be based upon this principle:

“for some much per day (in money today, in labour tomorrow) you are entitled to satisfy — luxury excepted — this or the other of your wants.” [Peter Kropotkin, **Small Communal Experiments and why the fail**, p. 8]

Building upon this, we can imagine a situation where the average output for a given industry in a given amount of time is used to encourage efficiency and productivity. If a given syndicate can produce this average output with at least average quality in less time than the agreed average/minimum (and without causing ecological or social externalities, of course) then the members of that syndicate can and should have that time off.

This would be a powerful incentive to innovate, improve productivity, introduce new machinery and processes as well as work efficiently without reintroducing the profit motive and material inequality. With the possibility of having more time available for themselves and their own projects, people involved in productive activities would have a strong interest in being efficient. Of course, if the work in question is something they enjoy then any increases in efficiency would **enhance** what makes their work enjoyable and not eliminate it.

Rewarding efficiency with free time would also be an important means to ensure efficient use of resources as well as a means of reducing time spent in productive activity which was considered as boring or otherwise undesirable. The incentive of getting unpleasant tasks over with as quickly as possible would ensure that the tasks were done efficiently and that innovation was directed towards them.

Moreover, when it came to major investment decisions, a syndicate would be more likely to get others to agree to its plans if the syndicate had a reputation of excellence. This, again, would encourage efficiency as people would know that they could gain resources for their communities and workplaces (i.e. themselves) more easily if their work is efficient and reliable. This would be a key means of encouraging efficient and effective use of resources.

Similarly, an inefficient or wasteful syndicate would have negative reactions from their fellow workers. As we argued in section I.4.7 (*“What will stop producers ignoring consumers?”*), a libertarian communist economy would be based on free association. If a syndicate or community got a reputation for being inefficient with resources then others would not associate with them (i.e. they would not supply them with materials, or place them at the end of the queue when deciding which production requests to supply, and so on). As with a syndicate which produced shoddy goods, the inefficient syndicate would also face the judgement of its peers. This will produce an environment which will encourage efficient use of resources and time.

All these factors, the possibility of increased free time, the respect and resources gained for an efficient and excellent work and the possibility of a lack of co-operation with others for inefficient use of resources, would ensure that an anarchist-communist or anarchist-collectivist society would have no need to fear inefficiency. Indeed, by placing the benefits of increased efficiency into the hands of those who do the work, efficiency will no doubt increase.

With self-management, we can soon see human time being used efficiently and productively simply because those doing the work would have a direct and real interest in it. Rather than alienate their liberty, as under capitalism, they would apply their creativity and minds to transforming their productive activity in such a way as to make it enjoyable and not a waste of their time.

Little wonder Kropotkin argued, modern knowledge could be applied to a society in which people, *“with the work of their own hands and intelligence, and by the aid of the machinery already invented and to be invented, should themselves create all imaginable riches. Technics and science will not be lagging behind if production takes such a direction. Guided by observation, analysis and experiment, they will answer all possible demands. They will reduce the time required for producing wealth to any desired amount, so as to leave to everyone as much leisure as he or she may ask for...they guarantee ...the happiness that can be found in the full and varied exercise of the different capacities of the human being, in work that need not be overwork.”* [**Fields, Factories and Workshops Tomorrow**, pp. 198–9]

One last point. A free society will undoubtedly create new criteria for what counts as an efficient use of resources and time. What passes for *“efficient”* use in capitalism often means what is efficient in increasing the power and profits of the few, without regard to the wasteful use of individual time, energy and potential as well as environmental and social costs. Such a narrow criteria for decision making or evaluating efficient production will not exist in an anarchist society

(see our discussion of the irrational nature of the price mechanism in section I.1.2, for example). While we use the term efficiency we mean the dictionary definition of efficiency (i.e. reducing waste, maximising use of resources) rather than what the capitalist market distorts this into (i.e. what creates most profits for the boss).

I.5 What could the social structure of anarchy look like?

The social and political structure of anarchy is similar to that of the economic structure, i.e., it is based on a voluntary federation of decentralised, directly democratic policy-making bodies. These are the neighbourhood and community assemblies and their confederations. In these grassroots political units, the concept of “*self-management*” becomes that of “*self-government*”, a form of municipal organisation in which people take back control of their living places from the bureaucratic state and the capitalist class whose interests it serves.

“*A new economic phase demands a new political phase,*” argued Kropotkin, “*A revolution as profound as that dreamed of by the [libertarian] socialists cannot accept the mould of an out-dated political life. A new society based on equality of condition, on the collective possession of the instruments of work, cannot tolerate for a week . . . the representative system . . . if we want the social revolution, we must seek a form of political organisation that will correspond to the new method of economic organisation. . . The future belongs to the free groupings of interests and not to governmental centralisation; it belongs to freedom and not to authority.*” [Words of a Rebel, pp. 143–4]

Thus the social structure of an anarchist society will be the opposite of the current system. Instead of being centralised and top-down as in the state, it will be decentralised and organised from the bottom up. As Kropotkin argued, “*socialism must become more popular, more communalistic, and less dependent upon indirect government through elected representatives. It must become more self-governing.*” [Kropotkin’s Revolutionary Pamphlets, p. 185] While anarchists have various different conceptions of how this communal system would be constituted (as we will see), they is total agreement on these basic visions and principles.

This empowerment of ordinary citizens through decentralisation and direct democracy will eliminate the alienation and apathy that are now rampant in the modern city and town, and (as always happens when people are free) unleash a flood of innovation in dealing with the social breakdown now afflicting our urban wastelands. The gigantic metropolis with its hierarchical and impersonal administration, its atomised and isolated “*residents,*” will be transformed into a network of humanly scaled participatory communities (usually called “*communes*”), each with its own unique character and forms of self-government, which will be co-operatively linked through federation with other communities

at several levels, from the municipal through the bioregional to the global.

Of course, it can (and has) been argued that people are just not interested in “*politics*.” Further, some claim that this disinterest is why governments exist — people delegate their responsibilities and power to others because they have better things to do. Such an argument, however, is flawed on empirical grounds. As we indicated in section B.2.6, centralisation of power in both the French and American revolutions occurred **because** working people were taking **too much** interest in politics and social issues, not the reverse (“*To attack the central power, to strip it of its prerogatives, to decentralise, to dissolve authority, would have been to abandon to the people the control of its affairs, to run the risk of a truly popular revolution. That is why the bourgeoisie sought to reinforce the central government even more. . .*” [Kropotkin, **Words of a Rebel**, p. 143]).

Simply put, the state is centralised to facilitate **minority rule** by excluding the mass of people from taking part in the decision making processes within society. This is to be expected as social structures do not evolve by chance — rather they develop to meet specific needs and requirements. The specific need of the ruling class is to rule and that means marginalising the bulk of the population. Its requirement is for minority power and this is transformed into the structure of the state (and the capitalist company).

Even if we ignore the historical evidence on this issue, anarchists do not draw this conclusion from the current apathy that surrounds us. In fact, we argue that this apathy is not the cause of government but its result. Government is an inherently hierarchical system in which ordinary people are deliberately marginalised. The powerlessness people feel due to the workings of the system ensure that they are apathetic about it, thus guaranteeing that wealthy and powerful elites govern society without hindrance from the oppressed and exploited majority.

Moreover, government usually sticks its nose into areas that most people have no real interest in. Some things, as in the regulation of industry or workers’ safety and rights, a free society could leave to those affected to make their own decisions (we doubt that workers would subject themselves to unsafe working conditions, for example). In others, such as the question of personal morality and acts, a free people would have no interest in (unless it harmed others, of course). This, again, would reduce the number of issues that would be discussed in a free commune.

Also, via decentralisation, a free people would be mainly discussing local issues, so reducing the complexity of many questions and solutions. Wider issues would, of course, be discussed but these would be on specific issues and so more focused in their nature than those raised in the legislative bodies of the state. So, a combination of centralisation and an irrational desire to discuss every and all questions also helps make “*politics*” seem boring and irrelevant.

As noted above, this result is not an accident and the marginalisation of “*ordinary*” people is actually celebrated in bourgeois “*democratic*” theory. As Noam Chomsky notes:

“Twentieth century democratic theorists advise that ‘The public must be put in its place,’ so that the ‘responsible men’ may ‘live free of the trampling and roar of a bewildered herd,’ ‘ignorant and meddling outsiders’ whose ‘function’ is to be ‘interested spectators of action,’ not participants, lending their weight periodically to one or

another of the leadership class (elections), then returning to their private concerns. (Walter Lippman). The great mass of the population, 'ignorant and mentally deficient,' must be kept in their place for the common good, fed with 'necessary illusion' and 'emotionally potent oversimplifications' (Wilson's Secretary of State Robert Lansing, Reinhold Niebuhr). Their 'conservative' counterparts are only more extreme in their adulation of the Wise Men who are the rightful rulers — in the service of the rich and powerful, a minor footnote regularly forgotten. [Year 501, p. 18]

As discussed in Section B.2.6 (“*Who benefits from centralisation?*”) this marginalisation of the public from political life ensures that the wealthy can be “*left alone*” to use their power as they see fit. In other words, such marginalisation is a necessary part of a fully functioning capitalist society. Hence, under capitalism, libertarian social structures have to be discouraged. Or as Chomsky puts it, the “*rabble must be instructed in the values of subordination and a narrow quest for personal gain within the parameters set by the institutions of the masters; meaningful democracy, with popular association and action, is a threat to be overcome.*” [Op. Cit., p. 18] This philosophy can be seen in the statement of a US Banker in Venezuela under the murderous Jimenez dictatorship:

“You have the freedom here to do whatever you want to do with your money, and to me, that is worth all the political freedom in the world.” [quoted by Chomsky, Op. Cit., p. 99]

Deterring libertarian alternatives to statism is a common feature of our current system. By marginalising and disempowering people, the ability of individuals to manage their own social activities is undermined and weakened. They develop a “*fear of freedom*” and embrace authoritarian institutions and “*strong leaders,*” which in turn reinforces their marginalisation.

This consequence is hardly surprising. Anarchists maintain that the desire to participate and the ability to participate are in a symbiotic relationship: participation feeds on itself. By creating the social structures that allow participation, participation will increase. As people increasingly take control of their lives, so their ability to do so also increases. The challenge of having to take responsibility for decisions that make a difference is at the same time an opportunity for personal development. To begin to feel power, having previously felt powerless, to win access to the resources required for effective participation and learn how to use them, is a liberating experience. Once people become active subjects, making things happen in one aspect of their lives, they are less likely to remain passive objects, allowing things to happen to them, in other aspects. All in all, “*politics*” is far too important a subject to leave to politicians, the wealthy and bureaucrats. After all, it is what affects, your friends, community, and, ultimately, the planet you live on. Such issues cannot be left to anyone but you.

Hence a meaningful communal life based on self-empowered individuals is a distinct possibility (indeed, it has repeatedly appeared throughout history). It is the hierarchical structures in statism and capitalism, marginalising and disempowering the majority, which is at the root of the current wide scale apathy in the face of increasing social and ecological disruption. Libertarian socialists therefore call for a radically new form of political system to replace the

centralised nation-state, a form that would be based around confederations of self-governing communities. In other words, in anarchism “[s]ociety is a society of societies; a league of leagues of leagues; a commonwealth of commonwealths of commonwealths; a republic of republics of republics. Only there is freedom and order, only there is spirit, a spirit which is self-sufficiency and community, unity and independence.” [Gustav Landauer, **For Socialism**, pp. 125–126]

To create such a system would require dismantling the nation-state and re-constituting relations between communities on the basis of self-determination and free and equal confederation from below. In the following subsections we will examine in more detail why this new system is needed and what it might look like. As we stressed in the introduction, these are just suggestions of possible anarchist solutions to social organisation. Most anarchists recognise that anarchist communities will co-exist with non-anarchist ones after the destruction of the existing state. As we are anarchists we are discussing anarchist visions. We will leave it up to non-anarchists to paint their own pictures of a possible future.

I.5.1 What are participatory communities?

As Murray Bookchin argues in **The Rise of Urbanisation and the Decline of Citizenship** (reprinted as **From Urbanisation to Cities**), the modern city is a virtual appendage of the capitalist workplace, being an outgrowth and essential counterpart of the factory (where “*factory*” means any enterprise in which surplus value is extracted from employees). As such, cities are structured and administered primarily to serve the needs of the capitalist elite — employers — rather than the needs of the many — their employees and their families. From this standpoint, the city must be seen as (1) a transportation hub for importing raw materials and exporting finished products; and (2) a huge dormitory for wage slaves, conveniently locating them near the enterprises where their labour is to be exploited, providing them with entertainment, clothing, medical facilities, etc. as well as coercive mechanisms for controlling their behaviour.

The attitude behind the management of these “*civic*” functions by the bureaucratic servants of the capitalist ruling class is purely instrumental: worker-citizens are to be treated merely as means to corporate ends, not as ends in themselves. This attitude is reflected in the overwhelmingly alienating features of the modern city: its inhuman scale; the chilling impersonality of its institutions and functionaries; its sacrifice of health, comfort, pleasure, and aesthetic considerations to bottom-line requirements of efficiency and “*cost effectiveness*”; the lack of any real communal interaction among residents other than collective consumption of commodities and amusements; their consequent social isolation and tendency to escape into television, alcohol, drugs, gangs, etc. Such features make the modern metropolis the very antithesis of the genuine community for which most of its residents hunger. This contradiction at the heart of the system contains the possibility of radical social and political change.

The key to that change, from the anarchist standpoint, is the creation of a network of participatory communities based on self-government through direct, face-to-face democracy in grassroots neighbourhood and community assemblies. As we argued in section I.2.3 such assemblies will be born in social struggle and

so reflect the needs of the struggle and those within it so our comments here must be considered as generalisations of the salient features of such communities and **not** blue-prints.

Traditionally, these participatory communities were called **communes** in anarchist theory (“*The basic social and economic cell of the anarchist society is the free, independent commune*” [A. Grachev, quoted by Paul Avrich, **The Anarchists in the Russian Revolution**, p. 64]). Within anarchist thought, there are two main conceptions of the free commune. One vision is based on workplace delegates, the other on neighbourhood assemblies. We will sketch each in turn.

Bakunin argued that the “*future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in communes, regions, nations and finally in a great federation, international and universal.*” In other words, “*the federative Alliance of all working men’s associations . . . will constitute the commune.*” [**Michael Bakunin: Selected Writings**, p. 206 and p. 170]

This vision of the commune was created during many later revolutions (such as in Russia in 1905 and 1917 and Hungary in 1956). Being based on workplaces, this form of commune has the advantage of being based on groups of people who are naturally associated during most of the day (Bakunin considered workplace bodies as “*the natural organisation of the masses*” as they were “*based on the various types of work*” which “*define their actual day-to-day life*” [**The Basic Bakunin**, p. 139]). This would facilitate the organisation of assemblies, discussion on social, economic and political issues and the mandating and recalling of delegates. Moreover, it combines political and economic power in one organisation, so ensuring that the working class actually manages society.

This vision was stressed by later anarchist thinkers. For example, Spanish anarchist Issac Puente thought that in towns and cities “*the part of the free municipality is played by local federation. . . Ultimate sovereignty in the local federation of industrial unions lies with the general assembly of all local producers.*” [**Libertarian Communism**, p. 27] The Russian anarchist G. P. Maximoff saw the “*communal confederation*” as being “*constituted by thousands of freely acting labour organisations.*” [**The Program of Anarcho-Syndicalism**, p. 43]

Other anarchists counterpoise neighbourhood assemblies to workers’ councils. These assemblies will be general meetings open to all citizens in every neighbourhood, town, and village, and will be the source of and final “*authority*” over public policy for all levels of confederal co-ordination. Such “*town meetings*” will bring ordinary people directly into the political process and give them an equal voice in the decisions that affect their lives. Such anarchists point to the experience of the French Revolution of 1789 and the “*sections*” of the Paris Commune as the key example of “*a people governing itself directly — when possible — without intermediaries, without masters.*” It is argued, based on this experience, that “*the principles of anarchism . . . dated from 1789, and that they had their origin, not in theoretical speculations, but in the deeds of the Great French Revolution.*” [Peter Kropotkin, **The Great French Revolution**, vol. 1, p. 210 and p. 204]

Critics of workers’ councils point out that not all working class people work in factories or workplaces. Many are parents who look after children, for example. By basing the commune around the workplace, such people are automatically excluded. Moreover, in most modern cities many people do not live near where

they work. It would mean that local affairs could not be effectively discussed in a system of workers' councils as many who take part in the debate are unaffected by the decisions reached (this is something which the supporters of workers' councils **have** noticed and argue for councils which are delegates from both the inhabitants **and** the enterprises of an area).

In addition, anarchists like Murray Bookchin argue that workplace based systems automatically generate "*special interests*" and so exclude community issues. Only community assemblies can "*transcend the traditional special interests of work, workplace, status, and property relations, and create a **general interest based on shared community problems.***" [Murray Bookchin, **From Urbanisation to Cities**, p. 254]

However, such communities assemblies can only be valid if they can be organised rapidly in order to make decisions and to mandate and recall delegates. In the capitalist city, many people work far from where they live and so such meetings have to be called for after work or at weekends. Thus the key need is to reduce the working day/week and to communalise industry. For this reason, many anarchists continue to support the workers' council vision of the commune, complemented by community assemblies for those who live in an area but do not work in a traditional workplace (e.g. parents bring up small children, the old, the sick and so on).

These positions are not hard and fast divisions, far from it. Puente, for example, thought that in the countryside the dominant commune would be "*all the residents of a village or hamlet meeting in an assembly (council) with full powers to administer local affairs.*" [Op. Cit., p. 25] Kropotkin supported the soviets of the Russian Revolution, arguing that the "*idea of soviets . . . of councils of workers and peasants . . . controlling the economic and political life of the country is a great idea. All the more so, since it necessarily follows that these councils should be composed of all who take part in the production of natural wealth by their own efforts.*" [Kropotkin's **Revolutionary Pamphlets**, p. 254]

Which method, workers' councils or community assemblies, will be used in a given community will depend on local conditions, needs and aspirations and it is useless to draw hard and fast rules. It is likely that some sort of combination of the two approaches will be used, with workers' councils being complemented by community assemblies until such time as a reduced working week and decentralisation of urban centres will make purely community assemblies the more realistic option. It is likely that in a fully libertarian society, community assemblies will be the dominant communal organisation but in the period immediately after a revolution this may not be immediately possible. Objective conditions, rather than predictions, will be the deciding factor. Under capitalism, anarchists pursue both forms of organisation, arguing for community **and** industrial unionism in the class struggle (see sections J.5.1 and J.5.2).

Regardless of the exact make up of the commune, they would share identical features. They would be free associations, based upon the self-assumed obligation of those who join them. In free association, participation is essential simply because it is the **only** means by which individuals can collectively govern themselves (and unless they govern themselves, someone else will). "*As a unique individual,*" Stirner argues, "*you can assert yourself alone in association, because the association does not own you, because you are one who owns it or who turns it to your own advantage.*" The rules governing the association

are determined by the associated and can be changed by them (and so a vast improvement over “love it or leave”) as are the policies the association follows. Thus, the association “does not impose itself as a spiritual power superior to my spirit. I have no wish to become a slave to my maxims, but would rather subject them to my ongoing criticism.” [Max Stirner, **No Gods, No Masters**, vol. 1, p. 17]

Thus participatory communities are freely joined and self-managed by their members. No more division between order givers and order takers as exist within the state or capitalist workplaces. Rather the associated govern themselves and while the assembled people collectively decide the rules governing their association, and are bound by them as individuals, they are also superior to them in the sense that these rules can always be modified or repealed (see section A.2.11 — “*Why are most anarchists in favour of direct democracy?*” — for more details). As can be seen, a participatory commune is new form of social life, radically different from the state as it is decentralised, self-governing and based upon individual autonomy and free agreement. Thus Kropotkin:

“The representative system was organised by the bourgeoisie to ensure their domination, and it will disappear with them. For the new economic phase that is about to begin we must seek a new form of political organisation, based on a principle quite different from that of representation. The logic of events imposes it.” [**Words of a Rebel**, p. 125]

This “new form of political organisation has to be worked out the moment that socialistic principles shall enter our life. And it is self-evident that this new form will have to be **more popular, more decentralised, and nearer to the folk-mote self-government** than representative government can ever be.” [Kropotkin, **Kropotkin’s Revolutionary Pamphlets**, p. 184] He, like all anarchists, considered the idea that socialism could be created by taking over the current state or creating a new one as doomed to failure. Instead, he recognised that socialism would only be built using new organisations that reflect the spirit of socialism (such as freedom, self-government and so on). Kropotkin, like Proudhon and Bakunin before him, therefore argued that “[t]his was the form that the social revolution must take — the independent commune. . . [whose] inhabitants have decided that they **will** communalise the consumption of commodities, their exchange and their production.” [**Op. Cit.**, p. 163]

In a nutshell, a participatory community is a free association, based upon the mass assembly of people who live in a common area, the means by which they make the decisions that affect them, their communities, bio-regions and the planet. Their essential task is to provide a forum for raising public issues and deciding them. Moreover, these assemblies will be a key way of generating a community (and community spirit) and building and enriching social relationships between individuals and, equally important, of developing and enriching individuals by the very process of participation in communal affairs. By discussing, thinking and listening to others, individuals develop their own abilities and powers while at the same time managing their own affairs, so ensuring that no one else does (i.e. they govern themselves and are no longer governed from above by others). As Kropotkin argued, self-management has an educational effect on those who practice it:

“The ‘permanence’ of the general assemblies of the sections — that is, the possibility of calling the general assembly whenever it was wanted by the members of the section and of discussing everything in the general assembly. . . will educate every citizen politically. . . The section in permanence — the forum always open — is the only way . . . to assure an honest and intelligent administration.” [**The Great French Revolution**, vol. 1, pp. 210–1]

As well as integrating the social life of a community and encouraging the political and social development of its members, these free communes will also be integrated into the local ecology. Humanity would live in harmony with nature as well as with itself:

“We can envision that their squares will be interlaced by streams, their places of assembly surrounded by groves, their physical contours respected and tastefully landscaped, their soils nurtured carefully to foster plant variety for ourselves, our domestic animals, and wherever possible the wildlife they may support on their fringes.” [Murray Bookchin, **The Ecology of Freedom**, p. 344]

The commune itself would aim for a balanced mix of agriculture and industry, as described by Peter Kropotkin in his classic work **Fields, Factories and Workshops**. Thus a free commune would aim to integrate the individual into social and communal life, rural and urban life into a balanced whole and human life into the wider ecology. In this way the free commune would make human habitation fully ecological, ending the sharp and needless (and dehumanising and de-individualising) division of human life from the rest of the planet. The commune will be a key means of the expressing diversity within humanity and the planet as well as improving the quality of life in society:

“The Commune . . . will be entirely devoted to improving the communal life of the locality. Making their requests to the appropriate Syndicates, Builders’, Public Health, Transport or Power, the inhabitants of each Commune will be able to gain all reasonable living amenities, town planning, parks, play-grounds, trees in the street, clinics, museums and art galleries. Giving, like the medieval city assembly, an opportunity for any interested person to take part in, and influence, his town’s affairs and appearance, the Commune will be a very different body from the borough council. . .

“In ancient and medieval times cities and villages expressed the different characters of different localities and their inhabitants. In red-stone, Portland or granite, in plaster or brick, in pitch of roof, arrangements of related buildings or patterns of slate and thatch each locality added to the interests of travellers . . . each expressed itself in castle, home or cathedral.

“How different is the dull, drab, or flashy ostentatious monotony of modern England. Each town is the same. The same Woolworth’s, Odeon Cinemas, and multiple shops, the same ‘council houses’ or ‘semi-detached villas’ . . . North, South, East or West, what’s the difference, where is the change?

“With the Commune the ugliness and monotony of present town and country life will be swept away, and each locality and region, each person will be able to express the joy of living, by living together.”
[Tom Brown, **Syndicalism**, p. 59]

The size of the neighbourhood assemblies will vary, but it will probably fluctuate around some ideal size, discoverable in practice, that will provide a viable scale of face-to-face interaction and allow for both a variety of personal contacts and the opportunity to know and form a personal estimation of everyone in the neighbourhood. Some anarchists have suggested that the ideal size for a neighbourhood assembly might be under one thousand adults. This, of course, suggests that any town or city would itself be a confederation of assemblies — as was, of course, practised very effectively in Paris during the Great French Revolution.

Such assemblies would meet regularly, at the very least monthly (probably more often, particularly during periods which require fast and often decision making, like a revolution), and deal with a variety of issues. In the words of the CNT’s resolution on libertarian communism:

“the foundation of this administration will be the commune. These communes are to be autonomous and will be federated at regional and national levels to achieve their general goals. The right to autonomy does not preclude the duty to implement agreements regarding collective benefits.

“[The] commune . . . without any voluntary restrictions will undertake to adhere to whatever general norms may be agreed by majority vote after free debate. In return, those communities which industrialisation . . . may agree upon a different model of co-existence and will be entitled to an autonomous administration released from the general commitments . . .

“...the commune is to be autonomous and confederated with the other communes . . . the commune will have the duty to concern itself with whatever may be of interest to the individual.

“It will have to oversee organising, running and beautification of the settlement. It will see that its inhabitants; are housed and that items and products be made available to them by the producers’ unions or associations.

“Similarly, it is concern itself with hygiene, the keeping of communal statistics and with collective requirements such as education, health services and with the maintenance and improvement of local means of communication.

“It will orchestrate relations with other communes and will take care to stimulate all artistic and cultural pursuits.

“So that this mission may be properly fulfilled, a communal council is to be appointed . . . None of these posts will carry any executive or bureaucratic powers . . . [its members] will perform their role as producers coming together in session at the close of the day’s work to discuss the detailed items which may not require the endorsement of communal assemblies.

“Assemblies are to be summoned as often as required by communal interests, upon the request of the communal council or according to the wishes of the inhabitants of each commune . . .

“The inhabitants of a commune are to debate among themselves their internal problems . . . Federations are to deliberate over major problems affecting a country or province and all communes are to be represented at their reunions and assemblies, thereby enabling their delegates to convey the democratic viewpoint of their respective communes . . . every commune which is implicated will have its right to have its say . . . On matters of a regional nature, it is the duty of the regional federation to implement agreements . . . So the starting point is the individual, moving on through the commune, to the federation and right on up finally to the confederation.” [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, pp. 106–7]

Thus the communal assembly discusses that which affects the community and those within it. As these local community associations, will be members of larger communal bodies, the communal assembly will also discuss issues which affect wider areas, as indicated, and mandate their delegates to discuss them at confederation assemblies (see next section). This system, we must note, was applied with great success during the Spanish revolution (see section I.8) and so cannot be dismissed as wishful thinking.

However, of course, the actual framework of a free society will be worked out in practice. As Bakunin correctly argued, society *“can, and must, organise itself in a different fashion [than what came before], but not from top to bottom and according to an ideal plan”* [Michael Bakunin: **Selected Writings**, p. 205] What does seem likely is that confederations of communes will be required. We turn to this in the next section.

I.5.2 Why are confederations of participatory communities needed?

Since not all issues are local, the neighbourhood and community assemblies will also elect mandated and recallable delegates to the larger-scale units of self-government in order to address issues affecting larger areas, such as urban districts, the city or town as a whole, the county, the bio-region, and ultimately the entire planet. Thus the assemblies will confederate at several levels in order to develop and co-ordinate common policies to deal with common problems.

In the words of the CNT’s resolution on libertarian communism:

“The inhabitants of a commune are to debate among themselves their internal problems . . . Federations are to deliberate over major problems affecting a country or province and all communes are to be represented at their reunions and assemblies, thereby enabling their delegates to convey the democratic viewpoint of their respective communes.

“If, say, roads have to be built to link villages of a county or any matter arises to do with transportation and exchange of produce between

agricultural and industrial counties, then naturally every commune which is implicated will have its right to have its say.

“On matters of a regional nature, it is the duty of the regional federation to implement agreements which will represent the sovereign will of all the region’s inhabitants. So the starting point is the individual, moving on through the commune, to the federation and right on up finally to the confederation.

“Similarly, discussion of all problems of a national nature shall flow a like pattern . . . “ [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, p. 107]

In other words, the commune “cannot any longer acknowledge any superior: that, above it, there cannot be anything, save the interests of the Federation, freely embraced by itself in concert with other Communes.” [Kropotkin, **No Gods, No Masters**, vol. 1, p. 259]

Federalism is applicable at all levels of society. As Kropotkin pointed out, anarchists “understand that if no central government was needed to rule the independent communes, if national government is thrown overboard and national unity is obtained by free federation, then a central **municipal** government becomes equally useless and noxious. The same federative principle would do within the commune.” [Kropotkin’s **Revolutionary Pamphlets**, pp. 163–164] Thus the whole of society would be a free federation, from the local community right up to the global level. And this free federation would be based squarely on the autonomy and self-government of local groups. With federalism, co-operation replaces coercion.

This need for co-operation does not imply a centralised body. To exercise your autonomy by joining self-managing organisations and, therefore, agreeing to abide by the decisions you help make is not a denial of that autonomy (unlike joining a hierarchical structure, where you forsake autonomy **within** the organisation). In a **centralised** system, we must stress, **power** rests at the top and the role of those below is simply to obey (it matters not if those with the power are elected or not, the principle is the same). In a **federal** system, power is **not** delegated into the hands of a few (obviously a “federal” government or state is a centralised system). Decisions in a federal system are made at the base of the organisation and flow upwards so ensuring that power remains decentralised in the hands of all. Working together to solve common problems and organise common efforts to reach common goals is not centralisation and those who confuse the two make a serious error — they fail to understand the different relations of authority each generates and confuse obedience with co-operation.

As in the economic federation of collectives, the lower levels will control the higher, thus eliminating the current pre-emptive powers of centralised government hierarchies. Delegates to higher-level co-ordinating councils or conferences will be instructed, at every level of confederation, by the assemblies they represent, on how to deal with any issue. These instructions will be binding, committing delegates to a framework of policies within which they must act and providing for their recall and the nullification of their decisions if they fail to carry out their mandates. Delegates may be selected by election and/or sortition (i.e. random selection by lot, as for jury duty currently).

Most anarchists recognise that there will be a need for “public officials” with specific tasks within the social confederation. We stress the word “tasks” as

“powers” would not be the best word to describe their activities simply because their work is essentially administrative in nature. For example, an individual or a group of individuals may be elected to look into alternative power supplies for a community and report back on what they discover. They cannot impose their decision **onto** the community as they do not have the power to do so. They simply present their findings to the body which had mandated them. These findings are **not** a law which the electors are required to follow, but a series of suggestions and information from which the electors chose what they think is best. Or, to use another example, someone may be elected to overlook the installation of a selected power supply but the decision on what power supply to use and which specific project to implement has been decided upon by the whole community. Similarly with any delegate elected to a confederal council. Such a delegate will have their decisions mandated by their electors and are subject to recall by those electors. If such a delegate starts to abuse their position or even vote in ways opposed to by the communal assembly then they would quickly be recalled and replaced.

As such a person is an elected delegate of the community, they are a “*public official*” in the broadest sense of the word but that does not mean that they have power or authority. Essentially they are an agent of the local community who is controlled by, and accountable to, that community. Clearly, such “*officials*” are unlike politicians. They do not, and cannot, make policy decisions on behalf of those who elected them, and so they do not have governmental power over those who elected them. By this method the “*officials*” remain the servants of the public and are not given power to make decisions for people. In addition, these “*officials*” will be rotated frequently to prevent a professionalisation of politics and the problem of politicians being largely on their own once elected. And, of course, they will continue to work and live with those who elected them and receive no special privileges due to their election (in terms of more income, better housing, and so on).

Therefore, such “*public officials*” would be under the strict control of the organisations that elected them to administration posts. But, as Kropotkin argued, the general assembly of the community “*in permanence — the forum always open — is the only way . . . to assure an honest and intelligent administration . . . [and is based upon] distrust of all executive powers.*” [The Great French Revolution Vol. 1, p. 211]

As Murray Bookchin argues, a “*confederalist view involves a clear distinction between policy making and the co-ordination and execution of adopted policies. Policy making is exclusively the right of popular community assemblies based on the practices of participatory democracy. Administration and co-ordination are the responsibility of confederal councils, which become the means for interlinking villages, towns, neighbourhoods, and cities into confederal networks. Power flows from the bottom up instead of from the top down, and in confederations, the flow of power from the bottom up diminishes with the scope of the federal council ranging territorially from localities to regions and from regions to ever-broader territorial areas.*” [From Urbanisation to Cities, p. 253]

Thus the people will have the final word on policy, which is the essence of self-government, and each citizen will have his or her turn to participate in the co-ordination of public affairs. In other words, the “*legislative branch*” of self-government will be the people themselves organised in their community assemblies and their confederal co-ordinating councils, with the “*executive branch*”

(public officials) limited to implementing policy formulated by the legislative branch, that is, by the people.

Besides rotation of public officials, means to ensure the accountability of such officials to the people will include a wider use of elections and sortitions, open access to proceedings and records of “*executive*” activities by computer or direct inspection, the right of citizen assemblies to mandate delegates to higher-level confederal meetings, recall their officials, and revoke their decisions, and the creation of accountability boards, elected or selected by lot (as for jury duty), for each important administrative branch, from local to national.

Thus confederations of communes are required to co-ordinate joint activity and discuss common issues and interests. Confederation is also required to protect individual, community and social freedom. The current means of co-ordinating wide scale activity — centralism via the state — is a threat to freedom as, to quote Proudhon, “*the citizen divests himself of sovereignty, the town and the Department and province above it, absorbed by central authority, are no longer anything but agencies under direct ministerial control.*” He continues:

“The Consequences soon make themselves felt: the citizen and the town are deprived of all dignity, the state’s depredations multiply, and the burden on the taxpayer increases in proportion. It is no longer the government that is made for the people; it is the people who are made for the government. Power invades everything, dominates everything, absorbs everything. . . .” [The Principle of Federation, p. 59]

Moreover, “[t]he principle of political centralism is openly opposed to all laws of social progress and of natural evolution. It lies in the nature of things that every cultural advance is first achieved within a small group and only gradually finds adoption by society as a whole. Therefore, political decentralisation is the best guaranty for the unrestricted possibilities of new experiments. For such an environment each community is given the opportunity to carry through the things which it is capable of accomplishing itself without imposing them on others. Practical experimentation is the parent of ever development in society. So long as each distinct is capable of effecting the changes within its own sphere which its citizens deem necessary, the example of each becomes a fructifying influence on the other parts of the community since they will have the chance to weigh the advantages accruing from them without being forced to adopt them if they are not convinced of their usefulness. The result is that progressive communities serve the others as models, a result justified by the natural evolution of things.” [Rudolf Rocker, **Pioneers of American Freedom**, pp. 16–7]

The contrast with centralisation of the state could not be more clear. As Rocker argues, “[i]n a strongly centralised state, the situation is entirely reversed and the best system of representation can do nothing to change that. The representatives of a certain district may have the overwhelming majority of a certain district on his [or her] side, but in the legislative assembly of the central state, he [or she] will remain in the minority, for it lies in the nature of things that in such a body not the intellectually most active but the most backward districts represent the majority. Since the individual district has indeed the right to give expression of its opinion, but can effect no changes without the consent of the central government, the most progressive districts will be condemned to stagnate while the most backward districts will set the norm.” [Op. Cit., p. 17]

Little wonder anarchists have always stressed what Kropotkin termed “*local action*” and considered the libertarian social revolution as “*proceed[ing] by proclaiming independent Communes which Communes will endeavour to accomplish the economic transformation within . . . their respective surroundings.*” [Peter Kropotkin, **Act For Yourselves**, p. 43] Thus the advanced communities will inspire the rest to follow them by showing them a practical example of what is possible. Only decentralisation and confederation can promote the freedom and resulting social experimentation which will ensure social progress and make society a good place to live.

Moreover, confederation is required to maximise self-management. As Rocker explains, “[i]n a smaller community, it is far easier for individuals to observe the political scene and become acquainted with the issues which have to be resolved. This is quite impossible for a representative in a centralised government. Neither the single citizen nor his [or her] representative is completely or even approximately to supervise the huge clockwork of the central state machine. The deputy is forced daily to make decisions about things of which he [or she] has no personal knowledge and for the appraisal of which he must therefore depend on others [i.e. bureaucrats and lobbyists]. That such a system necessarily leads to serious errors and mistakes is self-evident. And since the citizen for the same reason is not able to inspect and criticise the conduct of his representative, the class of professional politicians is given added opportunity to fish in troubled waters.” [Op. Cit., p. 17–18]

In other words, confederations are required to protect society and the individual against the dangers of centralisation. As Bakunin stressed, there are two ways of organising society, “*as it is today, from high to low and from the centre to circumference by means of enforced unity and concentration*” and the way of the future, by federalism “*starting with the free individual, the free association and the autonomous commune, from low to high and from circumference to centre, by means of free federation.*” [Michael Bakunin: **Selected Writings**, p. 88] In other words, “*the organisation of society from the bottom up.*” [The **Basic Bakunin**, p. 131]

Thus confederations of participatory communities are required to co-ordinate joint activities, allow social experimentation and protect the distinctiveness, dignity, freedom and self-management of communities and so society as a whole. This is why “*socialism is federalist*” and “*true federalism, the political organisation of socialism, will be attained only when these popular grass-roots institutions [namely, “communes, industrial and agricultural associations”] are organised in progressive stages from the bottom up.*” [Bakunin on **Anarchism**, p. 402]

I.5.3 What will be the scales and levels of confederation?

This can only be worked out in practice. In general, it would be save to say that confederations would be needed on a wide scale, including in towns and cities. No village, town or city could be self-sufficient nor would desire to be — communication and links with other places are part and parcel of live and anarchists have no desire to retreat back into an isolated form of localism:

“No community can hope to achieve economic autarchy, nor should

*it try to do so. Economically, the wide range of resources that are needed to make many of our widely used goods preclude self-enclosed insularity and parochialism. Far from being a liability, this interdependence among communities and regions can well be regarded as an asset — culturally as well as politically . . . Divested of the cultural cross-fertilisation that is often a product of economic intercourse, the municipality tends to shrink into itself and disappear into its own civic privatism. Shared needs and resources imply the existence of sharing and, with sharing, communication, rejuvenation by new ideas, and a wider social horizon that yields a wider sensibility to new experiences.” [Murray Bookchin, **From Urbanisation to Cities**, p. 237]*

This means that the scale and level of the confederations created by the communes will be varied and extensive. It would be hard to generalise about them, particularly as different confederations will exist for different tasks and interests. Moreover, any system of communes would start off based on the existing villages, towns and cities of capitalism. That is unavoidable and will, of course, help determine the initial scale and level of confederations.

It seems likely that the scale of the confederation will be dependent on the inhabited area in question. A village, for example, would be based on one assembly and (minimally) be part of a local confederation covering all the villages nearby. In turn, this local confederation would be part of a district confederation, and so on up to (ultimately) a continental and world scale. Needless to say, the higher the confederation the less often it would meet and the less it would have to consider in terms of issues to decide. On such a level, only the most general issues and decisions could be reached (in effect, only guidelines which the member confederations would apply as they saw fit).

In urban areas, the town or city would have to be broken down into confederations and these confederations would constitute the town or city assembly of delegates. Given a huge city like London, New York or Mexico City it would be impossible to organise in any other way. Smaller towns would probably be able to have simpler confederations. We must stress here that few, if any, anarchists consider it desirable to have huge cities in a free society and one of the major tasks of social transformation will be to break the metropolis into smaller units, integrated with the local environment. However, a social revolution will take place in these vast metropolises and so we have to take them into account in our discussion.

Thus the issue of size would determine when a new level of confederation would be needed. A town or village of several thousand people could be organised around the basic level of the commune and it may be that a libertarian socialist society would probably form another level of confederation once this level has been reached. Such units of confederation would, as noted above, include urban districts within today’s large cities, small cities, and rural districts composed of several nearby towns. The next level of confederation would, we can imagine, be dependent on the number of delegates required. After a certain number, the confederation assembly may become difficult to manage, so implying that another level of confederation is required. This would, undoubtedly, be the base for determining the scale and level of confederation, ensuring that any confederal assembly can actually manage its activities and remain under

the control of lower levels.

Combined with this consideration, we must also raise the issue of economies of scale. A given level of confederation may be required to make certain social and economic services efficient (we are thinking of economies of scale for such social needs as universities, hospitals, and cultural institutions). While every commune may have a doctor, nursery, local communal stores and small-scale workplaces, not all can have a university, hospital, factories and so forth. These would be organised on a wider level, so necessitating the appropriate confederation to exist to manage them.

However, face-to-face meetings of the whole population are impractical at this size. Therefore, the decision making body at this level would be the **confederal council**, which would consist of mandated, recallable, and rotating delegates from the neighbourhood assemblies. These delegates would co-ordinate policies which have been discussed and voted on by the neighbourhood assemblies, with the votes being summed across the district to determine district policy by majority rule. The issues to be discussed by these confederal meetings/assemblies would be proposed by local communes, the confederal council would collate these proposals and submit them to the other communes in the confederation for discussion. Thus the flow of decision making would be from the bottom up, with the “*lowest*” bodies having the most power, particularly the power to formulate, suggest, correct and, if need be, reject decisions made at “*higher*” levels in the confederation.

Ties between bioregions or larger territories based on the distribution of such things as geographically concentrated mineral deposits, climate dependent crops, and production facilities that are most efficient when concentrated in one area will unite communities confederally on the basis of common material needs as well as values. At the bioregional and higher levels of confederation, councils of mandated, recallable, and rotating delegates will co-ordinate policies at those levels, but such policies will still be subject to approval by the neighbourhood and community assemblies through their right to recall their delegates and revoke their decisions.

In the final analysis, libertarian socialism cannot function optimally — and indeed may be fatally undermined — unless the present system of competing nation-states is replaced by a co-operative system of decentralised bioregions of self-governing communities confederated on a global scale. For, if a libertarian socialist nation is forced to compete in the global market for scarce raw materials and hard cash with which to buy them, the problems of “*petty-bourgeois co-operativism*,” previously noted, will have merely been displaced to a higher level of organisation. That is, instead of individual co-operatives acting as collective capitalists and competing against each other in the national market for profits, raw materials, etc., the nation or community **as a whole** will become the “*collective capitalist*” and compete against other nations in the global capitalist market — a situation that is bound to reintroduce many problems, e.g. militarism, imperialism, and alienating/disempowering measures in the workplace, justified in the name of “*efficiency*” and “*global competitiveness*.”

To some extent such problems can be reduced in the revolutionary period by achieving self-sufficiency within bioregions as Kropotkin argued (see section I.3.8). This should be easier to achieve in a libertarian socialist economy as artificial needs are not manufactured by massive advertising campaigns of giant profit-seeking corporations. As a social revolution would, as Kropotkin

predicted, suffer (initially) from isolation and disrupted trade patterns such a policy would have to be applied anyway and so interbioregional trade would be naturally be limited to other members of the libertarian socialist federation to a large degree. However, to eliminate the problem completely, anarchists envision a global council of bioregional delegates to co-ordinate global co-operation based on policies formulated and approved at the grassroots by the confederal principles outlined above. As noted above, most anarchists think that the “*higher*” the confederation, the more its decisions will be guidelines rather than anything else.

In summary, the size and scale of confederations will depend on practical considerations, based on what people found were optimal sizes for their neighbourhood assemblies and the needs of co-operation between them, towns, cities, regions and so on. We cannot, and have no wish, to predict the development of a free society. Therefore the scale and levels of confederation will be decided by those actually creating an anarchist world. All we can do is make a few suggestions of what seems likely.

I.5.4 How will anything ever be decided by all these meetings?

Anarchists have little doubt that the confederal structure will be an efficient means of decision making and will not be bogged down in endless meetings. We have various reasons for thinking this.

Firstly, we doubt that a free society will spend all its time in assemblies or organising confederal conferences. Certain questions are more important than others and few anarchists desire to spend all their time in meetings. The aim of a free society is to allow individuals to express their desires and wants freely — they cannot do that if they are continually at meetings (or preparing for them). So while communal and confederal assemblies will play an important role in a free society, do not think that they will be occurring all the time or that anarchists desire to make meetings the focal point of individual life. Far from it!

Thus communal assemblies may occur, say, once a week, or fortnightly or monthly in order to discuss truly important issues. There would be no real desire to meet continuously to discuss every issue under the sun and few people would tolerate this occurring. This would mean that such meetings would current regularly and when important issues needed to be discussed, **not** continuously (although, if required, continuous assembly or daily meetings may have to be organised in emergency situations but this would be rare).

Secondly, it is extremely doubtful that a free people would desire waste vast amounts of time at such meetings. While important and essential, communal and confederal meetings would be functional in the extreme and not forums for hot air. It would be the case that those involved in such meetings would quickly make their feelings known to time wasters and those who like the sound of their own voices. Thus Cornelius Castoriadis:

“It might be claimed that the problem of numbers remains and that people never would be able to express themselves in a reasonable amount of time. This is not a valid argument. There would rarely be

an assembly over twenty people where everyone would want to speak, for the very good reason that when there is something to be decided upon there are not an infinite number of options or an infinite number of arguments. In unhampered rank-and-file workers' gatherings (convened, for instance, to decide on a strike) there have never been 'too many' speeches. The two or three fundamental opinions having been voiced, and various arguments exchanged, a decision is soon reached.

"The length of speeches, moreover, often varies inversely with the weight of their content. Russian leaders sometimes talk on for four hours at Party Congresses without saying anything . . . For an account of the laconicism of revolutionary assemblies, see Trotsky's account of the Petrograd soviet of 1905 — or accounts of the meetings of factory representatives in Budapest in 1956." [Political and Social Writings, vol. 2, pp. 144–5]

As we shall see below, this was definitely the case during the Spanish Revolution as well.

Thirdly, as these assemblies and congresses are concerned purely with joint activity and co-ordination, it is likely that they will not be called very often. Different associations, syndicates and co-operatives have a functional need for co-operation and so would meet more regularly and take action on practical activity which affects a specific section of a community or group of communities. Not every issue that a member of a community is interested in is necessarily best discussed at a meeting of all members of a community or at a confederal conference.

In other words, communal assemblies and conferences will have specific, well defined agendas, and so there is little danger of "*politics*" taking up everyone's time. Hence, far from discussing abstract laws and pointless motions which no one actually knows much about, the issues discussed in these conferences will be on specific issues which are important to those involved. In addition, the standard procedure may be to elect a sub-group to investigate an issue and report back at a later stage with recommendations. The conference can change, accept, or reject any proposals.

As Kropotkin argued, anarchy would be based on "*free agreement, by exchange of letters and proposals, and by congresses at which delegates met to discuss well specified points, and to come to an agreement about them, but not to make laws. After the congress was over, the delegates [would return] . . . not with a law, but with the draft of a contract to be accepted or rejected.*" [Conquest of Bread, p. 131]

By reducing conferences to functional bodies based on concrete issues, the problems of endless discussions can be reduced, if not totally eliminated. In addition, as functional groups would exist outside of these communal confederations (for example, industrial collectives would organise conferences about their industry with invited participants from consumer groups), there would be a limited agenda in most communal get-togethers.

The most important issues would be to agree on the guidelines for industrial activity, communal investment (e.g. houses, hospitals, etc.) and overall co-ordination of large scale communal activities. In this way everyone would be part of the commonwealth, deciding on how resources would be used to

maximise human well-being and ecological survival. The problems associated with “*the tyranny of small decisions*” would be overcome without undermining individual freedom. (In fact, a healthy community would enrich and develop individuality by encouraging independent and critical thought, social interaction, and empowering social institutions based on self-management).

Is such a system fantasy? Given that such a system has existed and worked at various times, we can safely argue that it is not. Obviously we cannot cover every example, so we point to just two — revolutionary Paris and Spain.

As Murray Bookchin points out, Paris “*in the late eighteenth century was, by the standards of that time, one of the largest and economically most complex cities in Europe: its population approximated a million people . . . Yet in 1793, at the height of the French Revolution, the city was managed **institutionally** almost entirely by [48] citizen assemblies. . . and its affairs were co-ordinated by the **Commune** . . . and often, in fact, by the assemblies themselves, or sections as they were called, which established their own interconnections without recourse to the **Commune**.*” [Society and Nature, no. 5, p. 96]

Here is his account of how communal self-government worked in practice:

“What, then, were these little-known forty-eight sections of Paris . . . How were they organised? And how did they function?”

*“Ideologically, the **sectionnaires** (as their members were called) believed primarily in sovereignty of the people. This concept of popular sovereignty, as Albert Soboul observes, was for them ‘not an abstraction, but the concrete reality of the people united in sectional assemblies and exercising all their rights.’ It was in their eyes an inalienable right, or, as the section de la Cite declared in November 1792, ‘every man who assumes to have sovereignty [over others] will be regarded as a tyrant, usurper of public liberty and worthy of death.’*

*“Sovereignty, in effect, was to be enjoyed by **all** citizens, not preempted by ‘representatives’ . . . The radical democrats of 1793 thus assumed that every adult was, to one degree or another, competent to participate in management public affairs. Thus, each section . . . was structured around a **face-to-face democracy**: basically a general assembly of the people that formed the most important deliberative body of a section, and served as the incarnation of popular power in a given part of the city . . . each elected six deputies to the Commune, presumably for the purpose merely of co-ordinating all the sections in the city of Paris.*

“Each section also had its own various administrative committees, whose members were also recruited from the general assembly.” [The Third Revolution, vol. 1, p. 319]

Little wonder Kropotkin argued that these “*sections*” showed “*the principles of anarchism, expressed some years later in England by W. Godwin, . . . had their origin, not in theoretical speculations, but in the **deeds** of the Great French Revolution*” [The Great French Revolution, vol. 1, p. 204]

Communal self-government was also practised, and on a far wider scale, in revolutionary Spain. All across Republican Spain, workers and peasants formed

communes and federations of communes (see section I.8 for fuller details). As Gaston Leval summarises the experience:

“There was, in the organisation set in motion by the Spanish Revolution and by the libertarian movement, which was its mainspring, a structuring from the bottom to the top, which corresponds to a real federation and true democracy . . . the controlling and co-ordinating Comites, clearly indispensable, do not go outside the organisation that has chosen them, they remain in their midst, always controllable by and accessible to the members. If any individuals contradict by their actions their mandates, it is possible to call them to order, to reprimand them, to replace them. It is only by and in such a system that the ‘majority lays down the law.’

*“The syndical assemblies were the expression and the practice of libertarian democracy, a democracy having nothing in common with the democracy of Athens where the citizens discussed and disputed for days on end on the Agora; where factions, clan rivalries, ambitions, personalities conflicted, where, in view of the social inequalities precious time was lost in interminable wrangles. Here a modern Aristophenes would have had no reason to write the equivalent of **The Clouds**.*

“Normally those periodic meetings would not last more than a few hours. They dealt with concrete, precise subjects concretely and precisely. And all who had something to say could express themselves. The Comite presented the new problems that had arisen since the previous assembly, the results obtained by the application of such and such a resolution . . . relations with other syndicates, production returns from the various workshops or factories. All this was the subject of reports and discussion. Then the assembly would nominate the commissions, the members of these commissions discussed between themselves what solutions to adopt, if there was disagreement, a majority report and a minority report would be prepared.

*“This took place in **all** the syndicates **throughout Spain**, in **all** trades and **all** industries, in assemblies which, in Barcelona, from the very beginnings of our movement brought together hundreds or thousands of workers depending on the strength of the organisations. So much so that the awareness of the duties, responsibilities of each spread all the time to a determining and decisive degree. . .*

“The practice of this democracy also extended to the agricultural regions . . . the decision to nominate a local management Comite for the villages was taken by general meetings of the inhabitants of villages, how the delegates in the different essential tasks which demanded an indispensable co-ordination of activities were proposed and elected by the whole assembled population. But it is worth adding and underlining that in all the collectivised villages and all the partially collectivised villages, in the 400 Collectives in Aragon, in the 900 in the Levante region, in the 300 in the Castilian region, to mention only the large groupings . . . the population was called together

weekly, fortnightly or monthly and kept fully informed of everything concerning the commonweal.

“This writer was present at a number of these assemblies in Aragon, where the reports on the various questions making up the agenda allowed the inhabitants to know, to so understand, and to feel so mentally integrated in society, to so participate in the management of public affairs, in the responsibilities, that the recriminations, the tensions which always occur when the power of decision is entrusted to a few individuals, be they democratically elected without the possibility of objecting, did not happen there. The assemblies were public, the objections, the proposals publicly discussed, everybody being free, as in the syndical assemblies, to participate in the discussions, to criticise, propose, etc. Democracy extended to the whole of social life.” [Collectives in the Spanish Revolution, pp. 205–7]

These collectives organised federations embracing thousands of communes and workplaces, whole branches of industry, hundreds of thousands of people and whole regions of Spain.

In other words, it **is** possible. It **has** worked. With the massive improvements in communication technology it is even more viable than before. Whether or not we reach such a self-managed society depends on whether we desire to be free or not.

I.5.5 Aren’t participatory communities and confederations just new states?

No. As we have seen in section B.2, a state can be defined both by its structure and its function. As far as structure is concerned, a state involves the politico-military and economic domination of a certain geographical territory by a ruling elite, based on the delegation of power into the hands of the few, resulting in hierarchy (centralised authority). As Kropotkin argued, *“the word ‘State’ . . . should be reserved for those societies with the hierarchical system and centralisation.”* [Ethics, p. 317f]

In a system of federated participatory communities, however, there is no ruling elite, and thus no hierarchy, because power is retained by the lowest-level units of confederation through their use of direct democracy and mandated, rotating, and recallable delegates to meetings of higher-level confederal bodies. This eliminates the problem in “representative” democratic systems of the delegation of power leading to the elected officials becoming isolated from and beyond the control of the mass of people who elected them. As Kropotkin pointed out, an anarchist society would make decisions by *“means of congresses, composed of delegates, who discuss among themselves, and submit **proposals**, not **laws**, to their constituents”*, and so is based on **self**-government, **not** representative government (i.e. statism). [The Conquest of Bread, p. 135]

In addition, in representative democracy, elected officials who must make decisions on a wide range of issues inevitably gather an unelected bureaucracy around them to aid in their decision making, and because of its control of information and its permanency, this bureaucracy soon has more power than the

elected officials (who themselves have more power than the people). In the system we have sketched, policy proposals formulated by higher-level confederal bodies would often be presented to the grassroots political units for discussion and voting (though the grassroots units could also formulate policy proposals directly), and these higher-level bodies would often need to consult experts in formulating such proposals. But these experts would not be retained as a permanent bureaucracy, and all information provided by them would be available to the lower-level units to aid in their decision making, thus eliminating the control of information on which bureaucratic power is based.

Perhaps it will be objected that communal decision making is just a form of “statism” based on direct, as opposed to representative, democracy — “statist” because the individual is still be subject to the rules of the majority and so is not free. This objection, however, confuses statism with free agreement (i.e. co-operation). Since participatory communities, like productive syndicates, are voluntary associations, the decisions they make are based on self-assumed obligations (see section A.2.11 — “*Why are most anarchists in favour of direct democracy?*”), and dissenters can leave the association if they so desire. Thus communes are no more “statist” than the act of promising and keeping ones word.

In addition, in a free society, dissent and direct action can be used by minorities to press their case (or defend their freedom) as well as debate. As Carole Pateman argues, “[p]olitical disobedience is merely one possible expression of the active citizenship on which a self-managing democracy is based.” [**The Problem of Political Obligation**, p. 162] In this way, individual liberty can be protected in a communal system and society enriched by opposition, confrontation and dissent.

Without self-management and minority dissent, society would become an ideological cemetery which would stifle ideas and individuals as these thrives on discussion (“*those who will be able to create in their mutual relations a movement and a life based on the principles of free understanding . . . will understand that variety, conflict even, is life and that uniformity is death*” [Kropotkin, **Kropotkin’s Revolutionary Pamphlets**, p. 143]). Therefore it is likely that a society based on voluntary agreements and self-management would, out of interpersonal empathy and self-interest, create a society that encouraged individuality and respect for minorities.

Therefore, a commune’s participatory nature is the opposite of statism. April Carter, in **Authority and Democracy** agrees. She states that “*commitment to direct democracy or anarchy in the socio-political sphere is incompatible with political authority*” and that the “*only authority that can exist in a direct democracy is the collective ‘authority’ vested in the body politic . . . it is doubtful if authority can be created by a group of equals who reach decisions be a process of mutual persuasion.*” [p. 69 and p. 380] Which echoes, we must note, Proudhon’s comment that “*the true meaning of the word ‘democracy’*” was the “*dismissal of government.*” [**No Gods, No Masters**, vol. 1, p. 42] Bakunin argued that when the “*whole people govern*” then “*there will be no one to be governed. It means that there will be no government, no State.*” [**The Political Philosophy of Bakunin**, p. 287] Malatesta, decades later, made the same point — “*government by everybody is no longer government in the authoritarian, historical and practical sense of the word.*” [**No Gods, No Masters**, vol. 2, p. 38] And, of course, Kropotkin argued that by means of the directly democratic sections

of the French Revolution the masses “*practic[ed] what was to be described later as Direct Self-Government*” and expressed “*the principles of anarchism.*” [**The Great French Revolution**, vol. 1, p. 200 and p. 204]

Anarchists assert that individuals and the institutions they create cannot be considered in isolation. Authoritarian institutions will create individuals who have a servile nature, who cannot govern themselves. Anarchists, therefore, consider it common sense that individuals, in order to be free, **must** have take part in determining the general agreements they make with their neighbours which give form to their communities. Otherwise, a free society could not exist and individuals would be subject to rules others make **for** them (following orders is hardly libertarian). Therefore, anarchists recognise the social nature of humanity and the fact any society based on contracts (like capitalism) will be marked by authority, injustice and inequality, **not** freedom. As Bookchin points out, “[t]o speak of ‘*The Individual*’ apart from its social roots is as meaningless as to speak of a society that contains no people or institutions.” [“*Communalism: The Democratic Dimension of Anarchism*”, **Society and Nature** no. 8, p. 15]

Society cannot be avoided and “[u]nless everyone is to be psychologically homogeneous and society’s interests so uniform in character that dissent is simply meaningless, there must be room for conflicting proposals, discussion, rational explication and majority decisions — in short, democracy.” [Bookchin, **Op. Cit.**, pp. 15–16] Those who reject democracy in the name of liberty (such as many supporters of capitalism claim to do) usually also see the need for laws and hierarchical authority (particularly in the workplace). This is unsurprising, as such authority is the only means left by which collective activity can be coordinated if “*democracy*” (i.e. self-management) is rejected (usually as “*statist*”, which is ironic as the resulting institutions, such as a capitalist company, are far more statist than self-managed ones).

However, it should be noted that communities can expel individuals or groups of individuals who constantly hinder community decisions. As Malatesta argued, “*for if it is unjust that the majority should oppress the minority, the contrary would be quite as unjust; and if the minority has a right to rebel, the majority has a right to defend itself . . . it is true that this solution is not completely satisfactory. The individuals put out of the association would be deprived of many social advantages, which an isolated person or group must do without, because they can only be procured by the co-operation of a great number of human beings. But what would you have? These malcontents cannot fairly demand that the wishes of many others should be sacrificed for their sakes.*” [**A Talk about Anarchist-Communism**, p. 29]

Nevertheless, such occurrences would be rare (for reasons discussed in section I.5.6), and their possibility merely indicates that free association also means the freedom **not** to associate. This a very important freedom for both the majority and the minority, and must be defended. However, as an isolated life is impossible, the need for communal associations is essential. It is only by living together in a supportive community can individuality be encouraged and developed along with individual freedom. However, anarchists are aware that not everyone is a social animal and that there are times that people like to withdraw into their own personal space. Thus our support for free association and federalism along with solidarity, community and self-management.

Lastly, that these communities and confederations are not just states with new names in indicated by two more considerations. Firstly, in regard to the

activities of the confederal conferences, it is clear that they would **not** be passing laws on personal behaviour or ethics, i.e. not legislating to restrict the liberty of those who live in these communities they represent. For example, a community is unlikely to pass laws outlawing homosexuality or censoring the press, for reasons discussed in the next section. Hence they would not be “*law-making bodies*” in the modern sense of the term, and thus not statist. Secondly, these confederations have no means to enforce their decisions. In other words, if a confederal congress makes a decision, it has no means to force people to act or not act in a certain way. We can imagine that there will be ethical reasons why participants will not act in ways to oppose joint activity — as they took part in the decision making process they would be considered childish if they reject the final decision because it did not go in their favour. Moreover, they would also have to face the reaction of those who also took part in the decision making process. It would be likely that those who ignored such decisions (or actively hindered them) would soon face non-violent direct action in the form of non-co-operation, shunning, boycotting and so on.

So, far from being new states by which one section of a community imposes its ethical standards on another, the anarchist commune is just a public forum. In this forum, issues of community interest (for example, management of the commons, control of communalised economic activity, and so forth) are discussed and policy agreed upon. In addition, interests beyond a local area are also discussed and delegates for confederal conferences are mandated with the wishes of the community. Hence, administration of things replaces government of people, with the community of communities existing to ensure that the interests of all are managed by all and that liberty, justice and equality are more than just ideals.

For these reasons, a libertarian-socialist society would not create a new state as far as structure goes. But what about in the area of function?

As noted in section B.2.1, the function of the state is to enable the ruling elite to exploit subordinate social strata, i.e. to derive an economic surplus from them, which it does by protecting certain economic monopolies from which the elite derives its wealth, and so its power. But this function is completely eliminated by the economic structure of anarchist society, which, by abolishing private property, makes it impossible for a privileged elite to form, let alone exploit “*subordinate strata*” (which will not exist, as no one is subordinate in power to anyone else). In other words, by placing the control of productive resources in the hands of the workers councils and community assemblies, every worker is given free access to the means of production that he or she needs to earn a living. Hence no one will be forced to pay usury (i.e. a use-fee) in the form of appropriated surplus value (profits) to an elite class that monopolises the means of production. In short, without private property, the state loses its reason for existence.

I.5.6 Won’t there be a danger of a “*tyranny of the majority*” under libertarian socialism?

While the “*tyranny of the majority*” objection does contain an important point, it is often raised for self-serving reasons. This is because those who raised

the issue (for example, creators of the 1789 US constitution like Hamilton and Madison) saw the “*minority*” to be protected as the rich. In other words, the objection is not opposed to majority tyranny as such (they have no objections when the majority support their right to their riches) but rather attempts of the majority to change their society to a fairer one. However, as noted, the objection to majority rule **does** contain a valid point and one which anarchists have addressed — namely, what about minority freedom within a self-managed society.

There is, of course, this danger in **any** society, be its decision making structure direct (anarchy) or indirect (by some form of government). Anarchists are at the forefront in expressing concern about it (see, for example, Emma Goldman’s classic essay “*Minorities versus Majorities*” in **Anarchism and Other Essays**). We are well aware that the mass, as long as the individuals within it do not free themselves, can be a dead-weight on others, resisting change and enforcing conformity. As Goldman argued, “*even more than constituted authority, it is social uniformity and sameness that harass the individual the most.*” [**Red Emma Speaks**, p. 93] Hence Malatesta’s comment that anarchists “*have the special mission of being vigilant custodians of freedom, against all aspirants to power and against the possible tyranny of the majority.*” [**Life and Ideas**, p. 161]

However, rather than draw elitist conclusions from this fact of life under capitalism and urge forms of government and organisation which restrict popular participation (and promote rule, and tyranny, by the few) — as classical liberals do — libertarians argue that only a process of self-liberation through struggle and participation can break up the mass into free, self-managing individuals. Moreover, we also argue that participation and self-management is the only way that majorities can come to see the point of minority ideas and for seeing the importance of protecting minority freedoms. This means that any attempt to restrict participation in the name of minority rights actually enforces the herd mentality, undermining minority and individual freedom rather than protecting it. As Carole Pateman argues:

“the evidence supports the arguments . . . that we do learn to participate by participating and that feelings of political efficacy are more likely to be developed in a participatory environment. Furthermore, the evidence indicates that experience of a participatory authority structure might also be effective in diminishing tendencies towards non-democratic attitudes in the individual.” [**Participation and Democratic Theory**, p. 105]

However, while there is cause for concern (and anarchists are at the forefront in expressing it), the “*tyranny of the majority*” objection fails to take note of the vast difference between direct and “*representative*” forms of democracy.

In the current system, as we pointed out in section B.5, voters are mere passive spectators of occasional, staged, and highly rehearsed debates among candidates pre-selected by the corporate elite, who pay for campaign expenses. More often the public is expected to choose simply on the basis of political ads and news sound bites. Once the choice is made, cumbersome and ineffective recall procedures insure that elected representatives can act more or less as they (or rather, their wealthy sponsors) please. The function, then, of the electorate

in bourgeois “*representative government*” is ratification of “*choices*” that have been **already made for them!**

By contrast, in a direct, libertarian democracy, decisions are made following public discussion in community assemblies open to all. After decisions have been reached, outvoted minorities — even minorities of one — still have ample opportunity to present reasoned and persuasive counter-arguments to try to change the decision. This process of debate, disagreement, challenge, and counter-challenge, which goes on even after the defeated minority has temporarily acquiesced in the decision of the majority, is virtually absent in the representative system, where “*tyranny of the majority*” is truly a problem. In addition, minorities can secede from an association if the decision reached by it are truly offensive to them.

And let us not forget that in all likelihood, issues of personal conduct or activity will not be discussed in the neighbourhood assemblies. Why? Because we are talking about a society in which most people consider themselves to be unique, free individuals, who would thus recognise and act to protect the uniqueness and freedom of others. Unless people are indoctrinated by religion or some other form of ideology, they can be tolerant of others and their individuality. If this is not the case now, then it has more to do with the existence of authoritarian social relationships — relationships that will be dismantled under libertarian socialism — and the type of person they create rather than some innate human flaw.

Thus there will be vast areas of life in a libertarian socialist community which are none of other people’s business. Anarchists have always stressed the importance of personal space and “*private*” areas. Indeed, for Kropotkin, the failure of many “*utopian*” communities directly flowed from a lack personal space. One of the mistakes made by such “*utopian*” communities within capitalism was “*the desire to manage the community after the model of a family, to make it ‘the great family.’ They lived all in the same house and were thus forced to continuously meet the same ‘brethren and sisters.’ It is already difficult often for two real brothers to live together in the same house, and family life is not always harmonious; so it was a fundamental error to impose on all the ‘great family’ instead of trying, on the contrary, to guarantee as much freedom and home life to each individual.*” [**Small Communal Experiments and Why they Fail**, pp. 8–9]

Thus in an anarchist society, continual agreement on all issues is not desired. The members of a free society “*need only agree as to some advantageous method of common work, and are free otherwise to live in their own way.*” [**Op. Cit.**, p. 22]

Which brings us to another key point. When anarchists talk of democratising or communalising the household or any other association, we do not mean that it should be stripped of its private status and become open to the “*tyranny of the majority*” or regulation by general voting in a single, universal public sphere. Rather, we mean that households and other relationships should take in libertarian characteristics and be consistent with the liberty of all its members. Thus a society based on self-management does not imply the destruction of private spheres of activity — it implies the extension of anarchist principles into all spheres of life, both private and public. It does not mean the subordination of the private by the public, or vice versa.

So, in other words, it is highly unlikely that the “*tyranny of the majority*”

will exert itself where most rightly fear it — in their homes, how they act with friends, their personal space, how they act, and do on. As long as individual freedom and rights are protected, it is of little concern what people get up to (included the rights of children, who are also individuals and **not** the property of their parents). Direct democracy in anarchist theory is purely concerned with common resources and their use and management. It is highly unlikely that a free society would debate issues of personal behaviour or morality and instead would leave them to those directly affected by them — as it should be, as we all need personal space and experimentation to find the way of life that best suits us.

Today an authoritarian worldview, characterised by an inability to think beyond the categories of domination and submission, is imparted by conditioning in the family, schools, religious institutions, clubs, fraternities, the army, etc., and produces a type of personality that is intolerant of any individual or group perceived as threatening to the perpetuation of that worldview and its corresponding institutions and values. Thus, as Bakunin argues, “*public opinion*” is potentially intolerant “*simply because hitherto this power has not been humanised itself; it has not been humanised because the social life of which it is ever the faithful expression is based . . . in the worship of divinity, not on respect for humanity; in authority, not on liberty; on privilege, not on equality; in the exploitation, not on the brotherhood, of men; on iniquity and falsehood, not on justice and truth. Consequently its real action, always in contradiction of the humanitarian theories which it professes, has constantly exercised a disastrous and depraving influence.*” [**God and the State**, p. 43f] In other words, “*if society is ever to become free, it will be so through liberated individuals, whose free efforts make society.*” [Emma Goldman, **Anarchism and Other Essays**, p. 44]

In an anarchist society, however, a conscious effort will be made to dissolve the institutional and traditional sources of the authoritarian/submissive type of personality, and thus to free “*public opinion*” of its current potential for intolerance. In addition, it should be noted that as anarchists recognise that the practice of self-assumed political obligation implied in free association also implies the right to practice dissent and disobedience as well. As Carole Pateman notes, “[*e*]ven if it is impossible to be unjust to myself, I do not vote for myself alone, but alone with everyone else. Questions about injustice are always appropriate in political life, for there is no guarantee that participatory voting will actually result in decisions in accord with the principles of political morality.” [**The Problem of Political Obligation**, p. 160]

If an individual or group of individuals feel that a specific decision threatens their freedom (which is the basic principle of political morality in an anarchist society) they can (and must) act to defend that freedom. “*The political practice of participatory voting rests in a collective self-consciousness about the meaning and implication of citizenship. The members of the political association understand that to vote is simultaneously to commit oneself, to commit one’s fellow citizens, and also to commit oneself to them in a mutual undertaking . . . a refusal to vote on a particular occasion indicates that the refusers believe . . . [that] the proposal . . . infringes the principle of political morality on which the political association is based . . . A refusal to vote [or the use of direct action] could be seen as an appeal to the ‘sense of justice’ of their fellow citizens.*” [Carole Pateman, **Op. Cit.**, p. 161]

As they no longer “*consent*” to the decisions made by their community they can appeal to the “*sense of justice*” of their fellow citizens by direct action and indicate that a given decision may have impacts which the majority were not aware. Hence direct action and dissent is a key aspect of an anarchist society and help ensure against the tyranny of the majority. Anarchism rejects the “*love it or leave it*” attitude that marks classical liberalism as well as Rousseau (this aspect of his work being inconsistent with its foundations in participation).

This vision of self-assumed obligation, with its basis in individual liberty, indicates the basic flaw of Joseph Schumpeter’s argument against democracy as anything but a political **method** of arriving at decisions (in his case who will be the leaders of a society). Schumpeter proposed the “*mental experiment*” of imagining a country which, democratically, persecuted Jews, witches and Christians (see his famous work **Capitalism, Socialism and Democracy**). He argues that we should not approve of these practices just because they have been decided upon by the democratic method and, therefore, democracy cannot be an end in itself.

However, such systematic persecution would conflict with the rules of procedure required if a country’s or community’s political method is to be called “*democratic*.” This is because, in order to be democratic, the minority must be in a position for its ideas to become the majority’s via argument and convincing the majority (and that requires freedom of discussion and association). A country or community in which the majority persecutes or represses a minority automatically ensures that the minority can never be in a position to become the majority (as the minority is barred by force from becoming so) or convince the majority of the errors of its way (even if it cannot become the majority physically, it can become so morally by convincing the majority to change its position). Schumpeter’s example utterly violates democratic principles and so cannot be squared with the rules of democratic procedure. Thus majority tyranny is an outrage against both democratic theory **and** individual liberty (unsurprisingly, as the former has its roots in the latter).

This argument applies with even more force to a self-managed community too and so any system in which the majority tyrannises over a minority is, by definition, **not** self-managed as one part of the community is excluded from convincing the other (“*the enslavement of part of a nation denies the federal principal itself*.” [P-J Proudhon, **The Principle of Federation**, p. 42f]). Thus individual freedom and minority rights are essential to direct democracy/self-management.

It should be stressed, however, that most anarchists do not think that the way to guard against possible tyranny by the majority is to resort to decision-making by consensus (where no action can be taken until every person in the group agrees) or a property system (based in contracts). Both consensus (see section A.2.12 — “*Is consensus an alternative to direct democracy?*”) and contracts (see section A.2.14 — “*Why is voluntarism not enough?*”) soon result in authoritarian social relationships developing in the name of “liberty.”

For example, decision making by consensus tends to eliminate the creative role of dissent and mutate into a system that pressures people into psychic and intellectual conformity — hardly a libertarian ideal. In the case of property and contract based systems, those with property have more power than those without, and so they soon determine what can and cannot be done — in other words, the “*tyranny of the minority*” and hierarchical authority. Both alternatives are

deeply flawed.

Hence most anarchists have recognised that majority decision making, though not perfect, is the best way to reach decisions in a political system based on maximising individual (and so social) freedom. Direct democracy in grassroots confederal assemblies and workers' councils ensures that decision making is "*horizontal*" in nature (i.e. between **equals**) and not hierarchical (i.e. governmental, between order giver and order taker). In other words, it ensures liberty.

1.5.7 What if I don't want to join a commune?

As would be expected, no one would be **forced** to join a commune nor take part in its assemblies. To suggest otherwise would be contrary to anarchist principles. We have already indicated (in the last two sections) why the communes would not be likely to restrict individuals with new "*laws*." Thus a commune would be a free society, in which individual liberty would be respected and encouraged.

However, what about individuals who live within the boundaries of a commune but decide not to join? For example, a local neighbourhood may include households that desire to associate and a few that do not (this is actually happened during the Spanish Revolution). What happens to the minority of dissenters?

Obviously individuals can leave to find communities more in line with their own concepts of right and wrong if they cannot convince their neighbours of the validity of their ideas. And, equally obviously, not everyone will want to leave an area they like. So we must discuss those who decide to not to find a more suitable community. Are the communal decisions binding on non-members? Obviously not. If an individual or family desire **not** to join a commune (for whatever reason), their freedoms must be respected. However, this also means that they cannot benefit from communal activity and resources (such a free housing, hospitals, and so forth) and, possibly, have to pay for their use. As long as they do not exploit or oppress others, an anarchist community would respect their decision. After all, as Malatesta argued, "*free and voluntary communism is ironical if one has not the right and the possibility to live in a different regime, collectivist, mutualist, individualist — as one wishes, always on condition that there is no oppression or exploitation of others.*" [**Life and Ideas**, p. 103]

Many who oppose anarchist self-management in the name of freedom often do so because they desire to oppress and exploit others. In other words, they oppose participatory communities because they (rightly) fear that this would restrict their ability to oppress, exploit and grow rich off the labour of others. This type of opposition can be seen from history, when rich elites, in the name of liberty, have replaced democratic forms of social decision making with representative or authoritarian ones (see section B.2.6). Regardless of what defenders of capitalism claim, "*voluntary bilateral exchanges*" affect third parties and can harm others indirectly. This can easily be seen from examples like concentrations of wealth which have effects across society, or crime in the local community, or the ecological impacts of consumption and production. This means that an anarchist society would be aware that inequality and so statism could develop again and take precautions against it. As Malatesta put it, some "*seem almost to believe that after having brought down government and private property we would allow both to be quietly built up again, because of respect for*

the *freedom* of those who might feel the need to be rulers and property owners. A truly curious way of interpreting our ideas.” [Anarchy, p. 41]

So, it goes without saying that the minority, as in any society, will exist within the ethical norms of the surrounding society and they will be “forced to adhere” to them in the same sense that they are “forced to adhere” to not murdering people. Few people would say that forcing people not to commit murder is a restriction of their liberty. Therefore, while allowing the maximum of individual freedom of dissent, an anarchist community would still have to apply its ethical standards to those beyond that community. Individuals would not be allowed to murder, harm or enslave others and claim that they are allowed to do so because they are not part of the local community (see section I.5.8 on crime in an anarchist society).

Similarly, individuals would not be allowed to develop private property (as opposed to possession) simply because they wanted to. Such a “ban” on private property would not be a restriction on liberty simply because stopping the development of authority hardly counts as an authoritarian act (for an analogy, supporters of capitalism do not think that banning theft is a restriction of liberty and because this view is — currently — accepted by the majority, it is enforced on the minority). Even the word “ban” is wrong, as it is the would-be capitalist who is trying to ban freedom for others on their “property.” Members of a free society would simply refuse to recognise the claims of private property — they would simply ignore the would-be capitalist’s pretensions and “keep out” signs. Without a state, or hired thugs, to back up their claims, they would just end up looking silly. “Occupancy and use” (to use Tucker’s term) would be the limits of possession — and so property would become “that control of a thing by a person which will receive either social sanction, or else unanimous individual sanction, when the laws of social expediency shall have been fully discovered.” [B. Tucker, *Instead of a Book*, p. 131]

Tucker explains this system further:

“Suppose that all the municipalities have adopted the voluntary principle, and that compulsory taxation has been abolished. Now after this let us suppose that the Anarchistic view that occupancy and use should condition and limit landholding becomes the prevailing view. Evidently then these municipalities will proceed to formulate and enforce this view. What the formula will be no one can foresee. But continuing with our suppositions, we will say that they decide to protect no one in the possession of more than ten acres. In execution of this decision, they . . . notify all holders of more than ten acres within their limits that . . . they will cease to protect them in the possession of more than ten acres . . .” [The Individualist Anarchists, pp. 159–60]

A similar process would occur for housing, with tenants “would not be forced to pay [the landlord] rent, nor would [the landlord] be allowed to seize their property. The Anarchistic associations would look upon . . . tenants very much as they would look upon . . . guests.” [Op. Cit., p. 162]

Therefore anarchists support the maximum of experiments while ensuring that the social conditions that allow this experimentation are protected against concentrations of wealth and power. As Malatesta put it, “Anarchism involves

all and only those forms of life that respect liberty and recognise that every person has an equal right to enjoy the good things of nature and the products of their own activity.” [The Anarchist Revolution, p. 14]

This means that Anarchists do not support the liberty of being a boss (anarchists will happily work **with** someone but not **for** someone). Of course, those who desire to create private property against the wishes of others expect those others to respect their wishes. So, when the would-be proprietarians happily fence off their “property” and exclude others from it, could not these others remember these words from Woody Guthrie’s **This Land is Your Land**, and act accordingly?

*“As I went rumbling that dusty highway
I saw a sign that said private property
But on the other side it didn’t say nothing
This land was made for you and me”*

While happy to exclude others from “their” property, such owners seem more than happy to use the resources held in common by others. They are the ultimate “free riders,” desiring the benefits of society but rejecting the responsibilities that go with it. In the end, such “individualists” usually end up supporting the state (an institution they claim to hate) precisely because it is the only means by which private property and their “freedom” to exercise authority can be defended.

So, as a way to eliminate the problem of minorities seeking power and property for themselves, an anarchist revolution places social wealth (starting with the land) in the hands of all and promises to protect only those uses of it which are considered just by society as a whole. In other words, by recognising that “property” is a product of society, an anarchist society will ensure that an individual’s “property” is protected by his or her fellows when it is based purely upon actual occupancy and use. Thus attempts to transform minority dissent into, say, property rights would be fought by simply ignoring the “keep out” signs of property owned, but not used, by an individual or group.

Therefore, individuals are free not to associate, but their claims of “ownership” will be based around **use** rights, not property rights. Individuals will be protected by their fellows only in so far as what they claim to “own” is related to their ability to personally use said “property.” As Kropotkin argued, *“when we see a peasant who is in possession of just the amount of land he can cultivate, we do not think it reasonable to turn him off his little farm. He exploits nobody, and nobody would have the right to interfere with his work. But if he possesses under the capitalist law more than he can cultivate himself, we consider that we must not give him the right of keeping that soil for himself, leaving it uncultivated when it might be cultivated by others, or of making other cultivate it for his benefit.”* [Act for Yourselves, p. 104] Without a state to back up and protect property “rights,” we see that all rights are, in the end, what society considers to be fair (the difference between law and social custom is discussed in section I.7.3). What the state does is to impose “rights” which do not have such a basis (i.e. those that protect the property of the elite) or “rights” which have been corrupted by wealth and would have been changed because of this corruption had society been free to manage its own affairs.

In summary, individuals will be free not to join a participatory community, and hence free to place themselves outside its decisions and activities on most

issues that do not apply to the fundamental ethical standards of a society. Hence individuals who desire to live outside of anarchist communities would be free to live as they see fit but would not be able to commit murder, rape, create private property or other activities that harmed individuals. It should be noted, moreover, that this does not mean that their possessions will be taken from them by “*society*” or that “*society*” will tell them what to do with their possessions. Freedom, in a complex world, means that such individuals will not be in a position to turn their possessions into **property** and thus recreate capitalism (for the distinction between “*property*” and “*possessions*,” see section B.3.1). This will not be done by “anarchist police” or by “banning” voluntary agreements, but purely by recognising that “*property*” is a social creation and by creating a social system that will encourage individuals to stand up for their rights and co-operate with each other.

I.5.8 What about crime?

For anarchists, “*crime*” can best be described as anti-social acts, or behaviour which harms someone else or which invades their personal space. Anarchists argue that the root cause for crime is not some perversity of human nature or “*original sin*,” but is due to the type of society by which people are moulded. For example, anarchists point out that by eliminating private property, crime could be reduced by about 90 percent, since about 90 percent of crime is currently motivated by evils stemming from private property such as poverty, homelessness, unemployment, and alienation. Moreover, by adopting anarchist methods of non-authoritarian child rearing and education, most of the remaining crimes could also be eliminated, because they are largely due to the anti-social, perverse, and cruel “*secondary drives*” that develop because of authoritarian, pleasure-negative child-rearing practices (See section J.6 — “*What methods of child rearing do anarchists advocate?*”)

“*Crime*”, therefore, cannot be divorced from the society within which it occurs. Society, in Emma Goldman’s words, gets the criminals it deserves. For example, anarchists do not think it unusual nor unexpected that crime exploded under the pro-free market capitalist regimes of Thatcher and Reagan. Crime, the most obvious symptom of social crisis, took 30 years to double in Britain (from 1 million incidents in 1950 to 2.2 million in 1979). However, between 1979 and 1992 the crime rate more than doubled, exceeding the 5 million mark in 1992. These 13 years were marked by a government firmly committed to the “*free market*” and “*individual responsibility*.” It was entirely predictable that the social disruption, atomisation of individuals, and increased poverty caused by freeing capitalism from social controls would rip society apart and increase criminal activity. Also unsurprisingly (from an anarchist viewpoint), under these pro-market governments we also saw a reduction in civil liberties, increased state centralisation, and the destruction of local government. As Malatesta put it, the classical liberalism which these governments represented could have had no other effect, for “*the government’s powers of repression must perforce increase as free competition results in more discord and inequality.*” [**Anarchy**, p. 46]

Hence the paradox of governments committed to “*individual rights*,” the “*free market*” and “*getting the state off our backs*” increasing state power and reducing rights while holding office during a crime explosion is no paradox at

all. “The conjuncture of the rhetoric of individual freedom and a vast increase in state power,” argues Carole Pateman, “is not unexpected at a time when the influence of contract doctrine is extending into the last, most intimate nooks and crannies of social life. Taken to a conclusion, contract undermines the conditions of its own existence. Hobbes showed long ago that contract — all the way down — requires absolutism and the sword to keep war at bay.” [**The Sexual Contract**, p. 232]

Capitalism, and the contract theory on which it is built, will inevitably rip apart society. Capitalism is based upon a vision of humanity as isolated individuals with no connection other than that of money and contract. Such a vision cannot help but institutionalise anti-social acts. As Kropotkin argued “it is not love and not even sympathy upon which Society is based in mankind. It is the conscience — be it only at the stage of an instinct — of human solidarity. It is the unconscious recognition of the force that is borrowed by each man [and woman] from the practice of mutual aid; of the close dependency of every one’s happiness upon the happiness of all; and of the sense of justice, or equity, which brings the individual to consider the rights of every other individual as equal to his [or her] own.” [**Mutual Aid**, p. 16]

The social atomisation required and created by capitalism destroys the basic bonds of society — namely human solidarity — and hierarchy crushes the individuality required to understand that we share a common humanity with others and so understand **why** we must be ethical and respect others rights.

We should also point out that prisons have numerous negative affects on society as well as often re-enforcing criminal (i.e. anti-social) behaviour. Kropotkin originated the accurate description of prisons as “Universities of Crime” wherein the first-time criminal learns new techniques and have adapt to the prevailing ethical standards within them. Hence, prisons would have the effect of increasing the criminal tendencies of those sent there and so prove to be counter-productive. In addition, prisons do not affect the social conditions which promote many forms of crime.

We are not saying, however, that anarchists reject the concept of individual responsibility. While recognising that rape, for example, is the result of a social system which represses sexuality and is based on patriarchy (i.e. rape has more to do with power than sex), anarchists do not “sit back” and say “it’s society’s fault.” Individuals have to take responsibility for their own actions and recognise that consequences of those actions. Part of the current problem with “law codes” is that individuals have been deprived of the responsibility for developing their own ethical code, and so are less likely to develop “civilised” social standards (see section I.7.3).

Therefore, while anarchists reject the ideas of law and a specialised justice system, they are not blind to the fact that anti-social action may not totally disappear in a free society. Therefore, some sort of “court” system would still be necessary to deal with the remaining crimes and to adjudicate disputes between citizens.

These courts would function in one of two ways. One possibility is that the parties involved agree to hand their case to a third party. Then the “court” in question would be the arrangements made by those parties. The second possibility is when the parties cannot not agree (or if the victim was dead). Then the issue could be raised at a communal assembly and a “court” appointed to look into the issue. These “courts” would be independent from the commune, their

independence strengthened by popular election instead of executive appointment of judges, by protecting the jury system of selection of random citizens by lot, and by informing jurors of their right to judge the law itself, according to their conscience, as well as the facts of a case. As Malatesta pointed out, “*when differences were to arise between men [sic!], would not arbitration voluntarily accepted, or pressure of public opinion, be perhaps more likely to establish where the right lies than through an irresponsible magistrate which has the right to adjudicate on everything and everybody and is inevitably incompetent and therefore unjust?*” [**Anarchy**, p. 43]

In the case of a “*police force*,” this would not exist either as a public or private specialised body or company. If a local community did consider that public safety required a body of people who could be called upon for help, we imagine that a new system would be created. Such a system would “*not be entrusted to, as it is today, to a special, official body: all able-bodied inhabitants [of a commune] will be called upon to take turns in the security measures instituted by the commune.*” [James Guillaume, **Bakunin on Anarchism**, p. 371] This system would be based around a voluntary militia system, in which all members of the community could serve if they so desired. Those who served would not constitute a professional body; instead the service would be made up of local people who would join for short periods of time and be replaced if they abused their position. Hence the likelihood that a communal militia would become corrupted by power, like the current police force or a private security firm exercising a policing function, would be vastly reduced. Moreover, by accustoming a population to intervene in anti-social as part of the militia, they would be empowered to do so when not an active part of it, so reducing the need for its services even more.

Such a body would not have a monopoly on protecting others, but would simply be on call if others required it. It would no more be a monopoly of defence (i.e. a “*police force*”) than the current fire service is a monopoly. Individuals are not banned from putting out fires today because the fire service exists, similarly individuals will be free to help stop anti-social crime by themselves, or in association with others, in an anarchist society.

Of course there are anti-social acts which occur without witnesses and so the “*guilty*” party cannot be readily identified. If such acts did occur we can imagine an anarchist community taking two courses of action. The injured party may look into the facts themselves or appoint an agent to do so or, more likely, an ad hoc group would be elected at a community assembly to investigate specific crimes of this sort. Such a group would be given the necessary “*authority*” to investigate the crime and be subject to recall by the community if they start trying to abuse whatever authority they had. Once the investigating body thought it had enough evidence it would inform the community as well as the affected parties and then organise a court. Of course, a free society will produce different solutions to such problems, solutions no-one has considered yet and so these suggestions are just that, suggestions.

As is often stated, prevention is better than cure. This is as true of crime as of disease. In other words, crime is best fought by rooting out its **causes** as opposed to punishing those who act in response to these causes. For example, it is hardly surprising that a culture that promotes individual profit and consumerism would produce individuals who do not respect other people (or themselves) and see them as purely means to an end (usually increased con-

sumption). And, like everything else in a capitalist system, such as honour and pride, conscience is also available at the right price — hardly an environment which encourages consideration for others, or even for oneself.

In addition, a society based on hierarchical authority will also tend to produce anti-social activity because the free development and expression it suppresses. Thus, irrational authority (which is often claimed to be the only cure for crime) actually helps produce it. As Emma Goldman argued, crime “*is naught but misdirected energy. So long as every institution of today, economic, political, social, moral conspires to misdirect human energy into wrong channels; so long as most people are out of place doing things they hate to do, living a life they loathe to live, crime will be inevitable, and all the laws on the statutes can only increase, but never do away with, crime*” [Red Emma Speaks, p. 57]

Eric Fromm, decades latter, makes the same point:

*“It would seem that the amount of destructiveness to be found in individuals is proportionate to the amount to which expansiveness of life is curtailed. By this we do not refer to individual frustrations of this or that instinctive desire but to the thwarting of the whole of life, the blockage of spontaneity of the growth and expression of man’s sensuous, emotional, and intellectual capacities. Life has an inner dynamism of its own; it tends to grow, to be expressed, to be lived . . . the drive for life and the drive for destruction are not mutually interdependent factors but are in a reversed interdependence. The more the drive towards life is thwarted, the stronger is the drive towards destruction; the more life is realised, the less is the strength of destructiveness. **Destructiveness is the outcome of unlived life.** Those individual and social conditions that make for suppression of life produce the passion for destruction that forms, so to speak, the reservoir from which particular hostile tendencies — either against others or against oneself — are nourished” [The Fear of Freedom, p. 158]*

Therefore, by reorganising society so that it empowers everyone and actively encourages the use of all our intellectual, emotional and sensuous abilities, crime would soon cease to be the huge problem that it is now. As for the anti-social behaviour or clashes between individuals that might still exist in such a society, it would be dealt with in a system based on respect for the individual and a recognition of the social roots of the problem. Restraint would be kept to a minimum.

Anarchists think that public opinion and social pressure would be the main means of preventing anti-social acts in an anarchist society, with such actions as boycotting and ostracising used as powerful sanctions to convince those attempting them of the errors of their way. Extensive non-co-operation by neighbours, friends and work mates would be the best means of stopping acts which harmed others.

An anarchist system of justice, we should note, would have a lot to learn from aboriginal societies simply because they are examples of social order without the state. Indeed many of the ideas we consider as essential to justice today can be found in such societies. As Kropotkin argued, “*when we imagine that we have made great advances in introducing, for instance, the jury, all we have done is*

to return to the institutions of the so-called ‘barbarians’ after having changed it to the advantage of the ruling classes.” [The State: Its Historic Role, p. 18]

Like aboriginal justice (as documented by Rupert Ross in **Returning to the Teachings: Exploring Aboriginal Justice**) anarchists contend that offenders should not be punished but justice achieved by the teaching and healing of all involved. Public condemnation of the wrongdoing would be a key aspect of this process, but the wrong doer would remain part of the community and so see the effects of their actions on others in terms of grief and pain caused. It would be likely that wrong doers would be expected to try to make amends for their act by community service or helping victims and their families.

So, from a practical viewpoint, almost all anarchists oppose prisons on both practical grounds (they do not work) and ethical grounds (“*We know what prisons mean — they mean broken down body and spirit, degradation, consumption, insanity*” Voltairine de Cleyre, quoted by Paul Avrich in **An American Anarchist**, p. 146]). The Makhnovists took the usual anarchist position on prisons:

“Prisons are the symbol of the servitude of the people, they are always built only to subjugate the people, the workers and peasants. . . Free people have no use for prisons. Wherever prisons exist, the people are not free. . . In keeping with this attitude, they [the Makhnovists] demolished prisons wherever they went.” [Peter Arshinov, **The History of the Makhnovist Movement**, p. 153]

With the exception of Benjamin Tucker, no major anarchist writer supported the institution. Few anarchists think that private prisons (like private policemen) are compatible with their notions of freedom. However, all anarchists are against the current “*justice*” system which seems to them to be organised around **revenge** and punishing effects and not fixing causes.

However, there are psychopaths and other people in any society who are too dangerous to be allowed to walk freely. Restraint in this case would be the only option and such people may have to be isolated from others for their own, and others, safety. Perhaps mental hospitals would be used, or an area quarantined for their use created (perhaps an island, for example). However, such cases (we hope) would be rare.

So instead of prisons and a legal code based on the concept of punishment and revenge, anarchists support the use of public opinion and pressure to stop anti-social acts and the need to therapeutically rehabilitate those who commit anti-social acts. As Kropotkin argued, “*liberty, equality, and practical human sympathy are the most effective barriers we can oppose to the anti-social instinct of certain among us*” and **not** a parasitic legal system. [The Anarchist Reader, p. 117]

I.5.9 What about Freedom of Speech under Anarchism?

Many express the idea that **all** forms of socialism would endanger freedom of speech, press, and so forth. The usual formulation of this argument is in relation to state socialism and goes as follows: if the state (or “*society*”) owned all the

means of communication, then only the views which the government supported would get access to the media.

This is an important point and it needs to be addressed. However, before doing so, we should point out that under capitalism the major media are effectively controlled by the wealthy. As we argued in section D.3, the media are **not** the independent defenders of freedom that they like to portray themselves as. This is hardly surprising, since newspapers, television companies, and so forth are capitalist enterprises owned by the wealthy and with managing directors and editors who are also wealthy individuals with a vested interest in the status quo. Hence there are institutional factors which ensure that the “*free press*” reflects the interests of capitalist elites.

However, in democratic capitalist states there is little overt censorship. Radical and independent publishers can still print their papers and books without state intervention (although market forces ensure that this activity can be difficult and financially unrewarding). Under socialism, it is argued, because “*society*” owns the means of communication and production, this liberty will not exist. Instead, as can be seen from all examples of “*actually existing socialism*,” such liberty is crushed in favour of the government’s point of view.

As anarchism rejects the state, we can say that this danger does not exist under libertarian socialism. However, since social anarchists argue for the communalisation of production, could not restrictions on free speech still exist? We argue no, for three reasons.

Firstly, publishing houses, radio stations, and so on will be run by their workers directly. They will be supplied by other syndicates, with whom they will make agreements, and **not** by “*central planning*” officials, who would not exist. In other words, there is no bureaucracy of officials allocating (and so controlling) resources (and so the means of communication). Hence, anarchist self-management will ensure that there is a wide range of opinions in different magazines and papers. There would be community papers, radio stations, etc., and obviously they would play an increased role in a free society. But they would not be the only media. Associations, political parties, industrial syndicates, and so on would have their own media and/or would have access to the resources of communication workers’ syndicates, so ensuring that a wide range of opinions can be expressed.

Secondly, the “*ultimate*” power in a free society will be the individuals of which it is composed. This power will be expressed in communal and workplace assemblies that can recall delegates and revoke their decisions. It is doubtful that these assemblies would tolerate a set of would-be bureaucrats determining what they can or cannot read, see, or hear.

Thirdly, individuals in a free society would be interested in hearing different viewpoints and discussing them. This is the natural side-effect of critical thought (which self-management would encourage), and so they would have a vested interest in defending the widest possible access to different forms of media for different views. Having no vested interests to defend, a free society would hardly encourage or tolerate the censorship associated with the capitalist media (“*I listen to criticism because I am greedy. I listen to criticism because I am selfish. I would not deny myself another’s insights*” [For Ourselves, **The Right to be Greedy**, Thesis 113]).

Therefore, anarchism will **increase** freedom of speech in many important ways, particularly in the workplace (where it is currently denied under capital-

ism). This will be a natural result of a society based on maximising freedom and the desire to enjoy life.

We would also like to point out that during both the Spanish and Russian revolutions, freedom of speech was protected within anarchist areas.

For example, the Makhnovists in the Ukraine “*fully applied the revolutionary principles of freedom of speech, of thought, of the Press, and of political association. In all the cities and towns occupied . . . Complete freedom of speech, Press, assembly, and association of any kind and for everyone was immediately proclaimed.*” [Peter Arshinov, **The History of the Makhnovist Movement**, p. 153] This is confirmed by Michael Malet who notes that “[*o]ne of the most remarkable achievements of the Makhnovists was to preserve a freedom of speech more extensive than any of their opponents.*” [Nestor Makhno in the **Russian Civil War**, p. 175]

In revolutionary Spain republicans, liberals, communists, Trotskyites and many different anarchist groups all had freedom to express their views. Emma Goldman writes that “[*o]n my first visit to Spain in September 1936, nothing surprised me so much as the amount of political freedom I found everywhere. True, it did not extend to Fascists . . . [but] everyone of the anti-Fascist front enjoyed political freedom which hardly existed in any of the so-called European democracies.*” [Vision on Fire, p.147] This is confirmed in a host of other eye-witnesses, including George Orwell in **Homage to Catalonia** (in fact, it was the rise of the pro-capitalist republicans and communists that introduced censorship).

Both movements were fighting a life-and-death struggle against communist, fascist and pro-capitalist armies and so this defence of freedom of expression, given the circumstances, is particularly noteworthy.

Therefore, based upon both theory and practice, we can say that anarchism will not endanger freedom of expression. Indeed, by breaking up the capitalist oligopoly which currently exists and introducing workers’ self-management of the press, a far wider range of opinions will become available in a free society. Rather than reflect the interests of a wealthy elite, the media would reflect the interests of society as a whole and the individuals and groups within it.

I.5.10 What about political parties?

Political parties and other interest groups will exist in an anarchist society as long as people feel the need to join them. They will not be “*banned*” in any way, and their members will have the same rights as everyone else. Individuals who are members of political parties or associations can take part in communal and other assemblies and try to convince others of the soundness of their ideas.

However, there is a key difference between such activity and politics under a capitalist democracy. This is because the elections to positions of responsibility in an anarchist society will not be based on party tickets nor will it involve the delegation of power. Emile Pouget’s description of the difference between the syndicalist trade union and elections drives this difference home:

“The constituent part of the trade union is the individual. Except that the union member is spared the depressing phenomenon manifest in democratic circles where, thanks to the veneration of universal

suffrage, the trend is towards the crushing and diminution of the human personality. In a democratic setting, the elector can avail of his [or her] will only in order to perform an act of abdication: his role is to 'award' his 'vote' to the candidate whom he [or she] wishes to have as his [or her] 'representative.'

"Affiliation to the trade union has no such implication . . . In joining the union, the worker merely enters into a contract — which he may at any time abjure — with comrades who are his equals in will and potential . . . In the union, say, should it come to the appointment of a trade union council to take charge of administrative matters, such 'selection' is not to be compared with 'election': the form of voting customarily employed in such circumstances is merely a means whereby the labour can be divided and is not accompanied by any delegation of authority. The strictly prescribed duties of the trade union council are merely administrative. The council performs the task entrusted to it, without ever overruling its principals, without supplanting them or acting in their place.

"The same might be said of all decisions reached in the union: all are restricted to a definite and specific act, whereas in democracy, election implies that the elected candidate has been issued by his [or her] elector with a *carte blanche* empowering him [or her] to decide and do as he [or she] pleases, in and on everything, without even the hindrance of the quite possibly contrary views of his [or her] principals, whose opposition, in any case, no matter how pronounced, is of no consequence until such time as the elected candidate's mandate has run its course.

"So there cannot be any possible parallels, let alone confusion, between trade unions activity and participation in the disappointing chores of politics." [No Gods, No Masters, vol. 2, pp. 67–68]

In other words, when individuals are elected to administrative posts they are elected to carry out their mandate, **not** to carry out their party's programme. Of course, if the individuals in question had convinced their fellow workers and citizens that their programme was correct, then this mandate and the programme would be identical. However this is unlikely in practice. We would imagine that the decisions of collectives and communes would reflect the complex social interactions and diverse political opinions their members and of the various groupings within the association.

Hence anarchism will likely contain many different political groupings and ideas. The relative influence of these within collectives and communes would reflect the strength of their arguments and the relevance of their ideas, as would be expected in a free society. As Bakunin argued, "[t]he abolition of this mutual influence would be death. And when we vindicate the freedom of the masses, we are by no means suggesting the abolition of any of the natural influences that individuals or groups of individuals exert on them. What we want is the abolition of influences which are artificial, privileged, legal, official." [quoted by Malatesta in **Anarchy**, p. 50]

It is only when representative government replaces self-management that political debate results in "elected dictatorship" and centralisation of power into

the hands of one party which claims to speak for the whole of society, as if the latter had one mind.

I.5.11 What about interest groups and other associations?

Anarchists do not think that social life can be reduced to political and economic associations alone. Individuals have many different interests and desires which they must express in order to have a truly free and interesting life. Therefore an anarchist society will see the development of numerous voluntary associations and groups to express these interests. For example, there would be consumer groups, musical groups, scientific associations, art associations, clubs, housing co-operatives and associations, craft and hobby guilds, fan clubs, animal rights associations, groups based around sex, sexuality, creed and colour and so forth. Associations will be created for all human interests and activities.

As Kropotkin argued:

“He who wishes for a grand piano will enter the association of musical instrument makers. And by giving the association part of his half-days’ leisure, he will soon possess the piano of his dreams. If he is fond of astronomical studies he will join the association of astronomers. . . and he will have the telescope he desires by taking his share of the associated work. . . In short, the five or seven hours a day which each will have at his disposal, after having consecrated several hours to the production of necessities, would amply suffice to satisfy all longings for luxury, however varied. Thousands of associations would undertake to supply them.” [**The Conquest of Bread**, p. 120]

We can imagine, therefore, an anarchist society being based around associations and interest groups on every subject which fires the imagination of individuals and for which individuals want to meet in order to express and further their interests. Housing associations, for example, would exist to allow inhabitants to manage their local areas, design and maintain their homes and local parks and gardens. Animal rights and other interest groups would produce information on issues they consider important, trying to convince others of the errors of eating meat or whatever. Consumer groups would be in dialogue with syndicates about improving products and services, ensuring that syndicates produce what is required by consumers. Environment groups would exist to watch production and make sure that it is not creating damaging side effects and informing both syndicates and communes of their findings. Feminist, homosexual, bisexual and anti-racist groups would exist to put their ideas across, highlighting areas in which social hierarchies and prejudice still existed. All across society, people would be associating together to express themselves and convince others of their ideas on many different issues.

Hence in a anarchist society, free association would take on a stronger and more positive role than under capitalism. In this way, social life would take on many dimensions, and the individual would have the choice of thousands of societies to join to meet his or her interests or create new ones with other

like-minded people. Anarchists would be the last to deny that there is more to life than work!

I.5.12 Would an anarchist society provide health care and other public services?

It depends on the type of anarchist society you are talking about. Different anarchists propose different solutions.

In an individualist-mutualist society, for example, health care and other public services would be provided by individuals or co-operatives on a pay-for-use basis. It would be likely that individuals or co-operatives/associations would subscribe to various insurance providers or enter into direct contracts with health care providers. Thus the system would be similar to privatised health care but without the profit margins as competition, it is hoped, would drive prices down to cost.

Other anarchists reject such a system. They are favour of socialising health care and other public services. They argue that a privatised system would only be able to meet the requirements of those who can afford to pay for it and so would be unjust and unfair. The need for medical attention is not dependent on income and so a civilised society would recognise this fact. Under capitalism, profit-maximising medical insurance sets premiums according to the risks of the insured getting ill or injured, with the riskiest may not being able to find insurance at any price. Private insurers shun entire industries, such as logging, as too dangerous for their profits due to the likelihood of accidents or illness. They review contracts regularly and drop people who get sick. Hardly a vision to inspire a free society or one compatible with equality and mutual respect.

Moreover, competition would lead to inefficiencies as prices would be inflated to pay for advertising, competition related administration costs, paying dividends to share-holders and so on. For example, in 1993, Canada's health plans devoted 0.9% of spending to overhead, compared to U.S. figures of 3.2% for Medicare and 12% for private insurers. In addition, when Canada adopted its publicly financed system in 1971, it and the U.S. both spent just over 7% of GDP on health care. By 1990, the U.S. was up to 12.3%, verses Canada's 9%.

As can be seen, social anarchists point to what happens under capitalism when discussing the benefits of a socialised system of health care in an anarchist society. Competition, they argue, harms health-care provision. According to Alfie Kohn:

“More hospitals and clinics are being run by for-profit corporations; many institutions, forced to battle for ‘customers,’ seem to value a skilled director of marketing more highly than a skilled caregiver. As in any other economic sector, the race for profits translates into pressure to reduce costs, and the easiest way to do it here is to cut back on services to unprofitable patients, that is, those who are more sick than rich . . .”

He concludes:

*“The result: hospital costs are actually **higher** in areas where there is more competition for patients.”* [Alfie Kohn, **No Contest**, p. 240]

As Robert Kuttner notes:

“The American health-care system is a tangle of inequity and inefficiency — and getting worse as private-market forces seek to rationalise it. A shift to a universal system of health coverage would cut this Gordian knot at a stroke. It would not only deliver the explicitly medical aspects of health more efficiently and fairly, but, by socialising costs of poor health, it would also create a powerful financial incentive for society as a whole to stress primary prevention. . . every nation with a universal system spends less of its GDP on health care than the United States . . . And nearly every other nation with a universal system has longer life spans from birth (though roughly equivalent life spans from adulthood) . . . most nations with universal systems also have greater patient satisfaction.

“The reasons . . . should be obvious. By their nature, universal systems spend less money on wasteful overhead, and more on primary prevention. Health-insurance overhead in the United States alone consumes about 1 percent of the GDP, compared to 0.1 percent in Canada. Though medical inflation is a problem everywhere, the universal systems have had far lower rates of cost inflation . . . In the years between 1980 and 1987, total health costs in the United States increased by 2.4 times the rate of GDP growth. In nations with universal systems, they increased far more slowly. The figures for Sweden, France, West Germany, and Britain were 1.2, 1.6, 1.8, and 1.7 percent, respectively . . .

[. . .]

“Remarkably enough, the United States spends most money on health care, but has the fewest beds per thousand in population, the lowest admission rate, and the lowest occupancy rate — coupled with the highest daily cost, highest technology-intensiveness, and greatest number of employees per bed.” [Everything for Sale, pp. 155–6]

In 1993, the US paid 13.4% of its GDP towards health care, compared to 10% for Canada, 8.6% for Sweden and Germany, 6.6% for Britain and 6.8% for Japan. Only 40% of the US population was covered by public health care and over 35 million people, 14% of the population, went without health insurance for all of 1991, and about twice that many were uninsured for some period during the year. In terms of health indicators, the US people are not getting value for money. Life expectancy is higher in Canada, Sweden, Germany, Japan and Britain. The USA has the highest levels of infant mortality and is last in basic health indicators as well as having fewer doctors per 1,000 people than the OECD average. All in all, the US system is miles behind the universal systems of other countries.

Of course, it will be argued that the USA is not an anarchy and so comparisons are pointless. However, it seems strange that the more competitive system, the more privatised system, is less efficient and less fair than the universal systems. It also seems strange that defenders of competition happily use examples from “*actually existing*” capitalism to illustrate their politics but reject negative examples as being a product of an “*impure*” system. They want to have their cake and eat it to.

Therefore, most anarchists are in favour of a socialised and universal health-care system for both ethical and efficiency reasons. Needless to say, an anarchist system of socialised health care would differ in many ways to the current systems of universal health-care provided by the state.

Such a system of socialised health-care will be built from the bottom-up and based around the local commune. In a social anarchist society, *“medical services . . . will be free of charge to all inhabitants of the commune. The doctors will not be like capitalists, trying to extract the greatest profit from their unfortunate patients. They will be employed by the commune and expected to treat all who need their services.”* Moreover, prevention will play an important part, as *“medical treatment is only the **curative** side of the science of health care; it is not enough to treat the sick, it is also necessary to prevent disease. That is the true function of hygiene.”* [James Guillaume, **Bakunin on Anarchism**, p. 371]

How would an anarchist health service work? It would be based on self-management, of course, with close links to the local commune and federations of communes. Each hospital or health centre would be autonomous but linked in a federation with the others, allowing resources to be shared as and when required while allowing the health service to adjust to local needs and requirements as quickly as possible.

The Spanish Revolution indicates how an anarchist health service would operate. In rural areas local doctors would usually join the village collective and provided their services like any other worker. Where local doctors were not available, *“arrangements were made by the collectives for treatment of their members by hospitals in nearby localities. In a few cases, collectives themselves build hospitals; in many they acquired equipment and other things needed by their local physicians.”* For example, the Monzon comarcal (district) federation of collectives in Aragon established maintained a hospital in Binefar, the Casa de Salud Durruti. By April 1937 it had 40 beds, in sections which included general medicine, prophylaxis and gynaecology. It saw about 25 outpatients a day and was open to anyone in the 32 villages of the comarca. [Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 1, p. 331 and pp. 366–7]

The socialisation of the health care took on a slightly different form in Catalonia but on the same libertarian principles. Gaston Leval provides us with an excellent summary:

“The socialisation of health services was one of the greatest achievements of the revolution. To appreciate the efforts of our comrades it must be borne in mind that the rehabilitated the health service in all of Catalonia in so short a time after July 19th. The revolution could count on the co-operation of a number of dedicated doctors whose ambition was not to accumulate wealth but to serve the afflicted and the underprivileged.

*“The Health Workers’ Union was founded in September, 1936. In line with the tendency to unite all the different classifications, trades, and services serving a given industry, **all** health workers, from porters to doctors and administrators, were organised into one big union of health workers*

[. . .]

“Our comrades laid the foundations of a new health service . . . The new medical service embraced all of Catalonia. It constituted a great apparatus whose parts were distributed according to different needs, all in accord with an overall plan. Catalonia was divided into nine zones . . . In turn, all the surrounding villages and towns were served from these centres.

“Distributed throughout Catalonia were twenty-seven towns with a total of thirty-six health centres conducting services so thoroughly that every village, every hamlet, every isolated peasant in the mountains, every woman, every child, anywhere, received adequate, up-to-date medical care. In each of the nine zones there was a central syndicate and a Control Committee located in Barcelona. Every department was autonomous within its own sphere. But this autonomy was not synonymous with isolation. The Central Committee in Barcelona, chosen by all the sections, met once a week with one delegate from each section to deal with common problems and to implement the general plan. . .

“The people immediately benefited from the projects of the health syndicate. The syndicate managed all hospitals and clinics. Six hospitals were opened in Barcelona. . . Eight new sanitariums were installed in converted luxurious homes ideally situated amidst mountains and pine forests. It was no easy task to convert these homes into efficient hospitals with all new facilities. . .” [quoted by Sam Dolgoff, **The Anarchist Collectives**, pp. 99–100]

People were no longer required to pay for medical services. Each collective, if it could afford it, would pay a contribution to its health centre. Building and facilities were improved and modern equipment introduced. Like other self-managed industries, the health service was run at all levels by general assemblies of workers who elected delegates and hospital administration.

In the Levante, the CNT built upon its existing Sociedad de Socorros Mutuos de Levante (a health service institution founded by the union as a kind of mutual benefit society which had numerous doctors and specialists). During the revolution, the Mutua had 50 doctors and was available to all affiliated workers and their families.

Thus, all across Spain, the workers in the health service re-organised their industry in libertarian lines and in association with the local collective or commune and the unions of the CNT. As Gaston Leval summarises:

“Everywhere that we were able to study the towns and little cities transformed by the revolution, the hospitals, the clinics, the polyclinics and other health establishments have been municipalised, enlarged, modernised, put under the safekeeping of the collectivity. And where they didn’t exist, they were improvised. The socialisation of medicine was a work for the benefit of all.” [quoted by Robert Alexander, **Op. Cit.**, p. 677]

We can expect a similar process to occur in the future anarchist society. Workers in the health industry will organise their workplaces, federate together to share resources and information, to formulate plans and improve the quality

of service to the public. The communes and their federations, the syndicates and federations of syndicates will provide resources and effectively own the health system, ensuring access for all.

Similar systems would operate in other public services. For example, in education we expect the members of communes to organise a system of free schools. This can be seen from the Spanish revolution. Indeed, the Spanish anarchists organised Modern Schools before the outbreak of the revolution, with 50 to 100 schools in various parts funded by local anarchist groups and CNT unions. During the revolution everywhere across Spain, syndicates, collectives and federations of collectives formed and founded schools. Indeed, education “advanced at an unprecedented pace. Most of the partly or wholly socialised collectives and municipalities built at least one school. By 1938, for example, every collective in the Levant Federation had its own school.” [Gaston Leval, quoted by Sam Dolgoff, **The Anarchist Collectives**, p. 168] These schools aimed, to quote the CNT’s resolution on Libertarian Communism, to “help mould men with minds of their own — and let it be clear that when we use the word ‘men’ we use it in the generic sense — to which end it will be necessary for the teacher to cultivate every one of the child’s faculties so that the child may develop every one of its capacities to the full.” [quoted by Jose Periat, **The CNT in the Spanish Revolution**, p. 70] The principles of libertarian education, of encouraging freedom instead of authority in the school, was applied on vast scale (see section J.5.13 for more details on Modern Schools and libertarian education).

This educational revolution was not confined to collectives or children. For example, the Federacion Regional de Campesinos de Levante formed institutes in each of its five provinces. The first was set up in October 1937 in an old convent with 100 students. The Federation also set up two “universities” in Valencia and Madrid which taught a wide variety of agricultural subjects and combined learning with practical experience in an experimental form attached to each university. The Aragon collectives formed a similar specialised school in Binefar. The CNT was heavily involved in transforming education in Catalonia. In addition, the local federation of the CNT in Barcelona established a school to train women workers to replace male ones being taken into the army. The school was run by the anarchist-feminist group the Mujeres Libres. [Robert Alexander, **Op. Cit.**, p. 406, p. 670 and pp. 665–8 and p. 670]

Ultimately, the public services that exist in a social anarchist society will be dependent on what members of that society desire. If, for example, a commune or federation of communes desires a system of communal health-care or schools then they will allocate resources to implement it. They will allocate the task of creating such a system to, say, a special commission based on volunteers from the interested parties such as the relevant syndicates, professional associations, consumer groups and so on. For example, for communal education a commission or working group would include delegates from the teachers union, from parent associations, from student unions and so on. The running of such a system would be based, like any other industry, on those who work in it. Functional self-management would be the rule, with doctors managing their work, nurses theirs and so on, while the general running of, say, a hospital would be based on a general assembly of all workers there who would elect and mandate delegates, the administration staff and decide the policy the hospital would follow. Needless to say, other interested parties would have a say, including patients in the health system and students in the education system.

Thus, as would be expected, public services would be organised by the public, organised in their syndicates and communes. They would be based on workers' self-management of their daily work and of the system as a whole. Non-workers who took part in the system (patients, students) would not be ignored and would also place a role in providing essential feedback to assure quality control of services and to ensure that the service is responsive to users needs. The resources required to maintain and expand the system would be provided by the communes, syndicates and their federations. For the first time, public services would truly be public and not a statist system imposed upon the public from above.

Needless to say, any system of public services would not be imposed on those who did not desire it. They would be organised for and by members of the communes. Therefore, individuals who were not part of a local commune or syndicate would have to pay to gain access to the communal resources. However, it is unlikely that an anarchist society would be as barbaric as a capitalist one and refuse entry to cases who were ill and could not pay, nor turn away emergencies because they did not have enough money to pay. And just as other workers need not join a syndicate or commune, so doctors, teachers and so on could practice their trade outside the communal system as either individual artisans or as part of a co-operative. However, given the availability of free medical services it is doubtful they would grow rich doing so. Medicine, teaching and so on would revert back to what usually initially motivates people to take these up professions — the desire to help others and make a positive impact in peoples lives.

I.5.13 Won't an anarchist society be vulnerable to the power hungry?

A common objection to anarchism is that an anarchist society will be vulnerable to be taken over by thugs or those who seek power. A similar argument is that a group without a leadership structure becomes open to charismatic leaders so anarchy would just lead to tyranny.

For anarchists, such arguments are strange. Society already **is** run by thugs and/or the off-spring of thugs. Kings were originally just successful thugs who succeeded in imposing their domination over a given territorial area. The modern state has evolved from the structure created to impose this domination. Similarly with property, with most legal titles to land being traced back to its violent seizure by thugs who then passed it on to their children who then sold it or gave it to their offspring. The origins of the current system in violence can be seen by the continued use of violence by the state and capitalists to enforce and protect their domination over society. When push comes to shove, the dominant class will happily re-discover their thug past and employ extreme violence to maintain their privileges. The descent of large parts of Europe into Fascism during the 1930s, or Pinochet's coup in Chile in 1973 indicates how far they will go. As Peter Arshinov argued (in a slightly different context):

“Statists fear free people. They claim that without authority people will lose the anchor of sociability, will dissipate themselves, and will return to savagery. This is obviously rubbish. It is taken seriously

by idlers, lovers of authority and of the labour of others, or by blind thinkers of bourgeois society. The liberation of the people in reality leads to the degeneration and return to savagery, not of the people, but of those who, thanks to power and privilege, live from the labour of the people's arms and from the blood of the people's veins . . . The liberation of the people leads to the savagery of those who live from its enslavement." [The History of the Makhnovist Movement, p. 85]

Anarchists are not impressed with the argument that anarchy would be unable to stop thugs seizing power. It ignores the fact that we live in a society where the power-hungry already hold power. As an argument against anarchism it fails and is, in fact, an argument against capitalist and statist societies.

Moreover, it also ignores fact that people in an anarchist society would have gained their freedom by overthrowing every existing and would-be thug who had or desired power over others. They would have defended that freedom against those who desired to re-impose it. They would have organised themselves to manage their own affairs and, therefore, to abolish all hierarchical power. And we are to believe that these people, after struggling to become free, would quietly let a new set of thugs impose themselves? As Kropotkin argued:

*"The only way in which a state of Anarchy can be obtained is for each man [or woman] who is oppressed to act as if he [or she] were at liberty, in defiance of all authority to the contrary . . . In practical fact, territorial extension is necessary to ensure permanency to any given individual revolution. In speaking of the Revolution, we signify the aggregate of so many successful individual and group revolts as will enable every person within the revolutionised territory to act in perfect freedom . . . without having to constantly dread the prevention or the vengeance of an opposing power upholding the former system . . . Under these circumstance it is obvious that any visible reprisal could and would be met by a resumption of the same revolutionary action on the part of the individuals or groups affected, and that the **maintenance** of a state of Anarchy in this manner would be far easier than the gaining of a state of Anarchy by the same methods and in the face of hitherto unshaken opposition . . . They have it in their power to apply a prompt check by boycotting such a person and refusing to help him with their labour or to willing supply him with any articles in their possession. They have it in their power to use force against him. They have these powers individually as well as collectively. Being either past rebels who have been inspired with the spirit of liberty, or else habituated to enjoy freedom from their infancy, they are hardly to rest passive in view of what they feel to be wrong."* [Kropotkin, **Act for Yourselves**, pp. 87-8]

Thus a free society would use direct action to resist the would-be ruler just as it had used direct action to free itself from existing rulers. An anarchist society would be organised in a way which would facilitate this direct action as it would be based on networks of solidarity and mutual aid. An injury to one is an injury to all and a would-be ruler would face a whole liberated society acting against him or her. Faced with the direct action of the population (which would express

itself in non-co-operation, strikes, demonstrations, occupations, insurrections and so on) a would be power seeker would find it difficult to impose themselves. Unlike those accustomed to rulership in existing society, an anarchist people would be a society of rebels and so difficult to dominate and conquer.

Anarchists point to the example of the rise of Fascism in Italy, Spain and Germany to prove their point. In areas with strong anarchist movements the fascists were resisted most strongly. While in Germany Hitler took power with little or no opposition, in Italy and Spain the fascists had to fight long and hard to gain power. The anarchist and anarcho-syndicalist organisations fought the fascists tooth and nail, with some success before betrayal by the Republicans and Marxists. From this historical experience anarchists argue that an anarchist society would quickly and easily defeat would-be thugs as people would be used to practising direct action and self-management and would have no desire to stop practising them.

As for self-management resulting in “*charismatic*” leaders, well the logic is astounding. As if hierarchical structures are **not** based on leadership structures and do not require a charismatic leader! Such an argument is inherently self-contradictory — as well as ignoring the nature of modern society and its leadership structures. Rather than mass assemblies being dominated by leaders, it is the case that hierarchical structures are the natural breeding ground for dictators. All the great dictators the world have seen have come to the forefront in **hierarchical** organisations, **not** libertarian structured ones. Hitler, for example, did not come to power via a libertarian organisation. Rather he used a highly centralised and hierarchically organised party to take control of a centralised, hierarchical state. The very disempowerment of the population in capitalist society results in them looking to leaders to act for them and so “*charismatic*” leaders are a natural result. An anarchist society, by empowering all, would make it more difficult, not less, for a would-be leader to gain power — few people, if any, would be willing to sacrifice and negate themselves for the benefit of another.

As would be expected, given our comments above, anarchists think an anarchist society must defend itself against attempts to re-introduce the state or private property. The question of defence of an anarchist society is discussed in the next section and so we will not do so here.

Our discussion on the power hungry obviously relates to the more general the question of whether ethical behaviour be rewarded in an anarchist society. In other words, could an anarchist society be stable or would the unethical take over?

It is one of the most disturbing aspects of living in a world where the rush to acquire wealth is the single most important aspect of living is what happens to people who follow an ethical path in life.

Under capitalism, the ethical generally do not succeed as well as those stab their fellows in the back, those who cut corners, indulge in sharp business practises, drive competitors into the ground and live their lives with an eye on the bottom line but they do survive. Loyalty to a firm or a group, bending over backwards to provide a service, giving a helping hand to somebody in need, placing friendship above money, count for nothing when the bills come in. People who act ethically in a capitalist society are usually punished and penalised for their ethical, moral and principled behaviour. Indeed, the capitalist market rewards unethical behaviour as it generally reduces costs and so gives those who

do it a competitive edge.

It is different in a free society. Anarchism is based on two principles of association, equal access to power and wealth. Everybody in an anarchist society irrespective of what they do, or who they are or what type of work they perform is entitled to share in society's wealth. Whether a community survives or prospers depends on the combined efforts of the people in that community. Ethical behaviour would become the norm in an anarchist community; those people who act ethically would be rewarded by the standing they achieve in the community and by others being more than happy to work with and aid them. People who cut corners, try to exercise power over others, refuse to co-operate as equals or otherwise act in an unethical manner would lose their standing in an anarchist society. Their neighbours and work mates would refuse to co-operate with them (or reduce co-operation to a minimum) and take other forms of non-violent direct action to point out that certain forms of activity was inappropriate. They would discuss the issue with the unethical person and try to convince them of the errors of their way. In a society where the necessities are guaranteed, people would tend to act ethically because ethical behaviour raises an individuals profile and standing within such a community. Capitalism and ethical behaviour are mutually exclusive concepts; anarchism encourages and rewards ethical behaviour.

Therefore, as can be seen, anarchists argue that a free society would not have to fear would-be thugs, “*charismatic*” leaders or the unethical. An anarchist society would be based on the co-operation of free individuals. It is unlikely that they would tolerate such behaviour and would use their own direct action as well as social and economic organisations to combat it. Moreover, the nature of free co-operation would reward ethical behaviour as those who practice it would have it reciprocated by their fellows.

One last point. Some people seem to think that anarchism is about the powerful being appealed to **not** to oppress and dominate others. Far from it. Anarchism is about the oppressed and exploited refusing to let others dominate them. It is **not** an appeal to the “*better side*” of the boss or would-be boss; it is about the solidarity and direct action of those subject to a boss **getting rid of the boss** — whether the boss agrees to it or not! Once this is clearly understood the idea that an anarchist society is vulnerable to the power-hungry is clearly nonsense — anarchy is based on resisting power and so is, by its very nature, more resistant to would-be rulers than a hierarchical one.

I.5.14 How could an anarchist society defend itself?

Anarchists are well aware that an anarchist society will have to defend itself from both inside and outside attempts to re-impose capitalism and the state. Indeed, every revolutionary anarchist has argued that a revolution will have to defend itself.

Unfortunately, Marxists have consistently misrepresented anarchist ideas on this subject. Lenin, for example, argued that the “*proletariat needs the state only temporarily. We do not at all disagree with the anarchists on the question of the abolition of the state as an aim. We maintain that, to achieve this aim, we*

*must temporarily make use of the instruments, resources and methods of state power **against** the exploiters, just as the dictatorship of the oppressed class is temporarily necessary for the abolition of classes. Marx chooses the sharpest and clearest way of stating his position against the anarchists: after overthrowing the yoke of the capitalists, should workers 'lay down their arms' or use them against the capitalists in order to crush their resistance? But what is the systematic use of arms by one class against the other, if not a 'transitory form' of state."* ["*The State and Revolution*", **Essential Works of Lenin**, p. 316]

Fortunately, as Murray Bookchin points out, anarchists are "*not so naive as to believe anarchism could be established overnight. In imputing this notion to Bakunin, Marx and Engels wilfully distorted the Russian anarchist's views. Nor did the anarchists . . . believe that the abolition of the state involved 'laying down arms' immediately after the revolution. . .*" [**Post-Scarcity Anarchism**, p. 213] Even a basic familiarity with the work of anarchist thinkers would make the reader aware that Bookchin is right. As we shall see, anarchists have consistently argued that a revolution and an anarchist society needs to be defended against those who would try and re-introduce hierarchy, domination, oppression and exploitation (even, as with Leninists, they call themselves "*socialists*"). As Malatesta argued in 1891:

*"Many suppose that . . . anarchists, in the name of their principles, would wish to see that strange liberty respected which violates and destroys the freedom and life of others. They seem almost to believe that after having brought down government and private property we would allow both to be quietly built up again, because of a respect for the **freedom** of those who might feel the need to be rulers and property owners. A truly curious way of interpreting our ideas!"* [**Anarchy**, p. 41]

Anarchists reject the idea that defending a revolution, or even the act of revolution itself, represents or requires a "*state*." As Malatesta argued, the state "*means the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few.*" [**Op. Cit.**, p. 40] Luigi Fabbri stresses this when he argued that, for anarchists, "*the essence of the state . . . [is] centralised power or to put it another way the coercive authority of which the state enjoys the monopoly, in that organisation of violence know as 'government'; in the hierarchical despotism, juridical, police and military despotism that imposes laws on everyone.*" ["*Anarchy and 'Scientific' Communism*", in **The Poverty of Statism**, pp. 13–49, Albert Meltzer (ed.), pp. 24–5] Therefore the state is the delegation of power, the centralisation of authority into the hands of a few at the top of society rather than a means of defending a revolution against the expropriated ruling class. To confuse the defence of a revolution and the state is, therefore, a great mistake as it introduces an inequality of power into a so-called socialist society. In the words of Voline:

"All political power inevitably creates a privileged situation for the men who exercise it. Thus it violates, from the beginning, the equalitarian principle and strikes at the heart of the Social Revolution . . . [and] becomes the source of other privileges . . . power is compelled to create a bureaucratic and coercive apparatus indispensable to all authority . . . Thus it forms a new privileged

caste, at first politically and later economically...It sows everywhere the seed of inequality and soon infects the whole social organism ...It predisposes the masses to passivity, and all sprite and initiative is stifled by the very existence of power, in the extent to which it is exercised.” [The Unknown Revolution, p. 249]

Unsurprisingly, anarchists think a revolution should defend itself in the same way that it organises itself — from the bottom up, in a self-managed way. The means to defend an anarchist society or revolution are based around the organs of self-management that revolution creates. In the words of Bakunin:

“[T]he federative Alliance of all working men’s associations ... constitute the Commune ... Commune will be organised by the standing federation of the Barricades and by the creation of a Revolutionary Communal Council composed of one or two delegates from each barricade ... vested with plenary but accountable and removable mandates ... all provinces, communes and associations ... reorganising on revolutionary lines ... [would] send ... their representatives to an agreed meeting place ... vested with similar mandates to constitute the federation of insurgent associations, communes and provinces ... [which would] organise a revolutionary force capable of defeating reaction ... it is the very fact of the expansion and organisation of the revolution for the purpose of self-defence among the insurgent areas that will bring about the triumph of the revolution... ”

“Since revolution everywhere must be created by the people, and supreme control must always belong to the people organised in a free federation of agricultural and industrial associations ... organised from the bottom upwards by means of revolutionary delegation... ”
[Michael Bakunin: Selected Writings, pp. 170–2]

Thus we have a dual framework of revolution. On the one hand, the federation of workers’ councils based on self-managed assemblies nominating mandated and accountable delegates. On the other, we have a federation of barricades, again based on self-management and mandated delegates, which actually defends the revolution against reaction. The success of the revolution depends on spreading it and organising joint self-defence. He stressed the importance of co-ordinating defence two years later, in 1870:

*“[L]et us suppose ... it is Paris that starts [the revolution] ... Paris will naturally make haste to organise itself as best it can, in revolutionary style, after the workers have joined into associations and made a clean sweep of all the instruments of labour, every kind of capital and building; armed and organised by streets and **quartiers**, they will form the revolutionary federation of all the **quartiers**, the federative commune... All the French and foreign revolutionary communes will then send representatives to organise the necessary common services ... and to organise common defence against the enemies of the Revolution, together with propaganda, the weapon of revolution, and practical revolutionary solidarity with friends in all countries against enemies in all countries.” [Op. Cit., p. 178–9]*

As can be seen, the revolution not only abolishes the state by a free federation of workers associations, it also expropriates capital and ends wage labour. Thus the “*political revolution is transformed into social revolution.*” [Op. Cit., p. 171] Which, we must add, destroys another Marxist myth that claims that anarchists think, to quote Engels, that “*the state is the chief evil, [and] it is above all the state which must be done away with and then capitalism will go to blazes,*” in other words, the “*abolition of the state*” comes before the “*social revolution.*” [Marx and Engels, **The Marx-Engels Reader** p. 728] As can be clearly seen, anarchists consider the social revolution to be, **at the same time**, the abolition of the state **along with** the abolition of capitalism.

Therefore, Bakunin was well aware of the needs to defend a revolution after destroying the state and abolishing capitalism. It is clear that after a successful rising, the revolutionary population does **not** “*lay down their arms*” but rather organises itself in a federal to co-ordinate defence against reactionary areas which seek to destroy it.

Nor was Bakunin alone in this analysis. For example, we discover Errico Malatesta arguing that during a revolution we should “*[a]rm all the population.*” The revolution would have “*armed the people so that it can resist any armed attempt by reaction to re-establish itself.*” This revolution would involve “*creation of a voluntary militia, without powers to interfere as militia in the life of the community, but only to deal with any armed attacks by the forces of reaction to re-establish themselves, or to resist outside intervention by countries as yet not in a state of revolution.*” Like Bakunin, Malatesta stresses the importance of co-ordinating activity via free federations of workers’ associations — “*the development of the revolution would be the task of volunteers, by all kinds of committees, local, intercommunal, regional and national congresses which would attend to the co-ordination of social activity,*” the “*[o]rganisation of social life by means of free association and federations of producers and consumers, created and modified according to the wishes of their members,*” and so be “*under the direct control of the people.*” Again, like Bakunin, the revolution would abolish state and capital, and “*the workers . . . [should] take possession of the factories . . . federate among themselves . . . the peasants should take over the land and the produce usurped by the landlords.*” Ultimately, the “*most powerful means for defending the revolution remains always that of taking away from the bourgeois the economic means on which their power rests, and of arming everybody (until such time as one will have managed to persuade everybody to throw away their arms as useless and dangerous toys), and of interesting the mass of the population in the victory of the revolution.*” [**Life and Ideas**, p. 170, p. 165, p. 166, pp. 165–6, p. 184, p. 175, p. 165 and p. 173]

Malatesta stresses that a government is not required to defend a revolution:

“But, by all means, let us admit that the governments of the still unemancipated countries were to want to, and could, attempt to reduce free people to a state of slavery once again. Would this people require a government to defend itself? To wage war men are needed who have all the necessary geographical and mechanical knowledge, and above all large masses of the population willing to go and fight. A government can neither increase the abilities of the former nor the will and courage of the latter. And the experience of history teaches us that a people who really want to defend their own country

are invincible: and in Italy everyone knows that before the corps of volunteers (anarchist formations) thrones topple, and regular armies composed of conscripts or mercenaries disappear.” [Anarchy, pp. 40–1]

The Spanish anarchist D. A. Santillan argued that the “*local Council of Economy will assume the mission of defence and raise voluntary corps for guard duty and if need be, for combat*” in the “*cases of emergency or danger of a counter-revolution.*” These Local Councils would be a federation of workplace councils and would be members of the Regional Council of the Economy which, like the Local Council, would be “*constitute[d] by delegations or through assemblies.*” [**After the Revolution**, p. 80 and pp. 82–83] Yet again we see the defence of the revolution based on the federation of workers’ councils and so directly controlled by the revolutionary population.

Lastly, we turn to the Spanish CNT’s 1936 resolution on Libertarian Communism. In this document is a section entitled “*Defence of the Revolution*” which argues:

“We acknowledge the necessity to defend the advances made through the revolution ... So ... the necessary steps will be taken to defend the new regime, whether against the perils of a foreign capitalist invasion ... or against counter-revolution at home. It must be remembered that a standing army constitutes the greatest danger for the revolution, since its influence could lead to dictatorship, which would necessarily kill off the revolution... .

“The people armed will be the best assurance against any attempt to restore the system destroyed from either within or without... .

“Let each Commune have its weapons and means of defence ... the people will mobilise rapidly to stand up to the enemy, returning to their workplaces as soon as they may have accomplished their mission of defence... .

“1. The disarming of capitalism implies the surrender of weaponry to the communes which be responsible for ensuring defensive means are effectively organised nationwide.

*“2. In the international context, we shall have to mount an intensive propaganda drive among the proletariat of every country so that it may take an energetic protest, calling for sympathetic action against any attempted invasion by its respective government. At the same time, our Iberian Confederation of Autonomous Libertarian Communes will render material and moral assistance to all the world’s exploited so that these may free themselves forever from the monstrous control of capitalism and the State.” [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 110]*

Therefore, an anarchist society defends itself in a non-statist fashion. Defence is organised in a libertarian manner, based on federations of free communes and workers’ councils and incorporating self-managed workers’ militias. This was exactly what the CNT-FAI did in 1936 to resist Franco’s fascists. The militia bodies that were actually formed by the CNT in the revolution were internally self-governing, not hierarchical. Each militia column was administered

by its own “*war committee*,” made up of elected delegates, which in turn sent delegates to co-ordinate action on a specific front. Similarly, the Makhnovists during the Russian Revolution also organised in a democratic manner, subject to the decisions of the local workers’ councils and their congresses.

Thus Anarchist theory and practice indicate that defence of a revolution need not involve a hierarchical system like the Bolshevik Red Army where the election of officers, soldiers’ councils and self-governing assemblies were abolished by Trotsky in favour of officers appointed from above (see Trotsky’s article **The Path of the Red Army** in which he freely admits to abolishing the soldiers’ “*organs of revolutionary self-government*” the Soviets of Soldiers’ Deputies as well as “*the system of election*” of commanders by the soldiers themselves in favour of a Red Army “*built from above*” with appointed commanders).

As can be seen, the only armed force for the defence of the an anarchist society would be the voluntary, self-managed militia bodies organised by the free communes and federations of workers’ associations. The militias would be unified and co-ordinated by federations of communes while delegates from each militia unit would co-ordinate the actual fighting. In times of peace the militia members would be living and working among the rest of the populace, and, thus, they would tend to have the same outlook and interests as their fellow workers.

Instead of organising a new state, based on top-down command and hierarchical power, anarchists argue that a revolutionary people can build and co-ordinate a militia of their own and control the defence of their revolution directly and democratically, through their own organisations (such as unions, councils of delegates elected from the shop floor and community, and so on). Where they have had the chance, anarchists have done so, with remarkable success. Therefore, an anarchist society can be defended against attempts to re-impose hierarchy and bosses (old or new).

For more discussion of this issue, see section J.7.6 (“*How could an anarchist revolution defend itself?*”)

I.6 What about the “*Tragedy of the Commons*”? Surely communal ownership will lead to overuse and environmental destruction?

It should first be noted that the paradox of the “*Tragedy of the Commons*” is actually an application of the “*tragedy of the free-for-all*” to the issue of the “*commons*” (communally owned land). Resources that are “*free for all*” have all the problems associated with what is called the “*Tragedy of the Commons*,” namely the overuse and destruction of such resources; but unfortunately for the capitalists who refer to such examples, they do not involve true “*commons*.”

The “*free-for-all*” land in such examples becomes depleted (the “*tragedy*”) because hypothetical shepherds each pursue their maximum individual gain without regard for their peers or the land. What is individually rational (e.g., grazing the most sheep for profit), when multiplied by each shepherd acting in isolation, ends up grossly irrational (e.g., ending the livelihood of **every** shepherd). What works for one cannot work as well for everyone in a given area. But, as discussed below, because such land is not communally **managed** (as true commons are), the so-called Tragedy of the Commons is actually an indictment of what is, essentially, laissez-faire capitalist economic practices!

As Allan Engler points out, “[s]upporters of capitalism cite what they call the tragedy of the commons to explain the wanton plundering of forests, fish and waterways, but common property is not the problem. When property was held in common by tribes, clans and villages, people took no more than their share and respected the rights of others. They cared for common property and when necessary acted together to protect it against those who would damage it. Under capitalism, there is no common property. (Public property is a form of private property, property owned by the government as a corporate person.) Capitalism recognises only private property and free-for-all property. Nobody is responsible for free-for-all property until someone claims it as his own. He then has a right to do as he pleases with it, a right that is uniquely capitalist. Unlike common

or personal property, capitalist property is not valued for itself or for its utility. It is valued for the revenue it produces for its owner. If the capitalist owner can maximise his revenue by liquidating it, he has the right to do that.” [Apostles of Greed, pp. 58–59]

Therefore, as Colin Ward argues, “[l]ocal, popular, control is the surest way of avoiding the tragedy of the commons.” [Reflected in Water, p. 20] Given that a social anarchist society is a communal, decentralised one, it will have little to fear from irrational overuse or abuse of communally owned and used resources.

So, the **real** problem is that a lot of economists and sociologists conflate this scenario, in which **unmanaged** resources are free for all, with the situation that prevailed in the use of “commons,” which were communally **managed** resources in village and tribal communities. E.P. Thompson, for example, notes that Garret Hardin (who coined the phrase “Tragedy of the Commons”) was “historically uninformed” when he assumed that commons were “pastures open to all. It is expected that each herdsman will try to keep as many cattle as possible on the commons.” [“Custom, Law and Common Right”, **Customs in Common**, p. 108f] The commons, in fact, **were** managed by common agreements between those who used them. Similarly, those who argue that the experience of the Soviet Union and Eastern Block shows that “common” property leads to pollution and destruction of the resources also show a lack of awareness of what common property actually is (it is no co-incidence that libertarian capitalists use such an argument). This is because the resources in question were **not** owned or managed in common — the fact that these countries were dictatorships excludes popular control of resources. Thus the Soviet Union does not, in fact, show the dangers of having “commons.” Rather it shows the danger of not subjecting those who control a resource to public control (and it is no co-incidence that the USA is far more polluted than Western Europe — in the USA, like in the USSR, the controllers of resources are not subject to popular control and so pass pollution on to the public). The Eastern block shows the danger of state owned resource use rather than commonly owned resource use, particularly when the state in question is not under even the limited control of its subjects implied in representative democracy.

This confusion has, of course, been used to justify the stealing of communal property by the rich and the state. The continued acceptance of this “confusion” in political debate is due to the utility of the theory for the rich and powerful, who have a vested interest in undermining pre-capitalist social forms and stealing communal resources. Therefore, most examples used to justify the “tragedy of the commons” are **false** examples, based on situations in which the underlying social context is radically different from that involved in using true commons.

In reality, the “tragedy of the commons” comes about only after wealth and private property, backed by the state, starts to eat into and destroy communal life. This is well indicated by the fact that commons existed for thousands of years and only disappeared after the rise of capitalism — and the powerful central state it requires — had eroded communal values and traditions. Without the influence of wealth concentrations and the state, people get together and come to agreements over how to use communal resources, and have been doing so for millennia. That was how the commons were managed, so “the tragedy of the commons” would be better called the “tragedy of private property.” Gerrard

Winstanley, the Digger (and proto-anarchist), was only expressing a widespread popular sentiment when he complained that “*in Parishes where Commons lie the rich Norman Freeholders, or the new (more covetous) Gentry overstock the Commons with sheep and cattle, so that the inferior Tenants and poor labourers can hardly keep a cow but half starve her.*” [quoted by Maurice Dobb, **Studies in the Development of Capitalism**, p. 173] Colin Ward points to a more recent example, that of Spain after the victory of Franco:

“The water history of Spain demonstrates that the tragedy of the commons is not the one identified by Garrett Hardin. Communal control developed an elaborate and sophisticated system of fair shares for all. The private property recommended by Hardin resulted in the selfish individualism that he thought was inevitable with common access, or in the lofty indifference of the big landowners.” [Colin Ward, **Op. Cit.**, p. 27]

As E.P. Thompson notes in an extensive investigation on this subject, the tragedy “*argument [is] that since resources held in common are not owned and protected by anyone, there is an inexorable economic logic that dooms them to over-exploitation. . . Despite its common sense air, what it overlooks is that commoners themselves were not without common sense. Over time and over space the users of commons have developed a rich variety of institutions and community sanctions which have effected restraints and stints upon use. . . As the old . . . institutions lapsed, so they fed into a vacuum in which political influence, market forces, and popular assertion contested with each other without common rules.*” [Op. Cit., p. 107]

In practice, of course, both political influence and market forces are dominated by wealth — “*There were two occasions that dictated absolute precision: a trial at law and a process of enclosure. And both occasions favoured those with power and purses against the little users.*” Popular assertion means little when the state enforces property rights in the interests of the wealthy. Ultimately, “*Parliament and law imposed capitalist definitions to exclusive property in land.*” [E.P. Thompson, **Op. Cit.**, p. 134 and p. 163]

The working class is only “*left alone*” to starve. In practice, the privatisation of communal land has led to massive ecological destruction, while the possibilities of free discussion and agreement are destroyed in the name of “*absolute*” property rights and the power and authority which goes with them.

For more on this subject, try **The Question of the Commons**, Bonnie M. McCoy and James M. Acheson (ed.), Tucson, 1987 and **The Evolution of Co-operation** by Robert Axelrod, Basic Books, 1984.

I.6.1 How can anarchists explain how the use of property “*owned by everyone in the world*” will be decided?

First, we need to point out the fallacy normally lying behind this objection. It is assumed that because everyone owns something, that everyone has to be consulted in what it is used for. This, however, applies the logic of private property to non-capitalist social forms. While it is true that everyone owns

collective “*property*” in an anarchist society, it does not mean that everyone **uses** it. Carlo Cafiero, one of the founders of communist-anarchism, states the obvious:

“The common wealth being scattered right across the planet, while belonging by right to the whole of humanity, those who happen to be within reach of that wealth and in a position to make use of it will utilise it in common. The folk from a given country will use the land, the machines, the workshops, the houses, etc., of that country and they will all make common use of them. As part of humanity, they will exercise here, in fact and directly, their rights over a portion of mankind’s wealth. But should an inhabitant of Peking visit this country, he [or she] would enjoy the same rights as the rest: in common with the others, he would enjoy all the wealth of the country, just as he [or she] would have in Peking.” [No Gods, No Masters, vol. 1, p. 250]

Anarchists, therefore, think that those who **use** a part of society’s wealth have the most say in what happens to it (e.g. workers control the means of production they use and the work they do when using it). This does not mean that those using it can do what they like to it. Users would be subject to recall by local communities if they are abusing their position (for example, if a workplace was polluting the environment, then the local community could act to stop, or if need be, close down the workplace). Thus use rights (or usufruct) replace property rights in a free society, combined with a strong dose of “*think globally, act locally.*”

It is no coincidence that societies that are stateless are also without private property. As Murray Bookchin points out “*an individual appropriation of goods, a personal claim to tools, land, and other resources . . . is fairly common in organic [i.e. aboriginal] societies. . . By the same token, co-operative work and the sharing of resources on a scale that could be called communistic is also fairly common. . . But primary to both of these seemingly contrasting relationships is the practice of usufruct.*” [The Ecology of Freedom, p. 50]

Such stateless societies are based upon “*the principle of usufruct, the freedom of individuals in a community to appropriate resources merely by the virtue of the fact they are using them. . . Such resources belong to the user as long as they are being used. Function, in effect, replaces our hallowed concept of possession.*” [Bookchin, **Op. Cit.**, p. 50] The future stateless society anarchists hope for would also be based upon such a principle. In effect, critics of social anarchism confuse property with possession and think that abolishing property automatically abolishes possession and use rights. However, as argued in section B.3, property and possession are distinctly different. In the words of Charlotte Wilson:

“Property is the domination of an individual, or a coalition of individuals, over things; it is not the claim of any person or persons to the use of things — this is usufruct [or possession], a very different matter. Property means the monopoly of wealth, the right to prevent others using it, whether the owner needs it or not. Usufruct implies the claim to the use of such wealth as supplies the user’s needs. If any individual shuts off a portion of it (which he is not using, and

does not need for his own use) from his fellows, he is defrauding the whole community." [Three Essays on Anarchism, p. 17]

Thus an anarchist society has a simple and effective means of deciding how communally owned resources are used, one based on possession and usufruct.

As for deciding what a given area of commons is used for, that falls to the local communities who live next to them. If, for example, a local self-managed factory wants to expand and eat into the commons, then the local community who uses (and so controls) the local commons would discuss it and come to an agreement concerning it. If a minority **really** objects, they can use direct action to put their point across. But anarchists argue that rational debate among equals will not result in too much of that. Or suppose an individual wanted to set up an allotment in a given area, which had not been allocated as a park. Then he or she would notify the community assembly by appropriate means (e.g. on a notice board or newspaper), and if no one objected at the next assembly or in a set time-span, the allotment would go ahead, as no one else desired to use the resource in question.

Other communities would be confederated with this one, and joint activity would also be discussed by debate, with a community (like an individual) being free **not** to associate if they so desire. Other communities could and would object to ecologically and individually destructive practices. The interrelationships of both ecosystems and freedom is well known, and it's doubtful that free individuals would sit back and let some amongst them destroy **their** planet.

Therefore, those who use something control it. This means that "*users groups*" would be created to manage resources used by more than one person. For workplaces this would (essentially) be those who worked there (with, possibly, the input of consumer groups and co-operatives). Housing associations made up of tenants would manage housing and repairs. Resources that are used by associations within society, such as communally owned schools, workshops, computer networks, and so forth, would be managed on a day-to-day basis by those who use them. User groups would decide access rules (for example, time-tables and booking rules) and how they are used, making repairs and improvements. Such groups would be accountable to their local community. Hence, if that community thought that any activities by a group within it was destroying communal resources or restricting access to them, the matter would be discussed at the relevant assembly. In this way, interested parties manage their own activities and the resources they use (and so would be very likely to have an interest in ensuring their proper and effective use), but without private property and its resulting hierarchies and restrictions on freedom.

Lastly, let us examine clashes of use rights, i.e. cases where two or more people or communities/collectives desire to use the same resource. In general, such problems can be resolved by discussion and decision making by those involved. This process would be roughly as follows: if the contesting parties are reasonable, they would probably mutually agree to allow their dispute to be settled by some mutual friend whose judgement they could trust, or they would place it in the hands of a jury, randomly selected from the community or communities in question. This would take place if they could not come to an agreement between themselves to share the resource in question.

One thing is certain, however, such disputes are much better settled without the interference of authority or the re-creation of private property. If those

involved do not take the sane course described above and instead decide to set up a fixed authority, disaster will be the inevitable result. In the first place, this authority will have to be given power to enforce its judgement in such matters. If this happens, the new authority will undoubtedly keep for itself the best of what is disputed, and allot the rest to its friends! By re-introducing private property, such authoritarian bodies would develop sooner, rather than later, with two new classes of oppressors being created — the property owners and the enforcers of “*justice*.”

It is a strange fallacy to suppose that two people who meet on terms of equality and disagree could not be reasonable or just, or that a third party with power backed up by violence will be the incarnation of justice itself. Common sense should certainly warn us against such an illusion. Historical “*counterexamples*” to the claim that people meeting on terms of equality cannot be reasonable or just are suspect, since the history of disagreements with unjust or unreasonable outcomes (e.g. resulting in war) generally involve conflicts between groups with unequal power and within the context of private property and hierarchical institutions.

And, we should note, it is equally as fallacious, as Leninists claim, that only centralisation can ensure common access and common use. Centralisation, by removing control from the users into a body claiming to represent “*society*”, replaces the dangers of abuse by a group of workers with the dangers of abuse by a bureaucracy invested with power and authority over **all** workers. If rank and file workers can abuse their position and restrict access for their own benefit, so can the individuals gathered round a centralised body (whether that body is, in theory, accountable by election or not). Indeed, it is far more likely to occur. Thus **decentralisation** is the key to common ownership and access, **not** centralisation.

Communal “*property*” needs communal structures in order to function. Use rights, and discussion among equals, replace property rights in a free society. Freedom cannot survive if it is caged behind laws enforced by public or private states.

I.6.2 Doesn't any form of communal ownership involve restricting individual liberty?

This point is expressed in many different forms. John Henry MacKay (an individualist anarchist) puts the point as follows:

“‘Would you [the social anarchist], in the system of society which you call ‘free Communism’ prevent individuals from exchanging their labour among themselves by means of their own medium of exchange? And further: Would you prevent them from occupying land for the purpose of personal use?’ . . . [The] question was not to be escaped. If he answered ‘Yes!’ he admitted that society had the right of control over the individual and threw overboard the autonomy of the individual which he had always zealously defended; if on the other hand he answered ‘No!’ he admitted the right of private property which he had just denied so emphatically.” [Patterns of Anarchy, p. 31]

However, as is clearly explained above and in sections B.3 and I.5.7, anarchist theory has a simple and clear answer to this question. To see what this answer is it simply a case of remembering that use rights replace property rights in an anarchist society. In other words, individuals can exchange their labour as they see fit and occupy land for their own use. This in no way contradicts the abolition of private property, because occupancy and use is directly opposed to private property. Therefore, in a free communist society individuals can use land and such tools and equipment as they personally “*use and occupancy*” as they wish — they do not have to join the free communist society. If they do not, however, they cannot place claims on the benefits others receive from co-operation and their communal life.

This can be seen from Charlotte Wilson’s discussions on anarchism written a few years before MacKay published his “*inescapable*” question. Wilson argues that anarchism “*proposes . . . [t]hat usufruct of instruments of production — land included — should be free to all workers, or groups of workers*” and that “*the necessary connections between the various industries . . . should be managed on the . . . voluntary principle.*” She asks the question: “*Does Anarchism . . . then . . . acknowledge . . . no personal property?*” She answers by noting that “*every man [or woman] is free to take what he [or she] requires*” and so “*it is hardly conceivable that personal necessities and conveniences will not be appropriated.*” For “*[w]hen property is protected by no legal enactments, backed by armed force, and is unable to buy personal service, its resuscitation on such a scale as to be dangerous to society is little to be dreaded. The amount appropriated by each individual . . . must be left to his [or her] own conscience, and the pressure exercised upon him [or her] by the moral sense and distinct interests of his [or her] neighbours.*” This is because:

*“Property is the **domination** of an individual, or a coalition of individuals, over things; it is not the claim of any person or persons to the use of things — this is, usufruct, a very different matter. Property means the monopoly of wealth, the right to prevent others using it, whether the owner needs it or not. Usufruct implies the claim to the use of such wealth as supplies the users needs. If any individual shuts of a portion of it (which he is not using, and does not need for his own use) from his fellows, he is defrauding the whole community.”* [Anarchist Essays, pp. 22–23 and p. 40]

In other words, **possession** replaces private property in a free society. This applies to those who decide to join a free communist society and those who desire to remain outside. This is clear from Kropotkin’s argument that an anarchist-communist revolution would leave self-employed artisans and peasants alone if they did not desire to join the free commune (see **Act for Yourself**, pp. 104–5 and **The Conquest of Bread**, p. 61 and pp. 95–6). Thus the leading theorist of free communism did not think the occupying of land for personal use (or a house or the means of production) entailed the “*right of private property.*” Obviously John Henry MacKay had not read his Proudhon!

This can be seen even clearer when Kropotkin argued that “*[a]ll things belong to all, and provided that men and women contribute their share of labour for the production of necessary objects, they are entitled to their share of all that is produced by the community at large.*” [**The Place of Anarchism in Socialistic Evolution**, p. 6] He goes on to state that “*free Communism . . . places*

the products reaped or manufactured in common at the disposal of all, leaving to each the liberty to consume them as he [or she] pleases in his [or her] own home." [Op. Cit., p. 7] This obviously implies a situation of "occupancy and use" (with those who are actually using a resource controlling it).

This clearly means, as the biographers of Kropotkin noted, that an Individualist Anarchist like Tucker (or MacKay) "partly misinterprets" Kropotkin when he "suggests that [Kropotkin's] idea of communal organisation would **prevent** the individual from working on his [or her] own if he wished (a fact which Kropotkin always explicitly denied, since the basis of his theory was the voluntary principle)." [G. Woodcock and I. Avakumovic, **The Anarchist Prince**, p. 280]

Thus the case of the non-member of free communism is clear — they would also consume what they have produced or exchanged with others in their own home (i.e. land used for their own "personal use"). The land and resources do **not**, however, become private property simply because they revert back into common ownership once they are no longer "occupied and used." In other words, **possession** replaces **property**. Thus communist-anarchists agree with Individualist Anarchist John Beverley Robinson when he wrote:

"There are two kinds of land ownership, proprietorship or property, by which the owner is absolute lord of the land to use it or hold it out of use, as it may please him; and possession, by which he is secure in the tenure of land which he uses and occupies, but has no claim on it at all if he ceases to use it. For the secure possession of his crops or buildings or other products, he needs nothing but the possession of the land he uses." [Patterns of Anarchy, p. 273]

This system, we must note, was used in the rural collectives during the Spanish Revolution, with people free to remain outside the collective working only as much land and equipment as they could "occupy and use" by their own labour. Similarly, the individuals within the collective worked in common and took what they needed from the communal stores. See Gaston Leval's **Collectives in the Spanish Revolution** for details (and section I.8).

MacKay's comments raise another interesting point. Given that Individualist Anarchists oppose the current system of private property in land, **their** system entails that "society ha[s] the right of control over the individual." If we look at the "occupancy and use" land system favoured by the likes of Tucker, we discover that it is based on restricting property in land (and so the owners of land). Tucker argued that if "the Anarchistic view" of "occupancy and use" would prevail then any defence associations would not protect anyone in the possession of more than they could personally use, nor would they force tenants to pay rent to landlords of housing. [The Individualist Anarchists, pp. 159–62] Thus the "prevailing view", i.e. society, would limit the amount of land which individuals could acquire, controlling their actions and violating their autonomy. Which, we must say, is not surprising as individualism requires the supremacy of the rest of society over the individual in terms of rules relating to the ownership and use of possessions (or "property") — as the Individualist Anarchists themselves implicitly acknowledge, as can be seen.

John Henry MacKay goes on to state that "every serious man must declare himself: for Socialism, and thereby for force and against liberty, or for Anarchism, and thereby for liberty and against force." [Op. Cit., p. 32] Which,

we must note, is a strange statement, as individualist anarchists like Benjamin Tucker considered themselves socialists and opposed capitalist private property (while, confusingly, many of them calling their system of possession “*property*” — see section G.2.2).

However, MacKay’s statement begs the question, does private property support liberty? He does not address or even acknowledge the fact that private property will inevitably lead to the owners of such property gaining control over the individuals who use, but do not own, that property and so denying them liberty (see section B.4). As Proudhon argued:

“The purchaser draws boundaries, fences himself in, and says, ‘This is mine; each one by himself, each one for himself.’ Here, then, is a piece of land upon which, henceforth, no one has right to step, save the proprietor and his friends; which can benefit nobody, save the proprietor and his servants. Let these multiply, and soon the people . . . will have nowhere to rest, no place of shelter, no ground to till. They will die of hunger at the proprietor’s door, on the edge of that property which was their birth-right; and the proprietor, watching them die, will exclaim, ‘So perish idlers and vagrants.’” [**What is Property?**, p. 118]

Of course, the non-owner can gain access to the property by selling their liberty to the property-owner, by agreeing to submit to the owners authority. Little wonder that Proudhon argued that the “*second effect of property is despotism.*” [**Op. Cit.**, p. 259] Moreover, given that Tucker argued that the state was “*the assumption of sole authority over a given area and all within it*” we can see that MacKay’s argument ignores the negative aspects of property and its similarity with the state [**The Individualist Anarchists**, p. 24]. After all, MacKay would be the first to argue that the property owner must be sovereign of their property (and not subject to any form of control). In other words, the property owner must assume sole authority over the given area they own and all within it. Little wonder Emile Pouget, echoing Proudhon, argued that:

*“Property and authority are merely differing manifestations and expressions of one and the same ‘principle’ which boils down to the enforcement and enshrinement of the servitude of man. Consequently, the only difference between them is one of vantage point: viewed from one angle, slavery appears as a **property crime**, whereas, viewed from a different angle, it constitutes an **authority crime.**”* [**No Gods, No Masters**, vol. 2, p. 66]

Neither does MacKay address the fact that private property requires extensive force (i.e. a state) to protect it against those who use it or could use it but do not own it.

In other words, MacKay ignores two important aspects of private property. Firstly, that private property is based upon force, which must be used to ensure the owner’s right to exclude others (the main reason for the existence of the state). And secondly, he ignores the anti-libertarian nature of “*property*” when it creates wage labour — the other side of “*private property*” — in which the liberty of employees is obviously restricted by the owners whose property they are hired to use. Unlike in a free communist society, in which members of a commune have

equal rights, power and say within a self-managed association, under “*private property*” the owner of the property governs those who use it. When the owner and the user is identical, this is not a problem (i.e. when possession replaces property) but once possession becomes property then despotism, as Proudhon noted, is created.

Therefore, it seems that in the name of “*liberty*” John MacKay and a host of other “*individualists*” end up supporting authority and (effectively) some kind of state. This is hardly surprising as private property is the opposite of personal possession, not its base.

Therefore, far from communal property restricting individual liberty (or even personal use of resources) it is in fact its only defence.

I.7 Won't Libertarian Socialism destroy individuality?

No. Libertarian socialism only suppresses individuality for those who are so shallow that they can't separate their identity from what they own. However, be that as it may, this is an important objection to any form of socialism and, given the example of "socialist" Russia, needs to be discussed more.

The basic assumption behind this question is that capitalism encourages individuality, but this assumption can be faulted on many levels. As Kropotkin noted, "*individual freedom [has] remained, both in theory and in practice, more illusory than real*" [**Ethics**, p. 27] and that "*the want of development of the personality [leading to herd-psychology] and the lack of individual creative power and initiative are certainly one of the chief defects of our time.*" [**Op. Cit.**, p. 28] In effect, modern capitalism has reduced individuality to a parody of what it could be (see section I.7.4). As Alfie Kohn points out, "*our miserable individuality is screwed to the back of our cars in the form of personalised license plates.*" Little wonder Emma Goldman argued that:

"The oft repeated slogan of our time is . . . that ours is an era of individualism . . . Only those who do probe beneath the surface might be led to entertain this view. Have not the few accumulated the wealth of the world? Are they not the masters, the absolute kings of the situation? Their success, however, is due not to individualism, but the inertia, the cravenness, the utter submission of the mass. The latter wants but to be dominated, to be led, to be coerced. As to individualism, at no time in human history did it have less chance of expression, less opportunity to assert itself in a normal, healthy manner." [**Anarchism and Other Essays**, pp. 70–1]

So we see a system which is apparently based on "*egoism*" and "*individualism*" but whose members are free to expand as standardised individuals, who hardly express their individuality at all. Far from increasing individuality, capitalism standardises it and so restricts it — that it survives at all is more an expression of the strength of humanity than any benefits of the capitalist system. This impoverishment of individuality is hardly surprising in a society based on hierarchical institutions which are designed to assure obedience and subordination.

So, can we say that libertarian socialism will **increase** individuality or is this conformity and lack of “*individualism*” a constant feature of the human race? In order to make some sort of statement on this, we have to look at non-hierarchical societies and organisations. We will discuss tribal cultures as an example of non-hierarchical societies in section I.7.1. Here, however, we indicate how anarchist organisations will protect and increase an individual’s sense of self.

Anarchist organisations and tactics are designed to promote individuality. They are decentralised, participatory organisations and so they give those involved the “*social space*” required to express themselves and develop their abilities and potential in ways restricted under capitalism. As Gaston Leval notes in his book on the anarchist collectives during the Spanish Revolution, “*so far as collective life is concerned, the freedom of each is the right to participate spontaneously with one’s thought, one’s will, one’s initiative to the full extent of one’s capacities. A negative liberty is not liberty; it is nothingness.*” [**Collectives in the Spanish Revolution**, p. 346]

By being able to take part in and manage the decision making processes which directly affect you, your ability to think for yourself is increased and so you are constantly developing your abilities and personality. The spontaneous activity described by Leval has important psychological impacts. As Eric Fromm notes, “[*i*]n all spontaneous activity, the individual embraces the world. Not only does his [*sic*] individual self remain intact; it becomes stronger and more solidified. **For the self is as strong as it is active.**” [**Escape from Freedom**, p. 225]

Therefore, individuality does not atrophy within an anarchist organisation and becomes stronger as it participates and acts within the social organisation. In other words, individuality requires community. As Max Horkheimer once observed, “*individuality is impaired when each man decides to fend for himself. . . The absolutely isolated individual has always been an illusion. The most esteemed personal qualities, such as independence, will to freedom, sympathy, and the sense of justice, are social as well as individual virtues. The fully developed individual is the consummation of a fully developed society.*” [**The Eclipse of Reason**, p. 135]

The sovereign, self-sufficient individual is as much a product of a healthy community as it is from individual self-realisation and the fulfilment of desire. Kropotkin, in **Mutual Aid**, documented the tendency for **community** to enrich and develop **individuality**. As he proved, this tendency is seen throughout human history, which suggests that the abstract individualism of capitalism is more the exception than the rule in social life. In other words, history indicates that by working together with others as equals individuality is strengthened far more than in the so-called “*individualism*” associated with capitalism.

This communal support for individuality is hardly surprising as individuality is a product of the interaction between **social** forces and individual attributes. The more an individual cuts themselves off from social life, the more likely their individuality will suffer. This can be seen from the 1980’s when neo-liberal governments supporting the “*radical*” individualism associated with free market capitalism were elected in both Britain and the USA. The promotion of market forces lead to social atomisation, social disruption and a more centralised state. As “*the law of the jungle*” swept across society, the resulting disruption of social life ensured that many individuals became impoverished ethically and culturally

as society became increasingly privatised.

In other words, many of the characteristics which we associate with a developed individuality (namely ability to think, to act, to hold ones own opinions and standards and so forth) are (essentially) **social** skills and are encouraged by a well developed community. Remove that social background and these valued aspects of individuality are undermined by fear, lack of social interaction and atomisation. Taking the case of workplaces, for example, surely it is an obvious truism that a hierarchical working environment will marginalise the individual and ensure that they cannot express their opinions, exercise their thinking capacities to the full or manage their own activity. This will have in impact in all aspects of an individual's life.

Hierarchy in all its forms produces oppression and a crushing of individuality (see section B.1). In such a system, the *"business"* side of group activities would be *"properly carried out"* but at the expense of the individuals involved. Anarchists agree with John Stuart Mill when he asks, under such *"benevolent dictatorship," "what sort of human beings can be formed under such a regimen? What development can either their thinking or their active faculties attain under it? . . . Their moral capacities are equally stunted. Wherever the sphere of action of human beings is artificially circumscribed, their sentiments are narrowed and dwarfed."* [**Representative Government**, pp. 203-4] Like anarchists, Mill tended his critique of political associations into all forms of associations and stated that if *"mankind is to continue to improve"* then in the end one form of association will predominate, *"not that which can exist between a capitalist as chief, and workpeople without a voice in the management, but the association of labourers themselves on terms of equality, collectively owning the capital with which they carry on their operations, and working under managers elected and removable by themselves."* [**The Principles of Political Economy**, p. 147]

Hence, anarchism will protect and develop individuality by creating the means by which all individuals can participate in the decisions that affect them, in all aspects of their lives. Anarchism is build upon the central assertion that individuals and their institutions cannot be considered in isolation from one another. Authoritarian organisations will create a servile personality, one that feels safest conforming to authority and what is considered normal. A libertarian organisation, one that is based upon participation and self-management will encourage a strong personality, one that knows his or her own mind, thinks for itself and feels confident in his or her own powers.

Therefore, as Bakunin argued, liberty *"is not a fact springing from isolation but from reciprocal action, a fact not of exclusion, but, on the contrary, of social interaction — for freedom of every individual is simply the reflection of his humanity or his human right in the consciousness of all free men, his brothers, his equals."* Freedom *"is something very positive, very complex, and above all eminently social, since it can be realised only by society and only under conditions of strict equality and solidarity."* Hierarchical power, by necessity, kills individual freedom as it is *"characteristic of privilege and of every privileged position to kill the minds and hearts of men"* and *"power and authority corrupt those who exercise them as much as those who are compelled to submit to them."* [**The Political Philosophy of Bakunin**, p. 266, p. 268, p. 269 and p. 249]

A libertarian re-organisation of society will be based upon, and encourage, a self-empowerment and self-liberation of the individual and by participation within self-managed organisations, individuals will educate themselves for the

responsibilities and joys of freedom. As Carole Pateman points out, “*participation develops and fosters the very qualities necessary for it; the more individuals participate the better able they become to do so.*” [**Participation and Democratic Theory**, pp. 42–43]

Such a re-organisation (as we will see in section J) is based upon the tactic of **direct action**. This tactic also encourages individuality by encouraging the individual to fight directly, by their own self-activity, that which they consider to be wrong. As Voltairine de Cleyre puts it:

“Every person who ever thought he had a right to assert, and went boldly and asserted it, himself, or jointly with others that shared his convictions, was a direct actionist . . . Every person who ever had a plan to do anything, and went and did it, or who laid his plan before others, and won their co-operation to do it with him, without going to external authorities to please do the thing for them, was a direct actionist. All co-operative experiments are essentially direct action . . . [direct actions] are the spontaneous retorts of those who feel oppressed by a situation.” [**Direct Action**]

Therefore, anarchist tactics base themselves upon self-assertion and this can only develop individuality. Self-activity can only occur when there is a independent, free-thinking self. As self-management is based upon the principle of direct action (“*all co-operative experiments are essentially direct action*”) we can suggest that individuality will have little to fear from an anarchist society. Indeed, anarchists strongly stress the importance of individuality within a society:

“[T]o destroy individuality is to destroy society. For society is only realised and alive in the individual members. Society has no motive that does not issue from its individual members, no end that does not centre in them, no mind that is not there. ‘Spirit of the age,’ ‘public opinion,’ ‘commonweal or good,’ and like phrases have no meaning if they are thought of as features of something that hovers or floats between man and woman. They name what resides in and proceeds from individuals. Individuality and community, therefore, are equally constitutive of our idea of human life.” [J. Burns-Gibson quoted by William R. McKercher, **Freedom and Authority**, p. 31]

Little wonder, then, that anarchism “*recognises and values individuality which means character, conduct and the springs of conduct, free initiative, creativeness, spontaneity, autonomy.*” [J. Burns-Gibson, quoted by William R. McKercher, **Op. Cit.**, p. 31f] As Kropotkin put it, anarchism “*seeks the most complete development of individuality combined with the highest development of voluntary association in all its aspects . . . ever changing, ever modified. . .*” [**Kropotkin’s Revolutionary Pamphlets**, p. 123]

For anarchists, like Mill, real liberty requires social equality. For “[i]f individuals are to exercise the maximum amount of control over their own lives and environment then authority structures in these areas must be so organised that they can participate in decision making.” [Pateman, **Op. Cit.**, p. 43] Hence

individuality will be protected, encouraged and developed in an anarchist society far more than in a class ridden, hierarchical society like capitalism. As Kropotkin argued:

“[Anarchist] Communism is the best basis for individual development and freedom; not that individualism which drives men to the war of each against all . . . but that which represents the full expansion of man’s [and woman’s] faculties, the superior development of what is original in him [or her], the greatest fruitfulness of intelligence, feeling and will.” [Op. Cit., p. 141]

It is because wonders are so enriching to life, and none is more wonderful than individuality, that anarchists oppose capitalism in the name of socialism — libertarian socialism, the free association of free individuals.

I.7.1 Do tribal cultures indicate that communalism defends individuality?

Yes. In many tribal cultures (what some people call “primitive”), we find a strong respect for individuals. As Paul Radin points out, “[i]f I were to state . . . what are the outstanding features of aboriginal civilisation, I . . . would have no hesitation in answering that . . . respect for the individual, irrespective of age or sex” is the first one. [The World of Primitive Man, p. 11]

Murray Bookchin comments on Radin’s statement as follows, “respect for the individual, which Radin lists first as an aboriginal attribute, deserves to be emphasised, today, in an era that rejects the collective as destructive of individuality on the one hand, and yet, in an orgy of pure egotism, has actually destroyed all the ego boundaries of free-floating, isolated, and atomised individuals on the other. A strong collectivity may be even more supportive of the individual as close studies of certain aboriginal societies reveal, than a ‘free market’ society with its emphasis on an egoistic, but impoverished, self” [Remaking Society, p. 48]

This individualisation associated with tribal cultures was also noted by Howard Zinn. He quotes Gary Nash describing Iroquois culture (which appears typical of most Native American tribes):

“No laws and ordinances, sheriffs and constables, judges and juries, or courts or jails — the apparatus of authority in European societies — were to be found in the north-east woodlands prior to European arrival. Yet boundaries of acceptable behaviour were firmly set. Though priding themselves on the autonomous individual, the Iroquois maintained a strict sense of right and wrong . . .” [quoted by Zinn in A People’s History of the United States, p. 21]

This respect for individuality existed in a society based on communistic principles. As Zinn notes, in the Iroquois “land was owned in common and worked in common. Hunting was done together, and the catch was divided among the members of the village. Houses were considered common property and were shared by several families. The concept of private ownership of land and homes was foreign to the Iroquois.” In this communal society women “were important

and respected” and families were matrilineal. Power was shared between the sexes (unlike the European idea of male domination). Similarly, children “*while taught the cultural heritage of their people and solidarity with the tribe, were also taught to be independent, not to submit to overbearing authority. They were taught equality of status and the sharing of possessions.*” [Zinn, **Op. Cit.**, p. 20]

As Zinn stresses, Native American tribes “*paid careful attention to the development of personality, intensity of will, independence and flexibility, passion and potency, to their partnership with one another and with nature.*” [**Op. Cit.**, pp. 21–2]

Thus tribal societies indicate that community defends individuality, with communal living actually encouraging a strong sense of individuality. This is to be expected, as equality is the only condition in which individuals can be free and so in a position to develop their personality to its full. Furthermore, this communal living took place within an anarchist environment:

“The foundation principle of Indian government had always been the rejection of government. The freedom of the individual was regarded by practically all Indians north of Mexico as a canon infinitely more precious than the individual’s duty to his [or her] community or nation. This anarchistic attitude ruled all behaviour, beginning with the smallest social unity, the family. The Indian parent was constitutionally reluctant to discipline his [or her] children. Their every exhibition of self-will was accepted as a favourable indication of the development of maturing character. . . .” [Van Every, quoted by Zinn, **Op. Cit.**, p. 136]

In addition, Native American tribes also indicate that communal living and high standards of living can and do go together. The Cherokees, for example, in the 1870s, “*land was held collectively and life was contented and prosperous*” with the Department of the Interior recognising that it was “*a miracle of progress, with successful production by people living in considerable comfort, a level of education ‘equal to that furnished by an ordinary college in the States,’ flourishing industry and commerce, an effective constitutional government, a high level of literacy, and a state of ‘civilisation and enlightenment’ comparable to anything known: ‘What required five hundred years for the Britons to accomplish in this direction they have accomplished in one hundred years,’ the Department declared in wonder.*” [Noam Chomsky, **Year 501**, p. 231]

Senator Henry Dawes of Massachusetts visited “*Indian Territory*” in 1883 and described what he found in glowing terms:

“There was not a pauper in that nation, and the nation did not owe a dollar. It built its own capitol, in which we had this examination, and it built its schools and its hospitals.” No family lacked a home. [Cited by Chomsky, **Op. Cit.**, p. 231]

(It must be mentioned that Dawes recommended that the society must be destroyed because “*[t]hey have got as far as they can go, because they own their land in common. . . there is no enterprise to make your home any better than that of your neighbours. There is no selfishness, which is the bottom of civilisation. Till this people will consent to give up their lands, and divide them among their*

citizens so that each can own the land he cultivates, they will not make much more progress.” The introduction of capitalism — as usual by state action — resulted in poverty and destitution, again showing the link between capitalism and high living standards is not clear cut, regardless of claims otherwise).

Undoubtedly, having access to the means of production ensured that members of such cultures did not have to place themselves in situations which could produce a servile character structure. As they did not have to follow the orders of a boss they did not have to learn to obey others and so could develop their own abilities to govern themselves. This self-government allowed the development of a custom in such tribes called “*the principle of non-interference*” in anthropology. This is the principle of defending someone’s right to express the opposing view and it is a pervasive principle in the tribal world, and it is so much so as to be safely called a “*universal*”.

The principle of non-interference is a powerful principle that extends from the personal to the political, and into every facet of daily life. Most modern people are aghast when they realise the extent to which it is practised, but it has proven itself to be an integral part of living anarchy (as many of these communities can be termed, although they would be considered imperfect anarchist societies in some ways). It means that people simply do not limit the activities of others, period. This in effect makes absolute tolerance a custom, or as the modern would say, a law. But the difference between law and custom is important to point out. Law is dead, and Custom lives (see section I.7.3).

As modern people we have so much baggage that relates to “*interfering*” with the lives of others that merely visualising the situation that would eliminate this daily pastime for many is impossible. But think about it. First of all, in a society where people do not interfere with each other’s behaviour, people tend to feel trusted and empowered by this simple social fact. Their self-esteem is already higher because they are trusted with the responsibility for making learned and aware choices. This is not fiction; individual responsibility is a key aspect of social responsibility.

Therefore, given the strength of individuality documented in tribes with little or no hierarchical structures within them, can we not conclude that anarchism will defend individuality and even develop it in ways blocked by capitalism? At the very least we can say “*possibly*,” and that is enough to allow us to question that dogma that capitalism is the only system based on respect for the individual.

I.7.2 Is this not worshipping the past or the “*noble savage*”?

No. However, this is a common attack on socialists by supporters of capitalism and on anarchists by Marxists. Both claim that anarchism is “*backward looking*”, opposed to “*progress*” and desire a society based on inappropriate ideas of freedom. In particular, ideological capitalists maintain that all forms of socialism base themselves on the ideal of the “*noble savage*” and ignore the need for laws and other authoritarian social institutions to keep people “*in check*” (see, for example, free market capitalist guru Frederick von Hayek’s work, particularly his **Fatal Conceit: The Errors of Socialism**).

Anarchists are well aware of the limitations of the “*primitive communist*” societies they have used as example of anarchistic tendencies within history or society. They are also aware of the problems associated with using **any** historical period as an example of “*anarchism in action.*” Take for example the “*free cities*” of Medieval Europe, which was used by Kropotkin as an example of the potential of decentralised, confederated communes. He was sometimes accused of being a “*Medievalist*” (as was William Morris) while all he was doing was indicating that capitalism need not equal progress and that alternative social systems have existed which have encouraged freedom in ways capitalism restricts.

In a similar way, Marxists often accuse Proudhon of being “*petty-bourgeois*” and looking backward to a pre-industrial society of artisans and peasants. Of course, nothing could be further from the truth. Proudhon came from a area of French which, like many other parts of that country at the time, was essentially pre-industrial and based on peasant and artisan production. He therefore based his socialist ideas on the needs of working people as they required them at the time. Unlike Marx, who argued that industrialisation (i.e. proletarianisation) was the pre-conditions of socialism, Proudhon wanted justice and freedom for working people in the here and now, not some (unspecified) time in the future after capitalism had fully developed. He was “*petit-bourgeois*” only in so far as the French working class at the time was “*petit-bourgeois*” and was “*proletarian*” in so far as his fellow working people were.

When Proudhon did look at large-scale production (such as railways, factories and so on) he proposed co-operative associations to run them. These associations would maintain the dignity of the worker by maintaining the essential feature of artisan and peasant live, namely the control of the work and product by the labourer. Thus he used the experience of the past (artisan production) to inform his analysis of current events (industrialisation) to create a solution to the social problem which built upon and extended a freedom crushed by capitalism (namely workers’ self-management in production). Rather than being backward looking and worshipping a past which was disappearing, Proudhon analysed the present **and** past, drew any positive features he could from both and applied them to the present and the future (see also section H.2.1).

Again it is hardly surprising to find that many supporters of capitalism ignore the insights that can be gained by studying tribal cultures and the questions they raise about capitalism and freedom. Instead, they duck the issues raised by these insights and accuse socialists of idealising “*the noble savage.*” As indicated, nothing could be further from the truth. Indeed, this claim has been directed towards Rousseau (often considered the father of socialist and anarchist “*idealisation*” of the “*noble savage*”) even though Rousseau expressly rejected any “*return to nature.*” He stated that “*must societies be totally abolished? Must **meum** and **tuum** be annihilated, and must we return again to the forests to live among bears? This is a deduction in the manner of my adversaries, which I would as soon anticipate as let them have the shame of drawing.*” [**The Social Contract and Discourses**, p. 112] Sadly, Rousseau failed to understand that his adversaries, both then and now, seem to know no shame (similarly, Rousseau is often thought of idealising “*natural man*” but actually wrote that “*men in a state of nature, having no moral relations or determinate obligations one with another, could not be either good or bad, virtuous or vicious*” [**Op. Cit.**, p. 64]). This also seems to be the case when anarchists look through history, draw

libertarian currents from it and are denounced as backward looking utopians.

What libertarians socialists point out from this analysis of history is that the atomised individual associated with capitalist society is not “*natural*” and that capitalist social relationships help to weaken individuality. All the many attacks on libertarian socialist analysis of past societies is a product of capitalists attempts to deny history and state that “*Progress*” reaches its final resting place in capitalism. As David Watson argues:

*“When we consider people living under some of the harshest, most commanding conditions on earth, who can nevertheless do what they like when the notion occurs to them, we should be able to witness the contemporary doubt about civilisation’s superiority without growing indignant. Primitivism, after all, reflects not only a glimpse of life before the rise of the state, but also a legitimate response to real conditions of life under civilisation . . . Most people do not live in aboriginal societies, and most tribal peoples themselves now face wholly new contexts which will have to be confronted in new ways if they are to survive as peoples. But their lifeways, their histories, remind us that **other modes of being are possible**. Reaffirmation of our primal past offers insight into our history — not the only possible insight, to be sure, but one important, legitimate entry point for a reasoned discussion about (and an impassioned reaction to) this world we must leave behind.”* [Beyond Bookchin, p. 240]

This essential investigation of history and modern society to see what other ways of living have and do exist is essential. It is too easy to forget that what exists under modern capitalism has not always existed (as neo-classical economics does, to a large degree). It is also useful to remember what many people now consider as “*normal*” was not always the case. As we discussed in section F.8.6, the first generation of industrial wage slaves **hated** the system, considering it both tyranny and unnatural. Studying history, previous cultures and the process of hierarchical society and the oppressed resistance to it can enrich our analysis and activity in the here and now and help us to envision an anarchist society, the problems it could face and possible solutions to them.

If the challenge for anarchists is to smash power-relations and domination, it would make sense to get to the root of the problem. Hierarchy, slavery, coercion, patriarchy, and so on far outdate capitalism and it is hardly enough to just analyse the economic system of capitalism, which is merely the current and most insidious form of hierarchical civilisation. Similarly, without looking to cultures and communities that functioned quite well before the rise of the state, hierarchies and classes, anarchists do not really have much solid ground to prove to people that anarchy is desirable or possible. For this reason, historical analysis and the celebration of the positive aspects of tribal and other societies is essential.

Moreover, as George Orwell points out, attacks that reject this critical analysis as worshipping the “*noble savage*” miss the point:

“In the first place he [the defender of modern life] will tell you that it is impossible to ‘go back’ . . . and will then accuse you of being a medievalist and begin to descant upon the horrors of the Middle Ages . . . As a matter of fact, most attacks upon the Middle Ages and

the past generally by apologists of modernity are beside the point, because their essential trick is to project a modern man, with his squeamishness and his high standard of comfort, into an age when such things were unheard of. But notice that in any case this is not an answer. For dislike of the mechanised future does not imply the smallest reverence for any period of the past . . . When one pictures it merely as an objective; there is no need to pretend that it has ever existed in space and time.” [The Road to Wigan Pier, p. 183]

We should also note that such attacks on anarchist investigations of past cultures assumes that these cultures have **no** good aspects at all and so indicates a sort of intellectual “*all or nothing*” approach to modern life. The idea that past (and current) civilisations may have got **some** things right and others wrong and should be investigated is rejected for a totally uncritical “*love it or leave*” approach to modern society. Of course, the well known “*free market*” capitalist love of 19th century capitalist life and values warrants no such claims of “*past worship*” by the supporters of the system.

Therefore attacks on anarchists as supporters of the “*noble savage*” ideal indicate more about the opponents of anarchism and their fear of looking at the implications of the system they support than about anarchist theory.

I.7.3 Is the law required to protect individual rights?

No, far from it. While it is obvious that, as Kropotkin put it, “[*n*]o society is possible without certain principles of morality generally recognised. If everyone grew accustomed to deceiving his fellow-men; if we never could rely on each other’s promise and words; if everyone treated his fellow as an enemy, against whom every means of warfare is justified — no society could exist.” [Kropotkin’s Revolutionary Pamphlets, p. 73] this does not mean that a legal system (with its resultant bureaucracy, vested interests and inhumanity) is the best way to protect individual rights within a society.

What anarchists propose instead of the current legal system (or an alternative law system based on religious or “*natural*” laws) is **custom** — namely the development of living “*rules of thumb*” which express what a society considers as right at any given moment.

However, the question arises, if a fixed set of principles are used to determine the just outcome, in what way would this differ from laws?

The difference is that the “*order of custom*” would prevail rather than the “*rule of law*”. **Custom** is a body of living institutions that enjoys the support of the body politic, whereas **law** is a codified (read dead) body of institutions that separates social control from moral force. This, as anyone observing modern Western society can testify, alienates everyone. A **just outcome** is the predictable, but not necessarily the inevitable outcome of interpersonal conflict because in a traditional anarchistic society people are trusted to do it themselves. Anarchists think people have to grow up in a social environment free from the confusions generated by a fundamental discrepancy between morality, and social control, to fully appreciate the implications. However, the essential ingredient is the investment of trust, by the community, in people to come up

with **functional solutions** to interpersonal conflict. This stands in sharp contrast with the present situation of people being infantilised by the state through a constant bombardment of fixed social structures removing all possibility of people developing their own unique solutions.

Therefore, anarchist recognise that social custom changes with society. What was once considered “*normal*” or “*natural*” may become to be seen as oppressive and hateful. This is because the “*conception of good or evil varies according to the degree of intelligence or of knowledge acquired. There is nothing unchangeable about it.*” [Kropotkin, **Op. Cit.**, p. 92] Only by removing the dead hand of the past can society’s ethical base develop and grow with the individuals that make it up (see section A.2.19 for a discussion of anarchist ethics).

We should also like to point out here that laws (or “*The Law*”) also restrict the development of an individual’s sense of ethics or morality. This is because it relieves them of the responsibility of determining if something is right or wrong. All they need to know is whether it is legal. The morality of the action is irrelevant. This “*nationalisation*” of ethics is very handy for the would be capitalist, governor or other exploiter. In addition, capitalism also restricts the development of an individual’s ethics because it creates the environment where these ethics can be bought. To quote Shakespeare’s **Richard III**:

“Second Murderer: Some certain dregs of conscience are yet within me.

First Murderer : Remember our reward, when the deed’s done.

Second Murderer : Zounds! He dies. I had forgot the reward.

First Murderer : Where’s thy conscience now?

Second Murderer : O, in the Duke of Gloucester’s purse.”

Therefore, as far as “*The Law*” defending individual rights, it creates the necessary conditions (such as the de-personalisation of ethics, the existence of concentrations wealth, and so on) for undermining individual ethical behaviour, and so respect for other individual’s rights. As English libertarian socialist Edward Carpenter put it, “*I think we may fairly make the following general statement, viz., that legal ownership is essentially a negative and anti-social thing, and that unless qualified or antidoted by human relationship, it is pretty certain to be positively harmful. In fact, when a man’s chief plea is ‘The law allows it,’ you may be pretty sure he is up to some mischief!*” [quoted by William R. McKercher, **Freedom and Authority**, p. 48]

The state forces an individual a relationship with a governing body. This means “*taking away from the individual his [or her] direct interest in life and in his surroundings . . . blunting his [or her] moral sense . . . teaching that he [or she] must never reply on himself [or herself] . . . [but] upon a small part of men who are elected to do everything . . . [which] destroys to a large extent his [or her] perception of right and wrong.*” [J. B. Smith, quoted by McKercher, **Op. Cit.**, p. 67f]

Individual rights, for anarchists, are best protected in a social environment based on the self-respect and sympathy. Custom, because it is based on the outcome of numerous individual actions and thought does not have this problem and reflects (and encourages the development of) individual ethical standards and so a generalised respect for others. Thus, “*under anarchism all rules and*

*laws will be little more than suggestions for the guidance of juries which will judge not only the facts but the law, the justice of the law, its applicability to the given circumstances, and the penalty or damage to be inflicted because if its infraction . . . under Anarchism the law will be so flexible that it will shape itself to every emergency and need no alteration. And it will be regarded as **just** in proportion to its flexibility, instead of as now in proportion to its rigidity.”* [Benjamin Tucker, **The Individualist Anarchists**, pp. 160–1] Tucker, like other individualist Anarchists, believed that the role of juries had been very substantial in the English common-law tradition and that they had been gradually emasculated by the state. This system of juries, based on common-law/custom could be the means of ensuring justice in a free society.

Tolerance of other individuals depends far more on the attitudes of the society in question than on its system of laws. In other words, even if the law does respect individual rights, if others in society disapprove of an action then they can and will act to stop it (or restrict individual rights). All that the law can do is try to prevent this occurring. Needless to say, governments can (and have) been at the forefront of ignoring individual rights when it suits them.

In addition, the state perverts social customs for its own, and the interests of the economically and socially powerful. As Kropotkin argued, *“as society became more and more divided into two hostile classes, one seeking to establish its domination, the other struggling to escape, the strife began. Now the conqueror was in a hurry to secure the results of his actions in a permanent form, he tried to place them beyond question, to make them holy and venerable by every means in his power. Law made its appearance under the sanction of the priest, and the warriors club was placed at its service. Its office was to render immutable such customs as were to the advantage of the dominant minority . . . If law, however, presented nothing but a collection of prescriptions serviceable to rulers, it would find some difficulty in insuring acceptance and obedience. Well, the legislators confounded in one code the two currents of custom . . . , the maxims which represent principles of morality and social union wrought out as a result of life in common, and the mandates which are meant to ensure external existence to inequality. Customs, absolutely essential to the very being of society, are, in the code, cleverly intermingled with usages imposed by the ruling caste, and both claim equal respect from the crowd. . . Such was the law; and it has maintained its two-fold character to this day.”* [Kropotkin’s **Revolutionary Pamphlets**, p. 205] In other words, *“[t]he law has used Man’s social feelings to get passed not only moral precepts which were acceptable to Man, but also orders which were useful only to the minority of exploiters against whom he would have rebelled.”* [Kropotkin quoted by Malatesta in **Anarchy**, pp. 21–22]

Therefore anarchists argue that state institutions are not only unneeded to create an ethical society (i.e. one based on respecting individuality) but activity undermines such a society. That the economically and politically powerful state that a state is a necessary condition for a free society and individual space is hardly surprising. Malatesta put it as follows:

“A government cannot maintain itself for long without hiding its true nature behind a pretence of general usefulness . . . it cannot impose acceptances of the privileges of the few if it does not pretend to be the guardian of the rights of all.” [**Anarchy**, p. 21]

Therefore, it is important to remember why the state exists and so whatever

actions and rights it promotes for the individual it exists to protect the powerful against the powerless. Any human rights recognised by the state are a product of social struggle and exist because of past victories in the class war and not due to the kindness of ruling elites. In addition, capitalism itself undermines the ethical foundations of any society by encouraging people to grow “accustomed to deceiving his fellow-men” and women and treating “his fellow as an [economic] enemy, against whom every means of warfare is justified.” Hence capitalism undermines the basic social context within which individuals develop and need to become fully human and free. Little wonder that a strong state has always been required to introduce a free market — firstly, to protect wealth from the increasingly dispossessed and secondly, to try to hold society together as capitalism destroys the social fabric which makes a society worth living in.

1.7.4 Does capitalism protect individuality?

Given that many people claim that **any** form of socialism will destroy liberty (and so individuality) it is worthwhile to consider whether capitalism actually does protect individuality. As noted briefly in section I.7 the answer must be no. Capitalism seems to help create a standardisation which helps to distort individuality and the fact that individuality does exist under capitalism says more about the human spirit than capitalist social relationships.

So, why does a system apparently based on the idea of individual profit result in such a deadening of the individual? There are four main reasons:

- 1) capitalism produces a hierarchical system which crushes self-government in many areas of life;
- 2) there is the lack of community which does not provide the necessary supports for the encouragement of individuality;
- 3) there is the psychological impact of “*individual profit*” when it becomes identified purely with monetary gain (as in capitalism);
- 4) the effects of competition in creating conformity and mindless obedience to authority.

We have discussed point one on many occasions (see sections B.1 and B.4). As Emma Goldman put it, under capitalism, the individual “*must sell his [or her] labour*” and so their “*inclination and judgement are subordinated to the will of a master.*” This, naturally, represses individual initiative and the skills needed to know and express one’s own mind (as she put it, this “*condemns millions of people to be mere nonentities, living corpses without originality or power of initiative . . . who pile up mountains of wealth for others and pay for it with a grey, dull and wretched existence for themselves*”). “*There can be no freedom in the large sense of the word,*” Goldman stressed, “*so long as mercenary and commercial considerations play an important part in the determination of personal conduct.*” [Red Emma Speaks, p. 36]

Given the social relationships it is based on, capitalism cannot foster individuality but only harm it. As Kropotkin argued, “*obedience towards individuals or metaphysical entities . . . lead to depression of initiative and servility of mind.*” [Kropotkin’s Revolutionary Pamphlets, p. 285]

As far as point two goes, we have discussed it already in this section and will not repeat ourselves (see sections I.7 and I.7.1).

The last two points are worth discussing more thoroughly, and we will do so here.

Taking the third point first, when this kind of “greed” becomes the guiding aspect of an individual’s life (and the society they live in) they usually end up sacrificing their own ego to it. Instead of the individual dominating their “greed,” “greed” dominates them and so they end up being possessed by one aspect of themselves. This “*selfishness*” hides the poverty of the ego who practices it.

As Erich Fromm argues:

“Selfishness is not identical with self-love but with its very opposite. Selfishness is one kind of greediness. Like all greediness, it contains an insatiability, as a consequence of which there is never any real satisfaction. Greed is a bottomless pit which exhausts the person in an endless effort to satisfy the need without ever reaching satisfaction. . . this type of person is basically not fond of himself, but deeply dislikes himself.

“The puzzle in this seeming contradiction is easy to solve. Selfishness is rooted in this very lack of fondness for oneself. . . He does not have the inner security which can exist only on the basis of genuine fondness and affirmation.” [The Fear of Freedom, pp. 99–100]

In other words, the “*selfish*” person allows their greed to dominate their ego and they sacrifice their personality feeding this new “*God*.” This was clearly seen by Max Stirner who denounced this as a “*one-sided, unopened, narrow egoism*” which leads the ego being “*ruled by a passion to which he brings the rest as sacrifices*” (see section G.6). Like all “*spooks*,” capitalism results in the self-negation of the individual and so the impoverishment of individuality. Little wonder, then, that a system apparently based upon “*egoism*” and “*individualism*” ends up weakening individuality.

The effects of competition on individuality are equally as destructive.

Indeed, a “*culture dedicated to creating standardised, specialised, predictable human components could find no better way of grinding them out than by making every possible aspect of life a matter of competition. ‘Winning out’ in this respect does not make rugged individualists. It shapes conformist robots.*” [George Leonard, quoted by Alfie Kohn, **No Contest: The Case Against Competition**, p. 129]

Why is this?

Competition is based upon outdoing others and this can only occur if you are doing the same thing they are. However, individuality is the most unique thing there is and “*unique characteristics by definition cannot be ranked and participating in the process of ranking demands essential conformity.*” [Alfie Kohn, **Op. Cit.**, p. 130] According to Kohn in his extensive research into the effects of competition, the evidence suggests that it in fact “*encourages rank conformity*” as well as undermining the “*substantial and authentic kind of individualism*” associated by such free thinkers as Thoreau. [**Op. Cit.**, p. 129]

As well as impoverishing individuality by encouraging conformity, competition also makes us less free thinking and rebellious:

“Attitude towards authorities and general conduct do count in the kinds of competitions that take place in the office or classroom. If I want to get the highest grades in class, I will not be likely to challenge the teacher’s version of whatever topic is being covered. After a while, I may cease to think critically altogether. . . If people tend to ‘go along to get along,’ there is even more incentive to go along when the goal is to be number one. In the office or factory where co-workers are rivals, beating out the next person for a promotion means pleasing the boss. Competition acts to extinguish the Promethean fire of rebellion.” [Op. Cit., p. 130]

In section I.4.11 (*“If libertarian socialism eliminates the profit motive, won’t creativity suffer?”*) we noted that when an artistic task is turned into a contest, children’s work reveal significantly less spontaneity and creativity. In other words, competition reduces creativity and so individuality because creativity is *“anti-conformist at its core: it is nothing if not a process of idiosyncratic thinking and risk-taking. Competition inhibits this process.”* [Op. Cit., p. 130]

Competition, therefore, will result in a narrowing of our lives, a failing to experience new challenges in favour of trying to win and be *“successful.”* It turns *“life into a series of contests [and] turns us into cautious, obedient people. We do not sparkle as individuals or embrace collective action when we are in a race.”* [Op. Cit., p. 131]

So, far from defending individuality, capitalism places a lot of barriers (both physical and mental) in the path of individuals who are trying to express their freedom. Anarchism exists precisely because capitalism has not created the free society it supporters claimed it would during its struggle against the absolutist state.

I.8 Does revolutionary Spain show that libertarian socialism can work in practice?

Yes. As Murray Bookchin puts it, “[i]n Spain, millions of people took large segments of the economy into their own hands, collectivised them, administered them, even abolished money and lived by communistic principles of work and distribution — all of this in the midst of a terrible civil war, yet without producing the chaos or even the serious dislocations that were and still are predicted by authoritarian ‘radicals.’ Indeed, in many collectivised areas, the efficiency with which an enterprise worked by far exceeded that of a comparable one in nationalised or private sectors. This ‘green shoot’ of revolutionary reality has more meaning for us than the most persuasive theoretical arguments to the contrary. On this score it is not the anarchists who are the ‘unrealistic day-dreamers,’ but their opponents who have turned their backs to the facts or have shamelessly concealed them.” [“Introductory Essay,” in **The Anarchist Collectives**, Sam Dolgoff (ed.), p. xxxix]

Sam Dolgoff’s book is by far the best English source on the Spanish collectives and deserves to be quoted at length (as we do below). He quotes French Anarchist Gaston Leval comments that in those areas which defeated the fascist uprising on the 19th of July 1936 a profound social revolution took place based, mostly, on anarchist ideas:

“In Spain, during almost three years, despite a civil war that took a million lives, despite the opposition of the political parties . . . this idea of libertarian communism was put into effect. Very quickly more than 60% of the land was very quickly collectively cultivated by the peasants themselves, without landlords, without bosses, and without instituting capitalist competition to spur production. In almost all the industries, factories, mills, workshops, transportation services, public services, and utilities, the rank and file workers, their revolutionary committees, and their syndicates reorganised and administered production, distribution, and public services without capitalists, high-salaried managers, or the authority of the state.

“Even more: the various agrarian and industrial collectives imme-

diately instituted economic equality in accordance with the essential principle of communism, 'From each according to his ability and to each according to his needs.' They co-ordinated their efforts through free association in whole regions, created new wealth, increased production (especially in agriculture), built more schools, and bettered public services. They instituted not bourgeois formal democracy but genuine grass roots functional libertarian democracy, where each individual participated directly in the revolutionary reorganisation of social life. They replaced the war between men, 'survival of the fittest,' by the universal practice of mutual aid, and replaced rivalry by the principle of solidarity . . .

"This experience, in which about eight million people directly or indirectly participated, opened a new way of life to those who sought an alternative to anti-social capitalism on the one hand, and totalitarian state bogus socialism on the other." [Op. Cit., pp. 6-7]

Thus about eight million people directly or indirectly participated in the libertarian based new economy during the short time it was able to survive the military assaults of the fascists and the attacks and sabotage of the Communists. This in itself suggests that libertarian socialist ideas are of a practical nature.

Lest the reader think that Dolgoff and Bookchin are exaggerating the accomplishments and ignoring the failures of the Spanish collectives, in the following subsections we will present specific details and answer some objections often raised by misinformed critics. We will try to present an objective analysis of the revolution, its many successes, its strong points and weak points, the mistakes made and possible lessons to be drawn from the experience, both from the successes and the mistakes.

This libertarian influenced revolution has (generally) been ignored by historians, or its existence mentioned in passing. Some so-called historians and "*objective investigators*" have slandered it and lied about (when not ignoring) the role anarchists played in it. Communist histories are particularly unreliable (to use a polite word for their activities) but it seems that almost **every** political perspective has done this (including liberal, right-wing libertarian, Stalinist, Trotskyist, Marxist, and so on). Indeed, the myths generated by Marxists of various shades are quite extensive (see the appendix on "*Marrists and Spanish Anarchism*" for a reply to some of the more common ones).

Thus any attempt to investigate what actually occurred in Spain and the anarchists' role in it is subject to a great deal of difficulty. Moreover, the positive role that Anarchists played in the revolution and the positive results of our ideas when applied in practice are also downplayed, if not ignored. Indeed, the misrepresentations of the Spanish Anarchist movement are downright amazing (see Jerome R. Mintz's wonderful book **The Anarchists of Casa Viejas** for a refutation of the historians claims, a refutation based on oral history, as well as J. Romero Maura's, "*The Spanish case*", contained in **Anarchism Today**, edited by J. Joll and D. Apter. Both are essential reading to understand the distortions of historians about the Spanish anarchist movement).

All we can do here is present a summary of the social revolution that took place and attempt to explode a few of the myths that have been created around the work of the C.N.T. and F.A.I. during those years.

In addition, we must stress that this section of the FAQ can be nothing but an introduction to the Spanish Revolution. We concentrate on the economic and political aspects of the revolution as we cannot cover the social transformations that occurred. All across non-fascist Spain traditional social relationships between men and women, adults and children, individual and individual were transformed, revolutionised, in a libertarian way. C.N.T. militant Abel Paz gives a good indication of this when he wrote:

“Industry is in the hands of the workers and all the production centres conspicuously fly the red and black flags as well as inscriptions announcing that they have really become collectives. The revolution seems to be universal. Changes are also evident in social relations. The former barriers which used to separate men and woman arbitrarily have been destroyed. In the cafes and other public places there is a mingling of the sexes which would have been completely unimaginable before. The revolution has introduced a fraternal character to social relations which has deepened with practice and show clearly that the old world is dead.” [Durruti: **The People Armed**, p. 243]

The social transformation empowered individuals and these, in turn, transformed society. Anarchist militant Enriqueta Rovira presents a vivid picture of the self-liberation the revolution generated:

*“The atmosphere then [during the revolution], the feelings were very special. It was beautiful. A feeling of — how shall I say it — of power, not in the sense of domination, but in the sense of things being under **our** control, of under anyone’s. Of **possibility**. We **had** everything. We had Barcelona: It was ours. You’d walk out in the streets, and they were ours — here, CNT; there, **comite** this or that. It was totally different. Full of possibility. A feeling that we could, together, really **do** something. That we could make things different.”* [quoted by Martha A. Ackelsberg and Myrna Margulies Breithart, *“Terrains of Protest: Striking City Women”*, pp. 151–176, **Our Generation**, vol. 19, No. 1, pp. 164–5]

Moreover, the transformation of society that occurred during the revolution extended to all areas of life and work. For example, the revolution saw *“the creation of a health workers’ union, a true experiment in socialised medicine. They provided medical assistance and opened hospitals and clinics.”* [Juan Gomez Casas, **Anarchist Organisation: The History of the FAI**, p. 192] We discuss this example in some detail in section I.5.12 and so will not do so here. Therefore, we must stress that this section of the FAQ is just an introduction to what happened and does not (indeed, cannot) discuss all aspects of the revolution. We just present an overview, bringing out the libertarian aspects of the revolution, the ways workers’ self-management was organised, how the collectives organised and what they did.

Needless to say, many mistakes were made during the revolution. We point out and discuss some of them in what follows. Moreover, much of what happened did not correspond exactly with what many people consider as the essential steps in a communist (libertarian or otherwise) revolution. Economically, for example,

few collectives reached beyond a mutualist or collectivist state. Politically, the fear of a fascist victory made many anarchists accept collaboration with the state as a lesser evil. However, to dismiss the Spanish Revolution because it did not meet the ideas laid out by a handful of revolutionaries would be sectarian and elitist nonsense. No working class revolution is pure, no mass struggle is without its contradictions, no attempt to change society will be perfect. *“It is only those who do nothing who make no mistakes,”* as Kropotkin so correctly pointed out. [**Kropotkin’s Revolutionary Pamphlets**, p. 143] The question is whether the revolution creates a system of institutions which will allow those involved to discuss the problems they face and correct the decisions they make. In this, the Spanish Revolution clearly succeeded, creating organisations based on the initiative, autonomy and power of working class people.

For more information about the social revolution, Sam Dolgoff’s **The Anarchist Collectives** is an excellent starting place. Gaston Leval’s **Collectives in the Spanish Revolution** is another essential text. Jose Pierat’s **Anarchists in the Spanish Revolution** and Vernon Richards’ **Lessons of the Spanish Revolution** are excellent critical anarchist works on the revolution and the role of the anarchists. Robert Alexander’s **The Anarchists in the Spanish Civil War** is a good general overview of the anarchist’s role in the revolution and civil war, as is Burnett Bolloten’s **The Spanish Civil War**. Noam Chomsky’s excellent essay *“Objectivity and Liberal Scholarship”* indicates how liberal books on the Spanish Civil War can be misleading, unfair and essentially ideological in nature (this classic essay can be found in **The Chomsky Reader and American Power and the New Mandarins**). George Orwell’s **Homage to Catalonia** cannot be bettered as an introduction to the subject (Orwell was in the POUM militia at the Aragon Front and was in Barcelona during the May Days of 1937).

I.8.1 Wasn’t the Spanish Revolution primarily a rural phenomenon and therefore inapplicable as a model for modern industrialised societies?

Quite the reverse. More urban workers took part in the revolution than in the countryside. So while it is true that collectivisation was extensive in rural areas, the revolution also made its mark in urban areas and in industry.

In total, the *“regions most affected”* by collectivisation *“were Catalonia and Aragon, where about 70 per cent of the workforce was involved. The total for the whole of Republican territory was nearly 800,000 on the land and a little more than a million in industry. In Barcelona workers’ committees took over all the services, the oil monopoly, the shipping companies, heavy engineering firms such as Volcano, the Ford motor company, chemical companies, the textile industry and a host of smaller enterprises... Services such as water, gas and electricity were working under new management within hours of the storming of the Atarazanas barracks ... a conversion of appropriate factories to war production meant that metallurgical concerns had started to produce armed cars by 22 July ... The industrial workers of Catalonia were the most skilled in Spain ... One of the most impressive feats of those early days was the resurrection of the public transport system at a time when the streets were still littered and barricaded.”*

Five days after the fighting had stopped, 700 tramcars rather than the usual 600, all painted in the colours of the CNT-FAI were operating in Barcelona.” [Antony Beevor, **The Spanish Civil War**, pp. 91–2]

About 75% of Spanish industry was concentrated in Catalonia, the stronghold of the anarchist labour movement, and widespread collectivisation of factories took place there. However, collectivisation was not limited to Catalonia and took place all across urban as well as rural Republican Spain. As Sam Dolgoff rightly observes, “[t]his refutes decisively the allegation that anarchist organisational principles are not applicable to industrial areas, and if at all, only in primitive agrarian societies or in isolated experimental communities.” [**The Anarchist Collectives**, pp. 7–8]

There had been a long tradition of peasant collectivism in the Iberian Peninsula, as there was among the Berbers and in the ancient Russian **mir**. The historians Costa and Reparaz maintain that a great many Iberian collectives can be traced to “a form of rural libertarian-communism [which] existed in the Iberian Peninsula before the Roman invasion. Not even five centuries of oppression by Catholic kings, the State and the Church have been able to eradicate the spontaneous tendency to establish libertarian communistic communities.” [cited, **Op. Cit.**, p. 20] So it is not surprising that there were collectives in the countryside.

According to Augustin Souchy, “[i]t is no simple matter to collectivise and place on firm foundations an industry employing almost a quarter of a million textile workers in scores of factories scattered in numerous cities. But the Barcelona syndicalist textile union accomplished this feat in a short time. It was a tremendously significant experiment. The dictatorship of the bosses was toppled, and wages, working conditions and production were determined by the workers and their elected delegates. All functionaries had to carry out the instructions of the membership and report back directly to the men on the job and union meetings. The collectivisation of the textile industry shatters once and for all the legend that the workers are incapable of administering a great and complex corporation” [cited, **Op. Cit.**, p. 94].

Moreover, Spain in the 1930s was not a “backward, peasant country,” as is sometimes supposed. Between 1910 and 1930, the industrial working class more than doubled to over 2,500,000. This represented just over 26% of the working population (compared to 16% twenty years previously). In 1930, 45 per cent of the working population were engaged in agriculture. [Ronald Fraser, **The Blood of Spain**, p. 38] In Catalonia alone, 200,000 workers were employed in the textile industry and 70,000 in metal-working and machinery manufacturing. This was very different than the situation in Russia at the end of World War I, where the urban working class made up only 10% of the population.

Capitalist social relations had also penetrated agriculture much more thoroughly than in “backward, underdeveloped” countries by the 1930s. In Russia at the end of World War I, for example, agriculture mostly consisted of small farms on which peasant families worked mainly for their own subsistence, bartering or selling their surplus. In Spain, however, agriculture was oriented to the world market and by the 1930s approximately 90% of farm land was in the hands of the bourgeoisie. [Fraser, **Op. Cit.**, p. 37] Spanish agribusiness also employed large numbers of labourers who did not own enough land to support themselves. The revolutionary labour movement in the Spanish countryside in the 1930s was precisely based on this large population of rural wage-earners (the socialist UGT land workers union had 451,000 members in 1933, 40% of

its total membership, for example).

Therefore the Spanish Revolution cannot be dismissed as a product of pre-industrial society. The urban collectivisations occurred predominately in the most heavily industrialised part of Spain and indicate that anarchist ideas are applicable to modern societies (indeed, the CNT organised most of the unionised urban working class). By 1936 agriculture itself was predominately capitalist (with 2% of the population owning 67% of the land). The revolution in Spain was the work (mostly) of rural and urban wage labourers (joined with poor peasants) fighting a well developed capitalist system.

Therefore, the anarchist revolution in Spain has many lessons for revolutionaries in developed capitalist countries and cannot be dismissed as a product of industrial backwardness.

I.8.2 How were the anarchists able to obtain mass popular support in Spain?

Anarchism was introduced in Spain in 1868 by Giuseppe Fanelli, an associate of Michael Bakunin, and found fertile soil among both the workers and the peasants of Spain.

The peasants supported anarchism because of the rural tradition of Iberian collectivism mentioned in the last section. The urban workers supported it because its ideas of direct action, solidarity and free federation of unions corresponded to their needs in their struggle against capitalism and the state.

In addition, many Spanish workers were well aware of the dangers of centralisation and the republican tradition in Spain was very much influenced by federalist ideas (coming, in part, from Proudhon's work). The movement later spread back and forth between countryside and cities as union organisers and anarchist militants visited villages and as peasants came to industrial cities like Barcelona, looking for work.

Therefore, from the start anarchism in Spain was associated with the labour movement (as Bakunin desired) and so anarchists had a practical area to apply their ideas and spread the anarchist message. By applying their principles in everyday life, the anarchists in Spain ensured that anarchist ideas became commonplace and accepted in a large section of the population.

This acceptance of anarchism cannot be separated from the structure and tactics of the C.N.T. and its fore-runners. The practice of direct action and solidarity encouraged workers to rely on themselves to identify and solve their own problems. The decentralised structure of the anarchist unions had an educational effect of their members. By discussing issues, struggles, tactics, ideals and politics in their union assemblies, the members of the union educated themselves and, by the process of self-management in the struggle, prepared themselves for a free society. The very organisational structure of the C.N.T. ensured the dominance of anarchist ideas and the political evolution of the union membership. As one C.N.T. militant from Casas Viejas put it, new members *“asked for too much, because they lacked education. They thought they could reach the sky without a ladder . . . they were beginning to learn . . . There was good faith but lack of education. For that reason we would submit ideas to the assembly, and the bad ideas would be thrown out.”* [quoted by J. Mintz, **The Anarchists of**

Casas Viejas, p. 27]

It was by working in the union meetings that anarchists influenced their fellow workers. The idea that the anarchists, through the F.A.I., controlled the C.N.T is a myth. Not all anarchists in the C.N.T were members of the F.A.I., for example. Almost all F.A.I. members were also rank-and-file members of the C.N.T. who took part in union meetings as equals. Anarchists were not members of the FAI indicate this. Jose Borrás Casacarsa notes that “[o]ne has to recognise that the F.A.I. did not intervene in the C.N.T. from above or in an authoritarian manner as did other political parties in the unions. It did so from the base through militants . . . the decisions which determined the course taken by the C.N.T. were taken under constant pressure from these militants.” Jose Campos notes that F.A.I. militants “tended to reject control of confederal committees and only accepted them on specific occasions . . . if someone proposed a motion in assembly, the other F.A.I. members would support it, usually successfully. It was the individual standing of the *faista* in open assembly.” [quoted by Stuart Christie, **We, the Anarchists**, p. 62]

This explains the success of anarchism in the CNT. Anarchist ideas, principles and tactics, submitted to the union assemblies, proved to be good ideas and were not thrown out. The structure of the organisation, in other words, decisively influenced the **content** of the decisions reached as ideas, tactics, union policy and so on were discussed by the membership and those which best applied to the members lives were accepted and implemented. The C.N.T assemblies showed the validity of Bakunin’s arguments for self-managed unions as a means of ensuring workers’ control of their own destinies and organisations. As he put it, the union “sections could defend their rights and their autonomy [against union bureaucracy] in only one way: the workers called general membership meetings . . . In these great meetings of the sections, the items on the agenda were amply discussed and the most progressive opinion prevailed.” [**Bakunin on Anarchism**, p. 247] The C.N.T was built on such “popular assemblies,” with the same radicalising effect. It showed, in practice, that bosses (capitalist as well as union ones) were not needed — workers can manage their own affairs directly. As a school for anarchism it could not be bettered as it showed that anarchist principles were not utopian. The C.N.T., by being based on workers’ self-management of the class struggle, prepared its members for workers’ self-management of the revolution and the new society.

The Spanish Revolution also shows the importance of anarchist education and media. In a country with a very high illiteracy rate, huge quantities of literature on social revolution were disseminated and read out loud at meetings by those who could read to those who could not. Anarchist ideas were widely discussed. “There were tens of thousands of books, pamphlets and tracts, vast and daring cultural and popular educational experiments (the Ferrer schools) that reached into almost every village and hamlet throughout Spain.” [**The Anarchist Collectives**, p. 27] The discussion of political, economic and social ideas was continuous, and “the centro [local union hall] became the gathering place to discuss social issues and to dream and plan for the future. Those who aspired to learn to read and write would sit around . . . studying.” [Jerome R. Mintz, **The Anarchists of Casas Viejas**, p. 160] One anarchist militant described it as follows:

“With what joy the orators were received whenever a meeting was

*held . . . We spoke that night about everything: of the ruling inequality of the regime and of how one had a right to a life without selfishness, hatred, without wars and suffering. We were called on another occasion and a crowd gathered larger than the first time. That's how the pueblo started to evolve, fighting the present regime to win something by which they could sustain themselves, and dreaming of the day when it would be possible to create that society some depict in books, others by word of mouth. Avid for learning, they read everything, debated, discussed, and chatted about the different modes of perfect social existence.” [Perez Cordon, quoted by Jerome R. Mintz, **Op. Cit.**, p. 158]*

Newspapers and periodicals were extremely important. By 1919, more than 50 towns in Andalusia had their own libertarian newspapers. By 1934 the C.N.T. (the anarcho-syndicalist labour union) had a membership of around one million and the anarchist press covered all of Spain. In Barcelona the C.N.T. published a daily, **Solidaridad Obrera** (Worker Solidarity), with a circulation of 30,000. The FAI's magazine **Tierra y Libertad** (Land and Liberty) had a circulation of 20,000. In Gijon there was **Vida Obrera** (Working Life), in Seville **El Productor** (The Producer), and in Saragossa **Accion y Cultura** (Action and Culture), each with a large circulation. There were many more.

As well as leading struggles, organising unions, and producing books, papers and periodicals, the anarchists also organised libertarian schools, cultural centres, co-operatives, anarchist groups (the F.A.I), youth groups (the Libertarian Youth) and women's organisations (the Free Women movement). They applied their ideas in all walks of life and so ensured that ordinary people saw that anarchism was practical and relevant to them.

This was the great strength of the Spanish Anarchist movement. It was a movement “*that, in addition to possessing a revolutionary ideology [sic], was also capable of mobilising action around objectives firmly rooted in the life and conditions of the working class . . . It was this ability periodically to identify and express widely felt needs and feelings that, together with its presence at community level, formed the basis of the strength of radical anarchism, and enabled it to build a mass base of support.*” [Nick Rider, “*The practice of direct action: the Barcelona rent strike of 1931*”, p. 99, from **For Anarchism**, pp. 79–105]

Historian Temma Kaplan stressed this in her work on the Andalusian anarchists. She argued that the anarchists were “*rooted in*” social life and created “*a movement firmly based in working-class culture.*” They “*formed trade unions, affinity groups such as housewives' sections, and broad cultural associations such as workers' circles, where the anarchist press was read and discussed.*” Their “*great strength . . . lay in the merger of communal and militant trade union traditions. In towns where the vast majority of worked in agriculture, agricultural workers' unions came to be identified with the community as a whole . . . anarchism . . . show[ed] that the demands of agricultural workers and proletarians could be combined with community support to create an insurrectionary situation . . . It would be a mistake . . . to argue that ‘village anarchism’ in Andalusia was distinct from militant unionism, or that the movement was a surrogate religion.*” [**Anarchists of Andalusia: 1868–1903**, p. 211, p. 207, pp. 204–5]

The Spanish anarchists, before and after the C.N.T was formed, fought in and out of the factory for economic, social and political issues. This refusal of the anarchists to ignore any aspect of life ensured that they found many willing to hear their message, a message based around the ideas of individual liberty. Such a message could do nothing but radicalise workers for “*the demands of the C.N.T went much further than those of any social democrat: with its emphasis on true equality, **autogestion** [self-management] and working class dignity, anarchosyndicalism made demands the capitalist system could not possibly grant to the workers.*” [J. Romero Maura, “*The Spanish case*”, p. 79, from **Anarchism Today**, edited by J. Joll and D. Apter]

Strikes, due to the lack of strike funds, depended on mutual aid to be won, which fostered a strong sense of solidarity and class consciousness in the CNT membership. Strikes did not just involve workers. For example, workers in Jerez responded to bosses importing workers from Malaga “*with a weapon of their own — a boycott of those using strikebreakers. The most notable boycotts were against landowners near Jerez who also had commercial establishments in the city. The workers and their wives refused to buy there, and the women stationed themselves nearby to discourage other shoppers.*” [Jerome R. Mintz, **Op. Cit.**, p. 102]

The structure and tactics of the C.N.T encouraged the politicisation, initiative and organisational skills of its members. It was a federal, decentralised body, based on direct discussion and decision making from the bottom up. “*The C.N.T tradition was to discuss and examine everything*”, as one militant put it. In addition, the C.N.T created a viable and practical example of an alternative method by which society could be organised. A method which was based on the ability of ordinary people to direct society themselves and which showed in practice that special ruling authorities are undesirable and unnecessary.

The very structure of the C.N.T and the practical experience it provided its members in self-management produced a revolutionary working class the likes of which the world has rarely seen. As Jose Peirats points out, “*above the union level, the C.N.T was an eminently political organisation . . . , a social and revolutionary organisation for agitation and insurrection.*” [**Anarchists in the Spanish Revolution**, p. 239]

The C.N.T. was organised in such a way as to encourage solidarity and class consciousness. Its organisation was based on the **sindicato unico** (one union) which united all workers of the same workplace in the same union. Instead of organising by trade, and so dividing the workers into numerous different unions, the C.N.T united all workers in a workplace into the same organisation, all trades, skilled and unskilled, where in a single organisation and so solidarity was increased and encouraged as well as increasing their fighting power by eliminating divisions within the workforce. All the unions in an area were linked together into a local federation, the local federations into a regional federation and so on. As J. Romero Maura argues, the “*territorial basis of organisation linkage brought all the workers from one area together and fomented working-class solidarity over and above corporate [industry or trade] solidarity.*” [“*The Spanish case*”, p. 75, from **Anarchism Today**, edited by J. Joll and D. Apter]

Thus the structure of the C.N.T. encouraged class solidarity and consciousness. In addition, being based on direct action and self-management, the union ensured that working people became accustomed to managing their own struggles and acting for themselves, directly. This prepared them to manage their

own personal and collective interests in a free society (as seen by the success of the self-managed collectives created in the revolution). Thus the process of self-managed struggle and direct action prepared people for the necessities of the social revolution and the an anarchist society — it built, as Bakunin argued, the seeds of the future in the present.

In other words, *“the route to radicalisation . . . came from direct involvement in struggle and in the design of alternative social institutions.”* Every strike and action empowered those involved and created a viable alternative to the existing system. For example, while the strikes and food protests in Barcelona at the end of the First World War *“did not topple the government, patterns of organisation established then provided models for the anarchist movement for years to follow.”* [Martha A. Ackelsberg and Myrna Margulies Breithart, *“Terrains of Protest: Striking City Women”*, pp. 151–176, **Our Generation**, vol. 19, No. 1, p. 164] The same could be said of every strike, which confirmed Bakunin’s and Kropotkin’s stress on the strike as not only creating class consciousness and confidence but also the structures necessary to not only fight capitalism, but to replace it.

It was the revolutionary nature of the C.N.T. that created a militant membership who were willing and able to use direct action to defend their liberty. Unlike the Marxist led German workers, organised in a centralised fashion and trained in the obedience required by hierarchy, who did nothing to stop Hitler, the Spanish working class (like their comrades in anarchist unions in Italy) took to the streets to stop fascism.

The revolution in Spain did not “just happen”; it was the result of nearly seventy years of persistent anarchist agitation and revolutionary struggle, including a long series of peasant uprisings, insurrections, industrial strikes, protests, sabotage and other forms of direct action that prepared the peasants and workers organise popular resistance to the attempted fascist coup in July 1937 and to take control of the economy when they had defeated it in the streets.

I.8.3 How were Spanish industrial collectives organised?

Marta A. Ackelsberg gives us an excellent short summary of how the industrial collectives were organised:

“In most collectivised industries, general assemblies of workers decided policy, while elected committees managed affairs on a day-to-day basis.” [**Free Women of Spain**, p. 73]

The collectives were based on workers’ democratic self-management of their workplaces, using productive assets that were under the custodianship of the entire working community and administered through federations of workers’ associations. Augustin Souchy writes:

“The collectives organised during the Spanish Civil War were workers’ economic associations without private property. The fact that collective plants were managed by those who worked in them did not mean that these establishments became their private property. The

collective had no right to sell or rent all or any part of the collectivised factory or workshop, The rightful custodian was the C.N.T., the National Confederation of Workers Associations. But not even the C.N.T. had the right to do as it pleased. Everything had to be decided and ratified by the workers themselves through conferences and congresses." [cited in **The Anarchist Collectives**, p. 67]

According to Souchy, in Catalonia "every factory elected its administrative committee composed of its most capable workers. Depending on the size of the factory, the function of these committees included inner plant organisation, statistics, finance, correspondence, and relations with other factories and with the community. . . Several months after collectivisation the textile industry of Barcelona was in far better shape than under capitalist management. Here was yet another example to show that grass roots socialism from below does not destroy initiative. Greed is not the only motivation in human relations." [**Op. Cit.**, p 95]

Thus the individual collective was based on a mass assembly of those who worked there. This assembly nominated administrative staff who were mandated to implement the decisions of the assembly and who had to report back to, and were accountable to, that assembly. For example, in Castellon de la Plana "[e]very month the technical and administrative council presented the general assembly of the Syndicate with a report which was examined and discussed if necessary, and finally introduced when this majority thought it of use. Thus all the activities were known and controlled by all the workers. We find here a practical example of libertarian democracy." [**Collectives in the Spanish Revolution**, p. 303]

So, in general, the industrial collectives were organised from the bottom-up, with policy in the hands of workers' assemblies who elected the administration required, including workplace committees and managers. However, power rested at the base of the collective, with "all important decisions [being] taken by the general assemblies of the workers, . . . [which] were widely attended and regularly held. . . if an administrator did something which the general assembly had not authorised, he was likely to be deposed at the next meeting." An example of this process can be seen from the Casa Rivieria company. After the defeat of the army coup "a control committee (Comite de Control) was named by the Barcelona Metal Workers' Union to take over temporary control of the enterprises. . . A few weeks after July 19th, there was the first general assembly of the firm's workers . . . It elected an enterprise committee (Comite de Empresa) to take control of the firm on a more permanent basis. . . Each of the four sections of the firm — the three factories and the office staff — held their own general assemblies at least once a week. There they discussed matters ranging from the most important affairs to the most trivial." [Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 1, p. 469 and p. 532]

A plenum of syndicates met in December of 1936 and formulated norms for socialisation in which the inefficiency of the capitalist industrial system was analysed. The report of the plenum stated:

"The major defect of most small manufacturing shops is fragmentation and lack of technical/commercial preparation. This prevents their modernisation and consolidation into better and more efficient

units of production, with better facilities and co-ordination... For us, socialisation must correct these deficiencies and systems of organisation in every industry... To socialise an industry, we must consolidate the different units of each branch of industry in accordance with a general and organic plan which will avoid competition and other difficulties impeding the good and efficient organisation of production and distribution... [cited by Souchy, **The Anarchist Collectives**, p. 83]

As Souchy points out, this document is very important in the evolution of collectivisation, because it indicates a realisation that “*workers must take into account that partial collectivisation will in time degenerate into a kind of bourgeois co-operativism,*” [Op. Cit., p. 83] as discussed earlier. Thus many collectives did not compete with each other for profits, as surpluses were pooled and distributed on a wider basis than the individual collective — in most cases industry-wide.

We have already noted some examples of the improvements in efficiency realised by collectivisation during the Spanish Revolution (section I.4.10). Another example was the baking industry. Souchy reports that, “*[a]s in the rest of Spain, Barcelona’s bread and cakes were baked mostly at night in hundreds of small bakeries. Most of them were in damp, gloomy cellars infested with roaches and rodents. All these bakeries were shut down. More and better bread and cake were baked in new bakeries equipped with new modern ovens and other equipment.*” [Op. Cit., p. 82]

Therefore, the collectives in Spain were marked by workplace democracy and a desire to co-operate within and across industries. This attempt at libertarian socialism, like all experiments, had its drawbacks as well as successes and these will be discussed in the next section as well as some of the conclusions drawn from the experience.

I.8.4 How were the Spanish industrial collectives co-ordinated?

The methods of co-operation tried by the collectives varied considerably. Initially, there were very few attempts to co-ordinate economic activities beyond the workplace. This is hardly surprising, given that the overwhelming need was to restart production, convert a civilian economy to a wartime one and to ensure that the civilian population and militias were supplied with necessary goods. This, unsurprisingly enough, led to a situation of anarchist mutualism developing, with many collectives selling the product of their own labour on the market (in other words, a form of simple commodity production).

This led to some economic problems as there existed no framework of institutions between collectives to ensure efficient co-ordination of activity and so led to pointless competition between collectives (which led to even more problems). As there were initially no confederations of collectives nor mutual/communal banks this led to the inequalities that initially existed between collectives (due to the fact that the collectives took over rich and poor capitalist firms) and it made the many ad hoc attempts at mutual aid between collectives difficult and temporary.

Therefore, the collectives were (initially) a form of “*self-management straddling capitalism and socialism, which we maintain would not have occurred had the Revolution been able to extend itself fully under the direction of our syndicates.*” [Gaston Leval, **Collectives in the Spanish Revolution**, pp. 227–8] As economic and political development are closely related, the fact that the C.N.T. did not carry out the **political** aspect of the revolution meant that the revolution in the economy was doomed to failure. As Leval stresses, in “*the industrial collectives, especially in the large towns, matters proceeded differently as a consequence of contradictory factors and of opposition created by the co-existence of social currents emanating from different social classes.*” [Op. Cit., p. 227]

Given that the C.N.T. program of libertarian communism recognised that a fully co-operative society must be based upon production for use, C.N.T. militants fought against this system of mutualism and for inter-workplace co-ordination. They managed to convince their fellow workers of the difficulties of mutualism by free debate and discussion within their unions and collectives.

Therefore, the degree of socialisation varied over time (as would be expected). Initially, after the initial defeat of Franco’s forces, there was little formal co-ordination and organisation. The most important thing was to get production started again. However, the needs of co-ordination soon became obvious (as predicted in anarchist theory and the programme of the CNT). Gaston Leval gives the example of Hospitalet del Llobregat with regards to this process:

*“Local industries went through stages almost universally adopted in that revolution . . . [I]n the first instance, **comités** nominated by the workers employed in them [were organised]. Production and sales continued in each one. But very soon it was clear that this situation gave rise to competition between the factories. . . creating rivalries which were incompatible with the socialist and libertarian outlook. So the CNT launched the watchword: ‘All industries must be ramified in the Syndicates, completely socialised, and the regime of solidarity which we have always advocated be established once and for all.*

“The idea won support immediately” [Op. Cit., pp. 291–2]

Another example was the woodworkers’ union which a massive debate on socialisation and decided to do so (the shopworkers’ union had a similar debate, but the majority of workers rejected socialisation). According to Ronald Fraser a “*union delegate would go round the small shops, point out to the workers that the conditions were unhealthy and dangerous, that the revolution was changing all this, and secure their agreement to close down and move to the union-built Double-X and the 33 EU.*” [Ronald Fraser, **Blood of Spain**, p. 222]

This process went on in many different unions and collectives and, unsurprisingly, the forms of co-ordination agreed to lead to different forms of organisation in different areas and industries, as would be expected in a free society. However, the two most important forms can be termed syndicalisation and confederalism (we will ignore the forms created by the collectivisation decree as these were not created by the workers themselves).

“*Syndicalisation*” (our term) meant that the C.N.T.’s industrial union ran the whole industry. This solution was tried by the woodworkers’ union after extensive debate. One section of the union, “*dominated by the F.A.I. [the anarchist*

federation], maintained that anarchist self-management meant that the workers should set up and operate autonomous centres of production so as to avoid the threat of bureaucratisation.” [Ronald Fraser, **Blood of Spain**, p. 222] However, those in favour of syndicalisation won the day and production was organised in the hands of the union, with administration posts and delegate meetings elected by the rank and file.

However, the “major failure . . . (and which supported the original anarchist objection) was that the union became like a large firm . . . [and its] structure grew increasingly rigid.” According to one militant, “From the outside it began to look like an American or German trust” and the workers found it difficult to secure any changes and “felt they weren’t particularly involved in decision making.”

In the end, the major difference between the union-run industry and a capitalist firm organisationally appeared to be that workers could vote for (and recall) the industry management at relatively regular General Assembly meetings. While a vast improvement on capitalism, it is hardly the best example of participatory self-management in action although the economic problems caused by the Civil War and Stalinist led counter-revolution obviously would have had an effect on the internal structure of any industry and so we cannot say that the form of organisation created was totally responsible for any marginalisation that took place.

The other important form of co-operation was what we will term “confederalisation.” This form of co-operation was practised by the Badalona textile industry (and had been defeated in the woodworkers’ union). It was based upon each workplace being run by its elected management, sold its own production, got its own orders and received the proceeds. However, everything each mill did was reported to the union which charted progress and kept statistics. If the union felt that a particular factory was not acting in the best interests of the industry as a whole, it was informed and asked to change course. According to one militant, the union “acted more as a socialist control of collectivised industry than as a direct hierarchised executive” [Op. Cit., p. 229]

This system ensured that the “dangers of the big ‘union trust’ as of the atomised collective were avoided” [Fraser, Op. Cit., p. 229] as well as maximising decentralisation of power. Unlike the syndicalisation experiment in the woodworkers’ industry, this scheme was based on horizontal links between workplaces (via the C.N.T. union) and allowed a maximum of self-management **and** mutual aid. The ideas of an anarchist economy sketched in section I.3 reflects in many ways the actual experiments in self-management which occurred during the Spanish Revolution.

Therefore, the industrial collectives co-ordinated their activity in many ways, with varying degrees of direct democracy and success. As would be expected, mistakes were made and different solutions found. When reading this section of the FAQ its important to remember that an anarchist society can hardly be produced “overnight” and so it is hardly surprising that the workers of the C.N.T. faced numerous problems and had to develop their self-management experiment as objective conditions allowed them to.

Unfortunately, thanks to fascist aggression and Communist Party backstabbing, the experiment did not last long enough to fully answer all the questions we have about the viability of the solutions they tried. Given the time, however, we are sure they would have solved the problems they faced.

I.8.5 How were the Spanish agricultural co-operatives organised and co-ordinated?

Jose Peirats describes collectivisation among the peasantry as follows:

“The expropriated lands were turned over to the peasant syndicates, and it was these syndicates that organised the first collectives. Generally the holdings of small property owners were respected, always on the condition that only they or their families would work the land, without employing wage labour. In areas like Catalonia, where the tradition of petty peasant ownership prevailed, the land holdings were scattered. There were no great estates. Many of these peasants, together with the C.N.T., organised collectives, pooling their land, animals, tools, chickens, grain, fertiliser, and even their harvested crops.

“Privately owned farms located in the midst of collectives interfered with efficient cultivation by splitting up the collectives into disconnected parcels. To induce owners to move, they were given more or even better land located on the perimeter of the collective.

*“The collectivist who had nothing to contribute to the collective was admitted with the same rights and the same duties as the others. In some collectives, those joining had to contribute their money (Giron-della in Catalonia, Lagunarrotta in Aragon, and Cervera del Maestra in Valencia).” [cited **The Anarchist Collectives**, p. 112]*

Peirats also notes that in conducting their internal affairs, all the collectives scrupulously and zealously observed democratic procedures. For example, *“Hospitalet de Llobregat held regular general membership meetings every three months to review production and attend to new business. The administrative council, and all other committees, submitted full reports on all matters. The meeting approved, disapproved, made corrections, issued instructions, etc.” [Ibid., p. 119]*

Dolgoft observes that *“supreme power was vested in, and actually exercised by, the membership in general assemblies, and all power derived from, and flowed back to, the grass roots organisations of the people”* and quotes Gaston Leval:

“Regular general membership meetings were convoked weekly, bi-weekly, or monthly. . . and these meetings were completely free of the tensions and recriminations which inevitably emerge when the power of decisions is vested in a few individuals — even if democratically elected. The Assemblies were open for everyone to participate in the proceedings. Democracy embraced all social life. In most cases, even the ‘individualists’ who were not members of the collective could participate in the discussions, and they were listened to by the collectivists.” [Op. Cit., p 119f]

It was in these face-to-face assemblies that decisions upon the distribution of resources were decided both within and without the collective. Here, when considering the importance of mutual aid, appeals were made to an individual's sense of empathy. As one activist remembers:

“There were, of course, those who didn’t want to share and who said that each collective should take care of itself. But they were usually convinced in the assemblies. We would try to speak to them in terms they understood. We’d ask, ‘Did you think it was fair when the cacique [local boss] let people starve if there wasn’t enough work?’ and they said, ‘Of course not.’ They would eventually come around. Don’t forget, there were three hundred thousand collectivists [in Aragon], but only ten thousand of us had been members of the C.N.T. . . We had a lot of educating to do.” [Felix Carrasquer, quoted by Martha A. Ackelsberg in **Free Women of Spain**, p. 79]

In addition, regional federations of collectives were formed in many areas of Spain (for example, in Aragon and the Levant). The federations were created at congresses to which the collectives in an area sent delegates. These congresses agreed a series of general rules about how the federation would operate and what commitments the affiliated collectives would have to each other. The congress elected an administration council, which took responsibility for implementing agreed policy.

These federations had many tasks. They ensured the distribution of surplus produce to the front line and to the cities, cutting out middlemen and ensuring the end of exploitation. They also arranged for exchanges between collectives to take place. In addition, the federations allowed the individual collectives to pool resources together in order to improve the infrastructure of the area (building roads, canals, hospitals and so on) and invest in means of production which no one collective could afford.

In this way individual collectives pooled their resources, increased and improved the means of production they had access to as well as improving the social infrastructure of their regions. All this, combined with an increase of consumption at the point of production and the feeding of militia men and women fighting the fascists at the front.

Rural collectivisations allowed the potential creative energy that existed among the rural workers and peasants to be unleashed, an energy that had been wasted under private property. The popular assemblies allowed community problems and improvements to be identified and solved directly, drawing upon the ideas and experiences of everyone and enriched by discussion and debate. This enabled rural Spain to be transformed from one marked by poverty and fear, into one of hope and experimentation (see the next section for a few examples of this experimentation).

Therefore self-management in collectives combined with co-operation in rural federations allowed an improvement in quality of rural life. From a purely economic viewpoint, production increased and as Benjamin Martin summarises, “[t]hough it is impossible to generalise about the rural land take-overs, there is little doubt that the quality of life for most peasants who participated in co-operatives and collectives notably improved.” [**The Agony of Modernisation**, p. 394]

More importantly, however, this improvement in the quality of life included an increase in freedom as well as in consumption. To quote the member of the Beceite collective in Aragon we cited in section A.5.6, *“it was marvellous. . . to live in a collective, a free society where one could say what one thought, where if the village committee seemed unsatisfactory one could say. The committee took*

no big decisions without calling the whole village together in a general assembly. All this was wonderful. [Ronald Fraser, **Blood of Spain**, p. 288]

I.8.6 What did the agricultural collectives accomplish?

Here are a few examples cited by Jose Peirats:

“In Montblanc the collective dug up the old useless vines and planted new vineyards. The land, improved by modern cultivation with tractors, yielded much bigger and better crops. . . Many Aragon collectives built new roads and repaired old ones, installed modern flour mills, and processed agricultural and animal waste into useful industrial products. Many of these improvements were first initiated by the collectives. Some villages, like Calanda, built parks and baths. Almost all collectives established libraries, schools, and cultural centres.” [cited **The Anarchist Collectives**, p. 116]

Gaston Leval points out that *“the Peasant Federation of Levant . . . produced more than half of the total orange crop in Spain: almost four million kilos (1 kilo equals about 2 and one-fourth pounds). It then transported and sold through its own commercial organisation (no middlemen) more than 70% of the crop. (The Federations’s commercial organisation included its own warehouses, trucks, and boats. Early in 1938 the export section established its own agencies in France: Marseilles, Perpignan, bordeaux, Cherbourg, and Paris.) Out of a total of 47,000 hectares in all Spain devoted to rice production, the collective in the Province of Valencia cultivated 30,000 hectares.”* [cited in **Ibid.**, p. 124]

To quote Peirats again:

“Preoccupation with cultural and pedagogical innovations was an event without precedent in rural Spain. The Amposta collectivists organised classes for semi-literates, kindergartens, and even a school of arts and professions. The Seros schools were free to all neighbours, collectivists or not. Grau installed a school named after its most illustrious citizen, Joaquin Costa. The Calanda collective (pop. only 4,500) schooled 1,233 children. The best students were sent to the Lyceum in Caspe, with all expenses paid by the collective. The Alcoriza (pop. 4,000) school was attended by 600 children. Many of the schools were installed in abandoned convents. In Granadella (pop. 2,000), classes were conducted in the abandoned barracks of the Civil Guards. Graus organised a print library and a school of arts and professions, attended by 60 pupils. The same building housed a school of fine arts and high grade museum. In some villages a cinema was installed for the first time. The Penalba cinema was installed in a church. Viladecana built an experimental agricultural laboratory.

“The collectives voluntarily contributed enormous stocks of provisions and other supplies to the fighting troops. Utiel sent 1,490 litres of oil and 300 bushels of potatoes to the Madrid front (in addition to huge stocks of beans, rice, buckwheat, etc.). Porales de Tujana sent

great quantities of bread, oil, flour, and potatoes to the front, and eggs, meat, and milk to the military hospital.

“The efforts of the collectives take on added significance when we take into account that their youngest and most vigorous workers were fighting in the trenches. 200 members of the little collective of Vilaboi were at the front; from Viledecans, 60; Amposta, 300; and Calande, 500.” [Ibid., pp. 116–120]

Peirats sums up the accomplishments of the agricultural collectives as follows:

“In distribution the collectives’ co-operatives eliminated middlemen, small merchants, wholesalers, and profiteers, thus greatly reducing consumer prices. The collectives eliminated most of the parasitic elements from rural life, and would have wiped them out altogether if they were not protected by corrupt officials and by the political parties. Non-collectivised areas benefited indirectly from the lower prices as well as from free services often rendered by the collectives (laundries, cinemas, schools, barber and beauty parlours, etc.)” [Ibid., p114]

Leval emphasises the following achievements (among others):

“In the agrarian collectives solidarity was practised to the greatest degree. Not only was every person assured of the necessities, but the district federations increasingly adopted the principle of mutual aid on an inter-collective scale. For this purpose they created common reserves to help out villages less favoured by nature. In Castile special institutions for this purpose were created. In industry this practice seems to have begun in Hospitalet, on the Catalan railways, and was applied later in Alcoy. Had the political compromise not impeded open socialisation, the practices of mutual aid would have been much more generalised. . . A conquest of enormous importance was the right of women to livelihood, regardless of occupation or function. In about half of the agrarian collectives, the women received the same wages as men; in the rest the women received less, apparently on the principle that they rarely live alone. . . In all the agrarian collectives of Aragon, Catalonia, Levant, Castile, Andalusia, and Estremadura, the workers formed groups to divide the labour or the land; usually they were assigned to definite areas. Delegates elected by the work groups met with the collective’s delegate for agriculture to plan out the work. This typical organisation arose quite spontaneously, by local initiative. . . In addition . . . the collective as a whole met in weekly, bi-weekly or monthly assembly . . . The assembly reviewed the activities of the councillors it named, and discussed special cases and unforeseen problems. All inhabitants — men and women, producers and non-producers — took part in the discussion and decisions . . . In land cultivation the most significant advances were: the rapidly increased use of machinery and irrigation; greater diversification; and forestation. In stock raising: the selection and

multiplication of breeds; the adaptation of breeds to local conditions; and large-scale construction of collective stock barns. [Ibid., pp. 166–167]

Martha A. Ackelsberg sums up the experience well:

“The achievements of these collectives were extensive. In many areas they maintained, if not increased, agricultural production [not forgetting that many young men were at the front line], often introducing new patterns of cultivation and fertilisation. . . collectivists built chicken coups, barns, and other facilities for the care and feeding of the community’s animals. Federations of collectives co-ordinated the construction of roads, schools, bridges, canals and dams. Some of these remain to this day as lasting contributions of the collectives to the infrastructure of rural Spain.” [The Free Women of Spain, p. 79]

She also points to inter-collective solidarity, noting that the *“collectivists also arranged for the transfer of surplus produce from wealthier collectives to those experiencing shortages.”* [Ibid.]

Therefore, as well as significant economic achievements, the collectives ensured social and political ones too. Solidarity was practised and previously marginalised people took direct and full management of the affairs of their communities, transforming them to meet their own needs and desires.

I.8.7 I’ve heard that the rural collectives were created by force. Is this true?

No, it is not. The myth that the rural collectives were created by “terror,” organised and carried out by the anarchist militia, was started by the Stalinists of the Spanish Communist Party. More recently, some right-wing Libertarians have warmed up and repeated these Stalinist fabrications. Anarchists have been disproving these allegations since 1936 and it is worthwhile to do so again here.

As Vernon Richards notes, *“[h]owever discredited Stalinism may appear to be today the fact remains that the Stalinist lies and interpretation of the Spanish Civil War still prevail, presumably because it suits the political prejudices of those historians who are currently interpreting it.”* [Introduction to Gaston Leval’s **Collectives in the Spanish Revolution**, p. 11] Here we shall present evidence to refute claims that the rural collectives were created by force.

Firstly, we should point out that rural collectives were created in many different areas of Spain, such as the Levant (900 collectives), Castile (300) and Estremadura (30), where the anarchist militia did not exist. In Catalonia, for example, the C.N.T. militia passed through many villages on its way to Aragon and only around 40 collectives were created unlike the 450 in Aragon. In other words, the rural collectivisation process occurred independently of the existence of anarchist troops, with the majority of the 1,700 rural collectives created in areas without a predominance of anarchist troops.

One historian, Ronald Fraser, seems to imply that the Aragon Collectives were imposed upon the Aragon population. As he puts it the *“collectivisation, carried out under the general cover, if not necessarily the direct agency,*

of C.N.T. militia columns, represented a revolutionary minority's attempt to control not only production but consumption for egalitarian purposes and the needs of the war." [Blood of Spain, p. 370] Notice that he does not suggest that the anarchist militia actually **imposed** the collectives, a claim for which there is little or no evidence. Moreover, Fraser presents a somewhat contradictory narrative to the facts he presents. On the one hand, he talks of a policy of "obligatory" collectivism imposed on the peasants by the C.N.T., while on the other hand he presents extensive evidence that the collectives did not have a 100% membership rate. How can collectivisation be obligatory if people remain outside the collectives? Similarly, he talks of how **some** C.N.T. militia leaders justified forced collectivisation in terms of the war effort while acknowledging the official C.N.T. policy of opposing forced collectivisation, an opposition expressed in practice as only around 5% of the collectives were total (and expressed in his own book as collectivists interviewed continually note that people remained outside their collectives!).

Thus Fraser's attempts to paint the Aragon collectives as a form of "war communism" imposed upon the population by the C.N.T. and obligatory for all fails to co-incidence with the evidence he presents.

Earlier he states that "[t]here was no need to dragoon them [the peasants] at pistol point [into collectives]: the coercive climate, in which 'fascists' were being shot, was sufficient. 'Spontaneous' and 'forced' collectives existed, as did willing and unwilling collectivists within them." [Op. Cit., p.349] Therefore, his suggestion that the Aragon collectives were imposed upon the rural population is based upon the insight that there was a "coercive climate" in Aragon at the time. Of course a civil war against fascism would produce a "coercive climate," particularly at the front line, and so the C.N.T. can hardly be blamed for that. In addition, in a life and death struggle against fascism, in which the fascists were systematically murdering vast numbers of anarchists, socialists and republicans in the areas under their control, it is hardly surprising that some anarchist troops took the law into their own hands and murdered some of those who supported and would help the fascists. Given what was going on in fascist Spain, and the experience of fascism in Germany and Italy, the C.N.T. militia knew exactly what would happen to them and their friends and family if they lost.

The question does arise, however, of whether the climate was made so coercive by the war and the nearness of the anarchist militia that individual choice was impossible.

The facts speak for themselves — rural collectivisation in Aragon embraced more than 70% of the population in the area saved from fascism. Around 30% of the population felt safe enough not to join a collective, a sizeable percentage.

If the collectives had been created by anarchist terror or force, we would expect a figure of 100% membership in the collectives. This was not the case, indicating the basically voluntary nature of the experiment (we should point out that other figures suggest a lower number of collectivists which makes the forced collectivisation argument even less likely). Historian Antony Beevor (while noting that there "had undoubtedly been pressure, and no doubt force was used on some occasions in the fervour after the rising") just stated the obvious when he wrote that "the very fact that every village was a mixture of collectivists and individualists shows that peasants had not been forced into communal farming at the point of a gun." [The Spanish Civil War, p. 206] In addition, if the C.N.T. militia had forced peasants into collectives we would expect the mem-

bership of the collectives to peak almost overnight, not grow slowly over time. However, this is what happened:

“At the regional congress of collectives, held at Caspe in mid-February 1937, nearly 80 000 collectivists were represented from ‘almost all the villages of the region.’ This, however, was but a beginning. By the end of April the number of collectivists had risen to 140 000; by the end of the first week of May to 180 000; and by the end of June to 300 000.” [Graham Kelsey, “Anarchism in Aragon,” pp. 60–82, **Spain in Conflict 1931–1939**, Martin Blinkhorn (ed.), p. 61]

If the collectives had been created by force, then their membership would have been 300 000 in February, 1937, not increasing steadily to reach that number four months later. Neither can it be claimed that the increase was due to new villages being collectivised, as almost all villages had sent delegates in February. This indicates that many peasants joined the collectives because of the advantages associated with common labour, the increased resources it placed at their hands and the fact that the surplus wealth which had in the previous system been monopolised by the few was used instead to raise the standard of living of the entire community.

The voluntary nature of the collectives is again emphasised by the number of collectives which allowed smallholders to remain outside. According to evidence Fraser presents (on page 366), an F.A.I. schoolteacher is quoted as saying that the forcing of smallholders into the collective “*wasn’t a widespread problem, because there weren’t more than twenty or so villages where collectivisation was total and no one was allowed to remain outside...*” Instead of forcing the minority in a village to agree with the wishes of the majority, the vast majority (95%) of Aragon collectives stuck to their libertarian principles and allowed those who did not wish to join to remain outside.

So, only around 20 were “*total*” collectives (out of 450) and around 30% of the population felt safe enough **not** to join. In other words, in the vast majority of collectives those joining could see that those who did not were safe. These figures should not be discounted, as they give an indication of the basically spontaneous and voluntary nature of the movement. As was the composition of the new municipal councils created after July 19th. As Graham Kelsey notes, “[*w*]hat is immediately noticeable from the results is that although the region has often been branded as one controlled by anarchists to the total exclusion of all other forces, the C.N.T. was far from enjoying the degree of absolute domination often implied and inferred.” [**Anarchosyndicalism, Libertarian Communism and the State**, p. 198]

In his account of the rural revolution, Burnett Bolloten notes that it “*embraced more than 70 percent of the population*” in liberated Aragon and that “*many of the 450 collectives of the region were largely voluntary*” although “*it must be emphasised that this singular development was in some measure due to the presence of militiamen from the neighbouring region of Catalonia, the immense majority of whom were members of the C.N.T. and F.A.I.*” [**The Spanish Civil War**, p. 74]

As Gaston Leval points out, “*it is true that the presence of these forces . . . favoured indirectly these constructive achievements by preventing active resistance by the supporters of the bourgeois republic and of fascism.*” [**Collectives in the Spanish Revolution**, p. 90]

In other words, the presence of the militia changed the balance of class forces in Aragon by destroying the capitalist state (i.e. the local bosses — caciques — could not get state aid to protect their property) and many landless workers took over the land. The presence of the militia ensured that land could be taken over by destroying the capitalist “*monopoly of force*” that existed before the revolution (the power of which will be highlighted below) and so the C.N.T. militia allowed the possibility of experimentation by the Aragonese population.

This class war in the countryside is reflected by Bollothen’s statement that “[*if*] the individual farmer viewed with dismay the swift and widespread collectivisation of agriculture, the farm workers of the Anarchosyndicalist C.N.T. and the Socialist UGT saw it as the commencement of a new era.” [**The Spanish Civil War**, p. 63] Both were mass organisations and supported collectivisation.

Therefore, anarchist militia allowed the rural working class to abolish the artificial scarcity of land created by private property (and enforced by the state). The rural bosses obviously viewed with horror the possibility that they could not exploit day workers’ labour. As Bollothen points out “*the collective system of agriculture threaten[ed] to drain the rural labour market of wage workers.*” [**Op. Cit.**, p. 62] Little wonder the richer peasants and landowners hated the collectives.

Bollothen also quotes a report on the district of Valderrobes which indicates popular support for the collectives:

“Collectivisation was nevertheless opposed by opponents on the right and adversaries on the left. If the eternally idle who have been expropriated had been asked what they thought of collectivisation, some would have replied that it was robbery and others a dictatorship. But, for the elderly, the day workers, the tenant farmers and small proprietors who had always been under the thumb of the big landowners and heartless usurers, it appeared as salvation” [**Op. Cit.**, p. 71]

However, most historians ignore the differences in class that existed in the countryside. They ignore it and explain the rise in collectives in Aragon (and ignore those elsewhere) as the result of the C.N.T. militia. Fraser, for example, states that “[*v*]ery rapidly collectives . . . began to spring up. It did not happen on instructions from the C.N.T. leadership — no more than had the [*industrial*] collectives in Barcelona. Here, as there, the initiative came from C.N.T. militants; here, as there, the ‘climate’ for social revolution in the rearguard was created by C.N.T. armed strength: the anarcho-syndicalists’ domination of the streets of Barcelona was re-enacted in Aragon as the C.N.T. militia columns, manned mainly by Catalan anarcho-syndicalist workers, poured in. Where a nucleus of anarcho-syndicalists existed in a village, it seized the moment to carry out the long-awaited revolution and collectivised spontaneously. Where there was none, villagers could find themselves under considerable pressure from the militias to collectivise. . . .” [**Op. Cit.**, p. 347]

In other words, he implies that the revolution was mostly imported into Aragon from Catalonia. However, the majority of C.N.T. column leaders were opposed to the setting up of the Council of Aragon (a confederation for the collectives) [Fraser, **Op. Cit.**, p. 350]. Hardly an example of Catalan C.N.T. imposed social revolution. The evidence we have suggests that the Aragon C.N.T. was a widespread and popular organisation, suggesting that the idea

that the collectives were imported into Aragon by the Catalan C.N.T. is simply **false**.

Fraser states that in “*some [of the Aragonese villages] there was a flourishing C.N.T., in others the UGT was strongest, and in only too many there was no unionisation at all.*” [**Blood of Spain**, p. 348] The question arises of how extensive was that strength. The evidence we have suggests that it was extensive, strong and growing, so indicating that rural Aragon was not without a C.N.T. base, a base that makes the suggestion of imposed collectives a false one.

Murray Bookchin summarises the strength of the C.N.T. in rural Aragon as follows:

“The authentic peasant base of the C.N.T. [by the 1930s] now lay in Aragon . . . [C.N.T. growth in Zaragoza] provided a springboard for a highly effective libertarian agitation in lower Aragon, particularly among the impoverished labourers and debt-ridden peasantry of the dry steppes region.” [**The Spanish Anarchists**, p. 203]

Graham Kelsey, in his social history of the C.N.T. in Aragon between 1930 and 1937, provides the necessary evidence to more than back Bookchin’s claim of C.N.T. growth. Kelsey points out that as well as the “*spread of libertarian groups and the increasing consciousness among C.N.T. members of libertarian theories . . . contribu[ting] to the growth of the anarchosyndicalist movement in Aragon*” the existence of “*agrarian unrest*” also played an important role in that growth [**Anarchosyndicalism, Libertarian Communism and the State**, pp. 80–81]. This all lead to the “*revitalisation of the C.N.T. network in Aragon*” [p. 82] and so by 1936, the C.N.T. had built upon the “*foundations laid in 1933. . . [and] had finally succeeded in translating the very great strength of the urban trade-union organisation in Zaragoza into a regional network of considerable extent.*” [**Op. Cit.**, p. 134]

Kelsey and other historians note the long history of anarchism in Aragon, dating back to the late 1860s. However, before the 1910s there had been little gains in rural Aragon by the C.N.T. due to the power of local bosses (called **caciques**):

*“Local landowners and small industrialists, the **caciques** of provincial Aragon, made every effort to enforce the closure of these first rural anarchosyndicalist cells [created after 1915]. By the time of the first rural congress of the Aragonese C.N.T. confederation in the summer of 1923, much of the progress achieved through the organisation’s considerable propaganda efforts had been countered by repression elsewhere.”* [Graham Kelsey, “*Anarchism in Aragon*,” p. 62]

A C.N.T. activist indicates the power of these bosses and how difficult it was to be a union member in Aragon:

“Repression is not the same in the large cities as it is in the villages where everyone knows everybody else and where the Civil Guards are immediately notified of a comrade’s slightest movement. Neither friends nor relatives are spared. All those who do not serve the

state's repressive forces unconditionally are pursued, persecuted and on occasions beaten up." [cited by Kelsey, **Op. Cit.**, p. 74]

However, while there were some successes in organising rural unions, even in 1931 "*propaganda campaigns which led to the establishment of scores of village trade-union cells, were followed by a counter-offensive from village **caciques** which forced them to close.*" [**Ibid.** p. 67] But even in the face of this repression the C.N.T. grew and "*from the end of 1932. . . [there was] a successful expansion of the anarchosyndicalist movement into several parts of the region where previously it had never penetrated.*" [Kesley, **Anarchosyndicalism, Libertarian Communism and the State**, p. 185]

This growth was built upon in 1936, with increased rural activism which had slowly eroded the power of the **caciques** (which in part explains their support for the fascist coup). After the election of the Popular Front, years of anarchist propaganda and organisation paid off with a massive increase in rural membership in the C.N.T.:

"The dramatic growth in rural anarcho-syndicalist support in the six weeks since the general election was emphasised in the [Aragon C.N.T.'s April] congress's agenda. . . the congress directed its attention to rural problems . . . [and agreed a programme which was] exactly what was to happen four months later in liberated Aragon." [Kesley, "*Anarchism in Aragon*", p. 76]

In the aftermath of a regional congress, held in Zaragoza at the start of April, a series of intensive propaganda campaigns was organised through each of the provinces of the regional confederation. Many meetings were held in villages which had never before heard anarcho-syndicalist propaganda. This was very successful and by the beginning of June, 1936, the number of Aragon unions had topped 400, compared to only 278 one month earlier (an increase of over 40% in 4 weeks). [**Ibid.**, pp. 75–76]

This increase in union membership reflects increased social struggle by the Aragonese working population and their attempts to improve their standard of living, which was very low for most of the population. A journalist from the conservative-Catholic **Heraldo de Aragon** visited lower Aragon in the summer of 1935 and noted "*[t]he hunger in many homes, where the men are not working, is beginning to encourage the youth to subscribe to misleading teachings.*" [cited by Kesley, **Ibid.**, p. 74]

Little wonder, then, the growth in C.N.T. membership and social struggle Kesley indicates:

"Evidence of a different kind was also available that militant trade unionism in Aragon was on the increase. In the five months between mid-February and mid-July 1936 the province of Zaragoza experienced over seventy strikes, more than had previously been recorded in any entire year, and things were clearly no different in the other two provinces . . . the great majority of these strikes were occurring in provincial towns and villages. Strikes racked the provinces and in at least three instances were actually transformed into general strikes." [**Ibid.**, p. 76]

Therefore, in the spring and summer of 1936, we see a massive growth in C.N.T. membership which reflects growing militant struggle by the urban and rural population of Aragon. Years of C.N.T. propaganda and organising had ensured this growth in C.N.T. influence, a growth which is also reflected in the creation of collectives in liberated Aragon during the revolution. Therefore, the construction of a collectivised society was founded directly upon the emergence, during the five years of the Second Republic, of a mass trade-union movement infused by libertarian, anarchist principles. These collectives were constructed in accordance with the programme agreed at the Aragon C.N.T. conference of April 1936 which reflected the wishes of the rural membership of the unions within Aragon (and due to the rapid growth of the C.N.T. afterwards obviously reflected popular feelings in the area).

In the words of Graham Kesley, *“libertarian dominance in post-insurrection Aragon itself reflected the predominance that anarchists had secured before the war; by the summer of 1936 the C.N.T. had succeeded in establishing throughout Aragon a mass trade-union movement of strictly libertarian orientation, upon which widespread and well-supported network the extensive collective experiment was to be founded.”* [Ibid., p. 61]

Additional evidence that supports a high level of C.N.T. support in rural Aragon can be provided by the fact that it was Aragon that was the centre of the December 1933 insurrection organised by the C.N.T. As Bookchin notes, *“only Aragon rose on any significant scale, particularly Saragossa . . . many of the villages declared libertarian communism and perhaps the heaviest fighting took place between the vineyard workers in Rioja and the authorities”* [M. Bookchin, *Op. Cit.*, p. 238]

It is unlikely for the C.N.T. to organise an insurrection in an area within which it had little support or influence. According to Kesley’s in-depth social history of Aragon, *“it was precisely those areas which had most important in December 1933 . . . which were now [in 1936], in seeking to create a new pattern of economic and social organisation, to form the basis of libertarian Aragon.”* [G. Kesley, **Anarchosyndicalism, Libertarian Communism and the State**, p. 161] After the revolt, thousands of workers were jailed, with the authorities having to re-open closed prisons and turn at least one disused monastery into a jail due to the numbers arrested.

Therefore, it can be seen that the majority of collectives in Aragon were the product of C.N.T. (and UGT) influenced workers taking the opportunity to create a new form of social life, a form marked by its voluntary and directly democratic nature. For from being unknown in rural Aragon, the C.N.T. was well established and growing at a fast rate — *“Spreading out from its urban base. . . the C.N.T., first in 1933 and then more extensively in 1936, succeeded in converting an essentially urban organisation into a truly regional confederation.”* [Ibid., p. 184]

Therefore the evidence suggests that historians like Fraser are wrong to imply that the Aragon collectives were created by the C.N.T. militia and enforced upon a unwilling population. The Aragon collectives were the natural result of years of anarchist activity within rural Aragon and directly related to the massive growth in the C.N.T. between 1930 and 1936. Thus Kesley is correct to state that:

“Libertarian communism and agrarian collectivisation were not eco-

conomic terms or social principles enforced upon a hostile population by special teams of urban anarchosyndicalists . . . [G. Kesley, **Op. Cit.**, p. 161]

This is not to suggest that there were **no** examples of people joining collectives involuntarily because of the “*coercive climate*” of the front line. And, of course, there were villages which did not have a C.N.T. union within them before the war and so created a collective because of the existence of the C.N.T. militia. But these can be considered as exceptions to the rule.

Moreover, the way the C.N.T. handled such a situation is noteworthy. Fraser indicates such a situation in the village of Alloza. In the autumn of 1936, representatives of the C.N.T. district committee had come to suggest that the villagers collectivise (we would like to stress here that the C.N.T. militia which had passed through the village had made no attempt to create a collective there).

A village assembly was called and the C.N.T. explained their ideas and suggested how to organise the collective. However, who would join and how the villagers would organise the collective was left totally up to them (the C.N.T. representatives “*stressed that no one was to be maltreated*”). Within the collective, self-management was the rule.

According to one member, “[o]nce the work groups were established on a friendly basis and worked their own lands, everyone got on well enough,” he recalled. “*There was no need for coercion, no need for discipline and punishment. . . A collective wasn’t a bad idea at all.*” [**Op. Cit.**, p. 360] This collective, like the vast majority, was voluntary and democratic — “*I couldn’t oblige him to join; we weren’t living under a dictatorship.*” [**Op. Cit.**, p. 362] In other words, **no** force was used to create the collective and the collective was organised by local people directly.

Of course, as with any public good (to use economic jargon), all members of the community had to pay for the war effort and feed the militia. As Kesley notes, “[t]he military insurrection had come at a critical moment in the agricultural calendar. Throughout lower Aragon there were fields of grain ready for harvesting. . . At the assembly in Albalate de Cinca the opening clause of the agreed programme had required everyone in the district, independent farmers and collectivists alike, to contribute equally to the war effort, thereby emphasising one of the most important considerations in the period immediately following the rebellion.”

In addition, the collectives controlled the price of crops in order to ensure that speculation and inflation were controlled. However, these policies as with the equal duties of individualists and collectivists in the war effort were enforced upon the collectives by the war.

Lastly, in support of the popular nature of the rural collectives, we will indicate the effects of the suppression of the collectives in August 1937 by the Communists, namely the collapse of the rural economy. This sheds considerable light on the question of popular attitudes to the collectives.

In October, the Communist-controlled Regional Delegation of Agrarian Reform acknowledged that “*in the majority of villages agricultural work was paralysed causing great harm to our agrarian economy.*” This is confirmed by Jose Silva, a Communist Party member and general secretary of the Institute of Agrarian Reform, who commented that after Lister had attacked Aragon, “*labour in the fields was suspended almost entirely, and a quarter of the land had not*

been prepared at the time for sowing.” At a meeting of the agrarian commission of the Aragonese Communist Party (October 9th, 1937), Jose Silva emphasised “*the little incentive to work of the entire peasant population*” and that the situation brought about by the dissolution of the collectives was “*grave and critical.*” [quoted by Bolloten, **Op. Cit.**, p. 530]

Jose Peirats explains the reasons for this economic collapse as a result of popular boycott:

“When it came time to prepare for the next harvest, smallholders could not by themselves work the property on which they had been installed [by the communists]. Dispossessed peasants, intransigent collectivists, refused to work in a system of private property, and were even less willing to rent out their labour.” [**Anarchists in the Spanish Revolution**, p. 258]

If the collectives were unpopular, created by anarchist force, then why did the economy collapse after the suppression? If Lister had overturned a totalitarian anarchist regime, why did the peasants not reap the benefit of their toil? Could it be because the collectives were essentially a spontaneous Aragonese development and supported by most of the population there? This analysis is backed up by Yaacov Oved’s statement (from a paper submitted to the XII Congress of Sociology, Madrid, July 1990):

“Those who were responsible for this policy [of “freeing” the Aragon Collectivists], were convinced that the farmers would greet it joyfully because they had been coerced into joining the collectives. But they were proven wrong. Except for the rich estate owners who were glad to get their land back, most of the members of the agricultural collectives objected and lacking all motivation they were reluctant to resume the same effort of in the agricultural work. This phenomenon was so widespread that the authorities and the communist minister of agriculture were forced to retreat from their hostile policy.” [Yaacov Oved, **Communismo Libertario and Communalism in the Spanish Collectivisations (1936–1939)**]

Even in the face of Communist repression, most of the collectives kept going. This, if nothing else, proves that the collectives were popular institutions. As Yaacov Oved argues in relation to the breaking up of the collectives:

“Through the widespread reluctance of collectivists to co-operate with the new policy it became evident that most members had voluntarily joined the collectives and as soon as the policy was changed a new wave of collectives was established. However, the wheel could not be turned back. An atmosphere of distrust prevailed between the collectives and the authorities and every initiative was curtailed” [**Op. Cit.**]

Jose Peirats sums up the situation after the communist attack on the collectives and the legalisation of the collectives as follows:

“It is very possible that this second phase of collectivisation better reflects the sincere convictions of the members. They had undergone

a sever test and those who had withstood it were proven collectivists. Yet it would be facile to label as anti-collectivists those who abandoned the collectives in this second phase. Fear, official coercion and insecurity weighed heavily in the decisions of much of the Aragonese peasantry.” [Op. Cit., p. 258]

While the collectives had existed, there was a 20% increase in production (and this is compared to the pre-war harvest which had been “*a good crop.*” [Fraser, p. 370]); after the destruction of the collectives, the economy collapsed. Hardly the result that would be expected if the collectives were forced upon an unwilling peasantry. The forced collectivisation by Stalin in Russia resulted in a famine. Only the victory of fascism made it possible to restore the so-called “*natural order*” of capitalist property in the Spanish countryside. The same land-owners who welcomed the Communist repression of the collectives also, we are sure, welcomed the fascists who ensured a lasting victory of property over liberty.

So, overall, the evidence suggests that the Aragon collectives, like their counterparts in the Levante, Catalonia and so on, were **popular** organisations, created by and for the rural population and, essentially, an expression of a spontaneous and popular social revolution. Claims that the anarchist militia created them by force of arms are **false**. While acts of violence **did** occur and some acts of coercion **did** take place (against C.N.T. policy, we may add) these are the exceptions to the rule. Bollothen’s summary best fits the facts:

“But in spite of the cleavages between doctrine and practice that plagued the Spanish Anarchists whenever they collided with the realities of power, it cannot be overemphasised that notwithstanding the many instances of coercion and violence, the revolution of July 1936 distinguished itself from all others by the generally spontaneous and far-reaching character of its collectivist movement and by its promise of moral and spiritual renewal. Nothing like this spontaneous movement had ever occurred before.” [Op. Cit., p. 78]

I.8.8 But did the Spanish collectives innovate?

Yes. In contradiction to the old capitalist claim that no one will innovate unless private property exists, the workers and peasants exhibited much more incentive and creativity under libertarian socialism than they had under the private enterprise system. This is apparent from Gaston Leval’s description of the results of collectivisation in Cargante:

“Carcagente is situated in the southern part of the province of Valencia. The climate of the region is particularly suited for the cultivation of oranges. . . All of the socialised land, without exception, is cultivated with infinite care. The orchards are thoroughly weeded. To assure that the trees will get all the nourishment needed, the peasants are incessantly cleaning the soil. ‘Before,’ they told me with pride, ‘all this belonged to the rich and was worked by miserably paid labourers. The land was neglected and the owners had to buy immense quantities of chemical fertilisers, although they could have

gotten much better yields by cleaning the soil...’ With pride, they showed me trees that had been grafted to produce better fruit.

*“In many places I observed plants growing in the shade of the orange trees. ‘What is this?’, I asked. I learned that the Levant peasants (famous for their ingenuity) have abundantly planted potatoes among the orange groves. The peasants demonstrate more intelligence than all the bureaucrats in the Ministry of Agriculture combined. They do more than just plant potatoes. Throughout the whole region of the Levant, wherever the soil is suitable, they grow crops. They take advantage of the four month [fallow period] in the rice fields. Had the Minister of Agriculture followed the example of these peasants throughout the Republican zone, the bread shortage problem would have been overcome in a few months.” [cited in Dolgoff, **Anarchist Collectives**, p. 153]*

This is just one from a multitude of examples presented in the accounts of both the industrial and rural collectives (for more see section C.2.3 in which we present more examples to refute that charge that “*workers’ control would stifle innovation*” and I.8.6). The available evidence proves that the membership of the collectives showed a keen awareness of the importance of investment and innovation in order to increase production and to make work both lighter and more interesting **and** that the collectives allowed that awareness to be expressed freely. The Spanish collectives indicate that, given the chance, everyone will take an interest in their own affairs and express a desire to use their minds to improve their surroundings. In fact, capitalism distorts what innovation exists under hierarchy by channelling it purely in how to save money and maximise investor profit, ignoring other, more important, issues.

As Gaston Leval argues, self-management encouraged innovation:

“The theoreticians and partisans of the liberal economy affirm that competition stimulates initiative and, consequently, the creative spirit and invention without which it remains dormant. Numerous observations made by the writer in the Collectives, factories and socialised workshops permit him to take quite the opposite view. For in a Collective, in a grouping where each individual is stimulated by the wish to be of service to his fellow beings research, the desire for technical perfection and so on are also stimulated. But they also have as a consequence that other individuals join those who were first to get together. Furthermore, when, in present society, an individualist inventor discovers something, it is used only by the capitalist or the individual employing him, whereas in the case of an inventor living in a community not only is his discovery taken up and developed by others, but is immediately applied for the common good. I am convinced that this superiority would very soon manifest itself in a socialised society.” [Collectives in the Spanish Revolution, p. 247]

Therefore the actual experiences of self-management in Spain supports the points made in section I.4.11. Freed from hierarchy, individuals will creatively interact with the world to improve their circumstances. This is not due to

“market forces” but because the human mind is an active agent and unless crushed by authority it can no more stop thinking and acting than the Earth stop revolving round the Sun. In addition, the Collectives indicate that self-management allows ideas to be enriched by discussion, as Bakunin argued:

“The greatest intelligence would not be equal to a comprehension of the whole. Thence results. . . the necessity of the division and association of labour. I receive and I give — such is human life. Each directs and is directed in his turn. Therefore there is no fixed and constant authority, but a continual exchange of mutual, temporary, and, above all, voluntary authority and subordination” [**God and the State**, p. 33]

The experience of self-management proved Bakunin’s point that society is more intelligent than even the most intelligent individual simply because of the wealth of viewpoints, experience and thoughts contained there. Capitalism impoverishes individuals and society by its artificial boundaries and authority structures.

I.8.9 Why, if it was so good, did it not survive?

Just because something is good does not mean that it will survive.

For example, the Warsaw Ghetto uprising against the Nazis failed but that does not mean that the uprising was a bad cause or that the Nazi regime was correct, far from it. Similarly, while the experiments in workers’ self-management and communal living undertaken across Republican Spain is one of the most important social experiments in a free society ever undertaken, this cannot change the fact that Franco’s forces and the Communists had access to more and better weapons.

Faced with the aggression and terrorism of Franco, and behind him the military might of Fascist Italy and Nazi Germany, the treachery of the Communists, and the aloofness of the Western bourgeois “*republics*” (whose policy of “*non-intervention*” was strangely ignored when their citizens aided Franco) it is amazing the revolution lasted as long as it did.

This does not excuse the actions of the anarchists themselves. As is well known, the C.N.T. co-operated with the other anti-fascist parties and trade unions on the Republican side (see next section). This co-operation led to the C.N.T. joining the anti-fascist government and “anarchists” becoming ministers of state. This co-operation, more than anything, helped ensure the defeat of the revolution. While much of the blame can be placed at the door of the would-be “*leaders*,” who like most leaders started to think themselves irreplaceable and spokespersons for the organisations they were members of, it must be stated that the rank-and-file of the movement did little to stop them. Most of the militant anarchists were at the front-line (and so excluded from union and collective meetings) and so could not influence their fellow workers (it is no surprise that the “*Friends of Durruti*” group were mostly ex-militia men). However, it seems that the mirage of anti-fascist unity proved too much for the majority of C.N.T. members (see section I.8.12).

Some anarchists still maintain that the Spanish anarchist movement had no choice and that collaboration (while having unfortunate effects) was the only

choice available. This view was defended by Sam Dolgoff and finds some support in the writings of Gaston Leval, August Souchy and many other anarchists. However, most anarchists today oppose collaboration and think it was a terrible mistake (at the time, this position was held by the majority of non-Spanish anarchists plus a large minority of the Spanish movement, becoming a majority as the implications of collaboration became clear). This viewpoint finds its best expression in Vernon Richard's **Lessons of the Spanish Revolution** and, in part, in such works as **Anarchists in the Spanish Revolution** by Jose Peirats and **Anarchist Organisation: The History of the F.A.I** by Juan Gomaz Casas as well as in a host of pamphlets and articles written by anarchists ever since.

So, regardless of how good a social system is, objective facts will overcome that experiment. Saturnino Carod (a leader of a C.N.T. Militia column at the Aragon Front) sums up the successes of the revolution as well as its objective limitations:

“Always expecting to be stabbed in the back, always knowing that if we created problems, only the enemy across the lines would stand to gain. It was a tragedy for the anarcho-sindicalist movement; but it was a tragedy for something greater — the Spanish people. For it can never be forgotten that it was the working class and peasantry which, by demonstrating their ability to run industry and agriculture collectively, allowed the republic to continue the struggle for thirty-two months. It was they who created a war industry, who kept agricultural production increasing, who formed militias and later joined the army. Without their creative endeavour, the republic could not have fought the war . . . ” [quoted by Fraser, **Blood of Spain**, p. 394]

I.8.10 Why did the C.N.T. collaborate with the state?

As is well know, in September 1936 the C.N.T joined the Catalan government, followed by the central government in November. This followed on from the decision made on July the 21st to not speak of Libertarian Communism until after Franco had been defeated. In other words, to collaborate with other anti-fascist parties and unions in a common front against fascism.

This, initially, involved the C.N.T agreeing to join a “*Central Committee of Anti-Fascist Militias*” proposed by the leader of the Catalan government, Louis Companys. This committee was made up of representatives of various anti-fascist parties and groups. From this it was only a matter of time until the C.N.T joined an official government as no other means of co-ordinating activities existed (see section I.8.13).

The question must arise, **why** did the C.N.T decide to collaborate with the state, forsaking its principles and, in its own way, contribute to the counter-revolution and the loosing of the war. This is an important question. Indeed, it is one Marxists always throw up in arguments with anarchists or in anti-anarchist diatribes. Does the failure of the C.N.T to implement anarchism after July 19th mean that anarchist politics are flawed? Or, rather, does the experience of the C.N.T and F.A.I during the Spanish revolution indicate a failure of

anarchists rather than of **anarchism**, a mistake made under difficult objective circumstances and one which anarchists have learnt from? Needless to say, anarchists argue that the latter answer is the correct one. In other words, as Vernon Richards argues, “*the basis of [his] criticism is not that anarchist ideas were proved to be unworkable by the Spanish experience, but that the Spanish anarchists and syndicalists failed to put their theories to the test, adopting instead the tactics of the enemy.*” [**Lessons of the Spanish Revolution**, p. 14] The writers of this FAQ agree.

So, why **did** the CNT collaborate with the state during the Spanish Civil War? Simply put, rather than being the fault of anarchist theory (as Marxists like to claim), its roots can be discovered in the situation facing the Catalan anarchists on July 20th. The objective conditions facing the leading militants of the CNT and FAI influenced the decisions they took, decisions which they later justified by **mis**-using anarchist theory.

What was the situation facing the Catalan anarchists on July 20th? Simply put, it was an unknown situation. Jose Peirats quotes from the report made by the C.N.T to the **International Workers Association** as follows:

“Levante was defenceless and uncertain . . . We were in a minority in Madrid. The situation in Andalusia was unknown . . . There was no information from the North, and we assumed the rest of Spain was in the hands of the fascists. The enemy was in Aragon, at the gates of Catalonia. The nervousness of foreign consular officials led to the presence of a great number of war ships around our ports.” [quoted in **Anarchists in the Spanish Revolution**, p. 180]

He also notes that:

“According to the report, the CNT was in absolute control of Catalonia in July 19, 1936, but its strength was less in Levante and still less in central Spain where the central government and the traditional parties were dominant. In the north of Spain the situation was confused. The CNT could have mounted an insurrection on its own ‘with probable success’ but such a takeover would have led to a struggle on three fronts: against the fascists, the government and foreign capitalism. In view of the difficulty of such an undertaking, collaboration with other antifascist groups was the only alternative.” [**Op. Cit.**, p. 179]

In the words of the CNT report itself:

“The CNT showed a conscientious scrupulousness in the face of a difficult alternative: to destroy completely the State in Catalonia, to declare war against the Rebels [i.e. the fascists], the government, foreign capitalism, and thus assuming complete control of Catalan society; or collaborating in the responsibilities of government with the other antifascist fractions.” [quoted by Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 2, p. 1156]

Moreover, as Gaston Leval later argued, given that the “*general preoccupation [of the majority of the population was] to defeat the fascists . . . the anarchists would, if they came out against the state, provoke the antagonism . . . of*

the majority of the people, who would accuse them of collaborating with Franco.” Implementing an anarchist revolution would, in all likelihood, also “*result . . . [in] the instant closing of the frontier and the blockade by sea by both fascists and the democratic countries. The supply of arms would be completely cut off, and the anarchists would rightly be held responsible for the disastrous consequences.*” [quoted in **The Anarchist Collectives**, p. 52 and p. 53]

While the supporters of Lenin and Trotsky will constantly point out the objective circumstances in which their heroes made their decisions during the Russian Revolution, they rarely mention those facing the anarchists in Spain on the 20th of July, 1936. It seems hypocritical to point to the Russian Civil War as the explanation of all of Bolshevism’s crimes against the working class (indeed, humanity) while remaining silent on the forces facing the C.N.T.-F.A.I at the start of the Spanish Civil War. The fact that **if** the CNT had decided to implement libertarian communism in Catalonia they would have to face the fascists (commanding the bulk of the Spanish army), the Republican government (commanding the rest) **plus** those sections in Catalonia which supported it is rarely mentioned. Moreover, when the decision to collaborate was made it was **immediately after the defeat of the army uprising in Barcelona** — the situation in the rest of the country was uncertain and when the social revolution was in its early days.

Stuart Christie indicates the dilemma facing the leadership of the CNT at the time:

“The higher committees of the CNT-FAI-FIJJL in Catalonia saw themselves caught on the horns of a dilemma: social revolution, fascism or bourgeois democracy. Either they committed themselves to the solutions offered by social revolution, regardless of the difficulties involved in fighting both fascism and international capitalism, or, through fear of fascism (or of the people), they sacrificed their anarchist principles and revolutionary objectives to bolster, to become, part of the bourgeois state . . . Faced with an imperfect state of affairs and preferring defeat to a possibly Pyrrhic victory, the Catalan anarchist leadership renounced anarchism in the name of expediency and removed the social transformation of Spain from their agenda.

“But what the CNT-FAI leaders failed to grasp was that the decision whether or not to implement Libertarian Communism, was not theirs to make. Anarchism was not something which could be transformed from theory into practice by organisational decree . . . [the] spontaneous defensive movement of 19 July had developed a political direct of its own.” [**We, the Anarchists!**, p. 99]

Given that the pro-fascist army still controlled a third or more of Spain (including Aragon) and that the CNT was not the dominant force in the centre and north of Spain, it was decided that a war on three fronts would only aid Franco. Moreover, it was a distinct possibility that by introducing libertarian communism in Catalonia, Aragon and elsewhere, the workers’ militias and self-managed industries would have been starved of weapons, resources and credit. That isolation was a real problem can be seen from De Santillan’s later comments on why the CNT joined the government:

“The Militias Committee guaranteed the supremacy of the people in arms . . . but we were told and it was repeated to us endlessly that as long as we persisted in retaining it, that is, as long as we persisted in propping up the power of the people, weapons would not come to Catalonia, now would we be granted the foreign currency to obtain them from abroad, nor would we be supplied with the raw materials for our industry. And since losing the war meant losing everything and returning to a state like that prevailed in the Spain of Ferdinand VII, and in the conviction that the drive given by us and our people could not vanish completely from the new economic life, we quit the Militias Committee to join the Generalidad government.” [quoted by Stuart Christie, **Op. Cit.**, p. 109]

It was decided to collaborate and reject the basic ideas of anarchism until the war was over. A terrible mistake, but one which can be understood given the circumstances in which it was made. This is not, we stress, to justify the decision but rather to explain it and place it in context. Ultimately, the **experience** of the Civil War saw a blockade of Republic by both “democratic” and fascist governments, the starving of the militias and self-managed collectives of resources and credit as well as a war on two fronts when the State felt strong enough to try and crush the CNT and the semi-revolution its members had started. Unfortunately, the anarchist movement did not have a crystal-ball with which to see the future. Ultimately, even faced with the danger of fascism, the liberals, the right-wing socialists and communists preferred to undermine the anti-fascist struggle by attacking the CNT. In this, history proved Durruti totally correct:

“For us it is a matter of crushing Fascism once and for all. Yes, and in spite of the Government.

“No government in the world fights Fascism to the death. When the bourgeoisie sees power slipping from its grasp, it has recourse to Fascism to maintain itself. The liberal government of Spain could have rendered the fascist elements powerless long ago. Instead it compromised and dallied. Even now at this moment, there are men in this Government who want to go easy on the rebels. You can never tell, you know — he laughed — the present Government might yet need these rebellious forces to crush the workers’ movement . . .

“We know what we want. To us it means nothing that there is a Soviet Union somewhere in the world, for the sake of whose peace and tranquillity the workers of Germany and China were sacrificed to Fascist barbarians by Stalin. We want revolution here in Spain, right now, not maybe after the next European war. We are giving Hitler and Mussolini far more worry to-day with our revolution than the whole Red Army of Russia. We are setting an example to the German and Italian working class on how to deal with fascism.

“I do not expect any help for a libertarian revolution from any Government in the world. Maybe the conflicting interests of the various imperialisms might have some influence in our struggle. That is quite possible . . . But we expect no help, not even from our own Government, in the last analysis.”

“You will be sitting on a pile of ruins if you are victorious,” said [the journalist] van Paasen.

Durruti answered: *“We have always lived in slums and holes in the wall. We will know how to accommodate ourselves for a time. For, you must not forget, we can also build. It is we the workers who built these palaces and cities here in Spain and in America and everywhere. We, the workers, can build others to take their place. And better ones! We are not in the least afraid of ruins. We are going to inherit the earth; there is not the slightest doubt about that. The bourgeoisie might blast and ruin its own world before it leaves the stage of history. We carry a new world here, in our hearts. That world is growing this minute.”* [quoted by Vernon Richards, **Lessons of the Spanish Revolution**, pp. 193–4f]

Isolation, the uneven support for a libertarian revolution across Spain and the dangers of fascism were real problems, but they do not excuse the libertarian movement for its mistakes. As we discuss in sections I.8.11 and I.8.13, the biggest of these mistakes was forgetting basic anarchist ideas and an anarchist approach to the problems facing the Spanish people. If these ideas had been applied in Spain, the outcome of the Civil War and Revolution would have been different.

In summary, while the decision to collaborate is one that can be understood (due to the circumstances under which it was made), it cannot be justified in terms of anarchist theory. Indeed, as we argue in the next section, attempts by the CNT leadership to justify the decision in terms of anarchist principles are not convincing and cannot be done without making a mockery of anarchism.

I.8.11 Was the decision to collaborate a product of anarchist theory, so showing anarchism is flawed?

As we indicated in the last section, the decision to collaborate with the state was made by the CNT due to the fear of isolation. The possibility that by declaring libertarian communism, the CNT would have had to fight the Republican government and foreign interventions **as well as** the military coup influenced the decision reached by the militants of Catalan anarchism. They argued that such a situation would only aid Franco.

Rather than being the product of anarchist ideology, the decision was made in light of the immediate danger of fascism and the situation in other parts of the country. The fact is that the circumstances in which the decision to collaborate was made are rarely mentioned by Marxists, who prefer to quote CNT militant Garcia Oliver’s comment from over a year later:

“The CNT and the FAI decided on collaboration and democracy, renouncing revolutionary totalitarianism which would lead to the strangulation of the revolution by the anarchist and Confederate dictatorship. We had to choose, between Libertarian Communism, which

meant anarchist dictatorship, and democracy, which meant collaboration." [quoted by Vernon Richards, **Lessons of the Spanish Revolution**, p. 34]

It is this quote, and quotes like it, which is ritualistically trotted out by Marxists when attacking anarchist ideas. They argue that they expose the bankruptcy of anarchist theory. So convinced of this, they rarely bother discussing the problems facing the CNT after the defeat of the military coup we discussed in the last section nor do they compare these quotes to the anarchist theory they claim inspired them. There are good reasons for this. Firstly, if they presented the objective circumstances the CNT found itself in then their readers may see that the decision, while wrong, is understandable and had nothing to do with anarchist theory. Secondly, by comparing these quotes to anarchist theory they would soon see how at odds they are with it. Indeed, they invoke anarchism to justify conclusions the exact opposite of that theory.

So what can be made of Garcia Oliver's argument?

As Abel Paz notes, "[i]t is clear that the explanations given . . . were designed for their political effect, hiding the atmosphere in which these decisions were taken. These declarations were made a year later when the CNT were already far removed from their original positions. It is also the period when they had become involved in the policy of collaboration which led to taking part in the Central Government. But in a certain way they shed light on the unknown factors which weighted so heavily on those who took part in the historic Plenum." [Durruti: **The People Armed**, p. 215]

For example, when the decision was made, the revolution had not started yet. The street fighting had just ended and the Plenum decided "*not to speak about Libertarian Communism as long as part of Spain was in the hands of the fascists.*" [Mariano R. Vesquez, quoted by Paz, **Op. Cit.**, p.214] The revolution took place **from below** in the days following the decision, independently of the wishes of the Plenum. In the words of Abel Paz:

"When the workers reached their workplaces . . . they found them deserted . . . The major centres of production had been abandoned by their owners . . . The CNT and its leaders had certainly not foreseen this situation; if they had, they would have given appropriate guidance to the workers when they called off the General Strike and ordered a return to work. What happened next was the result of the workers' spontaneous decision to take matters into their own hands.

"Finding the factories deserted, and no instructions from their unions, they resolved to operate the machines themselves." [**The Spanish Civil War**, pp. 54–5]

The rank and file of the CNT, on their own initiative, took advantage of the collapse of state power to transform the economy and social life of Catalonia. Paz stresses that "*no orders were given for expropriation or collectivisation — which proved that the union, which represented the will of the their members until July 18th, had now been overtaken by events*" and the "*union leaders of the CNT committees were confronted with a revolution that they had not foreseen . . . the workers and peasants had bypassed their leaders and taken collective action.*" [**Op. Cit.**, p. 40 and p. 56]

As the revolution had not yet begun and the CNT Plenum had decided **not** to call for its start, it is difficult to see how “*libertarian communism*” (i.e. the revolution) could “*lead to the strangulation of the revolution*” (i.e. libertarian communism). In other words, this particular rationale put forward by Garcia Oliver could not reflect the real thoughts of those present at the CNT plenum and so, in fact, was a later justification for the CNT’s actions.

Similarly, Libertarian Communism is based on self-management, by its nature opposed to dictatorship. According to the CNT’s resolution at its congress in Zaragonza in May, 1936, “*the foundation of this administration will be the Commune*” which is “*autonomous*” and “*federated at regional and national levels.*” The commune “*will undertake to adhere to whatever general norms [that] may be agreed by majority vote after free debate.*” It stressed the free nature of society aimed at by the CNT:

“The inhabitants of a commune are to debate among themselves their internal problems . . . Federations are to deliberate over major problems affecting a country or province and all communes are to be represented at their reunions and assemblies, thereby enabling their delegates to convey the democratic viewpoint of their respective communes . . . every commune which is implicated will have its right to have its say . . . On matters of a regional nature, it is the duty of the regional federation to implement agreements . . . So the starting point is the individual, moving on through the commune, to the federation and right on up finally to the confederation.” [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, pp. 106–7]

Hardly a picture of “*anarchist dictatorship*”! Indeed, it is far more “*democratic*” than the capitalist state Oliver describes as “*democracy.*”

Clearly, these often quoted words of Garcia Oliver cannot be taken at face value. Made in 1937, they present an attempt to misuse anarchist ideals to defend the anti-anarchist activities of the CNT leadership rather than a meaningful explanation of the decisions made on the 20th of July, 1936.

Moreover, the decision made then clearly stated that Libertarian Communism would be back on the agenda once Franco was defeated. Oliver’s comments were applicable **after** Franco was defeated just as much as when they were made. The real reasons for the decision to collaborate lies elsewhere, namely in the objective circumstances facing the CNT after the defeat of the army in Barcelona, July 20th, 1936, and **not** in anarchist theory.

This can clearly be seen from the report made by the CNT to the **International Workers Association** to justify the decision to forget anarchist theory and collaborate with bourgeois parties and join the government. The report states that “*the CNT, loyal to its ideals and its purely anarchist nature, did not attack the forms of the State, nor try publicly to penetrate or dominate it . . . none of the political or juridical institutions were abolished.*” [quoted by Robert Alexander, **The Anarchists in the Spanish Civil War**, vol. 2, p. 1156]

In other words, according to this report, “anarchist” ideals do not, in fact, mean the destruction of the state, but rather the **ignoring** of the state. That this is nonsense, concocted to justify the CNT leaderships’ betrayal of its ideals,

is clear. To do so we just need to look at Bakunin and Kropotkin and look at the activities of the CNT **before** the start of the war.

Bakunin had argued that “*the revolution must set out from the first to radically and totally destroy the State*” and that the “*natural and necessary consequence of this destruction*” will include the “*dissolution of army, magistracy, bureaucracy, police and priesthood.*” Capital would be expropriated (i.e. the “*confiscation of all productive capital and means of production on behalf of workers’ associations, who are to put them to use*”) and the state replaced by “*the federative Alliance of all working men’s associations*” which “*will constitute the Commune.*” [Michael Bakunin: **Selected Writings**, p. 170] Similarly, Kropotkin had stressed that the “*Commune . . . must break the State and replace it by the Federation.*” [Words of a Rebel, p. 83]

Thus anarchism has always been clear on what to do with the state, and it is obviously not what the CNT did to it! Nor had the CNT always taken this perspective. Before the start of the Civil War, the CNT had organised numerous insurrections against the state. For example, in the spontaneous revolt of CNT miners in January 1932, the workers “*seized town halls, raised the black-and-red flags of the CNT, and declared **comunismo libertario.***” In Tarassa, the same year, the workers again “*seiz[ed] town halls*” and the town “*swept by street fighting.*” The revolt in January 1933 began with “*assaults by Anarchist action groups . . . on Barcelona’s military barracks . . . Serious fighting occurred in working-class **barrios** and the outlying areas of Barcelona . . . Uprising occurred in Tarassa, Sardanola-Ripollet, Lerida, in several **pueblos** in Valencia province, and in Andalusia.*” In December 1933, the workers “*reared barricades, attacked public buildings, and engaged in heavy street fighting . . . many villages declared libertarian communism.*” [Murray Bookchin, **The Spanish Anarchists**, p. 225, p. 226, p. 227 and p. 238]

It seems that the CNT leadership’s loyalty to “*its ideals and its purely anarchist nature*” which necessitated “*not attack[ing] the forms of the State*” was a very recent development! That enemies of anarchism quote Garcia Oliver’s words from 1937 or from this document and others like it in order to draw conclusions about anarchist theory says more about their politics than about anarchism!

As can be seen, the rationales later developed to justify the betrayal of anarchist ideas and the revolutionary workers of Spain have no real relationship to anarchist theory. They were created to justify a non-anarchist approach to the struggle against fascism, an approach based on ignoring struggle from below and instead forging alliances with parties and unions at the top (in the style of the UGT “*Workers’ Alliance*” the CNT had correctly argued against before the war).

Rather than trying to cement a unity with other organisations at the top level, the leadership of the CNT should have applied their anarchist ideas by inciting the oppressed to enlarge and consolidate their gains (which they did anyway). This would have liberated all the potential energy within the country (and elsewhere), energy that clearly existed as can be seen from the spontaneous collectivisations that occurred after the fateful Plenum of July 20th and the creation of volunteer workers’ militia columns sent to liberate those parts of Spain which had fallen to Franco.

The role of anarchists, therefore, was that of “*inciting the people to abolish capitalistic property and the institutions through which it exercises its power for*

the exploitation of the majority by a minority” and “*to support, to incite and encourage the development of the social revolution and to frustrate any attempts by the bourgeois capitalist state to reorganise itself, which it would seek to do.*” This would involve “*seeking to destroy bourgeois institutions through the creation of revolutionary organisms.*” [Vernon Richards, **Op. Cit.**, p. 44, p. 46 and p. 193]

In other words, to encourage, what Bakunin called the “*federation of the standing barricades,*” made up of “*delegates . . . vested with binding mandates and accountable and revocable at all times*”) which could have been the initial framework for both defending and extending the revolution (to “*defend the revolution*” a “*communal militia*” would be organised, the revolution would “*radiate . . . outwards*” and communes would “*federate . . . for common defence.*”) [Michael Bakunin, **No Gods, No Masters**, vol. 1, p. 155 and p. 142] The equivalent of the “*Sections*” of the French Revolution, what Kropotkin argued “*laid the foundations of a new, free, social organisation*” and expressed “*the principles of anarchism.*” [**The Great French Revolution**, vol. 1, p. 206 and p. 204] Indeed, such an organisation already existing in embryo in the CNT’s **barrios** defence committees which had led and co-ordinated the struggle against the military coup throughout the city.

Later, a delegate meeting from the various workplaces (CNT and UGT organised as well as unorganised ones) would have to had been arranged to organise, to again quote Bakunin, “*the federal Alliance of workers associations*” which would “*constitute the Commune*” and complement the “*federation of the standing barricades.*” [**Op. Cit.**, p. 155] In more modern terminology, a federation of workers’ councils combined with a federation of workers’ militias and community assemblies. Without this, the revolution was doomed as was the war against Franco’s forces.

Such a development, applying the basic ideas of anarchism (and as expounded in the CNT’s May resolution on Libertarian Communism), was not an impossibility. After all, the CNT-FAI organised something similar in Aragon. The fear that if libertarian communism was implemented then a civil war within the anti-fascist forces would occur (so aiding Franco) was a real one. Unfortunately, the conclusion drawn from that fear, namely to win the war against Franco before talking about the revolution, was the wrong one. After all, a civil war within the Republican side **did** occur, when the state had recovered enough to do start it. Similarly, with the fear of a blockade by foreign governments. This happened away, confirming Durruti’s comment that he “*did not expect help for a libertarian revolution from any government in the world . . . not even from our own government in the last analysis.*” [quoted by Vernon Richards, **Op. Cit.**, p. 194f] Organising a full and proper delegate meeting in the first days of the revolution would have allowed these ideas to be discussed by the whole membership of the CNT and, perhaps, a different decision may have been reached on the subject of collaboration.

By thinking they could postpone the revolution until after the war, the CNT leadership made two mistakes. Firstly, they should have known that their members would hardly miss this opportunity to implement their ideas so making their decision redundant (and a statist backlash inevitable). Secondly, they abandoned their anarchist ideas, failing to understand that the struggle against fascism would never be effective without the active participation of the working class. Such participation could never be achieved by placing the war before the

revolution and by working in top-down, statist structures or within a state.

Indeed, the mistake made by the CNT, while understandable, cannot be justified given that their consequences had been predicted by numerous anarchists beforehand, including Kropotkin decades previously in an essay on the Paris Commune. In that essay he refutes the two assumptions of the CNT leadership — first, of placing the war before the revolution and, second, that the struggle could be waged by authoritarian structures or a state.

Kropotkin had explicitly attacked the mentality and logic begin the official CNT line of not mentioning Libertarian Communism “*until such time as we had captured that part of Spain that was in the hands of the rebels.*” Kropotkin had lambasted those who had argued “*Let us first make sure of victory, and then see what can be done.*” His comments are worth quoting at length:

*“Make sure of victory! As if there were any way of transforming society into a free commune without laying hands upon property! As if there were any way of defeating the enemy so long as the great mass of the people is not directly interested in the triumph of the revolution, in witnessing the arrival it of material, moral and intellectual well-being for all! They sought to consolidate the Commune first of all while postponing the social revolution for later on, while the only effective way of proceeding was **to consolidate the Commune by the social revolution!***

“It was the same with the governmental principle. In proclaiming the free Commune, the people of Paris proclaimed an essential anarchist principle . . . If we admit, in fact, that a central government is absolutely useless to regulate the relations of communes between each other, why do we grant its necessity to regulate the mutual relations of the groups that constitute the Commune? . . . A government within the Commune has no more right to exist than a government over the Commune.” [Words of a Rebel, p. 97]

Kropotkin’s argument was sound, as the CNT discovered. By waiting until victory in the war they were defeated. Kropotkin also indicated the inevitable effects of the CNT’s actions in co-operating with the state and joining representative bodies. In his words:

“Paris . . . sent her devoted sons to the Hotel-de-Ville [the town hall]. Indeed, immobilised there by fetters of red tape, forced to discuss when action was needed, and losing the sensitivity that comes from continual contact with the masses, they saw themselves reduced to impotence. Paralysed by their distancing from the revolutionary centre — the people — they themselves paralysed the popular initiative.” [Op. Cit., pp. 97–8]

Which, in a nutshell, was what happened to the leading militants of the CNT who collaborated with the state. Kropotkin was proved right, as was anarchist theory from Bakunin onwards. As Vernon Richards argues, “*there can be no excuse*” for the CNT’s decision, as “*they were not mistakes of judgement but the deliberate abandonment of the principles of the CNT.*” [Lessons of the Spanish Revolution, pp. 41–2] It seems difficult to blame anarchist theory for the decisions of the CNT when that theory argues the opposite position.

However, while the experience of Spain confirms anarchist theory **negatively**, it also confirms it **positively** by the Council of Aragon. The Council of Aragon was created by a meeting of delegates from CNT unions, village collectives and militia columns to protect the new society the people of Aragon were building. Its creation exposes as false the claim that anarchism failed in during the Spanish Civil War. In Aragon, the CNT **did** follow the ideas of anarchism, abolishing both the state and capitalism. If they had followed this example in Catalonia, the outcome of the Civil War may have been different.

In spite of opposition from the two Catalan militia leaders, the Aragonese delegates at the Bujaraloz assembly, encouraged by Durruti, supported the proposals and the Regional Defence Council of Aragón was born with the specific objective of implementing libertarian communism. The meeting also decided to press for the setting up of a National Defence Committee which would link together a series of regional bodies that were organised on principles similar to the one now established in Aragon.

The formation of the Regional Defence Council was an affirmation of commitment to the principles of libertarian communism. This principled stand for revolutionary social and economic change stands at odds with the claims that the Spanish Civil War indicates the failure of anarchism. After all, in Aragon the CNT **did** act in accordance with anarchist theory and its own history and politics.

Therefore, the activities of the CNT during the Civil War cannot be used to discredit anarchism although it can be used to show that anarchists can and do make terrible decisions in difficult circumstances. That Marxists always point to this event in anarchist history is unsurprising, for it was a terrible mistake.

However, to use this to generalise about anarchism is false as it, firstly, requires a dismissal of the objective circumstances the decision was made in (see last section) and, secondly, it means ignoring anarchist theory and history. It also gives the impression that anarchism as a revolutionary theory must be evaluated purely from one event in its history. The experiences of the Makhnovists in the Ukraine, the U.S.I and U.A.I. in the factory occupations of 1920 and fighting fascism in Italy, the insurrections of the C.N.T. during the 1930s, the Council of Aragon created by the CNT in the Spanish Revolution and so on, are all ignored when evaluating anarchism. Hardly convincing, although handy for Marxists. As is clear from, for example, the experiences of the Makhnovists and the Council of Aragon, that anarchism has been applied successfully on a large scale, both politically and economically, in revolutionary situations.

As Emma Goldman argued, the “*contention that there is something wrong with Anarchism . . . because the leading comrades in Spain failed Anarchism seems to be very faulty reasoning . . . the failure of one or several individuals can never take away from the depth and truth of an ideal.*” [Vision on Fire, p. 299] This is even more the case when anarchists can point to anarchist theory and other examples of anarchism in action which fully followed anarchist ideas. That opponents of anarchism fail to mention these examples suggests their case against anarchism, based on the experience of the CNT in the Spanish Civil War, is deeply flawed.

Rather than show the failure of anarchism, the experience of the Spanish Revolution indicates the failure of anarchists to apply their ideas in practice. Faced with extremely difficult circumstances, they compromised their ideas in the name of anti-fascist unity. Sadly, their compromises **confirmed** (rather

than refuted) anarchist theory as they led to the defeat of both the revolution and the civil war.

I.8.12 Was the decision to collaborate imposed on the CNT's membership?

A few words have to be said about the development of the CNT and FAI post 19th of July. It is clear that the CNT and FAI changed in nature and were the not same organisations as they were **before** July 1936. Both organisations became more centralised and bureaucratic, with the membership excluded from many major decisions. As Peirats argues:

“In the CNT and among militant anarchists there had been a tradition of the most scrupulous respect for the deliberations and decisions of the assemblies, the grassroots of the federalist organisation. Those who held administrative office had been merely the mandatories of those decisions. The regular motions adopted by the National congresses spelled out to the Confederation and its representative committees ineluctable obligations of a basic and general nature incumbent upon very affiliated member regardless of locality or region. And the forming of such general motions was the direct responsibility of all of the unions by means of motions adopted at their respective general assemblies. Similarly, the Regional or Local Congresses would establish the guidelines of requirement and problems that obtained only at regional or local levels. In both instances, sovereignty resided always with the assemblies of workers whether in their unions or in their groups.

“This sense of rigorous, everyday federalist procedure was abruptly amended from the very outset of the revolutionary phase. . . This amendment of the norms of the organisation was explained away by reference to the exceptional turn of events, which required a greater agility of decisions and resolutions, which is to say a necessary departure from the circuitous procedures of federalist practice which operated from the bottom upwards.” [The CNT in the Spanish Revolution, vol. 1, p. 213]

In other words, the CNT had become increasingly hierarchical, with the higher committees becoming transformed into executive bodies rather than administrative ones (*“it is safe to assert that the significant resolutions in the organisation were adopted by the committees, very rarely by the mass constituency. Certainly, circumstances required quick decisions from the organisation, and it was necessary to take precautions to prevent damaging leaks. These necessities tempted the committees to abandon the federalist procedures of the organisation.”* [Jose Peirats, **Anarchists in the Spanish Revolution**, p. 188]).

Ironically, rather than the “*anarchist leaders*” of the CNT failing to “*seize power*” as Trotsky and his followers lament, they did — **in their own organisations**. Such a development proved to be a disaster and re-enforced the anarchist critique against hierarchical and centralised organisations. The CNT higher committees became isolated from the membership, pursued their own

policies and compromised and paralysed the creative work being done by the rank and file — as predicted in anarchist theory. However, be that as it may, as we will indicate below, it would be false to assert that these higher committees simply imposed the decision to collaborate on their memberships (as, for example, Vernon Richards seems to imply in his **Lessons of the Spanish Revolution**). While it is true that the committees presented many decisions as a **fait accompli** the rank-and-file of the C.N.T and F.A.I did not simply follow orders and ratify all decisions blindly.

In any revolutionary situation decisions have to be made fast and sometimes without consulting the base of the organisation. However, such decisions must be accountable to the membership who must discuss and ratify them (this was the policy within the CNT militias, for example). The experience of the CNT and FAI in countless strikes, insurrections and campaigns had proven the decentralised, federal structure was more than capable of pursuing the class war — revolution is no exception as it is the class war in its most concentrated form. In other words, the organisational principles of the CNT and FAI were more than adequate for a revolutionary situation.

The centralising tendencies, therefore, cannot be blamed on the exception circumstances of the war. Rather, it is the policy of collaboration which explains them. Unlike the numerous strikes and revolts that occurred before July 19th, 1936, the CNT higher committees had started to work within the state structure. This, by its very nature, must generate hierarchical and centralising tendencies as those involved must adapt to the states basic structure and form. The violations of CNT policy flowed from the initial decision to compromise in the name of “*anti-fascist unity*” and a vicious circle developed — each compromise pushed the CNT leadership further into the arms of the state, which increased hierarchical tendencies, which in turn isolated these higher committees of the CNT from the masses, which in turn encouraged a conciliatory policy by those committees.

This centralising and hierarchical tendency did not mean that the higher committees of the CNT simply imposed their will on the rest of the organisation. It is very clear that the decision to collaborate had, initially, the passive support of the majority of the CNT and FAI (probably because they thought the war would be over after a few weeks or months). This can be seen from various facts. As visiting French anarchist Sebastian Faure noted, while “*effective participation in central authority has had the approval of the majority within the unions and in the groups affiliated to the FAI, that decision has in many places encountered the opposition of a fairly substantial minority. Thus there has been no unanimity.*” [quoted by Jose Peirats, **The CNT in the Spanish Revolution**, vol. 1, p. 183]

In the words of Peirats:

“Were all of the militants of the same mind? ... Excepting some vocal minorities which expressed their protests in their press organs and through committees, gatherings, plenums and assemblies, the dismal truth is that the bulk of the membership was in thrall to a certain fatalism which was itself a direct consequence of the tragic realities of the war.” [Op. Cit., p. 181]

And:

“We have already seen how, on the economic plane, militant anarchism forged ahead, undaunted, with its work of transforming the economy. It is not to be doubted — for to do so would have been to display ignorance of the psychology of libertarian rank and file of the CNT — that a muffled contest, occasionally erupting at plenums and assemblies and manifest in some press organs broke out as soon as the backsliding began. In this connection, the body of opinion hostile to any possible deviation in tactics and principles was able to count throughout upon spirited champions.” [Op. Cit., p. 210]

Thus, within the libertarian movement, there was a substantial minority who opposed the policy of collaboration and made their opinions known in various publications and meetings. While many (if not most) revolutionary anarchists volunteered for the militias and so were not active in their unions as before, there were various groups (such as Catalan Libertarian Youth, the Friends of Durruti, other FAI groups, and so on) which were opposed to collaboration and argued their case openly in the streets, collectives, organisational meetings and so on. Moreover, outside the libertarian movement the two tiny Trotskyist groups also argued against collaboration, as did sections of the POUM. Therefore it is impossible to state that the CNT membership were unaware of the arguments against the dominant policy. Also the Catalan CNT’s higher committees, for example, after the May Days of 1937 could not get union assemblies or plenums to expel the Friends of Durruti nor to get them to withhold financial support for the Libertarian Youth, who opposed collaboration vigorously in their publications, nor get them to call upon various groups of workers to stop distributing opposition publications in the public transit system or with the daily milk. [Abe Bluestein in Gomez Casas’s **Anarchist Organisation: The History of the FAI**, p. 10]

This suggests that in spite of centralising tendencies, the higher committees of the CNT were still subject to some degree of popular influence and control and should not be seen as having dictatorial powers over the organisation. While many decisions **were** presented as **fait accompli** to the union plenums (often called by the committees at short notice), in violation of past CNT procedures, the plenums could not be railroaded into any ratifying any decision the committees wanted. The objective circumstances associated with the war against Franco and fascism convinced most C.N.T. members and libertarian activists that working with other parties and unions within the state was the only feasible option. To do otherwise was to weaken the war effort by provoking another Civil War in the anti-Franco camp. While such a policy did not work (when it was strong enough the Republican state did start a civil war against the C.N.T. which gutted the struggle against fascism) it cannot be argued that it was imposed upon the membership nor that they did not hear opposing positions. Sadly, the call for anti-fascist unity dominated the minds of the libertarian movement.

In the early stages, the majority of rank-and-file militants believed that the war would be over in a matter of weeks. After all, a few days had been sufficient to rout the army in Barcelona and other industrial centres. This inclined them to, firstly, tolerate (indeed, support) the collaboration of the CNT with the “*Central Committee of Anti-Fascist Militias*” and, secondly, to start expropriating capitalism in the belief that the revolution would soon be

back on track (the opportunity to start introducing anarchist ideas was simply too good to waste, regardless of the wishes of the CNT Plenum). They believed that the revolution and libertarian communism, as debated and adopted by the CNT's Zaragoza Congress of May that year, was an inseparable aspect of the struggle against economic and social oppression and proceeded appropriately. The ignoring of the state, rather than its destruction, was seen as a short-term compromise, soon to be corrected. Sadly, there were wrong — collaboration had a logic all its own, one which got worse as the war dragged on (and soon it was too late).

Which, we must note indicates the superficial nature of most Marxist attacks on anarchism using the CNT as the key evidence. After all, it was the anarchists and anarchist influenced members of the CNT who organised the collectives, militias and started the transformation of Spanish society. They did so inspired by anarchism and in an anarchist way. To praise their actions, while attacking “anarchism”, shows a lack of logic — it was anarchism which inspired these actions. Indeed, these actions have more in common with anarchist ideas than the actions and rationales of the CNT leadership. Thus, to attack “anarchism” by pointing to the anti-anarchist actions of a few leaders while ignoring the anarchist actions of the majority is flawed.

Therefore, to summarise, it is clear that while the internal structure of the CNT was undermined and authoritarian tendencies increased by its collaboration with the state, the CNT was not transformed into a mere appendage to the higher committees of the organisation. The union plenums could and did reject the calls made by the leadership of the CNT. Support for “*anti-fascist unity*” was widespread among the CNT membership (in spite of the activities and arguments of large minority of anarchists) and was reflected in the policy of collaboration pursued by the organisation. While the CNT higher committees were transformed into a bureaucratic leadership, increasingly isolated from the rank and file, it cannot be argued that their power was absolute nor totally at odds with the wishes of the membership. Ironically, but unsurprisingly, the divergences from the C.N.T's previous libertarian organisational principles confirmed anarchist theory and became a drag on the revolution and a factor in its defeat.

As we argued in section I.8.11, the initial compromise with the state, the initial betrayal of anarchist theory and CNT policy, contained all the rest. Moreover, rather than refute anarchism, the experience of the CNT after it had rejected anarchist theory confirmed the principles of anarchism — centralised, hierarchical organisations hindered and ultimately destroyed the revolution.

The experience of the C.N.T and F.A.I suggests that those, like Leninists, who argue for **more** centralisation and for “*democratic*” hierarchical structures have refused to understand, let alone learn from, history. The increased centralisation within the C.N.T aided and empowered the leadership (a minority) and disempowered the membership (the majority). Rather than federalism hindering the revolution, it, as always, was centralism which did so.

Therefore, in spite of a sizeable minority of anarchists **within** the C.N.T and F.A.I arguing against the dominate policy of “*anti-fascist unity*” and political collaboration, this policy was basically agreed to by the C.N.T membership and was not imposed upon them. The membership of the C.N.T could, and did, reject suggestions of the leadership and so, in spite of the centralisation of power that occurred in the C.N.T due to the policy of collaboration, it cannot

be argued that this policy was alien to the wishes of the rank-and-file.

I.8.13 What political lessons were learned from the revolution?

The most important political lesson learned from the Spanish Revolution is that a revolution cannot compromise with existing power structures. In this, it just confirmed anarchist theory.

The Spanish Revolution is a clear example of the old maxim, “*those who only make half a revolution dig their own graves.*” Essentially, the most important political lesson of the Spanish Revolution is that a social revolution will only succeed if it follows an anarchist path and does not seek to compromise in the name of fighting a “*greater evil.*” As Kropotkin put it, a “*revolution that stops half-way is sure to be soon defeated.*” [**The Great French Revolution**, vol. 2, p. 553]

On the 20th of July, after the fascist coup had been defeated in Barcelona, the C.N.T. sent a delegation of its members to meet the leader of the Catalan Government. A plenum of C.N.T union shop stewards, in the light of the fascist coup, agreed that libertarian communism would be “*put off*” until Franco had been defeated (the rank and file ignored them and collectivised their workplaces). They organised a delegation to visit the Catalan president to discuss the situation:

“The delegation... was intransigent... Either Companys [the Catalan president] must accept the creation of a Central Committee [of Anti-Fascist Militias] as the ruling organisation or the C.N.T. would consult the rank and file and expose the real situation to the workers. Companys backed down.” [Abel Paz, **Durruti: the people Armed**, p. 216, our emphasis]

The C.N.T committee members used their new-found influence in the eyes of Spain to unite with the leaders of other organisations/parties but not the rank and file. This process led to the creation of the “*Central Committee of Anti-Fascist Militias*”, in which political parties as well as labour unions were represented. This committee was not made up of mandated delegates from workplaces, communities or barricades, but of representatives of existing organisations, nominated by committees. Instead of a genuine confederal body (made up of mandated delegates from workplace, militia and neighbourhood assemblies) the C.N.T. created a body which was not accountable to, nor could reflect the ideas of, ordinary working class people expressed in their assemblies. The state and government was not abolished by self-management, only ignored.

This first betrayal of anarchist principles led to all the rest, and so to the defeat of the revolution and the civil war. As Emma Goldman argued, the Spanish anarchists had “*come to realise that once they went into the so-called united-front, they could do nothing else but go further. In other words, the one mistake, the one wrong step inevitably led to others as it always does. I am more than ever convinced that if the comrades had remained firm on their own grounds they would have remained stronger than they are now. But I repeat, once they had made common cause for the period of the anti-Fascist war, they were driven by the logic of events to go further.*” [**Vision on Fire**, pp. 100–1]

The most obvious problem, of course, was that collaboration with the state ensured that a federation of workers' associations could not be created to co-ordinate the struggle against fascism and the social revolution. As Stuart Christie argues, “[b]y imposing their leadership from above, these partisan committees suffocated the mushrooming popular autonomous revolutionary centres — the grass-roots factory and local revolutionary committees — and prevented them from proving themselves as an efficient and viable means of co-ordinating communications, defence and provisioning. They also prevented the Local Revolutionary committees from integrating with each other to form a regional, provincial and national federal network which would facilitate the revolutionary task of social and economic reconstruction.” [We, the Anarchists!, pp. 99–100] Without such a federation, it was only a matter of time before the C.N.T joined the bourgeois government.

Rather than being an example of “dual power” as many Trotskyists maintain, the “Central Committee of Anti-Fascist Militias” created on July 20th, 1936, was, in fact, an organ of class collaboration and a handicap to the revolution. Stuart Christie was correct to call it an “artificial and hybrid creation,” a “compromise, an artificial political solution, an officially sanctioned appendage of the Generalidad government” which “drew the CNT-FAI leadership inexorably into the State apparatus, until then its principal enemy.” [Op. Cit., p. 105] Only a true federation of delegates from the fields, factories and workplaces could have been the framework of a true organisation of (to use Bakunin’s expression) “the social (and, by consequence, anti-political) power of the working masses.” [Michael Bakunin: Selected Writings, pp. 197–8]

Therefore, the C.N.T forgot a basic principle of anarchism, namely “the destruction . . . of the States.” Instead, like the Paris Commune, the C.N.T thought that “in order to combat . . . reaction, they had to organise themselves in reactionary Jacobin fashion, forgetting or sacrificing what they themselves knew were the first conditions of revolutionary socialism.” The real basis of the revolution, the basic principle of anarchism, was that the “future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in communes, regions, nations and finally in a great federation, international and universal.” [Bakunin, Op. Cit., p. 198, p. 202 and p. 204] By not doing this, by working in a top-down compromise body rather than creating a federation of workers’ councils, the C.N.T leadership could not help eventually sacrificing the revolution in favour of the war.

Of course, if a full plenum of CNT unions and **barrios** defence committees, with delegates invited from UGT and unorganised workplaces, had taken place there is no guarantee that the decision reached would have been in line with anarchist theory. The feelings for antifascist unity were strong. However, the decision would have been fully discussed by the rank and file of the union, under the influence of the revolutionary anarchists who were later to join the militias and leave for the front. It is likely, given the wave of collectivisation and what happened in Aragon, that the decision would have been different and the first step would have made to turn this plenum into the basis of a free federation of workers associations — i.e. the framework of an anarchist and self-managed society — which could have smashed the state and ensured no other appeared to take its place.

The basic idea of anarchism, the need to create a federation of workers

councils, was ignored. In the name of “*antifascist*” unity, the C.N.T worked with parties and classes which hated both them and the revolution. In the words of Sam Dolgoff “*both before and after July 19th, an unwavering determination to crush the revolutionary movement was the leitmotif behind the policies of the Republican government; irrespective of the party in power.*” [**The Anarchist Collectives**, p. 40] Without creating a means to organise the “*social power*” of the working class, the CNT was defenceless against these parties once the state had re-organised itself.

To justify their collaboration, the leaders of the C.N.T-F.A.I argued that not collaborating would have lead to a civil war within the civil war, so allowing Franco easy victory. In practice, while paying lip service to the revolution, the Communists and republicans attacked the collectives, murdered anarchists, cut supplies to collectivised industries (even **war** industries) and disbanded the anarchist militias after refusing to give them weapons and ammunition (preferring to arm the Civil Guard in the rearguard in order to crush the C.N.T. and so the revolution). By collaborating, a civil war was not avoided. One occurred anyway, with the working class as its victims, as soon as the state felt strong enough.

Garcia Oliver (the first ever, and hopefully last, “anarchist” minister of justice) stated in 1937 that collaboration was necessary and that the C.N.T. had “*renounc[ed] revolutionary totalitarianism, which would lead to the strangulation of the revolution by anarchist and Confederal [C.N.T.] dictatorship. We had confidence in the word and in the person of a Catalan democrat*” Companys (who had in the past jailed anarchists). Which means that only by working with the state, politicians and capitalists can an anarchist revolution be truly libertarian! Furthermore, in the words of Vernon Richards:

“This argument contains . . . two fundamental mistakes, which many of the leaders of the CNT-FAI have since recognised, but for which there can be no excuse, since they were not mistakes of judgement but the deliberate abandonment of the principles of the CNT. Firstly, that an armed struggle against fascism or any other form of reaction could be waged more successfully within the framework of the State and subordinating all else, including the transformation of the economic and social structure of the country, to winning the war. Secondly, that it was essential, and possible, to collaborate with political parties — that is politicians — honestly and sincerely, and at a time when power was in the hands of the two workers organisations. . .

“All the initiative . . . was in the hands of the workers. The politicians were like generals without armies floundering in a desert of futility. Collaboration with them could not, by any stretch of the imagination, strengthen resistance to Franco. On the contrary, it was clear that collaboration with political parties meant the recreation of governmental institutions and the transferring of initiative from the armed workers to a central body with executive powers. By removing the initiative from the workers, the responsibility for the conduct of the struggle and its objectives were also transferred to a governing hierarchy, and this could not have other than an adverse effect on the morale of the revolutionary fighters.” [**Lessons of the Spanish Revolution**, p. 42]

The dilemma of “*anarchist dictatorship*” or “*collaboration*” raised in 1937 was fundamentally wrong. It was never a case of banning parties, and other organisations under an anarchist system, far from it. Full rights of free speech, organisation and so on should have existed for all but the parties would only have as much influence as they exerted in union, workplace, community and militia assemblies, as should be the case! “*Collaboration*” yes, but within the rank and file and within organisations organised in an anarchist manner. Anarchism does not respect the “freedom” to be a boss or politician.

In his history of the F.A.I., Juan Gomaz Casas (an active F.A.I. member in 1936) makes this clear:

“How else could libertarian communism be brought about? It would always signify dissolution of the old parties dedicated to the idea of power, or at least make it impossible for them to pursue their politics aimed at seizure of power. There will always be pockets of opposition to new experiences and therefore resistance to joining ‘the spontaneity of the unanimous masses.’ In addition, the masses would have complete freedom of expression in the unions and in the economic organisations of the revolution as well as their political organisations in the district and communities.” [**Anarchist Organisation: the History of the F.A.I.**, p. 188f]

Instead of this “*collaboration*” from the bottom up, by means of a federation of workers’ associations, community assemblies and militia columns as argued for by anarchists from Bakunin onwards, the C.N.T. and F.A.I. committees favoured “*collaboration*” from the top down. The leaders ignored the state and co-operated with other trade unions officials as well as political parties in the **Central Committee of Anti-Fascist Militias**. In other words, they ignored their political ideas in favour of a united front against what they considered the greater evil, namely fascism. This inevitably led the way to counter-revolution, the destruction of the militias and collectives, as there was no means by which these groups could co-ordinate their activities independently of the state.

In particular, the continued existence of the state ensured that economic confederalism between collectives (i.e. extending the revolution under the direction of the syndicates) could not develop naturally nor be developed far enough in all places. Due to the political compromises of the C.N.T. the tendencies to co-ordination and mutual aid could not develop freely (see next section).

It is clear that the defeat in Spain was due to a failure not of anarchist theory and tactics but a failure of anarchists to **apply** their theory and tactics. Instead of destroying the state, the C.N.T.-F.A.I. ignored it. For a revolution to be successful it needs to create organisations which can effectively replace the state and the market; that is, to create a widespread libertarian organisation for social and economic decision-making through which working class people can start to set their own agendas. Only by going this route can the state and capitalism be effectively smashed.

In building the new world we must destroy the old one. Revolutions are authoritarian by their very nature, but only in respect to structures and social relations which promote injustice, hierarchy and inequality. It is not “*authoritarian*” to destroy authority and not tyrannical to dethrone tyrants! Revolutions, above all else, must be libertarian in respect to the oppressed. That is, they

must develop structures that involve the great majority of the population, who have previously been excluded from decision-making about social and economic issues. As such, a revolution is the most **libertarian** thing ever.

As the **Friends of Durruti** argued a “*revolution requires the absolute domination of the workers’ organisations.*” [“*The Friends of Durruti accuse*”, from **Class War on the Home Front**, p. 34] Only this, the creation of viable anarchist social organisations, can ensure that the state and capitalism can be destroyed and replaced with a just system based on liberty, equality and solidarity. Just as Bakunin, Kropotkin and a host of other anarchist thinkers had argued decades previously.

Thus the most important lesson gained from the Spanish Revolution is simply the correctness of anarchist theory on the need to organise the “*social power*” of the working class by a free federation of workers associations to destroy the state. Without this, no revolution can be lasting. As Gomez Casas correctly argues, “*if instead of condemning that experience [of collaboration], the movement continues to look for excuses for it, the same course will be repeated in the future ... exceptional circumstances will again put ... anarchism on [its] knees before the State.*” [Op. Cit., p. 251]

The second important lesson is on the nature of anti-fascism. The C.N.T. leadership, along with many (if not most) of the rank-and-file, were totally blinded by the question of anti-fascist unity, leading them to support a “*democratic*” state against a “*fascist*” one. While the basis of a new world was being created around them by the working class, inspiring the fight against fascism, the C.N.T. leaders collaborated with the system that spawns fascism. Indeed, while the anti-fascist feelings of the CNT leadership were sincere, the same cannot be said of their “*allies*” (who seemed happier attacking the gains of the semi-revolution than fighting fascism). As the Friends of Durruti make clear, “*Democracy defeated the Spanish people, not Fascism.*” [**Class War on the Home Front**, p. 30]

To be opposed to fascism is not enough, you also have to be anti-capitalist. As Durruti stressed, “[*n*]o government in the world fights fascism to the death. When the bourgeoisie sees power slipping from its grasp, it has recourse to fascism to maintain itself.” [quoted Vernon Richards, **Op. Cit.**, p. 193f]

In Spain, anti-fascism destroyed the revolution, not fascism. As the Scottish Anarchist Ethal McDonald argued at the time, “*Fascism is not something new, some new force of evil opposed to society, but is only the old enemy, Capitalism, under a new and fearful sounding name ... Anti-Fascism is the new slogan by which the working class is being betrayed.*” [**Workers Free Press**, Oct 1937]

Thirdly, the argument of the CNT that Libertarian Communism can wait until after the war was a false one. Fascism can only be defeated by ending the system that spawned it (i.e. capitalism). In addition, in terms of morale and inspiration, the struggle against fascism could only be effective if it was also a struggle **for** something better — namely a free society. To fight fascism for a capitalist democracy which had repressed the working class would hardly inspire those at the front. Similarly, the only hope for workers’ self-management was to push the revolution as far as possible, i.e. to introduce libertarian communism while fighting fascism. The idea of waiting for libertarian communism ultimately meant sacrificing it for the war effort.

Fourthly, the role of anarchists in a social revolution is to always encourage organisation “*from below*” (to use one of Bakunin’s favourite expressions), revo-

lutionary organisations which can effectively smash the state. Bakunin himself argued (as noted above) in favour of workers' councils, complemented by community assemblies (the federation of the barricades) and a self-managed militia. This model is still applicable today and was successfully applied in Aragon by the CNT.

Therefore, the political lessons gained from the experience of the C.N.T come as no surprise. They, in general, confirm anarchist theory. As Bakunin argued, no revolution is possible unless the state is smashed, capital expropriated and a free federation of workers' associations created as the framework of libertarian socialism. Rather than refuting anarchism, the experience of the Spanish Revolution confirms it.

I.8.14 What economic lessons were learned from the revolution?

The most important lesson from the revolution is the fact that ordinary people took over the management of industry and did an amazing job of keeping (and improving!) production in the face of the direst circumstances. Not only did workers create a war industry from almost nothing in Catalonia, they also improved working conditions and innovated with new techniques and processes. The Spanish Revolution shows that self-management is possible and that the constructive powers of ordinary people inspired by an ideal can transform society.

From the point of view of individual freedom, it's clear that self-management allowed previously marginalised people to take an active part in the decisions that affected them. Egalitarian organisations provided the framework for a massive increase in participation and individual self-government, which expressed itself in the extensive innovations carried out by the Collectives. The Collectives indicate, in Stirner's words, that "[o]nly in the union can you assert yourself as unique, because the union does not possess you, but you possess it or make it of use to you." [**The Ego and Its Own**, p. 312] A fact Emma Goldman confirmed from her visits to collectives and discussions with their members:

"I was especially impressed with the replies to my questions as to what actually had the workers gained by the collectivisation . . . the answer always was, first, greater freedom. And only secondly, more wages and less time of work. In two years in Russia [1920-21] I never heard any workers express this idea of greater freedom." [**Vision on Fire**, p. 62]

As predicted in anarchist theory, and borne out by actual experience, there exists large untapped reserves of energy and initiative in the ordinary person which self-management can call forth. The collectives proved Kropotkin's argument that co-operative work is more productive and that if the economists wish to prove "*their thesis in favour of **private property** against all other forms of **possession**, should not the economists demonstrate that under the form of communal property land never produces such rich harvests as when the possession is private. But this they could not prove; in fact, it is the contrary that has been observed.*" [**The Conquest of Bread**, p. 146]

Therefore, five important lessons from the actual experience of a libertarian socialist economy can be derived:

Firstly, that an anarchist society cannot be created overnight, but is a product of many different influences as well as the objective conditions. In this the anarchist collectives confirmed the ideas of anarchist thinkers like Bakunin and Kropotkin (see section I.2).

The lesson from every revolution is that the mistakes made in the process of liberation by people themselves are always minor compared to the results of creating institutions **for** people. The Spanish Revolution is a clear example of this, with the “*collectivisation decree*” causing more harm than good. Luckily, the Spanish anarchists recognised the importance of having the freedom to make mistakes, as can be seen by the many different forms of collectives and federations tried.

The actual process in Spain towards industrial co-ordination and so socialisation was dependent on the wishes of the workers involved — as would be expected in a true social revolution. As Bakunin argued, the “*revolution should not only be made for the people’s sake; it should also be made by the people.*” [No Gods, No Masters, vol. 1, p. 141] The problems faced by a social revolution will be solved in the interests of the working class only if working class people solve them themselves. For this to happen it requires working class people to manage their own affairs directly — and this implies anarchism, not centralisation or state control/ownership. The experience of the collectives in Spain supports this basic idea of anarchism.

Secondly, that self-management allowed a massive increase in innovation and new ideas.

The Spanish Revolution is clear proof of the anarchist case against hierarchy and validates Isaac Puente words that in “*a free collective each benefits from accumulated knowledge and specialised experiences of all, and vice versa. There is a reciprocal relationship wherein information is in continuous circulation.*” [cited in **The Anarchist Collectives**, p. 32]

Thirdly, the importance of decentralisation of management.

The woodworkers’ union experience indicates that when an industry becomes centralised, the administration of industry becomes constantly merged in fewer hands which leads to ordinary workers being marginalised. This can happen even in democratically run industries and soon result in apathy developing within it. This was predicted by Kropotkin and other anarchist theorists (and by many F.A.I. members in Spain at the time). While undoubtedly better than capitalist hierarchy, such democratically run industries are only close approximations to anarchist ideas of self-management. Importantly, however, the collectivisation experiments also indicate that co-operation need not imply centralisation (as can be seen from the Badelona collectives).

Fourthly, the importance of building links of solidarity between workplaces as soon as possible.

While the importance of starting production after the fascist uprising made attempts at co-ordination seem of secondary importance to the collectives, the competition that initially occurred between workplaces helped the state to undermine self-management. Because there was no People’s Bank or other communistic body to co-ordinate credit and production, state control of credit and the gold reserves made it easier for the Republican state (through its monopoly of credit) to undermine the revolution and control the collectives and (effec-

tively) nationalise them in time (Durruti and a few others planned to seize the gold reserves but were advised not to by De Santillan).

This attack on the revolution started when the Catalan State issued a decree legalising (and so controlling) the collectives in October 1936 (the famous “*Collectivisation Decree*”). The counter-revolution also withheld funds for collectivised industries, even war industries, until they agreed to come under state control. The industrial organisation created by this decree was a compromise between anarchist ideas and those of other parties (particularly the communists) and in the words of Gaston Leval, “*the decree had the baneful effect of preventing the workers’ syndicates from extending their gains. It set back the revolution in industry.*” [**The Anarchist Collectives**, p. 54]

And lastly, that an economic revolution can only succeed if the existing state is destroyed. As Kropotkin argued, “*a new form of economic organisation will necessarily require a new form of political structure*” — capitalism needs the state, socialism needs anarchy. [**Kropotkin’s Revolutionary Pamphlets**, p. 181] Without the new political structure, the new economic organisation cannot develop to its full potential.

Due to the failure to consolidate the revolution **politically**, it was lost **economically**. The decree “*legalising collectivisation*” “*distorted everything right from the start*” [**Collectives in the Spanish Revolution**, p. 227] and helped undermine the revolution by ensuring that the mutualism of the collectives did not develop freely into libertarian communism (“*The collectives lost the economic freedom they had won at the beginning*” due to the decree, as one participant put it. [Ronald Fraser, **Blood of Spain**, p. 230]).

As Fraser notes, it “*was doubtful that the C.N.T. had seriously envisaged collectivisation of industry... before this time.*” [**Op. Cit.**, p. 212] C.N.T. policy was opposed to the collectivisation decree. As an eyewitness pointed out, the C.N.T.’s “*policy was thus not the same as that pursued by the decree.*” [**Op. Cit.**, p. 213] Indeed, leading anarchists like Abad de Santillan opposed it and urged people to ignore it:

“I was an enemy of the decree because I considered it premature ... when I became councillor, I had no intention of taking into account or carrying out the decree: I intended to allow our great people to carry on the task as they best saw fit, according to their own inspiration.” [**Op. Cit.**, p. 212]

However, with the revolution lost politically, the C.N.T. was soon forced to compromise and support the decree (the C.N.T. did propose more libertarian forms of co-ordination between workplaces but these were undermined by the state). A lack of effective mutual aid organisations allowed the state to gain power over the collectives and so undermine and destroy self-management. Working class control over the economy (important as it is) does not automatically destroy the state. In other words, the economic aspects of the revolution cannot be considered in isolation from its political ones.

However, these points do not diminish the successes of the Spanish revolution. As Gaston Leval argued, “*in spite of these shortcomings [caused lack of complete socialisation] ... the important fact is that the factories went on working, the workshops and works produced without the owners, capitalists, shareholders and without high management executives.*” [**Collectives in the Spanish Revolution**, p. 228]

Beyond doubt, these months of economic liberty in Spain show not only that libertarian socialism **works** and that working class people can manage and run society ourselves but that it can improve the quality of life and increase freedom. Given the time and breathing space, the experiment would undoubtedly have ironed out its problems. Even in the very difficult environment of a civil war (and with resistance of almost all other parties and unions) the workers and peasants of Spain showed that a better society is possible. They gave a concrete example of what was previously just a vision, a world which was more humane, more free, more equitable and more civilised than that run by capitalists, managers, politicians and bureaucrats.

Section J: What do anarchists do?

This section discusses what anarchists get up to. There is little point thinking about the world unless you also want to change it for the better. And by trying to change it, you change yourself and others, making radical change more of a possibility. Therefore anarchists give their whole-hearted support to attempts by ordinary people to improve their lives by their own actions. As Max Stirner pointed out, “[t]he true man does not lie in the future, an object of longing, but lies, existent and real, in the present.” [The Ego and Its Own, p. 327]

For anarchists, the future is **already appearing in the present** and is expressed by the autonomy of working class self-activity. Anarchy is not some-day-to-be-achieved utopia, it is a living reality whose growth only needs to be freed from constraint. As such anarchist activity is about discovering and aiding emerging trends of mutual aid which work against capitalist domination (i.e. what is actually developing), so the Anarchist “studies society and tries to discover its **tendencies**, past and present, its growing needs, intellectual and economic, and in his [or her] ideal he merely points out in which direction evolution goes.” [Peter Kropotkin, **Kropotkin’s Revolutionary Pamphlets**, p. 47]

The kinds of activity outlined in this section are a general overview of anarchist work. It is by no means exclusive as we are sure to have left something out. However, the key aspect of *real* anarchist activity is **direct action** — self-activity, self-help, self-liberation and solidarity. Such activity may be done by individuals (for example, propaganda work), but usually anarchists emphasize collective activity. This is because most of our problems are of a social nature, meaning that their solutions can only be worked on collectively. Individual solutions to social problems are doomed to failure (for example green consumerism).

In addition, collective action gets us used to working together, promoting the experience of self-management and building organisations that will allow us to activity manage our own affairs. Also, and we would like to emphasize this, it’s **fun** to get together with other people and work with them, it’s fulfilling and empowering.

Anarchists do not ask those in power to give up that power. No, they promote forms of activity and organisation by which all the oppressed can liberate themselves by their own hands. In other words, we do not think that those in power will altruistically give up that power or their privileges. Instead, the oppressed must take the power **back** into their own hands by their own actions. We must free ourselves, no one else can do it for use.

As we have noted before, anarchism is more than just a critique of statism and capitalism or a vision of a freer, better way of life. It is first and foremost a movement, the movement of working class people attempting to change the world. Therefore the kind of activity we discuss in this section of the FAQ forms the bridge between capitalism and anarchy. By self-activity and direct action, people can change both themselves and their surroundings. They develop within themselves the mental, ethical and spiritual qualities which can make an anarchist society a viable option.

As Noam Chomsky argues:

“Only through their own struggle for liberation will ordinary people come to comprehend their true nature, suppressed and distorted within institutional structures designed to assure obedience and sub-

ordination. Only in this way will people develop more humane ethical standards, 'a new sense of right', 'the consciousness of their strength and their importance as a social factor in the life of their time' and their capacity to realise the strivings of their 'inmost nature.' Such direct engagement in the work of social reconstruction is a prerequisite for coming to perceive this 'inmost nature' and is the indispensable foundations upon which it can flourish" [preface to Rudolf Rocker's **Anarcho-Syndicalism**, p. viii]

In other words, anarchism is not primarily a vision of a better future, but the actual social movement which is fighting within the current unjust and unfree society for that better future and to improve things in the here and now. Without standing up for yourself and what you believe is right, nothing will change. Therefore anarchists would agree whole-heartedly with Frederick Douglass (an Abolitionist) who stated that:

"If there is no struggle, there is no progress. Those who profess to favor freedom and yet deprecate agitation are people who want crops without plowing up the ground. They want rain without thunder and lightning. That struggle might be a moral one; it might be a physical one; it might be both moral and physical, but it must be a struggle. Power concedes nothing without a demand. It never did and never will. People might not get all that they work for in this world, but they must certainly work for all they get."

In this section of the FAQ we will discuss anarchist ideas on struggle, what anarchists actually (and, almost as importantly, do not) do in the here and now and the sort of alternatives anarchists try to build within statism and capitalism in order to destroy them. As well as a struggle against oppression, anarchist activity is also struggle for freedom. As well as fighting against material poverty, anarchists combat spiritual poverty. By resisting hierarchy we emphasize the importance of **living** and of **life as art**. By proclaiming "**Neither Master nor Slave**" we urge an ethical transformation, a transformation that will help create the possibility of a truly free society.

This point was argued by Emma Goldman after she saw the defeat of the Russian Revolution by a combination of Leninist politics and capitalist armed intervention:

"the ethical values which the revolution is to establish must be initiated with the revolutionary activities... The latter can only serve as a real and dependable bridge to the better life if built of the same material as the life to be achieved." [**Red Emma Speaks**, p. 358]

In other words, anarchist activity is more than creating libertarian alternatives and resisting hierarchy, it is about building the new world in the shell of the old not only with regards to organisations and self-activity, but also within the individual. It is about transforming yourself while transforming the world — both processes obviously interacting and supporting each other — "*the first aim of Anarchism is to assert and make the dignity of the individual human being.*" [Charlotte Wilson, **Three Essays on Anarchism**, p. 17]

And by direct action, self-management and self-activity we can make the words first heard in Paris, 1968 a living reality:

“All power to the imagination!”

Words, we are sure, the classic anarchists would have whole-heartedly agreed with. There is a power in humans, a creative power, a power to alter what is into what should be. Anarchists try to create alternatives that will allow that power to be expressed, the power of imagination.

In the sections that follow we will discuss the forms of self-activity and self-organisation (collective and individual) which anarchists think will stimulate and develop the imagination of those oppressed by hierarchy, build anarchy in action and help create a free society.

J.1 Are anarchists involved in social struggles?

Yes. Anarchism, above all else, is a movement which aims to not only analyse the world but also to change it. Therefore anarchists aim to participate in and encourage social struggle. Social struggle includes strikes, marches, protests, demonstrations, boycotts, occupations and so on. Such activities show that the “*spirit of revolt*” is alive and well, that people are thinking and acting for themselves and against what authorities want them to do. This, in the eyes of anarchists, plays a key role in helping create the seeds of anarchy within capitalism.

Anarchists consider socialistic tendencies to develop within society, as people see the benefits of co-operation and particularly when mutual aid develops within the struggle against authority, oppression and exploitation. Anarchism, as Kropotkin argues, “*originated in everyday struggles.*” [**Environment and Revolution**, p.58] Therefore, anarchists do not place anarchy abstractly against capitalism, but see it as a tendency within (and against) the system — a tendency created by struggle and which can be developed to such a degree that it can **replace** the dominant structures and social relationships with new, more liberatory and humane ones. This perspective indicates why anarchists are involved in social struggles — they are an expression of this tendency within but against capitalism which can ultimately replace it.

However, there is another reason why anarchists are involved in social struggle — namely the fact that we are part of the oppressed and, like other oppressed people, fight for our freedom and to make our life better in the here and now. It is not in some tomorrow that we want to see the end of oppression, exploitation and hierarchy. It is today, in our own life, that the anarchist wants to win our freedom, or at the very least, to improve our situation, reduce oppression, domination and exploitation as well as increasing individual liberty. We are aware that we often fail to do so, but the very process of struggle can help create a more libertarian aspect to society:

“Whatever may be the practical results of the struggle for immediate gains, the greatest value lies in the struggle itself. For thereby workers [and other oppressed sections of society] learn that the bosses interests are opposed to theirs and that they cannot improve their conditions, and much less emancipate themselves, except by uniting and becoming stronger than the bosses. If they succeed in getting what they demand, they will be better off: they will earn more, work fewer hours and will have more time and energy to reflect on the

*things that matter to them, and will immediately make greater demands and have greater needs. If they do not succeed they will be led to study the reasons of their failure and recognise the need for closer unity and greater activity and they will in the end understand that to make victory secure and definite, it is necessary to destroy capitalism. The revolutionary cause, the cause of moral elevation and emancipation of the workers [and other oppressed sections of society] must benefit by the fact that workers [and other oppressed people] unite and struggle for their interests.” [Errico Malatesta, **Life and Ideas**, p. 191]*

Therefore, “*we as anarchists and workers, must incite and encourage them [the workers and other oppressed people] to struggle, and join them in their struggle.*” [Malatesta, **Op. Cit.**, p. 190] This is for three reasons. Firstly, struggle helps generate libertarian ideas and movements which could help make existing society more anarchistic and less oppressive. Secondly, struggle creates people, movements and organisations which are libertarian in nature and which, potentially, can replace capitalism with a more humane society. Thirdly, because anarchists are part of the oppressed and so have an interest in taking part in and showing solidarity with struggles and movements that can improve our life in the here and now (“*an injury to one is an injury to all*”).

As we will see later (in section J.2) anarchists encourage direct action within social struggles as well as arguing anarchist ideas and theories. However, what is important to note here is that social struggle is a sign that people are thinking and acting for themselves and working together to change things. Anarchists agree with Howard Zinn when he points out that:

*“civil disobedience. . . is **not** our problem. Our problem is civil **obedience**. Our problem is that numbers of people all over the world have obeyed the dictates of the leaders of their government and have gone to war, and millions have been killed because of this obedience. . . Our problem is that people are obedient all over the world in the face of poverty and starvation and stupidity, and war, and cruelty. Our problem is that people are obedient while the jails are full of petty thieves, and all the while the grand thieves are running the country. That’s our problem.” [Failure to Quit, p. 45]*

Therefore, social struggle is an important thing for anarchists and we take part in it as much as we can. Moreover, anarchists do more than just take part. We are fighting to get rid of the system that causes the problems which people fight again. We explain anarchism to those who are involved in struggle with us and seek to show the relevance of anarchism to people’s everyday lives through our work in such struggles and the popular organisations which they create (in addition to trade unions, campaigning groups and other bodies). By so doing we try to popularise the ideas and methods of anarchism, namely solidarity, self-management and direct action.

Anarchists do not engage in abstract propaganda (become an anarchist, wait for the revolution — if we did that, in Malatesta’s words, “*that day would never come.*” [**Op. Cit.**, p. 195]). We know that our ideas will only win a hearing and respect when we can show both their relevance to people’s lives in the here and now, and show that an anarchist world is both possible and desirable. In

other words, social struggle is the “school” of anarchism, the means by which people become anarchists and anarchist ideas are applied in action. Hence the importance of social struggle and anarchist participation within it.

Before discussing issues related to social struggle, it is important to point out here that anarchists are interested in struggles against all forms of oppression and do not limit ourselves to purely economic issues. The hierarchical and exploitative nature of the capitalist system is only part of the story — other forms of oppression are needed in order to keep it going (such as those associated with the state) and have resulted from its workings (in addition to those inherited from previous hierarchical and class systems). Like the bug in work, domination, exploitation, hierarchy and oppression soon spreads and infests our homes, our friendships and our communities. They need to be fought everywhere, not just in work.

Therefore, anarchists are convinced that human life (and the struggle against oppression) cannot be reduced to mere money and, indeed, the “*proclivity for economic reductionism is now actually obscurantist. It not only shares in the bourgeois tendency to render material egotism and class interest the centrepieces of history it also denigrates all attempts to transcend this image of humanity as a mere economic being... by depicting them as mere ‘marginalia’ at best, as ‘well-intentioned middle-class ideology’ at worse, or sneeringly, as ‘diversionary,’ ‘utopian,’ and ‘unrealistic.’ ... Capitalism, to be sure, did not create the ‘economy’ or ‘class interest,’ but it subverted all human traits — be they speculative thought, love, community, friendship, art, or self-governance — with the authority of economic calculation and the rule of quantity. Its ‘bottom line’ is the balance sheet’s sum and its basic vocabulary consists of simple numbers.*” [Murray Bookchin, **The Modern Crisis**, pp. 125–126]

In other words, issues such as freedom, justice, individual dignity, quality of life and so on cannot be reduced to the categories of capitalist economics. Anarchists think that any radical movement which does so fails to understand the nature of the system they are fighting against. Indeed, economic reductionism plays into the hands of capitalist ideology. So, when anarchists take part in and encourage social struggle they do not aim to restrict or reduce them to economic issues (however important these are). The anarchist knows that the individual has more interests than just money and we consider it essential to take into account the needs of the emotions, mind and spirit just as much as those of the belly. Hence Bookchin:

*“The class struggle does not centre around material exploitation alone but also around spiritual exploitation. In addition, entirely new issues emerge: coercive attitudes, the quality of work, ecology (or stated in more general terms, psychological and environmental oppression)... Terms like ‘classes’ and ‘class struggle,’ conceived of almost entirely as economic categories and relations, are too one-sided to express the **universalisation** of the struggle... the target is still a ruling class and a class society ... but this terminology, with its traditional connotations, does not reflect the sweep and the multi-dimensional nature of the struggle ... [and] fail to encompass the cultural and spiritual revolt that is taking place along with the economic struggle.”*

[...]

*“Exploitation, class rule and happiness, are the **particular** within the more **generalised** concepts of domination, hierarchy and pleasure.” [Post-Scarcity Anarchism, pp.229–30 and p. 243]*

As the anarchist character created by the science-fiction writer Ursula Le Guin (who is an anarchist) points out, capitalists *“think if people have enough things they will be content to live in prison.”* [The Dispossessed, p. 120] Anarchists disagree, and the experience of social revolt in the “affluent” 1960s proves their case.

This is unsurprising for, ultimately, the *“antagonism [between classes] is spiritual rather than material. There will never be a sincere understanding between bosses and workers. . . because the bosses above all want to remain bosses and secure always more power at the expense of the workers, as well as by competition with other bosses, whereas the workers have had their fill of bosses and don’t want any more.”* [Errico Malatesta, **Life and Ideas**, p. 79]

J.1.1 Why are social struggles important?

Social struggle is an expression of the class struggle, namely the struggle of working class people **against** their exploitation, oppression and alienation and **for** their liberty from capitalist and state authority. It is what happens when one group of people have hierarchical power over another. Where there is oppression, there is resistance and where there is resistance to authority you will see anarchy in action. For this reason anarchists are in favour of, and are involved within, social struggles. Ultimately they are a sign of individuals asserting their autonomy and disgust at an unfair system.

When it boils down to it, our actual freedom is not determined by the law or by courts, but by the power the cop has over us in the street; the judge behind him; by the authority of our boss if we are working; by the power of teachers and heads of schools and universities if we are students; by the welfare bureaucracy if we are unemployed or poor; by landlords if we are tenants; by prison guards if we are in jail; by medical professionals if we are in a hospital. These realities of wealth and power will remain unshaken unless counter-forces appear on the very ground our liberty is restricted — on the street, in workplaces, at home, at school, in hospitals and so on.

Therefore social struggles for improvements are important indications of the spirit of revolt and of people supporting each other in the continual assertion of their (and our) freedom. They show people standing up for what they consider right and just, building alternative organisations, creating their own solutions to their problems — and are a slap in the face of all the paternal authorities which dare govern us. Hence their importance to anarchists and all people interested in extending freedom.

In addition, social struggle helps break people from their hierarchical conditioning. Anarchists view people not as fixed objects to be classified and labelled, but as human beings engaged in making their own lives. They live, love, think, feel, hope, dream, and can change themselves, their environment and social relationships. Social struggle is the way this is done collectively.

Struggle promotes attributes within people which are crushed by hierarchy (attributes such as imagination, organisational skills, self-assertion, self-management, critical thought, self-confidence and so on) as people come up

against practical problems in their struggles and have to solve them themselves. This builds self-confidence and an awareness of individual and collective power. By seeing that their boss, the state and so on are against them they begin to realise that they live in a class ridden, hierarchical society that depends upon their submission to work. As such, social struggle is a politicising experience.

Struggle allows those involved to develop their abilities for self-rule through practice and so begins the process by which individuals assert their ability to control their own lives and to participate in social life directly. These are all key elements of anarchism and are required for an anarchist society to work (*"Self-management of the struggle comes first, then comes self-management of work and society,"* in the words of Alfredo Bonnano [*"Self-Management"*, **Anarchy: A Journal of Desire Armed**, no. 48, Fall-Winter 1999–2000, p. 35–37, p. 35]). So self-activity is a key factor in self-liberation, self-education and the creating of anarchists. In a nutshell, people learn in struggle.

A confident working class is an essential factor in making successful and libertarian improvements within the current system and, ultimately, in making a revolution. Without that self-confidence people tend to just follow "leaders" and we end up changing rulers rather than changing society.

Part of our job as anarchists is to encourage people to fight for whatever small reforms are possible at present, to improve our/their conditions, to give people confidence in their ability to start taking control of their lives, and to point out that there is a limit to whatever (sometimes temporary) gains capitalism will or can concede. Hence the need for a revolutionary change.

Until anarchist ideas are the dominant/most popular ones, other ideas will be the majority ones. If we think a movement is, all things considered, a positive or progressive one then we should not abstain but should seek to popularise anarchist ideas and strategies within it. In this way we create *"schools of anarchy"* within the current system and lay the foundations of something better. Revolutionary tendencies and movements, in other words, must create the organisations that contain, in embryo, the society of the future. These organisations, in turn, further the progress of radical change by providing social spaces for the transformation of individuals (via the use of direct action, practising self-management and solidarity, and so on). Therefore, social struggle aids the creation of a free society by accustoming the marginalised to govern themselves within self-managed organisations and empowering the (officially) disempowered via the use of direct action and mutual aid.

Hence the importance of social (or class) struggle for anarchists (which, we may add, goes on all the time and is a two-sided affair). Social struggle is the means of breaking the normality of capitalist and statist life, a means of developing the awareness for social change and the means of making life better under the current system. The moment that people refuse to bow to authority, its days are numbered. Social struggle indicates that some of the oppressed see that by using their power of disobedience they can challenge, perhaps eventually end, hierarchical power.

Ultimately, anarchy is not just something you believe in, it is not a cool label you affix to yourself, it is something you do. You participate. If you stop doing it, anarchy crumbles. Social struggle is the means by which we ensure that anarchy becomes stronger and grows.

J.1.2 Are anarchists against reforms?

No, we are not. While most anarchists are against reformism (namely the notion that we can somehow reform capitalism and the state away) they are most definitely in favour of reforms (i.e. improvements in the here and now).

The claim that anarchists are against reforms and improvements in the here and now are often put forth by opponents of anarchism in an effort to paint us as extremists. Anarchists are radicals; as such, they seek the root causes of societal problems. Reformists seek to ameliorate the symptoms of societal problems, while anarchists focus on the causes.

In the words of the revolutionary syndicalist Emile Pouget (who is referring to revolutionary/libertarian unions but whose words can be generalised to all social movements):

“Trade union endeavour has a double aim: with tireless persistence, it must pursue betterment of the working class’s current conditions. But, without letting themselves become obsessed with this passing concern, the workers should take care to make possible and imminent the essential act of comprehensive emancipation: the expropriation of capital.

“At present, trade union action is designed to won partial and gradual improvements which, far from constituting a goal, can only be considered as a means of stepping up demands and wresting further improvements from capitalism. . .

“This question of partial improvements served as the pretext for attempts to sow discord in the trades associations. Politicians . . . have tried to . . . stir up ill-feeling and to split the unions into two camps, by categorising workers as reformists and as revolutionaries. The better to discredit the latter, they have dubbed them ‘the advocates of all or nothing’ and the have falsely represented them as supposed adversaries of improvements achievable right now.

“The most that can be said about this nonsense is that it is witless. There is not a worker . . . who, on grounds of principle or for reasons of tactics, would insist upon working tend hours for an employer instead of eight hours, while earning six francs instead of seven. . .

“What appears to afford some credence to such chicanery is the fact that the unions, cured by the cruel lessons of experience from all hope in government intervention, are justifiably mistrustful of it. They know that the State, whose function is to act as capital’s gendarme, is, by its very nature, inclined to tip the scales in favour of the employer side. So, whenever a reform is brought about by legal avenues, they do not fall upon it with the relish of a frog devouring the red rag that conceals the hook, they greet it with all due caution, especially as this reform is made effective only of the workers are organised to insist forcefully upon its implementation.

“The trade unions are even more wary of gifts from the government because they have often found these to be poison gifts. . .

“But, given that the trade unions look askance at the government’s benevolence towards them, it follows that they are loath to go af-

ter partial improvements. Wanting real improvements . . . instead of waiting until the government is generous enough to bestow them, they wrest them in open battle, through direct action.

“If, as sometimes is the case, the improvement they seek is subject to the law, the trade unions strive to obtain it through outside pressure brought to bear upon the authorities and not by trying to return specially mandated deputies to Parliament, a puerile pursuit that might drag on for centuries before there was a majority in favour of the yearned-for reform.

“When the desired improvement is to be wrestled directly from the capitalist, the trades associations resort to vigorous pressure to convey their wishes. Their methods may well vary, although the direct action principle underlies them all. . .

“But, whatever the improvement won, it must always represent a reduction in capitalist privileges and be a partial expropriation. So . . . the fine distinction between ‘reformist’ and ‘revolutionary’ evaporates and one is led to the conclusion that the only really reformist workers are the revolutionary syndicalists.” [No Gods, No Masters, pp. 71–3]

By seeking improvements from below by direct action, solidarity and the organisation of those who directly suffer the injustice, anarchists can make reforms more substantial, effective and long lasting than “reforms” made from above by reformists. By recognising that the effectiveness of a reform is dependent on the power of the oppressed to resist those who would dominate them, anarchists seek change from the bottom-up and so make reforms real rather than just words gathering dust in the law books.

For example, a reformist sees poverty and looks at ways to lessen the destructive and debilitating effects of it: this produced things like the minimum wage, affirmative action, and the projects in the USA and similar reforms in other countries. An anarchist looks at poverty and says, “what causes this?” and attacks that source of poverty, rather than the symptoms. While reformists may succeed in the short run with their institutional panaceas, the festering problems remain untreated, dooming reform to eventual costly, inevitable failure — measured in human lives, no less. Like a quack that treats the symptoms of a disease without getting rid of what causes it, all the reformist can promise is short-term improvements for a condition that never goes away and may ultimately kill the sufferer. The anarchist, like a real doctor, investigates the causes of the illness and treats them while fighting the symptoms.

Therefore, anarchists are of the opinion that *“[w]hile preaching against every kind of government, and demanding complete freedom, we must support all struggles for partial freedom, because we are convinced that one learns through struggle, and that once one begins to enjoy a little freedom one ends by wanting it all. We must always be with the people . . . [and] get them to understand . . . [what] they may demand should be obtained by their own efforts and that they should despise and detest whoever is part of, or aspires to, government.”* [Errico Malatesta, **Life and Ideas** p. 195]

Anarchists keep the spotlight on the actual problems, which of course alienates them from their “distinguished” reformists foes. Reformists are uniformly

“reasonable” and always make use of “experts” who will make everything okay — and they are always wrong in how they deal with a problem.

The recent “health care crisis” in the United States is a prime example of reformism at work.

The reformist says, “*how can we make health care more affordable to people? How can we keep those insurance rates down to levels people can pay?*”

The anarchist says, “*should health care be considered a privilege or a right? Is medical care just another marketable commodity, or do living beings have an inalienable right to it?*”

Notice the difference? The reformist has no problem with people paying for medical care — business is business, right? The anarchist, on the other hand, has a big problem with that attitude — we are talking about human lives, here! For now, the reformists have won with their “managed care” reformism, which ensures that the insurance companies and medical industry continue to rake in record profits — at the expense of people’s lives. And, in the end, the proposed reforms were defeated by the power of big business — without a social movement with radical aims such a result was a forgone conclusion.

Reformists get acutely uncomfortable when you talk about genuinely bringing change to any system — they don’t see anything wrong with the system itself, only with a few pesky side effects. In this sense, they are stewards of the Establishment, and are agents of reaction, despite their altruistic overtures. By failing to attack the sources of problems, and by hindering those who do, they ensure that the problems at hand will only grow over time, and not diminish.

So, anarchists are not opposed to struggles for reforms and improvements in the here and now. Indeed, few anarchists think that an anarchist society will occur without a long period of anarchist activity encouraging and working within social struggle against injustice. Thus Malatesta’s words:

“the subject is not whether we accomplish Anarchism today, tomorrow or within ten centuries, but that we walk towards Anarchism today, tomorrow and always.” [“Towards Anarchism,” **Man!**, M. Graham (Ed.), p. 75]

So, when fighting for improvements anarchists do so in an anarchist way, one that encourages self-management, direct action and the creation of libertarian solutions and alternatives to both capitalism and the state.

J.1.3 Why are anarchists against reformism?

Firstly, it must be pointed out that the struggle for reforms within capitalism is **not** the same as reformism. Reformism is the idea that reforms within capitalism are enough in themselves and attempts to change the system are impossible (and not desirable). As such all anarchists are against this form of reformism — we think that the system can be (and should be) changed and until that happens any reforms will not get to the root of social problems.

In addition, particularly in the old social democratic labour movement, reformism also meant the belief that social reforms could be used to **transform** capitalism into socialism. In this sense, only the Individualist anarchists and Mutualists can be considered reformist as they think their system of mutual

banking can reform capitalism into a co-operative system. However, in contrast to Social Democracy, such anarchists think that such reforms cannot come about via government action, but only by people creating their own alternatives and solutions by their own actions.

So, anarchists oppose reformism because it takes the steam out of revolutionary movements by providing easy, decidedly short-term “solutions” to deep social problems. In this way, reformists can present the public with they’ve done and say “look, all is better now. The system worked.” Trouble is that over time, the problems will only continue to grow, because the reforms did not tackle them in the first place. To use Alexander Berkman’s excellent analogy:

“If you should carry out [the reformers] ideas in your personal life, you would not have a rotten tooth that aches pulled out all at once. You would have it pulled out a little to-day, some more next week, for several months or years, and by then you would be ready to pull it out altogether, so it should not hurt so much. That is the logic of the reformer. Don’t be ‘too hasty,’ don’t pull a bad tooth out all at once.” [What is Communist Anarchism?, p. 53]

Rather than seek to change the root cause of the problems (namely in a hierarchical, oppressive and exploitative system), reformists try to make the symptoms better. In the words of Berkman again:

“Suppose a pipe burst in your house. You can put a bucket under the break to catch the escaping water. You can keep on putting buckets there, but as long as you do not mean the broken pipe, the leakage will continue, no matter how much you may swear about it . . . the leakage will continue until you repair the broken social pipe.” [Op. Cit., p. 56]

What reformism fails to do is fix the underlying causes of the real problems society faces. Therefore, reformists try to pass laws which reduce the level of pollution rather than work to end a system in which it makes economic sense to pollute. Or they pass laws to improve working conditions and safety while failing to get rid of the wage slavery which creates the bosses whose interests are served by them ignoring those laws and regulations. The list is endless. Ultimately, reformism fails because reformists “believe in good faith that it is possible to eliminate the existing social evils by recognising and respecting, in practice if not in theory, the basic political and economic institutions which are the cause of, as well as the prop that supports these evils.” [Errico Malatesta, **Life and Ideas**, p. 82]

Reformists, in other words, are like people who think that treating the symptoms of, say, cholera is enough in and of itself. In practice, of course, the causes that create the disease as well as the disease itself must be combated before the symptoms will disappear. While most people would recognise the truth of this in the case of medicine, fewer apply it to social problems.

Revolutionaries, in contrast to reformists, fight both symptoms **and** the root causes. They recognise that as long as the cause of the evil remains, any attempts to fight the symptoms, however necessary, will never get to the root of the problem. There is no doubt that we have to fight the symptoms, however revolutionaries recognise that this struggle is not an end in itself and should

be considered purely as a means of increasing working class strength and social power within society until such time as capitalism and the state (i.e. the root causes of most problems) can be abolished.

Reformists also tend to objectify the people whom they are “helping;” they envision them as helpless, formless masses who need the wisdom and guidance of the “best and the brightest” to lead them to the Promised Land. Reformists mean well, but this is altruism borne of ignorance, which is destructive over the long run. Freedom cannot be given and so any attempt to impose reforms from above cannot help but ensure that people are treated as children, incapable of making their own decisions and, ultimately, dependent on bureaucrats to govern them. This can be seen from public housing. As Colin Ward argues, the “*whole tragedy of publicly provided non-profit housing for rent and the evolution of this form of tenure in Britain is that the local authorities have simply taken over, though less flexibly, the role of the landlord, together with all the dependency and resentment that it engenders.*” [**Housing: An Anarchist Approach**, p. 184] This feature of reformism was skilfully used by the right-wing to undermine publicly supported housing and other aspects of the welfare state. The reformist social-democrats reaped what they had sown.

Reformism often amounts to little more than an altruistic contempt for the masses, who are considered as little more than victims who need to be provided for by state. The idea that we may have our own visions of what we want is ignored and replaced by the vision of the reformists who enact legislation **for** us and make “reforms” from the top-down. Little wonder such reforms can be counter-productive — they cannot grasp the complexity of life and the needs of those subject to them.

Reformists may mean well, but they do not grasp the larger picture — by focusing exclusively on narrow aspects of a problem, they choose to believe that is the whole problem. In this wilfully narrow examination of pressing social ills, reformists are, more often than not, counter-productive. The disaster of the urban rebuilding projects in the United States (and similar projects in Britain which moved inter-city working class communities into edge of town developments during the 1950s and 1960s) are an example of reformism at work: upset at the growing slums, reformists supported projects that destroyed the ghettos and built brand-new housing for working class people to live in. They looked nice (initially), but they did nothing to address the problem of poverty and indeed created more problems by breaking up communities and neighbourhoods.

Logically, it makes no sense. Why dance around a problem when you can attack it directly? Reformists dilute social movements, softening and weakening them over time. The AFL-CIO labour unions in the USA, like the ones in Western Europe, killed the labour movement by narrowing and channelling labour activity and taking the power from the workers themselves, where it belongs, and placing it the hands of a bureaucracy. The British Labour Party, after over 100 years of reformist practice, has done little more than manage capitalism, seen most of its reforms eliminated by right-wing governments (and by the following Labour government!) and the creation of a leadership of the party (in the shape of Tony Blair) which is in most ways as right-wing as the Conservative Party (if not more so). Bakunin would not have been surprised.

Reformists say, “*don’t do anything, we’ll do it for you.*” You can see why anarchists would loathe this sentiment; anarchists are the consummate do-it-yourselfers, and there’s nothing reformists hate more than people who can take

care of themselves, who will not let them “help” them.

Also, it is funny to hear left-wing “revolutionaries” and “radicals” put forward the reformist line that the capitalist state can help working people (indeed be used to abolish itself!). Despite the fact that leftists blame the state and capitalism for most of the problems we face, they usually turn to the state (run primarily by rich — i.e. capitalist — people) to remedy the situation, not by leaving people alone, but by becoming more involved in people’s lives. They support government housing, government jobs, welfare, government-funded and regulated child care, government-funded drug “treatment,” and other government-centred programmes and activities. If a capitalist (and racist/sexist/authoritarian) government is the problem, how can it be depended upon to change things to the benefit of working class people or other oppressed sections of the population like blacks and women? Surely any reforms passed by the state will not solve the problem? As Malatesta pointed out, “[g]overnments and the privileged classes are naturally always guided by instincts of self-preservation, of consolidation and the development of their powers and privileges; and when they consent to reforms it is either because they consider that they will serve their ends or because they do not feel strong enough to resist, and give in, fearing what might otherwise be a worse alternative” (i.e. revolution) [**Op. Cit.**, p. 81] Therefore, reforms gained by direct action are of a different quality and nature than reforms passed by reformist politicians — these latter will only serve the interests of the ruling class as they do not threaten their privileges while the former have the potential of real change.

Instead of encouraging working class people to organise themselves and create their own alternatives and solutions to their problem (which can supplement, and ultimately replace, whatever welfare state activity which is actually useful), reformists and other radicals urge people to get the state to act for them. However, the state is not the community and so whatever the state does for people you can be sure it will be in **its** interests, not theirs. As Kropotkin put it:

“We maintain that the State organisation, having been the force to which the minorities resorted for establishing and organising their power over the masses, cannot be the force which will serve to destroy these privileges . . . the economic and political liberation of man will have to create new forms for its expression in life, instead of those established by the State.

“Consequently, the chief aim of Anarchism is to awaken those constructive powers of the labouring masses of the people which at all great moments of history came forward to accomplish the necessary changes . . .

*“This is also why the Anarchists refuse to accept the functions of legislators or servants of the State. We know that the social revolution will not be accomplished by means of **laws**. Laws only **follow** the accomplished facts . . . [and] remains a dead letter so long as there are not on the spot the living forces required for making of the **tendencies** expressed in the law an accomplished **fact**.*

*“On the other hand . . . the Anarchists have always advised taking an active part in those workers’ organisations which carry on the **direct** struggle of Labour against Capital and its protector, — the State.*

“Such a struggle . . . better than any other indirect means, permits the worker to obtain some temporary improvements in the present conditions of work [and life in general], while it opens his [or her] eyes to the evil that is done by Capitalism and the State that supports it, and wakes up his thoughts concerning the possibility of organising consumption, production, and exchange without the intervention of the capitalist and the State.” [**Environment and Evolution**, pp.82–3]

Therefore, while seeking reforms, anarchists are against reformism and reformists. Reforms are not an end in themselves but rather a means of changing society from the bottom-up and a step in that direction:

“Each step towards economic freedom, each victory won over capitalism will be at the same time a step towards political liberty — towards liberation from the yoke of the state. . . And each step towards taking from the State any one of its powers and attributes will be helping the masses to win a victory over capitalism.” [Kropotkin, **Op. Cit.**, p. 95]

However, no matter what, anarchists *“will never recognise the institutions; we will take or win all possible reforms with the same spirit that one tears occupied territory from the enemy’s grasp in order to keep advancing, and we will always remain enemies of every government.”* Therefore, *“[i]t is not true to say . . . [that anarchists] are systematically opposed to improvements, to reforms. They oppose the reformists on the one hand because their methods are less effective for securing reforms from government and employers, who only give in through fear, and because very often the reforms they prefer are those which not only bring doubtful immediate benefits, but also serve to consolidate the existing regime and to give the workers a vested interest in its continued existence.”* [**Life and Ideas**, p. 81 and p. 83]

Only by working class people, by their own actions and organisation, getting the state and capital out of the way can produce an improvement in their lives, indeed it is the only thing that will lead to **real** fundamental changes for the better. Encouraging people to rely on themselves instead of the state or capital can lead to self-sufficient, independent, and, hopefully, more rebellious people — people who will rebel against the real evils in society (capitalist and statist exploitation and oppression, racism, sexism, ecological destruction, and so on) and not their neighbours.

Working class people, despite having fewer options in a number of areas in their lives, due both to hierarchy and restrictive laws, still are capable of making choices about their actions, organising their own lives and are responsible for the consequences of their decisions, just as other people are. To think otherwise is to infantilise them, to consider them less fully human than other people and reproduce the classic capitalist vision of working class people as means of production, to be used, abused, and discarded as required. Such thinking lays the basis for paternalistic interventions in their lives by the state, ensuring their continued dependence and poverty and the continued existence of capitalism and the state.

Ultimately, there are two options:

“The oppressed either ask for and welcome improvements as a benefit graciously conceded, recognise the legitimacy of the power which is over them, and so do more harm than good by helping to slow down, or divert . . . the processes of emancipation. Or instead they demand and impose improvements by their action, and welcome them as partial victories over the class enemy, using them as a spur to greater achievements, and thus a valid help and a preparation to the total overthrow of privilege, that is, for the revolution.” [Errico Malatesta, **Op. Cit.**, p. 81]

Reformism encourages the first attitude within people and so ensures the impoverishment of the human spirit. Anarchism encourages the second attitude and so ensures the enrichment of humanity and the possibility of meaningful change. Why think that ordinary people cannot arrange their lives for themselves as well as Government people can arrange it not for themselves but for others?

J.1.4 What attitude do anarchists take to “*single-issue*” campaigns?

Firstly, we must note that anarchists do take part in “*single-issue*” campaigns, but do not nourish false hopes in them. This section explains what anarchists think of such campaigns.

A “single-issue” campaign are usually run by a pressure group which concentrates on tackling issues one at a time. For example, C.N.D. (The Campaign for Nuclear Disarmament) is a classic example of “single-issue” campaigning with the aim of getting rid of nuclear weapons as the be all and end all of its activity. For anarchists, however, single-issue campaigning can be seen as a source of false hopes. The possibilities of changing one aspect of a totally inter-related system and the belief that pressure groups can compete fairly with transnational corporations, the military and so forth, in their influence over decision making bodies can both be seen to be optimistic at best.

In addition, many “single-issue” campaigns desire to be “apolitical”, concentrating purely on the one issue which unites the campaign and so refuse to analyse or discuss the system they are trying to change. This means that they end up accepting the system which causes the problems they are fighting against. At best, any changes achieved by the campaign must be acceptable to the establishment or be so watered down in content that no practical long-term good is done.

This can be seen from the green movement, where groups like Greenpeace and Friends of the Earth accept the status quo as a given and limit themselves to working within it. This often leads to them tailoring their “solutions” to be “practical” within a fundamentally anti-ecological political and economic system, so slowing down (at best) ecological disruption.

For anarchists these problems all stem from the fact that social problems cannot be solved as single issues. As Larry Law argues:

“single issue politics . . . deals with the issue or problem in isolation. When one problem is separated from all other problems, a solution

really is impossible. The more campaigning on an issue there is, the narrower its perspectives become . . . As the perspective of each issue narrows, the contradictions turn into absurdities . . . What single issue politics does is attend to 'symptoms' but does not attack the 'disease' itself. It presents such issues as nuclear war, racial and sexual discrimination, poverty, starvation, pornography, etc., as if they were aberrations or faults in the system. In reality such problems are the inevitable consequence of a social order based on exploitation and hierarchical power . . . single issue campaigns lay their appeal for relief at the feet of the very system which oppresses them. By petitioning they acknowledge the right of those in power to exercise that power as they choose." [Bigger Cages, Longer Chains, pp. 17–20].

Single issue politics often prolong the struggle for a free society by fostering illusions that it is just parts of the capitalist system which are wrong, not the whole of it, and that those at the top of the system can, and will, act in our interests. While such campaigns can do some good, practical, work and increase knowledge and education about social problems, they are limited by their very nature and can not lead to extensive improvements in the here and now, never mind a free society.

Therefore, anarchists often support and work within single-issue campaigns, trying to get them to use effective methods of activity (such as direct action), work in an anarchistic manner (i.e. from the bottom up) and to try to "politicise" them into questioning the whole of the system. However, anarchists do not let themselves be limited to such activity as a social revolution or movement is not a group of single-issue campaigns but a mass movement which understands the inter-related nature of social problems and so the need to change every aspect of life.

J.1.5 Why do anarchists try to generalise social struggles?

Basically, we do it in order to encourage and promote solidarity. This is **the** key to winning struggles in the here and now as well as creating the class consciousness necessary to create an anarchist society. At its most simple, generalising different struggles means increasing the chances of winning them. Take, for example, a strike in which one trade or one workplace goes on strike while the others continue to work:

"Consider yourself how foolish and inefficient is the present form of labour organisation in which one trade or craft may be on strike while the other branches of the same industry continue to work. Is it not ridiculous that when the street car workers of New York, for instance, quit work, the employees of the subway, the cab and omnibus drivers remain on the job? . . . It is clear, then, that you compel compliance [from your bosses] only when you are determined, when your union is strong, when you are well organised, when you are united in such a manner that the boss cannot run his factory against

your will. But the employer is usually some big . . . company that has mills or mines in various places. . . If it cannot operate . . . in Pennsylvania because of a strike, it will try to make good its losses by continuing . . . and increasing production [elsewhere]. . . In that way the company . . . breaks the strike. [Alexander Berkman, **The ABC of Anarchism**, pp. 53–54]

By organising all workers in one union (after all they all have the same boss) it increases the power of each trade considerably. It may be easy for a boss to replace a few workers, but a whole workplace would be far more difficult. By organising all workers in the same industry, the power of each workplace is correspondingly increased. Extending this example to outside the workplace, it's clear that by mutual support between different groups increases the chances of each group winning its fight.

As the I.W.W. put it, “*An injury to one is an injury to all.*” By generalising struggles, by practising mutual support and aid we can ensure that when we are fighting for our rights and against injustice we will not be isolated and alone. If we don't support each other, groups will be picked off one by one and if we are go into conflict with the system there will be on-one there to support us and we may lose.

Therefore, from an anarchist point of view, the best thing about generalising different struggles together is that it leads to an increased spirit of solidarity and responsibility as well as increased class consciousness. This is because by working together and showing solidarity those involved get to understand their common interests and that the struggle is not against **this** injustice or **that** boss but against **all** injustice and **all** bosses.

This sense of increased social awareness and solidarity can be seen from the experience of the C.N.T in Spain during the 1930s. The C.N.T. organised all workers in a given area into one big union. Each workplace was a union branch and were joined together in a local area confederation. The result was that:

“The territorial basis of organisation linkage [of the C.N.T. unions] brought all the workers form one area together and fomented working class solidarity over and before corporative [i.e. industrial] solidarity.” [J. Romero Maura, “*The Spanish Case*”, in **Anarchism Today**, D. Apter and J. Joll (eds.), p. 75]

This can also be seen from the experiences of the syndicalist unions in Italy and France as well. The structure of such local federations also situates the workplace in the community where it really belongs (particularly if the commune concept supported by social anarchists is to be realistic).

Also, by uniting struggles together, we can see that there are really no “single issues” — that all various different problems are inter-linked. For example, ecological problems are not just that, but have a political and economic basis and that economic and social domination and exploitation spills into the environment. Inter-linking struggles means that they can be seen to be related to other struggles against capitalist exploitation and oppression and so encourage solidarity and mutual aid. What goes on in the environment, for instance, is directly related to questions of domination and inequality within human society, that pollution is often directly related to companies cutting corners to survive in

the market or increase profits. Similarly, struggles against sexism or racism can be seen as part of a wider struggle against hierarchy, exploitation and oppression in all their forms. As such, uniting struggles has an important educational effect above and beyond the benefits in terms of winning struggles.

Murray Bookchin presents a concrete example of this process of linking issues and widening the struggle:

*“Assume there is a struggle by welfare mothers to increase their allotments . . . Without losing sight of the concrete issues that initially motivated the struggle, revolutionaries would try to catalyse an order of relationships between the mothers entirely different from [existing ones] . . . They would try to foster a deep sense of community, a rounded human relationship that would transform the very subjectivity of the people involved . . . Personal relationships would be intimate, not merely issue-orientated. People would get to **know** each other, to **confront** each other; they would **explore** each other with a view of achieving the most complete, unalienated relationships. Women would discuss sexism, as well as their welfare allotments, child-rearing as well as harassment by landlords, their dreams and hopes as human beings as well as the cost of living.*

“From this intimacy there would grow, hopefully, a supportive system of kinship, mutual aid, sympathy and solidarity in daily life. The women might collaborate to establish a rotating system of baby sitters and child-care attendants, the co-operative buying of good food at greatly reduced prices, the common cooking and partaking of meals, the mutual learning of survival skills and the new social ideas, the fostering of creative talents, and many other shared experiences. Every aspect of life that could be explored and changed would be one part of the kind of relationships . . .

“The struggle for increased allotments would expand beyond the welfare system to the schools, the hospitals, the police, the physical, cultural, aesthetic and recreational resources of the neighbourhood, the stores, the houses, the doctors and lawyers in the area, and so on — into the very ecology of the district.

“What I have said on this issue could be applied to every issue — unemployment, bad housing, racism, work conditions — in which an insidious assimilation of bourgeois modes of functioning is masked as ‘realism’ and ‘actuality.’ The new order of relationships that could be developed from a welfare struggle . . . [can ensure that the] future penetrates the present; it recasts the way people ‘organise’ and the goals for which they strive.” [Op. Cit., pp. 231–3]

As the anarchist slogan puts it, **“Resistance is Fertile.”** Planting the seed of autonomy, direct action and self-liberation can result, potentially, in the blossoming of a free individual due to the nature of struggle itself (see also section A.2.7) Therefore, the generalisation of social struggle is not only a key way of winning a specific fight, it can (and should) also spread into different aspects of life and society and play a key part in developing free individuals who reject hierarchy in all aspects of their life.

Social problems are not isolated from each other and so struggles against them cannot be. The nature of struggle is such that once people start questioning one aspect of society, the questioning of the rest soon follow. So, anarchists seek to generalise struggles for these three reasons — firstly, to ensure the solidarity required to win; secondly, to combat the many social problems we face as **people** and to show how they are inter-related; and, thirdly, to encourage the transformation of those involved into unique individuals in touch with their humanity, a humanity eroded by hierarchical society and domination.

J.2 What is direct action?

Direct action, to use Rudolf Rocker's words, is "*every method of immediate warfare by the workers [or other sections of society] against their economic and political oppressors. Among these the outstanding are: the strike, in all its gradations from the simple wage struggle to the general strike; the boycott; sabotage in all its countless forms; [occupations and sit-down strikes;] anti-militarist propaganda, and in particularly critical cases, . . . armed resistance of the people for the protection of life and liberty.*" [Anarcho-Syndicalism, p. 66]

Not that anarchists think that direct action is only applicable within the workplace. Far from it. Direct action must occur everywhere! So, in non-workplace situations, direct action includes rent strikes, consumer boycotts, occupations (which, of course, can include sit-in strikes by workers), eco-tage, individual and collective non-payment of taxes, blocking roads and holding up construction work of an anti-social nature and so forth. Also direct action, in a workplace setting, includes strikes and protests on social issues, not directly related to working conditions and pay. Such activity aims to ensure the "*protection of the community against the most pernicious outgrowths of the present system. The social strike seeks to force upon the employers a responsibility to the public. Primarily it has in view the protection of the customers, of whom the workers themselves [and their families] constitute the great majority*" [Op. Cit., p. 72]

Basically, direct action means that instead of getting someone else to act for you (e.g. a politician) you act for yourself. Its essential feature is an organised protest by ordinary people to make a change by their own efforts. Thus Voltairine De Cleyre's excellent statement on this topic:

"Every person who ever thought he had a right to assert, and went boldly and asserted it, himself, or jointly with others that shared his convictions, was a direct actionist. Some thirty years ago I recall that the Salvation Army was vigorously practicing direct action in the maintenance of the freedom of its members to speak, assemble, and pray. Over and over they were arrested, fined, and imprisoned; but they kept right on singing, praying, and marching, till they finally compelled their persecutors to let them alone. The Industrial Workers [of the World] are now conducting the same fight, and have, in a number of cases, compelled the officials to let them alone by the same direct tactics.

"Every person who ever had a plan to do anything, and went and did it, or who laid his plan before others, and won their co-operation to

do it with him, without going to external authorities to please do the thing for them, was a direct actionist. All co-operative experiments are essentially direct action.

“Every person who ever in his life had a difference with anyone to settle, and went straight to the other persons involved to settle it, either by a peaceable plan or otherwise, was a direct actionist. Examples of such action are strikes and boycotts; many persons will recall the action of the housewives of New York who boycotted the butchers, and lowered the price of meat; at the present moment a butter boycott seems looming up, as a direct reply to the price-makers for butter.

“These actions are generally not due to any one’s reasoning over-much on the respective merits of directness or indirectness, but are the spontaneous retorts of those who feel oppressed by a situation. In other words, all people are, most of the time, believers in the principle of direct action, and practicers of it. . . ” [Direct Action]

So direct action means acting for yourself against injustice and oppression. It can, sometimes, involve putting pressure on politicians or companies, for example, to ensure a change in an oppressive law or destructive practices. However, such appeals are direct action simply because they do not assume that the parties in question we will act for us — indeed the assumption is that change only occurs when we act to create it. Regardless of what the action is, *“if such actions are to have the desired empowerment effect, they must be largely self-generated, rather than being devised and directed from above.”* [Martha Ackelsberg, **Free Women of Spain**, p. 33]

So, in a nutshell, direct action is any form of activity which people themselves decide upon and organise themselves which is based on their own collective strength and does not involve getting intermediates to act for them. As such direct action is a natural expression of liberty, of self-government for *“[d]irect action against the authority in the shop, direct action against the authority of the law, direct action against the invasive, meddling authority of our moral code, is the logical, consistent method of Anarchism.”* [Emma Goldman, **Red Emma Speaks**, pp. 62–63] It is clear that by acting for yourself you are expressing the ability to govern yourself. Thus its a means by which people can take control of their own lives. It is a means of self-empowerment and self-liberation:

“Direct action meant that the goal of any and all these activities was to provide ways for people to get in touch with their own powers and capacities, to take back the power of naming themselves and their lives.” [Martha Ackelsberg, **Op. Cit.**, p. 32]

In other words, anarchists reject the view that society is static and that people’s consciousness, values, ideas and ideals cannot be changed. Far from it and anarchists support direct action **because** it actively encourages the transformation of those who use it. Direct action is the means of creating a new consciousness, a means of self-liberation from the chains placed around our minds, emotions and spirits by hierarchy and oppression.

Because direct action is the expression of liberty, the powers that be are vitally concerned only when the oppressed use direct action to win its demands,

for it is a method which is not easy or cheap to combat. Any hierarchical system is placed into danger when those at the bottom start to act for themselves and, historically, people have invariably gained more by acting directly than could have been won by playing ring around the rosy with indirect means.

Direct action tore the chains of open slavery from humanity. Over the centuries it has established individual rights and modified the life and death power of the master class. Direct action won political liberties such as the vote and free speech. Used fully, used wisely and well, direct action can forever end injustice and the mastery of humans by other humans.

In the sections that follow, we will indicate why anarchists are in favour of direct action and why they are against electioneering as a means of change.

J.2.1 Why do anarchists favour using direct action to change things?

Simply because it is effective and it has a radicalising impact on those who practice it. As it is based on people acting for themselves, it shatters the dependency and marginalisation created by hierarchy. As Murray Bookchin argues, “[w]hat is even more important about direct action is that it forms a decisive step toward recovering the personal power over social life that the centralised, over-bearing bureaucracies have usurped from the people . . . we not only gain a sense that we can control the course of social events again; we recover a new sense of selfhood and personality without which a truly free society, based in self-activity and self-management, is utterly impossible.” [**Toward an Ecological Society**, p. 47]

By acting for themselves, people gain a sense of their own power and abilities. This is essential if people are to run their own lives. As such, direct action is **the** means by which individuals empower themselves, to assert their individuality, to make themselves count as individuals. It is the opposite of hierarchy, within which individuals are told again and again that they are nothing, are insignificant and must dissolve themselves into a higher power (the state, the company, the party, the people, etc.) and feel proud in participating in the strength and glory of this higher power. Direct action, in contrast, is the means of asserting ones individual opinion, interests and happiness, of fighting against self-negation:

“man has as much liberty as he is willing to take. Anarchism therefore stands for direct action, the open defiance of, and resistance to, all laws and restrictions, economic, social and moral. But defiance and resistance are illegal. Therein lies the salvation of man. Everything illegal necessitates integrity, self-reliance, and courage. In short, it calls for free independent spirits, for men who are men, and who have a bone in their back which you cannot pass your hand through.” [Emma Goldman, **Red Emma Speaks**, pp. 61–62]

In addition, because direct action is based around individuals solving their own problems, by their own action, it awakens those aspects of individuals crushed by hierarchy and oppression — such as initiative, solidarity, imagination, self-confidence and a sense of individual and collective power, that you do

matter and count as an individual and that you, and others like you, **can** change the world. Direct Action is the means by which people can liberate themselves and educate themselves in the ways of and skills required for self-management and liberty. Hence:

“anarchists insisted that we learn to think and act for ourselves by joining together in organisations in which our experience, our perception and our activity can guide and make the change. Knowledge does not precede experience, it flows from it... People learn to be free only by exercising freedom. [As one Spanish Anarchist put it] ‘We are not going to find ourselves... with people ready-made for the future... Without continued exercise of their faculties, there will be no free people... The external revolution and the internal revolution presuppose one another, and they must be simultaneous in order to be successful.’” [Martha Ackelsberg, **Free Women of Spain**, pp. 32–33]

So direct action, to use Murray Bookchin’s words, is *“the means whereby each individual awakens to the hidden powers within herself and himself, to a new sense of self-confidence and self-competence; it is the means whereby individuals take control of society directly.”* [**Op. Cit.**, p. 48]

In addition, direct action creates the need for new forms of social organisation. These new forms of organisation will be informed and shaped by the process of self-liberation, so be more anarchistic and based upon self-management. Direct action, as well as liberating individuals, can also create the free, self-managed organisations which can replace the current hierarchical ones. In other words, direct action helps create the new world in the shell of the old:

“direct action not only empowered those who participated in it, it also had effects on others... [including] exemplary action that attracted adherents by the power of the positive example it set. Contemporary examples... include food or day-care co-ops, collectively run businesses, sweat equity housing programmes, women’s self-help health collectives, urban squats or women’s peace camps [as well as traditional examples as industrial unions, social centres, etc.]. While such activities empower those who engage in them, they also demonstrate to others that non-hierarchical forms of organisation can and do exist — and that they can function effectively.” [Martha Ackelsberg, **Op. Cit.**, p. 33]

Also, direct action such as strikes encourage and promote class consciousness and class solidarity. According to Kropotkin, *“the strike develops the sentiment of solidarity”* while for Bakunin it *“is the beginnings of the social war of the proletariat against the bourgeoisie... Strikes are a valuable instrument from two points of view. Firstly, they electrify the masses, invigorate their moral energy and awaken in them the feeling of the deep antagonism which exists between their interests and those of the bourgeoisie... secondly they help immensely to provoke and establish between the workers of all trades, localities and countries the consciousness and very fact of solidarity: a twofold action, both negative and positive, which tends to constitute directly the new world of the proletariat, opposing it almost in an absolute way to the bourgeois world.”* [cited in Caroline

Cahm, **Kropotkin and the Rise of Revolutionary Anarchism 1872–1886**, p. 256, pp. 216–217]

Direct action and the movements that used it (such as unionism) would be the means to develop the “*revolutionary intelligence of the workers*” and so ensure “*emancipation through practice*” (to use Bakunin’s words).

Direct action, therefore, helps to create anarchists and anarchist alternatives within capitalism and statism. As such, it plays an essential role in anarchist theory and activity. For anarchists, direct action “*is not a ‘tactic’...it is a moral principle, an ideal, a sensibility. It should imbue every aspect of our lives and behaviour and outlook.*” [Murray Bookchin, **Op. Cit.**, p. 48]

J.2.2 Why do anarchists reject voting as a means for change?

Simply because electioneering does not work. History is littered with examples of radicals being voted into office only to become as, or even more, conservative than the politicians they replaced.

As we have discussed previously (see section B.2 and related sections) any government is under pressure from two sources of power, the state bureaucracy and big business. This ensures that any attempts at social change would be undermined and made hollow by vested interests, assuming they even reached that level of discussion to begin with (the de-radicalising effects of electioneering is discussed below in section J.2.6). Here we will highlight the power of vested interests within democratic government.

In section B.2 we only discussed the general nature of the state and what its role within society is (i.e. “*the preservation of the economic ‘status quo,’ the protection of the economic privileges of the ruling class,*” in the words of Luigi Galleani). However, as the effectiveness of the vote to secure change is now the topic we will have to discuss how and why the state and capital restricts and controls political action.

Taking capital to begin with, if we assume that a relatively reformist government was elected it would soon find itself facing various economic pressures. Either capital would disinvest, so forcing the government to back down in the face of economic collapse, or the government in question would control capital leaving the country and so would soon be isolated from new investment and its currency would become worthless. Either way, the economy would be severely damaged and the promised “reforms” would be dead letters. In addition, this economic failure would soon result in popular revolt which in turn would lead to a more authoritarian state as “democracy” was protected from the people.

Far fetched? No, not really. In January, 1974, the FT Index for the London Stock Exchange stood at 500 points. In February, the miner’s went on strike, forcing Heath to hold (and lose) a general election. The new Labour government (which included many left-wingers in its cabinet) talked about nationalising the banks and much heavy industry. In August, 74, Tony Benn announced Plans to nationalise the ship building industry. By December of that year, the FT index had fallen to 150 points. By 1976 the British Treasury was spending \$100 million a day buying back of its own money to support the pound [**The London Times**, 10/6/76]. The economic pressure of capitalism was at work:

“The further decline in the value of the pound has occurred despite the high level of interest rates. . . dealers said that selling pressure against the pound was not heavy or persistent, but there was an almost total lack of interest amongst buyers. The drop in the pound is extremely surprising in view of the unanimous opinion of bankers, politicians and officials that the currency is undervalued” [The London Times, 27/5/76]

The Labour government faced with the power of international capital ended up having to receive a temporary “bailing out” by the I.M.F. who imposed a package of cuts and controls which translated to Labour saying “*We’ll do anything you say*”, in the words of one economist [Peter Donaldson, **A Question of Economics**, p. 89]. The social costs of these policies was massive, with the Labour government being forced to crack down on strikes and the weakest sectors of society (but that’s not to forget that they “*cut expenditure by twice the amount the I.M.F. were promised.*” [Ibid.]). In the backlash to this, Labour lost the next election to a right-wing, pro-free market government which continued where Labour had left off.

Or, to use a more recent example, “[t]he fund managers [who control the flow of money between financial centres and countries] command such vast resources that their clashes with governments in the global marketplace usually ends up in humiliating defeat for politicians. . . In 1992, US financier George Soros single-handedly destroyed the British government’s attempts to keep the pound in the European Exchange Rate Mechanism (ERM). Soros effectively bet, and won, that he could force the British government to devalue. Using his huge resources, he engineered a run on the pound, overwhelming the Bank of England’s attempts to use its reserves to keep sterling within its ERM band. The British government capitulated by suspending sterling’s membership of the ERM (an effective devaluation) and Soros came away from his victory some \$1bn richer. Fund managers then picked off other currencies one by one, derailing the drive for European monetary union, which would, incidentally, have cut their profits by making them unable to buy and sell between the different European currencies.” [Duncan Green, **The Silent Revolution**, p. 124]

The fact is that capital will not invest in a country which does not meet its approval and this is an effective weapon to control democratically elected governments. And with the increase in globalisation of capital over the last 30 years this weapon is even more powerful (a weapon we may add which was improved, via company and state funded investment and research in communication technology, precisely to facilitate the attack on working class reforms and power in the developed world, in other words capital ran away to teach us a lesson — see sections C.8.1, C.8.2, C.8.3 and D.5.3).

As far as political pressures go, we must remember that there is a difference between the state and government. The state is the permanent collection of institutions that have entrenched power structures and interests. The government is made up of various politicians. It’s the institutions that have power in the state due to their permanence, not the representatives who come and go. In other words, the state bureaucracy has vested interests and elected politicians cannot effectively control them. This network of behind the scenes agencies can be usefully grouped into two parts:

“By ‘the secret state’ we mean. . . the security services, MI5 [the FBI in the

USA], *Special Branch*. . . MI6 [the CIA]. By ‘the permanent government’ . . . we mean the secret state plus the Cabinet Office and upper echelons of Home and Foreign and Commonwealth Offices, the Armed Forces and Ministry of Defence, the nuclear power industry and its satellite ministries; and the so-called ‘Permanent Secretaries Club,’ the network of very senior civil servants — the ‘Mandarins.’ In addition. . . its satellites” including M.P.s (particularly right-wing ones), ‘agents of influence’ in the media, former security services personnel, think tanks and opinion forming bodies, front companies of the security services, and so on. [Stephen Dorril and Robin Ramsay, **Smear! Wilson and the Secret State**, p. X, XI]

These bodies, while theoretically under the control of the elected government, can effectively (via disinformation, black operations, bureaucratic slow-downs, media attacks, etc.) ensure that any government trying to introduce policies which the powers that be disagree with will be stopped. In other words the state is **not** a neutral body, somehow rising above vested interests and politics. It is, and always will be, a institution which aims to protect specific sections of society as well as its own.

An example of this “secret state” at work can be found in **Smear!**, where Dorril and Ramsay document the campaign against the Labour Prime Minister of Britain, Harold Wilson, which resulted in his resignation. They also indicate the pressures which Labour M.P. Tony Benn was subjected to by “his” Whitehall advisers:

“In early 1985, the campaign against Benn by the media was joined by the secret state. The timing is interesting. In January, his Permanent Secretary had ‘declared war’ and the following month began the most extraordinary campaign of harassment any major British politician has experienced. While this is not provable by any means, it does look as though there is a clear causal connection between withdrawal of Prime Ministerial support, the open hostility from the Whitehall mandarins and the onset of covert operations.” [Stephen Dorril and Robin Ramsay, **Op. Cit.**, p. 279]

Not to mention the role of the secret state in undermining reformist and radical organisations and movements. Thus involvement goes from pure information gathering on “subversives”, to disruption and repression. Taking the example of the US secret state, Howard Zinn notes that in 1975

“congressional committees. . . began investigations of the FBI and CIA.

“The CIA inquiry disclosed that the CIA had gone beyond its original mission of gathering intelligence and was conducting secret operations of all kinds . . . [for example] the CIA — with the collusion of a secret Committee of Forty headed by Henry Kissinger — had worked to ‘destabilize’ the [democratically elected, left-wing] Chilean government. . .

“The investigation of the FBI disclosed many years of illegal actions to disrupt and destroy radical groups and left-wing groups of all kinds. The FBI had sent forged letters, engaged in burglaries. . . opened mail illegally, and in the case of Black Panther leader Fred Hampton, seems to have conspired in murder. . .

“The investigations themselves revealed the limits of government willingness to probe into such activities... [and they] submitted its findings on the CIA to the CIA to see if there was material the Agency wanted omitted.” [**A People’s History of the United States**, pp. 542–3]

Also, the CIA secretly employs several hundred American academics to write books and other materials to be used for propaganda purposes, an important weapon in the battle for hearts and minds. In other words, the CIA, FBI [and their equivalents in other countries] and other state bodies can hardly be considered neutral bodies, who just follow orders. They are a network of vested interests, with specific ideological viewpoints and aims which usually place the wishes of the voting population below maintaining the state-capital power structure in place.

This can be seen most dramatically in the military coup in Chile against the democratically re-elected (left-wing) Allende government by the military, aided by the CIA, US based corporations and the US government cutting economic aid to the country (specifically to make it harder for the Allende regime). The coup resulted in tens of thousands murdered and years of terror and dictatorship, but the danger of a pro-labour government was stopped and the business environment was made healthy for profits. An extreme example, we know, but important ones for any believer in freedom or the idea that the state machine is somehow neutral and can be captured and used by left-wing parties.

Therefore we cannot expect a different group of politicians to react in different ways to the same economic and institutional influences and interests. Its no coincidence that left-wing, reformist parties have introduced right-wing, pro-capitalist (“Thatcherite/Reaganite”) policies at the same time as right-wing, explicitly pro-capitalist parties introduced them in the UK and the USA. As Clive Ponting (an ex-British Civil Servant) points out, this is to be expected:

“the function of the political system in any country in the world is to regulate, but not alter radically, the existing economic structure and its linked power relationships. The great illusion of politics is that politicians have the power to make whatever changes they like... On a larger canvas what real control do the politicians in any country have over the operation of the international monetary system, the pattern of world trade with its built in subordination of the third world or the operation of multi-national companies? These institutions and the dominating mechanism that underlies them — the profit motive as a sole measure of success — are essentially out of control and operating on autopilot.” [quoted in **Alternatives**, # 5, p. 10]

Of course there have been examples of quite extensive reforms which did benefit working class people in major countries. The New Deal in the USA and the 1945–51 Labour Governments spring to mind. Surely these indicate that our claims above are false? Simply put, no, they do not. Reforms can be won from the state when the dangers of not giving in outweigh the problems associated with the reforms. Reforms can therefore be used to save the capitalist system and the state and even improve their operation (with, of course, the possibility of getting rid of the reforms when they are no longer required).

For example, both the reformist governments of 1930s USA and 1940s UK were under pressure from below, by waves of militant working class struggle which could have developed beyond mere reformism. The waves of sit-down strikes in the 1930s ensured the passing of pro-union laws which while allowing workers to organise without fear of being fired. This measure also involved the unions in running the capitalist-state machine (and so making them responsible for controlling “unofficial” workplace action and so ensuring profits). The nationalisation of roughly 20% of the UK economy during the Labour administration of 1945 (the most unprofitable sections of it as well) was also the direct result of ruling class fear. As Quintin Hogg, a Tory M.P. at the time, said, “*If you don't give the people social reforms they are going to give you social revolution*”. Memories of the near revolutions across Europe after the first war were obviously in many minds, on both sides. Not that nationalisation was particularly feared as “socialism.” Indeed it was argued that it was the best means of improving the performance of the British economy. As anarchists at the time noted “*the real opinions of capitalists can be seen from Stock Exchange conditions and statements of industrialists than the Tory Front bench ... [and from these we] see that the owning class is not at all displeased with the record and tendency of the Labour Party*” [**Neither Nationalisation nor Privatisation: Selections from Freedom 1945–1950**, Vernon Richards (Ed), p. 9]

So, if extensive reforms have occurred, just remember what they were in response to militant pressure from below and that we could have got so much more.

Therefore, in general, things have little changed over the one hundred years since this anarchist argument against electioneering was put forward:

“in the electoral process, the working class will always be cheated and deceived... if they did manage to send, one, or ten, or fifty of them[selves to Parliament], they would become spoiled and powerless. Furthermore, even if the majority of Parliament were composed of workers, they could do nothing. Not only is there the senate ... the chiefs of the armed forces, the heads of the judiciary and of the police, who would be against the parliamentary bills advanced by such a chamber and would refuse to enforce laws favouring the workers (it has happened [for example the 8 hour working day was legally created in many US states by the 1870s, but workers had to strike for it in 1886 as it was not enforced]; but furthermore laws are not miraculous; no law can prevent the capitalists from exploiting the workers; no law can force them to keep their factories open and employ workers at such and such conditions, nor force shopkeepers to sell at a certain price, and so on.” [S. Merlino, quoted by L. Galleani, **The End of Anarchism?**, p. 13]

Moreover, anarchists reject voting for other reasons. The fact is that electoral procedures are the opposite of direct action — they are **based** on getting someone else to act on your behalf. Therefore, far from empowering people and giving them a sense of confidence and ability, electioneering **dis-**empowers them by creating a “leader” figure from which changes are expected to flow. As Martin observes:

“all the historical evidence suggests that parties are more a drag than

an impetus to radical change. One obvious problem is that parties can be voted out. All the policy changes they brought in can simply be reversed later.

*“More important, though, is the pacifying influence of the radical party itself. On a number of occasions, radical parties have been elected to power as a result of popular upsurges. Time after time, the ‘radical’ parties have become chains to hold back the process of radical change” [“Democracy without Elections,” **Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), p. 124]*

This can easily be seen from the history of the various left-wing parties. Ralph Miliband points out that labour or socialist parties, elected in periods of social turbulence, have often acted to reassure the ruling elite by dampening popular action that could have threatened capitalist interests [**The State in Capitalist Society**, Weidenfeld and Nicolson, 1969]. For example, the first project undertaken by the Popular Front, elected in France in 1936, was to put an end to strikes and occupations and generally to cool popular militancy, which was the Front’s strongest ally in coming to power. The Labour government elected in Britain in 1945 got by with as few reforms as it could, refusing to consider changing basic social structures. In addition, within the first week of taking office it sent troops in to break the dockers’ strike. Labour has used troops to break strikes far more often than the Conservatives have.

These points indicate why existing power structures cannot effectively be challenged through elections. For one thing, elected representatives are not **mandated**, which is to say they are not tied in any binding way to particular policies, no matter what promises they have made or what voters may prefer. Around election time, the public’s influence on politicians is strongest, but after the election, representatives can do practically whatever they want, because there is no procedure for **instant recall**. In practice it is impossible to recall politicians before the next election, and between elections they are continually exposed to pressure from powerful special-interest groups — especially business lobbyists, state bureaucracies and political party power brokers.

Under such pressure, the tendency of politicians to break campaign promises has become legendary. Generally, such promise breaking is blamed on bad character, leading to periodic “throw-the-bastards-out” fervour — after which a new set of representatives is elected, who also mysteriously turn out to be bastards! In reality it is the system itself that produces “bastards,” the sell-outs and shady dealing we have come to expect from politicians. As Alex Comfort argues, political office attracts power-hungry, authoritarian, and ruthless personalities, or at least tends to bring out such qualities in those who are elected (see his classic work **Authority and Delinquency in the Modern State: A Criminological Approach to the Problem of Power**).

In light of modern “democracy”, it is amazing that anyone takes the system seriously enough to vote at all. And in fact, voter turnout in the US and other nations where “democracy” is practiced in this fashion is typically low. Nevertheless, some voters continue to participate, pinning their hopes on new parties or trying to reform a major party. For anarchists, this activity is pointless as it does not get at the root of the problem. It is not politicians or parties which are the problem, its a system which shapes them into its own image and

marginalises and alienates people due to its hierarchical and centralised nature. No amount of party politics can change that.

However, we should make it clear that most anarchists recognise there is a difference between voting for a government and voting in referendum. Here we are discussing the former, electioneering, as a means of social change. Referenda are closer to anarchist ideas of direct democracy and are, while flawed, far better than electing a politician to office once every four years or so.

In addition, Anarchists are not necessarily against all involvement in electoral politics. Bakunin thought it could sometimes be useful to participate in local elections in relatively small communities where regular contact with representatives can maintain accountability. This argument has been taken up by such Social Ecologists such as Murray Bookchin who argues that anarchists, by taking part in local elections, can use this technique to create self-governing community assemblies. However, few anarchists support such means to create community assemblies (see section J.5.14 for a discussion on this).

However, in large cities and in regional or national elections, certain processes have developed which render the term “democracy” inappropriate. These processes include mass advertising, bribery of voters through government projects in local areas, party “machines,” the limitation of news coverage to two (or at most three) major parties, and government manipulation of the news. Party machines choose candidates, dictate platforms, and contact voters by phone campaigns. Mass advertising “packages” candidates like commodities, selling them to voters by emphasising personality rather than policies, while media news coverage emphasise the “horse race” aspects of campaigns rather than policy issues. Government spending in certain areas (or more cynically, the announcement of new projects in such areas just before elections) has become a standard technique for buying votes. And we have already examined the mechanisms through which the media is made dependent of government sources of information (see section D.3), a development that obviously helps incumbents.

Therefore, for these related reasons anarchists reject the voting as a means of change. Instead we wholeheartedly support direct action as the means of getting improvements in the here and now as well as the means of creating an alternative to the current system.

J.2.3 What are the political implications of voting?

At its most basic, voting implies agreement with the status quo. It is worth quoting the Scottish libertarian socialist James Kelman at length on this:

“State propaganda insists that the reason why at least 40 percent of the voting public don’t vote at all is because they have no feelings one way or the other. They say the same thing in the USA, where some 85 percent of the population are apparently ‘apolitical’ since they don’t bother registering a vote. Rejection of the political system is inadmissible as far as the state is concerned... Of course the one thing that does happen when you vote is that someone else has endorsed an unfair political system... A vote for any party or any individual is always a vote for the political system. You can

interpret your vote in whichever way you like but it remains an endorsement of the apparatus... If there was any possibility that the apparatus could effect a change in the system then they would dismantle it immediately. In other words the political system is an integral state institution, designed and refined to perpetuate its own existence. Ruling authority fixes the agenda by which the public are allowed 'to enter the political arena' and that's the fix they've settled on" [Some Recent Attacks, p.87]

We are taught from an early age that voting in elections is right and a duty. In US schools, children elect class presidents and other officers. Often mini-general elections are held to “educate” children in “democracy”. Periodically, election coverage monopolises the media. We are made to feel guilty about shirking our “civic responsibility” if we don’t vote. Countries that have no elections, or only rigged elections, are regarded as failures [Benjamin Ginsberg, **The Consequences of Consent: Elections, Citizen Control and Popular Acquiescence**, Addison-Wesley, 1982]. As a result, elections have become a quasi-religious ritual.

As Brian Martin points out, however, *“elections in practice have served well to maintain dominant power structures such as private property, the military, male domination, and economic inequality. None of these has been seriously threatened through voting. It is from the point of view of radical critics that elections are most limiting.”* [“Democracy without Elections,” **Social Anarchism, Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), p. 124]

Benjamin Ginsberg has noted other ways in which elections serve the interests of state power. Firstly, voting helps to legitimate government; hence suffrage has often been expanded at times when there was little popular demand for it but when mass support of government was crucial, as during a war or revolution. Secondly, since voting is organised and supervised by government, it comes to be seen as the only legitimate form of political participation, thus making it likely that any revolts by oppressed or marginalized groups will be viewed by the general public as illegitimate. [**The Consequences of Consent**]

In addition, Ginsberg argues that, historically, by enlarging the number of people who participate in ‘politics,’ and by turning this participation into the “safe” activities of campaigning and voting, elections have reduced the risk of more radical direct action. That is, voting disempowers the grassroots by diverting energy from grassroots action. After all, the goal of electoral politics is to elect a representative who will act **for** us. Therefore, instead taking direct action to solve problems ourselves, action becomes indirect, though the government. This is an insidiously easy trap to fall into, as we have been conditioned in hierarchical society from day one into attitudes of passivity and obedience, which gives most of us a deep-seated tendency to leave important matters to the “experts” and “authorities.”

Anarchists also criticise elections for giving citizens the false impression that the government serves, or can serve, the people. As Martin puts it, *“the founding of the modern state a few centuries ago was met with great resistance: people would refuse to pay taxes, to be conscripted or to obey laws passed by national governments. The introduction of voting and the expanded suffrage have greatly aided the expansion of state power. Rather than seeing the system as one of ruler and ruled, people see at least the possibility of using state power to serve*

themselves. As electoral participation has increased, the degree of resistance to taxation, military service, and the immense variety of laws regulating behaviour, has been greatly attenuated” [Op. Cit., p. 126]

Ironically, however, voting has legitimated the growth of state power to such an extent that the state is now beyond any real popular control by the form of participation that made that growth possible. Nevertheless, as Ginsberg observes, the idea that electoral participation means popular control of government is so deeply implanted in people’s psyches “*that even the most overtly skeptical cannot fully free themselves from it*” [The Consequences of Consent, op. cit., p. 241].

Therefore, voting has the important political implication of encouraging people to identify with state power and to justify the status quo. In addition, it feeds the illusion that the state is neutral and that electing parties to office means that people have control over their own lives. Moreover, elections have a tendency to make people passive, to look for salvation from above and not from their own self-activity. As such it produces a division between leaders and led, with the voters turned into spectators of activity, not the participants within it.

All this does not mean, obviously, that anarchists prefer dictatorship or an “enlightened” monarchy. Far from it, democratising state power can be an important step towards abolishing it. All anarchists agree with Bakunin when he argued that “*the most imperfect republic is a thousand times better than even the most enlightened monarchy.*” [cited by Guerin, **Anarchism**, p. 20] But neither does it mean that anarchists will join in with the farce of electioneering, particularly when there are more effective means available for changing things for the better.

J.2.4 Surely voting for radical parties will be effective?

There is no doubt that voting can lead to changes in policies, which can be a good thing as far as it goes. But such policies are formulated and implemented within the authoritarian framework of the hierarchical capitalist state — a framework which itself is never open to challenge by voting. To the contrary, voting legitimates the state framework, ensuring that social change will be mild, gradual, and reformist rather than rapid and radical. Indeed, the “democratic” process will (and has) resulted in all successful political parties becoming committed to “more of the same” or tinkering with the details at best (which is usually the limits of any policy changes).

Therefore, given the need for radical systemic changes as soon as possible due to the exponentially accelerating crises of modern civilisation, working for gradual reforms within the electoral system must be seen as a potentially deadly tactical error. In addition, it can never get to the root causes of our problems. Anarchists reject the idea that our problems can be solved by the very institutions that cause them in the first place! What happens in our communities, workplaces and environment is too important to be left to politicians — or the ruling elite who control governments.

Because of this anarchists reject political parties and electioneering. Electioneering has always been the death of radicalism. Political parties are only rad-

ical when they don't stand a chance of election. However, many social activists continue to try to use elections, so participating in the system which disempowers the majority and so helps create the social problems they are protesting against.

"It should be a truism that elections empower the politicians and not the voters," Brian Martin writes, *"yet many social movements continually are drawn into electoral politics."* There are a number of reasons for this. *"One is the involvement of party members in social movements. Another is the aspirations for power and influence by leaders in movements. Having the ear of a government minister is a heady sensation for many; getting elected to parliament oneself is even more of an ego boost. What is forgotten in all this 'politics of influence' is the effect on ordinary activists."* [*Democracy without Elections*], **Reinventing Anarchy, Again**, Howard J. Ehrlich (ed.), p. 125]

Rudolph Bahro gives an example of how working "within the system" disempowered grassroots Green activists in Germany during the early eighties, pointing out that the coalitions into which the Greens entered with Social Democrats in the German legislature often had the effect of strengthening the status quo by co-opting those whose energies might otherwise have gone into more radical and effective forms of activism [**Building the Green Movement**, New Society Publishers, 1986].

No doubt the state is more complicated than the simple "executive committee of the ruling class" pictured by Marxists. There are continual struggles both within and without the state bureaucracies, struggles that influence policies and empower different groups of people. Because of this, many radical parties believe that it makes sense to work within the state — for example, to obtain labour, consumer, and environmental protection laws. However, this reasoning ignores the fact that the organisational structure of the state is not neutral.

To quote Martin again:

"The basic anarchist insight is that the structure of the state, as a centralised administrative apparatus, is inherently flawed from the point of view of human freedom and equality. Even though the state can be used occasionally for valuable ends, as a means the state is flawed and impossible to reform. The nonreformable aspects of the state include, centrally, its monopoly over 'legitimate' violence and its consequent power to coerce for the purpose of war, internal control, taxation and the protection of property and bureaucratic privilege.

"The problem with voting is that the basic premises of the state are never considered open for debate, much less challenge. The state's monopoly over the use of violence for war is never at issue. Neither is the state's use of violence against revolt from within. The state's right to extract economic resources from the population is never questioned. Neither is the state's guarantee of either private property (under capitalism) or bureaucratic prerogative (under state socialism) — or both" [**Op Cit.**, p. 127]

But, it may be said, if a new political group is radical enough, it will be able to use state power for good purposes. While we discuss this in more detail later in section J.2.6, let us consider a specific case: that of the Greens, many

of whom believe that the best way to achieve their aims is to work within the representative political system.

By pledging to use the electoral system to achieve change, Green parties necessarily commit themselves to formulating their proposals as legislative agendas. But once legislation is passed, the coercive mechanisms of the state will be needed to enforce it. Therefore, Green parties are committed to upholding state power. However, our analysis in section B.2 indicated that the state is a set of hierarchical institutions through which a ruling elite dominates society and individuals. And, as we have seen in the introduction to section E, ecologists, feminists, and peace activists — who are key constituencies of the Green movement — all need to **dismantle** hierarchies and domination in order to achieve their respective aims. Therefore, since the state is not only the largest and most powerful hierarchy but also serves to maintain the hierarchical form of all major institutions in society (since this form is the most suitable for achieving ruling-class interests), the state itself is the main obstacle to the success of key constituencies of the Green movement. Hence it is impossible **in principle** for a parliamentary Green party to achieve essential objectives of the Green movement. A similar argument would apply to any radical party whose main emphasis was social justice, which like the goals of feminists, radical ecologists, and peace activists, depends on dismantling hierarchies.

And surely no one who even is remotely familiar with history will suggest that ‘radical’ politicians, even if by some miracle they were to obtain a majority in the national legislature, might dismantle the state. It should be axiomatic by now that when a ‘radical’ politician (e.g. a Lenin) says to voters, “Give me and my party state power and we will ‘wither away’” it’s just more campaign rhetoric (in Lenin’s case, the ultimate campaign promise), and hence not to be taken seriously. And, as we argued in the previous section, radical parties are under pressure from economic and state bureaucracies that ensure that even a sincere radical party would be powerless to introduce significant reforms.

The only real response to the problems of representative democracy is to urge people not to vote. This can be a valuable way of making others aware of the limitations of the current system, which is a necessary condition for their seriously considering the anarchist alternative, as we have outlined in this FAQ. The implications of abstentionism are discussed in the next section.

J.2.5 Why do anarchists support abstentionism and what are its implications?

At its most basic, anarchists support abstentionism because “*participation in elections means the transfer of one’s will and decisions to another, which is contrary to the fundamental principles of anarchism.*” [Emma Goldman, “*Anarchists and Elections*”, **Vanguard** III, June-July 1936, p. 19]

If you reject hierarchy and government then participating in a system by which you elect those who will govern you is almost like adding insult to injury! And as Luigi Galleani points out, “[*b*]ut whoever has the political competence to choose his own rulers is, by implication, also competent to do without them.” [**The End of Anarchism?**, p. 37] In other words, because anarchists reject the idea of authority, we reject the idea that picking the authority (be it bosses or

politicians) makes us free. Therefore, anarchists reject governmental elections in the name of self-government and free association. We refuse to vote as voting is endorsing authoritarian social structures. We are (in effect) being asked to make obligations to the state, not our fellow citizens, and so anarchists reject the symbolic process by which our liberty is alienated from us.

For anarchists, then, when you vote, you are choosing between rulers. Instead of urging people to vote we raise the option of choosing to rule yourself, to organise freely with others — in your workplace, in your community, everywhere — as equals. The option of something you cannot vote for, a new society. And instead of waiting for others to do make some changes for you, anarchists urge that you do it yourself. This is the core of the anarchist support for abstentionism.

In addition, beyond this basic anarchist rejection of elections from an anti-statist position, anarchists also support abstentionism as it allows us to put across our ideas at election time. It is a fact that at election times individuals are often more interested in politics than usual. So, by arguing for abstentionism we can get our ideas across about the nature of the current system, how elected politicians do not control the state bureaucracy, how the state acts to protect capitalism and so on. In addition, it allows us to present the ideas of direct action and encourage those disillusioned with political parties and the current system to become anarchists by presenting a viable alternative to the farce of politics.

And a sizeable percentage of non-voters and voters are disillusioned with the current set-up. According to the US paper **The Nation** (dated February 10, 1997):

“Protest is alive and well in the growing non-electorate, now the majority (last fall’s turnout was 48.8 percent). According to a little-noticed post-election survey of 400 nonvoters conducted by the Polling Company, a Washington-based firm, 38 percent didn’t vote for essentially political reasons: they ‘did not care for any of the candidates’ (16 percent), they were ‘fed up with the political system’ (15 percent) or they ‘did not feel like candidates were interested in people like me’ (7 percent). That’s at least 36 million people — almost as many as voted for Bob Dole. The nonvoting majority is also disproportionately liberal-leaning, compared with those who did vote.”

So, anarchist abstentionism is a means of turning this negative reaction to an unjust system into positive activity. So, anarchist opposition to electioneering has deep political implications which Luigi Galleani addresses when he writes that the “*anarchists’ electoral abstentionism implies not only a conception that is opposed to the principle of representation (which is totally rejected by anarchism), it implies above all an absolute lack of confidence in the State. . . Furthermore, anarchist abstentionism has consequences which are much less superficial than the inert apathy ascribed to it by the sneering careerists of ‘scientific socialism’ [i.e. Marxism]. It strips the State of the constitutional fraud with which it presents itself to the gullible as the true representative of the whole nation, and, in so doing, exposes its essential character as representative, procurer and policeman of the ruling classes.*

“Distrust of reforms, of public power and of delegated authority, can lead to direct action [in the class struggle]. . . It can determine the revolutionary charac-

ter of this . . . action; and, accordingly, anarchists regard it as the best available means for preparing the masses to manage their own personal and collective interests; and, besides, anarchists feel that even now the working people are fully capable of handling their own political and administrative interests.” [The End of Anarchism?, pp. 13–14]

Therefore abstentionism stresses the importance of self-activity and self-libertarian as well as having an important educational effect in highlighting that the state is not neutral, but serves to protect class rule, and that meaningful change only comes from below, by direct action. For the dominant ideas within any class society reflect the opinion of the ruling elite of that society and so any campaign at election times which argues for abstentionism and indicates why voting is a farce will obviously challenge these dominant ideas. In other words, abstentionism combined with direct action and the building of socialist alternatives is a very effective means of changing people’s ideas and encouraging a process of self-education and, ultimately, self-liberation.

Anarchists are aware that elections serve to legitimate government. We have always warned that since the state is an integral part of the system that perpetuates poverty, inequality, racism, imperialism, sexism, environmental destruction, and war, we should not expect to solve any of these problems by changing a few nominal state leaders every four or five years (See P. Kropotkin, “*Representative Government*,” **The Commonweal**, Vol. 7, 1892; Errico Malatesta, **Vote: What For?**, Freedom Press, 1942). Therefore anarchists (usually) advocate abstentionism at election time as a means of exposing the farce of “democracy”, the disempowering nature of elections and the real role of the state.

Therefore, anarchists urge abstentionism in order to **encourage** activity, not apathy. The reasons **why** people abstain is more important than the act. The idea that the USA is closer to anarchy because around 50% of people do not vote is nonsense. Abstentionism in this case is the product of apathy and cynicism, not political ideas. So anarchists recognise that apathetic abstentionism is **not** revolutionary or an indication of anarchist sympathies. It is produced by apathy and a general level of cynicism at **all** forms of political ideas and the possibility of change.

Not voting is **not** enough, and anarchists urge people to **organise** and **resist** as well. Abstentionism must be the political counterpart of class struggle, self-activity and self-management in order to be effective — otherwise it is as pointless as voting is.

J.2.6 What are the effects of radicals using electioneering?

While many radicals would be tempted to agree with our analysis of the limitations of electioneering and voting, few would automatically agree with anarchist abstentionist arguments. Instead, they argue that we should combine direct action with electioneering. In that way (it is argued) we can overcome the limitations of electioneering by invigorating the movement with self-activity. In addition, it is argued, the state is too powerful to leave in the hands of the enemies of the working class. A radical politician will refuse to give the orders to crush social protest that a right-wing, pro-capitalist one would.

This reformist idea met a nasty end in the 1900s (when, we may note, social democracy was still considered revolutionary). In 1899, the Socialist Alexandre Millerand joined the cabinet of the French Government. However, nothing changed:

“thousands of strikers... appealed to Millerand for help, confident that, with him in the government, the state would be on their side. Much of this confidence was dispelled within a few years. The government did little more for workers than its predecessors had done; soldiers and police were still sent in to repress serious strikes.” [Peter N. Stearns, **Revolutionary Syndicalism and French Labour**, p. 16]

In 1910, the Socialist Prime Minister Briand used scabs and soldiers to again break a general strike on the French railways. And these events occurred during the period when social democratic and socialist parties were self-proclaimed revolutionaries and arguing against anarcho-syndicalism by using the argument that working people needed their own representatives in office to stop troops being used against them during strikes!

Looking at the British Labour government of 1945 to 1951 we find the same actions. What is often considered the most left-wing Labour government ever used troops to break strikes in every year it was in office, starting with a dockers' strike days after it became the new government. And again in the 1970s Labour used troops to break strikes. Indeed, the Labour Party has used troops to break strikes more often than the right-wing Conservative Party.

In other words, while these are important arguments in favour of radicals using elections, they ultimately fail to take into account the nature of the state and the corrupting effect it has on radicals. If history is anything to go by, the net effect of radicals using elections is that by the time they are elected to office the radicals will happily do what they claimed the right-wing would have done. Many blame the individuals elected to office for these betrayals, arguing that we need to elect **better** politicians, select **better** leaders. For anarchists nothing could be more wrong as it's the means used, not the individuals involved, which is the problem.

At its most basic, electioneering results in the party using it becoming more moderate and reformist — indeed the party often becomes the victim of its own success. In order to gain votes, the party must appear “moderate” and “practical” and that means working within the system. This has meant that (to use Rudolf Rocker words):

“Participation in the politics of the bourgeois States has not brought the labour movement a hair's-breadth nearer to Socialism, but thanks to this method, Socialism has almost been completely crushed and condemned to insignificance... Participation in parliamentary politics has affected the Socialist Labour movement like an insidious poison. It destroyed the belief in the necessity of constructive Socialist activity, and, worse of all, the impulse to self-help, by inoculating people with the ruinous delusion that salvation always comes from above.” [**Anarcho-Syndicalism**, p. 49]

This corruption does not happen overnight. Alexander Berkman indicates how it slowly develops when he writes:

“[At the start, the Socialist Parties] claimed that they meant to use politics only for the purpose of propaganda. . . and took part in elections on order to have an opportunity to advocate Socialism

“It may seem a harmless thing but it proved the undoing of Socialism. Because nothing is truer than the means you use to attain your object soon themselves become your object. . . [so] There is a deeper reason for this constant and regular betrayal [than individual scoundrels being elected] . . . no man turns scoundrel or traitor overnight.

*“It is **power** which corrupts. . . Moreover, even with the best intentions Socialists [who get elected]. . . find themselves entirely powerless to accomplishing anything of a socialistic nature. . . The demoralisation and vitiation [this brings about] take place little by little, so gradually that one hardly notices it himself. . . [The elected Socialist] perceives that he is regarded as a laughing stock [by the other politicians]. . . and finds more and more difficulty in securing the floor. . . he knows that neither by his talk nor by his vote can he influence the proceedings . . . His speeches don't even reach the public. . . [and so] He appeals to the voters to elect more comrades. . . Years pass. . . [and a] number . . . are elected. Each of them goes through the same experience. . . [and] quickly come to the conclusion. . . [that] They must show that they are practical men. . . that they are doing something for their constituency. . . In this manner the situation compels them to take a ‘practical’ part in the proceedings, to ‘talk business,’ to fall in line with the matters actually dealt with in the legislative body. . . Spending years in that atmosphere, enjoying good jobs and pay, the elected Socialists have themselves become part and parcel of the political machinery. . . With growing success in elections and securing political power they turn more and more conservative and content with existing conditions. Removal from the life and suffering of the working class, living in the atmosphere of the bourgeoisie. . . they have become what they call ‘practical’. . . Power and position have gradually stifled their conscience and they have not the strength and honesty to swim against the current. . . They have become the strongest bulwark of capitalism.” [What is Communist Anarchism?, pp. 78–82]*

And so the “political power which they had wanted to conquer had gradually conquered their Socialism until there was scarcely anything left of it.” [Rudolf Rocker, **Op. Cit.**, p. 50]

Not that these arguments are the result of hindsight, we must add. Bakunin was arguing in the early 1870s that the “inevitable result [of using elections] will be that workers’ deputies, transferred to a purely bourgeois environment, and into an atmosphere of purely bourgeois political ideas. . . will become middle class in their outlook, perhaps even more so than the bourgeois themselves.” As long as universal suffrage “is exercised in a society where the people, the mass of workers, are **economically** dominated by a minority holding exclusive possession the property and capital of the country” elections “can only be illusory, anti-democratic in their results.” [The Political Philosophy of Bakunin, p. 216 and p. 213] This meant that “the election to the German parliament of

one or two workers . . . from the Social Democratic Party” was “not dangerous” and, in fact, was “highly useful to the German state as a lightning-rod, or a safety-valve.” Unlike the “political and social theory” of the anarchists, which “leads them directly and inexorably to a complete break with all governments and all forms of bourgeois politics, leaving no alternative but social revolution,” Marxism, he argued, “inexorably enmeshes and entangles its adherents, under the pretext of political tactics, in endless accommodation with governments and the various bourgeois political parties — that is, it thrusts them directly into reaction.” [Bakunin, **Statism and Anarchy**, p. 193 and pp. 179–80] In the case of the German Social Democrats, this became obvious in 1914, when they supported their state in the First World war, and after 1918, when they crushed the German Revolution.

So history proved Bakunin’s prediction correct (as it did with his prediction that Marxism would result in elite rule). Simply put, for anarchists, the net effect of socialists using bourgeois elections would be to put them (and the movements they represent) into the quagmire of bourgeois politics and influences. In other words, the parties involved will be shaped by the environment they are working within and not vice versa.

History is littered with examples of radical parties becoming a part of the system. From Marxian Social Democracy at the turn of the 19th century to the German Green Party in the 1980s, we have seen radical parties, proclaiming the need for direct action and extra-parliamentary activity denouncing these activities once in power. From only using parliament as a means of spreading their message, the parties involved end up considering votes as more important than the message. Janet Biehl sums up the effects on the German Green Party of trying to combine radical electioneering with direct action:

*“the German Greens, once a flagship for the Green movement worldwide, should now be considered stink normal, as their **de facto** boss himself declares. Now a repository of careerists, the Greens stand out only for the rapidity with which the old cadre of careerism, party politics, and business-as-usual once again played itself out in their saga of compromise and betrayal of principle. Under the superficial veil of their old values — a very thin veil indeed, now — they can seek positions and make compromises to their heart’s content. . . They have become ‘practical,’ ‘realistic’ and ‘power-orientated.’ This former New Left ages badly, not only in Germany but everywhere else. But then, it happened with the S.P.D. [The German Social Democratic Party] in August 1914, then why not with Die Grunen in 1991? So it did.”* [“Party or Movement?”, **Greenline**, no. 89, p. 14]

This, sadly, is the end result of all such attempts. Ultimately, supporters of using political action can only appeal to the good intentions and character of their candidates. Anarchists, however, present an analysis of the structures and other influences that will determine how the character of the successful candidates will change. In other words, in contrast to Marxists and other radicals, anarchists present a materialist, scientific analysis of the dynamics of electioneering and its effects on radicals. And like most forms of idealism, the arguments of Marxists and other radicals flounder on the rocks of reality as their theory “inevitably draws and enmeshes its partisans, under the pretext of political tac-

tics, into ceaseless compromises with governments and political parties; that is, it pushes them toward downright reaction." [Bakunin, **Op. Cit.**, p. 288]

However, many radicals refuse to learn this lesson of history and keep trying to create a new party which will not repeat the saga of compromise and betrayal which all other radical parties have suffered. And they say that anarchists are utopian! In other words, its truly utopian to think that "*You cannot dive into a swamp and remain clean.*" [Alexander Berkman, **Op. Cit.**, p. 83] Such is the result of rejecting (or "supplementing" with electioneering) direct action as the means to change things, for any social movement "*to ever surrender their commitment to direct action for 'working within the system' is to destroy their personality as socially innovative movements. It is to dissolve back into the hopeless morass of 'mass organisations' that seek respectability rather than change.*" [Murray Bookchin, **Toward an Ecological Society**, p. 47]

Moreover, the use of electioneering has a centralising effect on the movements that use it. Political actions become considered as parliamentary activities made **for** the population by their representatives, with the 'rank and file' left with no other role than that of passive support. Only the leaders are actively involved and the main emphasis falls upon the leaders and it soon becomes taken for granted that they should determine policy (even ignoring conference decisions when required — how many times have politicians turned round and done the exact opposite of what they promised or introduced the exact opposite of party policy?). In the end, party conferences become simply like parliamentary elections, with party members supporting this leader against another.

Soon the party reflects the division between manual and mental labour so necessary for the capitalist system. Instead of working class self-activity and self-determination, there is a substitution and a non working class leadership acting **for** people replaces self-management in social struggle and within the party itself. Electoralism strengthens the leaders dominance over the party and the party over the people it claims to represent. And, of course, the real causes and solutions to the problems we face are mystified by the leadership and rarely discussed in order to concentrate on the popular issues that will get them elected.

And, of course, this results in radicals "*instead of weakening the false and enslaving belief in law and government . . . actually work[ing] to strengthen the people's faith in forcible authority and government.*" [A. Berkman, **Op. Cit.**, p. 84] Which has always proved deadly to encouraging a spirit of revolt, self-management and self-help — the very keys to creating change in a society.

Thus the 1870 resolution of the Spanish section of the **First International** seems to have been proven to be totally correct:

"Any participation of the working class in the middle class political government would merely consolidate the present state of affairs and necessarily paralyse the socialist revolutionary action of the proletariat. The Federation [of unions making up the Spanish section of the International] is the true representative of labour, and should work outside the political system." [quoted by Jose Pierats, **Anarchists in the Spanish Revolution**, p. 169]

Instead of trying to gain control of the state, for whatever reasons, anarchists try to promote a culture of resistance within society that makes the state subject

to pressure from without. Or, to quote Proudhon, we see the “*problem before the labouring classes . . . [as] consist[ing of] not in capturing, but in subduing both power and monopoly, — that is, in generating from the bowels of the people, from the depths of labour, a greater authority, a more potent fact, which shall envelop capital and the state and subjugate them.*” For, “*to combat and reduce power, to put it in its proper place in society, it is of no use to change the holders of power or introduce some variation into its workings: an agricultural and industrial combination must be found by means of which power, today the ruler of society, shall become its slave.*” [**System of Economical Contradictions**, p. 398 and p. 397]

To use an analogy, the pro-election radical argues that the state is like a person with a stick that intends to use it against you and your friends. Then you notice that their grasp of that stick is uncertain, and you can grab that stick away from them. If you take the stick away from them, that does not mean you have to hit them. After you take the weapon away from them, you can also break it in half and throw it away. They will have been deprived of its use, and that is the important thing.

In response the anarchist argues that instead of making plans to take their stick, we develop our muscles and skill so that we don't need a stick, so that we can beat them on our own. It takes longer, sure, to build up genuinely libertarian working class organs, but it's worth it simply because then our strength is part of us, and it can't be taken away by someone offering to “wield it on our behalf” (or saying that they will break the stick when they get it). And what do socialist and radical parties do? Offer to fight on our behalf and if we rely on others to act for us then we will be disarmed when they do not (and instead use the stick against us). Given the fact that power corrupts, any claim that by giving the stick of state power to a party we can get rid of it once and for all is naive to say the least.

And, we feel, history has proven us right time and time again.

J.2.7 Surely we should vote for reformist parties in order to show them up for what they are?

Some Leninist socialists (like the British Socialist Workers Party and their offshoots like ISO in the USA) argue that we should urge people to vote for Labour and other social democratic parties. This is because of two reasons.

Firstly, it is argued, radicals will be able to reach more people by being seen to support popular, trade union based parties. If they do not, then they are in danger of alienating sizeable sections of the working class by arguing that such parties will be no better than explicitly pro-capitalist ones.

The second argument, and the more important one, is that by electing reformist parties into office the experience of living under such a government will shatter whatever illusions its supporters had in them. In other words, by getting reformist parties elected into office they will be given the test of experience. And when they betray their supporters to protect the status quo the experience will radicalise those who voted for them, who will then seek out **real** socialist parties (namely the likes of the SWP and ISO).

Anarchists reject these arguments for three reasons.

Firstly, it is a deeply dishonest tactic as it hides the true thoughts of those who support the tactic. To tell the truth is a revolutionary act. Radicals should not follow the capitalist media by telling half-truths or distorting the facts or what they believe. They should not hide their politics or suggest they support a system or party they are opposed to. If this means being less popular in the short run, then so be it. Attacking capitalism, religion, or a host of other things can alienate people but few radicals would be so opportunistic as to hold their tongues attacking these. In the long run being honest about your ideas is the best way of producing a movement which aims to get rid of a corrupt social system. Starting such a movement with half-truths is doomed to failure.

Secondly, anarchists reject the logic of this theory. The logic underlying this argument is that by being disillusioned by their reformist leaders and party, voters will look for **new**, “better” leaders and parties. However, this fails to go to the root of the problem, namely the dependence on leaders which hierarchical society creates within people. Anarchists do not want people to follow the “best” leadership, they want them to govern themselves, to be **self**-active, manage their own affairs and not follow any would-be leaders. If you seriously think that the liberation of the oppressed is the task of the oppressed themselves (as these Leninists claim to do) then you **must** reject this tactic in favour of ones that promote working class self-activity.

And the third reason is that this tactic has been proven to fail time and time again. What most of its supporters seem to fail to notice is that voters have indeed put reformist parties into office many times (for example, there have been 7 Labour Party governments in Britain before 1997, all of whom attacked the working class) and there has been no movement away from them to something more radical. Lenin suggested this tactic over 70 years ago and there has been no general radicalisation of the voting population by this method, nor even in reformist party militants. Indeed, ironically enough, most such activists have left their parties when its been out of office and they have become disgusted by the party's attempts to appear “realistic” in order to win the next election! And this disgust often expresses itself as a demoralisation with socialism **as such**, rather than with their party's watered down version of it.

This total failure, for anarchists, is not surprising, considering the reasons why we reject this tactic. Given that this tactic does not attack hierarchy or dependence on leaders, does not attack the ideology and process of voting, it will obviously fail to present a real alternative to the voting population (who will turn to other alternatives available at election time and not embrace direct action). Also, the sight of a so-called “socialist” or “radical” government managing capitalism, imposing cuts, breaking strikes and generally attacking its supporters will damage the credibility of any form of socialism and discredit all socialist and radical ideas in the eyes of the population. And if the experience of the Labour Government in Britain during the 1970s is anything to go by, it may result in the rise of the right-wing who will capitalise on this disillusionment.

By refusing to argue that no government is “on our side,” radicals who urge us to vote reformist “without illusions” help to disarm theoretically the people who listen to them. Working class people, surprised, confused and disorientated by the constant “betrayals” of left-wing parties may turn to right wing parties (who can be elected) to stop the attacks rather than turn to direct action as the radical minority within the working class did not attack voting as part of the problem.

How many times must we elect the same party, go through the same process, the same betrayals before we realise this tactic does not work? And, if it **is** a case of having to experience something before people reject it, few state socialists take this argument to its logical conclusion. We rarely hear them argue we must experience the hell of fascism or Stalinism or the nightmare of free market capitalism in order to ensure working class people “see through” them.

Anarchists, in contrast, say that we can argue against reformist politics without having to associate ourselves with them by urging people to vote for them. By arguing for abstentionism we can help arm theoretically people who will come into conflict with these parties once they are in office. By arguing that all governments will be forced to attack us (due to the pressure from capital and state) and that we have to rely on our own organisations and power to defend ourselves, we can promote working class self-confidence in its own abilities, and encourage the rejection of capitalism, the state and hierarchical leadership as well as encouraging the use of direct action.

And, we may add, it is not required for radicals to associate themselves with the farce of parliamentary propaganda in order to win people over to our ideas. Non-anarchists will see us use **direct action**, see us **act**, see the anarchistic alternatives we create and see and read our propaganda. Non-anarchists can be reached quite well without taking part or associating ourselves with parliamentary action.

J.2.8 Will abstentionism lead to the right winning elections?

Possibly. However anarchists don't just say “*don't vote*”, we say “*organise*” as well. Apathy is something anarchists have no interest in encouraging. So, “[*if the anarchists could persuade half the electorate to abstain from voting this would, from an electoral point of view, contribute to the [electoral] victory of the Right. But it would be a hollow victory, for what government could rule when half the electorate by not voting had expressed its lack of confidence in all governments?*” [Vernon Richards, **The Impossibilities of Social Democracy**, p. 142]

In other words, whichever party was in office would have to rule over a country in which a sizeable minority, even a majority, had rejected government as such. This would mean that the politicians “*would be subjected to real pressures from people who believed in their own power*” and acted accordingly. So anarchists call on people **not** to vote, but instead organise themselves and be conscious of their own power both as individuals and as part of a union with others. Only this “*can command the respect of governments, can curb the power of government as millions of crosses on bits of paper never will.*” [**Ibid.**]

As Emma Goldman pointed out, “*if the Anarchists were strong enough to swing the elections to the Left, they must also have been strong enough to rally the workers to a general strike, or even a series of strikes. . . In the last analysis, the capitalist class knows too well that officials, whether they belong to the Right or the Left, can be bought. Or they are of no consequence to their pledge.*” [**Vision on Fire**, p. 90]

The mass of the population, however, cannot be bought off and if they are

willing and able to resist then they can become a power second to none. Only by organising, fighting back and practicing solidarity where we live and work can we **really** change things. That is where **our** power lies, that is where we can create a **real** alternative. By creating a network of self-managed, pro-active community and workplace organisations we can impose by direct action that which politicians can never give us from Parliament. And only such a movement can stop the attacks upon us by whoever gets into office. A government (left or right) which faces a mass movement based upon direct action and solidarity will always think twice before proposing cuts or introducing authoritarian laws.

Of course, all the parties claim that they are better than the others and this is the logic of this question — namely, we must vote for the lesser evil as the right-wing in office will be terrible. But what this forgets is that the lesser evil is still an evil. What happens is that instead of the greater evil attacking us, we get the lesser evil doing what the right-wing was going to do. And, since we are discussing the “lesser evil,” let us not forget it was the “lesser evil” of the Democrats (in the USA) and Labour (in the UK) who introduced the monetarist and other policies that Reagan and Thatcher made their own (and we may add that the US Air Traffic Controllers union endorsed Reagan against Carter in 1980 because they thought they would get a better deal out of the Republicans. Reagan then went on to bust the union once in office). Simply put, we cannot expect a different group of politicians to react differently to the same economic and political pressures and influences.

So, voting for other politicians will make little difference. The reality is that politicians are puppets. As we argued above (in section J.2.2) real power in the state does not lie with politicians, but instead within the state bureaucracy and big business. Faced with these powers, we have seen left-wing governments from Spain to New Zealand introduce right-wing policies. So even if we elected a radical party, they would be powerless to change anything important and soon be forced to attack us in the interests of capitalism. Politicians come and go, but the state bureaucracy and big business remain forever!

Therefore we cannot rely on voting for the lesser evil to save us from the possible dangers of a right-wing election victory brought about by abstentionism. All we can hope for is that no matter who gets in, the population will resist the government because it knows and can use its real power — direct action. For the “*only limit to the oppression of government is the power with which the people show themselves capable of opposing it.*” [Errico Malatesta, **Life and Ideas**, p. 196] Hence Vernon Richards:

“If the anarchist movement has a role to play in practical politics it is surely that of suggesting to, and persuading, as many people as possible that their freedom from the Hilters, Francos and the rest, depends not on the right to vote or securing a majority of votes ‘for the candidate of ones choice,’ but on evolving new forms of political and social organisation which aim at the direct participation of the people, with the consequent weakening of the power, as well of the social role, of government in the life of the community.” [**The Raven**, no. 14, pp. 177–8]

We discuss what new forms of political and social organisations anarchists encourage in section J.5.

J.2.9 What do anarchists do instead of voting?

While anarchists reject electioneering and voting, it does not mean that we are politically apathetic. Indeed, part of the reason why anarchists reject voting is because we think that voting is not part of the solution, its part of the problem. This is because it endorses an unjust and unfree political system and makes us look to others to fight our battles for us. It **blocks** constructive self-activity and direct action. It **stops** the building of alternatives in our communities and workplaces. Voting breeds apathy and apathy is our worse enemy.

Given that we have had universal suffrage for well over 50 years in many countries and we have seen the rise of Labour and Radical parties aiming to use that system to effect change in a socialistic manner, it seems strange that we are probably further away from socialism than when they started. The simple fact is that these parties have spent so much time trying to win elections that they have stopped even thinking about creating socialist alternatives in our communities and workplaces. That is in itself enough to prove that electioneering, far from eliminating apathy, in fact helps to create it.

So, because of this, anarchists argue that the only way to not waste your vote is to spoil it! We are the only political movement who argue that nothing will change unless you act for yourself, take back the power and fight the system **directly**. Only direct action breaks down apathy and gets results — and its the first steps towards real freedom, towards a free and just society.

Therefore anarchists are the first to point out that not voting is not enough — we need to actively struggle for an alternative to both voting **and** the current system. Just as the right to vote was won after a long series of struggles, so the creation of a free, decentralised, self-managed, libertarian socialist society will be the product of social struggle.

Anarchists are the last people to deny the importance of political liberties or the importance in winning the right to vote. The question we must ask is whether it is a more a fitting tribute to the millions of people who used direct action, fought and suffered for the right to vote to use that victory to endorse a deeply unfair and undemocratic system or to use other means (indeed the means they used to win the vote) to create a system based upon true popular self-government? If we are true to our (and their) desire for a real, meaningful democracy, we would have to reject political action in favour of direct action. So, if we desire a truly libertarian and democratic society then its clear that the vote will not achieve it (and indeed put back the struggle for such a society).

This obviously gives an idea of what anarchists do instead of voting, we agitate, organise and educate. While we will discuss the various alternatives anarchists propose and attempt to organise in more detail in section J.5 (What alternative social organisations do anarchists create?) it is useful to give a brief introduction to anarchist activity here, activity which bases itself on the two broad strategies of encouraging direct action and building alternatives where we live and work.

Taking the first strategy, anarchists say that by using direct action we can force politicians to respect the wishes of the people. For example, if a government or boss tries to limit free speech, then anarchists would try to encourage a free speech fight to break the laws in question until such time as they were revoked. If a government or landlord refuses to limit rent increases or improve safety requirements for accommodation, anarchists would organise squats and

rent strikes. In the case of environmental destruction, anarchists would support and encourage attempts at halting the damage by mass trespassing on sites, blocking the routes of developments, organising strikes and so on. If a boss refuses to introduce an 8 hour day, then workers should form a union and go on strike or stop working after 8 hours. Unlike laws, the boss cannot ignore direct action (and if such action is successful, the state will hurry to pass a law about it).

Similarly, strikes combined with social protest would be effective means of stopping authoritarian laws being passed. For example anti-union laws would be best fought by strike action and community boycotts (and given the utterly ineffectual defence pursued by pro-labour parties using political action to stop anti-union laws who can seriously say that the anarchist way would be any worse?). And of course collective non-payment of taxes would ensure the end of unpopular government decisions. The example of the poll tax rebellion in the UK in the late in 1980s shows the power of such direct action. The government could happily handle hours of speeches by opposition politicians but they could not ignore social protest (and we must add that the Labour Party which claimed to oppose the tax happily let the councils controlled by them introduce the tax and arrest non-payers).

As Noam Chomsky argues, “[w]ithin the constraints of existing state institutions, policies will be determined by people representing centres of concentrated power in the private economy, people who, in their institutional roles, will not be swayed by moral appeals but by the costs consequent upon the decisions they make — not because they are ‘bad people,’ but because that is what the institutional roles demands.” He continues by arguing that “[t]hose who own and manage the society want a disciplined, apathetic and submissive public that will not challenge their privilege and the orderly world in which it thrives. The ordinary citizen need not grant them this gift. *Enhancing the Crisis of Democracy by organisation and political engagement is itself a threat to power, a reason to undertake it quite apart from its crucial importance in itself as an essential step towards social change.*” [Turning the Tide, p. 251–2]

In this way, by encouraging social protest, any government would think twice before pursuing authoritarian, destructive and unpopular policies. In the final analysis, governments can and will ignore the talk of opposition politicians, but they cannot ignore social action for very long. In the words of a Spanish anarchosyndicalist, anarchists

“do not ask for any concessions from the government. Our mission and our duty is to impose from the streets that which ministers and deputies are incapable of realising in parliament.”[quoted by Graham Kelsey, **Anarchosyndicalism, Libertarian Communism and the State**, p. 79]

The second strategy of building alternatives flows naturally from the first. Any form of campaign requires organisation and by organising in an anarchist manner we build organisations that “bear in them the living seed of the new society which is replace the old world” (to use Bakunin’s words). In organising strikes in the workplace and community we can create a network of activists and union members who can encourage a spirit of revolt against authority. By creating assemblies where we live and work we can create an effective countering

power to the state and capital. Such a union, as the anarchists in Spain and Italy proved, can be the focal point for recreating self-managed schools, social centres and so on. In this way the local community can ensure that it has sufficient independent, self-managed resources available to educate its members. Also, combined with credit unions (or mutual banks), cooperative workplaces and stores, a self-managed infrastructure could be created which would ensure that people can directly provide for their own needs without having to rely on capitalists or governments.

In other words, an essential part of anarchist activity is (in the words of a C.N.T. militant):

“We must create that part of libertarian communism which can be created within bourgeois society and do so precisely to combat that society with our own special weapons.” [quoted **Op. Cit.**, p. 79]

So, far from doing nothing, by not voting the anarchist actively encourages alternatives. As the British anarchist John Turner argued, anarchists *“have a line to work upon, to teach the people self-reliance, to urge them to take part in non-political [i.e. non-electoral] movements directly started by themselves for themselves. . . as soon as people learn to rely upon themselves they will act for themselves. . . We teach the people to place their faith in themselves, we go on the lines of self-help. We teach them to form their own committees of management, to repudiate their masters, to despise the laws of the country. . .”* [quoted by John Quail, **The Slow Burning Fuse**, p. 87] In this way we encourage self-activity, self-organisation and self-help — the opposite of apathy and doing nothing.

But what about government policies which actually do help people? While anarchists would *“hesitate to condemn those measures taken by governments which obviously benefited the people, unless we saw the immediate possibility of people carrying them out for themselves. This would not inhibit us from declaring at the same time that what initiatives governments take would be more successfully taken by the people themselves if they put their minds to the same problems. . . to build up a hospital service or a transport system, for instance, from local needs into a national organisation, by agreement and consent at all levels is surely more economical as well as efficient than one which is conceived at top level [by the state]. . . where Treasury, political and other pressures, not necessarily connected with what we would describe as **needs**, influence the shaping of policies.”* [**The Raven**, no. 14, p. 179]

Ultimately, what the state and capital gives, they can also take away. What we build by our own self-activity can last as long as we want it to and act to protect it. And anarchists are convinced that:

“The future belongs to those who continue daringly, consistently, to fight power and governmental authority. The future belongs to us and to our social philosophy. For it is the only social ideal that teaches independent thinking and direct participation of the workers in their economic struggle [and working class people in their social struggles, we may add]. For it is only through the organized economic [and social] strength of the masses that they can and will do away with the capitalist system and all the wrongs and injustices it contains. Any diversion from this stand will only retard our movement and

make it a stepping stone for political climbers.” [Emma Goldman, Vision on Fire, p. 92]

J.2.10 Does rejecting electioneering mean that anarchists are apolitical?

No. Far from it. The “apolitical” nature of anarchism is Marxist nonsense. As it desires to fundamentally change society, anarchism can be nothing but political. However, anarchism does reject (as we have seen) “normal” political activity as ineffectual and corrupting. However, many (particularly Marxists) imply this reject of the con of capitalist politics means that anarchists concentration on purely “economic” issues like wages, working conditions and so forth. And, by so doing, Marxists claim that anarchists leave the political agenda to be dominated by capitalist ideology, with disastrous results for the working class.

This view, however, is **totally** wrong. Indeed, Bakunin explicitly rejected the idea that working people could ignore politics and actually agreed with the Marxists that political indifference only led to capitalist control of the labour movement:

*“[some of] the workers in Germany . . . [were organized in] a kind of federation of small associations. . . ‘Self-help’. . . was its slogan, in the sense that labouring people were persistently advised not to anticipate either deliverance or help from the state and the government, but only from their own efforts. This advise would have been excellent had it not been accompanied by the false assurance that liberation for the labouring people is possible under **current conditions of social organisation** . . . Under this delusion. . . the workers subject to [this] influence were supposed to disengage themselves systematically from all political and social concerns and questions about the state, property, and so forth. . . [This] completely subordinated the proletariat to the bourgeoisie which exploits it and for which it was to remain an obedient and mindless tool.” [Statism and Anarchy, p. 174]*

In addition, Bakunin argued that the labour movement (and so the anarchist movement) would have to take into account political ideas and struggles but to do so in a working class way:

“The International does not reject politics of a general kind; it will be compelled to intervene in politics so long as it is forced to struggle against the bourgeoisie. It rejects only bourgeois politics.” [The Political Philosophy of Bakunin, p. 313]

So, anarchists reject capitalist politics (i.e. electioneering), but we do not ignore politics nor wider political discussion. Anarchists have always recognised the importance of political debate and ideas in social movements. As Bakunin argued should “*the International [an international organisation of working class unions and groups]. . . cease to concern itself with political and philosophical questions? Would [it] . . . ignore progress in the world of thought as well as the events which accompany or arise from the political struggle in and between states[?]. . . We hasten to say that it is absolutely impossible to ignore*

political and philosophical questions. An exclusive pre-occupation with economic questions would be fatal for the proletariat... [I]t is impossible for the workers to stop there without renouncing their humanity and depriving themselves of the intellectual and moral power which is so necessary for the conquest of their economic rights". [Bakunin on Anarchism, p. 301]

Nor do anarchists ignore elections. As Vernon Richards argues, anarchists "cannot be uninterested in . . . election results, whatever their view about the demerits of the contending Parties. The fact that the anarchist movement has campaigned to persuade people not to use their vote is proof of our commitment and interest. If there is, say, a 60 per cent. poll we will not assume that the 40 per cent. abstentions are anarchists, but we would surely be justified in drawing the conclusion that among the 40 per cent. there are a sizeable minority who have lost faith in political parties and were looking for other instruments, other values." [The Impossibilities of Social Democracy, p. 141]

Thus the charge anarchists are apolitical or indifferent to politics (even capitalist politics) is a myth. Rather, "we are not concerned with choosing between governments but with creating the situation where government can no longer operate, because only then will we organise locally, regionally, nationally and internationally to satisfy real needs and common aspirations." For "so long as we have capitalism and government, the job of anarchists is to fight both, and at the same time encourage people to take what steps they can to run their own lives." [Vernon Richards, The Raven, no. 14, p. 179]

Part of this process will be the discussion of political, social and economic issues in whatever self-managed organisations people create in their communities and workplaces (as Bakunin argued) and the use of these organisations to fight for (political, social and economic) improvements and reforms in the here and now using direct action and solidarity. This means, as Rudolf Rocker points out, anarchists desire a unification of political and economic struggles as the two as inseparable:

"[T]he Anarchists represent the viewpoint that the war against capitalism must be at the same time a war against all institutions of political power, for in history economic exploitation has always gone hand in hand with political and social oppression. The exploitation of man by man and the domination of man over man are inseparable, and each is the condition of the other." [Anarcho-Syndicalism, p. 15]

Such a unification must take place on the social and economic field, not the political, as that is where the working class is strongest. So anarchists are well aware of the need to fight for political issues and reforms, and so are "not in any way opposed to the political struggle, but in their opinion this struggle . . . must take the form of direct action, in which the instruments of economic [and social] power which the working class has at its command are the most effective. The most trivial wage-fight shows clearly that, whenever the employers find themselves in difficulties, the state steps in with the police, and even in some cases with the militia, to protect the threatened interests of the possessing classes. It would, therefore, be absurd for them to overlook the importance of the political struggle. Every event that affects the life of the community is of a political nature. In this sense every important economic action . . . is also a political action

and, moreover, one of incomparably greater importance than any parliamentary proceeding.” In other words, “just as the worker cannot be indifferent to the economic conditions of his life in existing society, so he cannot remain indifferent to the political structure of his country. Both in the struggle for his daily bread and for every kind of propaganda looking towards his social liberation he needs political rights and liberties, and he must fight for these himself with all his strength whenever the attempt is made to wrest them from him.” [Rudolf Rocker, **Anarcho-Syndicalism**, p. 77 and p. 74] Hence the comments in the C.N.T.’s newspaper **Solidaridad Obrera**:

“Does anyone not know that we want to participate in public life? Does anyone not know that we have always done so? Yes, we want to participate. With our organisations. With our papers. Without intermediaries, delegates or representatives. No. We will not go to the Town Hall, to the Provincial Capitol, to Parliament.” [quoted by Jose Pierats, **Anarchists in the Spanish Revolution**, p. 173]

So, anarchists reject the idea that political and economic struggles can be divided. Such an argument just reproduces the artificially created division of labour between mental and physical activity of capitalism within working class organisations and within anti-capitalist movements. We say that we should not separate out politics into some form of specialised activity that only certain people (i.e. our “representatives”) can do. Instead, anarchists argue that political struggles, ideas and debates must be brought into the **social** and **economic** organisations of our class where they must be debated freely by all members as they see fit and that political and economic struggle and change must go hand in hand.

As Bakunin put it, “*the proletariat itself will pose*” political and philosophical questions in their own organisations and so the political struggle (in the widest scene) will come from the class struggle, for “[w]ho can deny that out of this ever-growing organisation of the militant solidarity of the proletariat against bourgeois exploitation there will issue forth the political struggle of the proletariat against the bourgeoisie?” Anarchists simply thought that the “*policy of the proletariat*” should be “*the destruction of the State*” rather than working within it. [**Bakunin on Anarchism**, p. 302 and p. 276] As such, the people “*must organise their powers apart from and against the State.*” [**The Political Philosophy of Bakunin**, p. 376]

History indicates that any attempt at taking social and economic issues into political parties has resulting in wasted energy and the watering down of these issues into pure reformism. In the words of Bakunin, such activity suggests that “*a political revolution should precede a social revolution. . . [which] is a great and fatal error, because every political revolution taking place prior to and consequently without a social revolution must necessarily be a bourgeois revolution, and a bourgeois revolution can only be instrumental in bringing about bourgeois Socialism.*” [**Op. Cit.**, p. 289]

We have discussed this process of socialist parties becoming reformist in section J.2.6 and will not repeat ourselves here. Only by rejecting the artificial divisions of capitalist society can we remain true to our ideals of liberty, equality and solidarity. Anarchists “*maintain that the State organisation, having been the force to which minorities resorted for establishing and organising their*

power over the masses, cannot be the force which will serve to destroy these privileges.” [Peter Kropotkin, **Kropotkin’s Revolutionary Pamphlets**, p. 170]. Every example of radicals using the state has resulted in them being changed by the system instead of them changing it and, to use Bakunin’s words, “*tied the proletariat to the bourgeois towline*” (i.e. resulted in working class movements becoming dominated by capitalist ideas and activity — becoming “realistic” and “practical”).

Therefore Anarchist argue that such a union of political ideas and social organisation and activity is essential for promoting radical politics as it “*digs a chasm between the bourgeoisie and the proletariat and places the proletariat outside the activity and political conniving of all parties within the State. . . in placing itself outside all bourgeois politics, the proletariat necessarily turns against it.*” So, by “*placing the proletariat outside the politics in the State and of the bourgeois world, [the union movement] thereby constructed a new world, the world of the united proletarians of all lands.*” [Bakunin, **Bakunin on Anarchism**, p. 303, p. 305]

In addition, so-called “economic” struggles do not occur in a social vacuum. They take place in a social and political context and so, necessarily, there can exist an separation of political and economic struggles only in the mind. Strikers or eco-warriors, for example, face the power of the state enforcing laws which protect the power of employers and polluters. This necessarily has a “political” impact on those involved in struggle. As Bakunin argued social struggle results in “*the spontaneous and direct development of philosophical and sociological in the International [i.e. union/social movement], ideas which inevitably develop side by side with and are produced by the first two movements [of strikes and union organising]*” [Op. Cit., p. 304]. By channeling any “political” conclusions drawn by those involved in struggle into electoral politics, this development of political ideas and discussion will be distorted into discussions of what is possible in the current system, and so the radical impact of direct action and social struggle is weakened.

Therefore anarchists reject electioneering not because they are “apolitical” but because they do not desire to see politics remain a thing purely for politicians and experts. Political issues are far too important to leave to such people. Anarchists desire to see political discussion and change develop from the bottom up, this is hardly “apolitical” — in fact with our desire to see ordinary people directly discuss the issues that affect them, act to change things by their own action and draw their own conclusions from their own activity anarchists are very “political.” The process of individual and social liberation is the most political activity we can think of!

J.3 What kinds of organisation do anarchists build?

Anarchists are well aware of the importance of building organisations. Organisations allow those within them to multiply their strength and activity, becoming the means by which an individual can see their ideas, hopes and dreams realised. This is as true for getting the anarchist message across as for building a home, running a hospital or creating some useful product like food. Anarchists support two types of organisation — organisations of anarchists and popular organisations which are not made up exclusively of anarchists such as industrial unions, co-operatives and community assemblies. In this section of the FAQ we will discuss the kinds, nature and role of the first type of organisation, namely explicitly anarchist organisations. In addition, we discuss anarcho-syndicalism, a revolutionary unionism which aims to create an anarchist society by anarchist tactics, as well as why many anarchists are not anarcho-syndicalists. The second type of organisations, popular organisations, are discussed in detail in section J.5 which gives specific examples of the kinds of social alternatives anarchists support and create under capitalism (community and industrial unions, mutual banks, co-operatives and so on).

Both forms of organisation, however, share the anarchist commitment to confederalism, decentralisation, self-management and decision making from the bottom up. In such organisations the membership play the decisive role in running them and ensuring that power remains in their hands. They express the anarchist vision of the power and creative efficacy people have when they are self-reliant, when they act for themselves and manage their own lives directly. Anarchists insist that people must manage their own affairs (individually and collectively) and have both the right and the ability to do so. Only by organising in this way can we create a new world, a world worthy of human beings and unique individuals.

Anarchist organisation in all its forms reflects the anarchist desire to “*build the new world in the shell of the old*” and to empower the individual. We reject the notion that it does not really matter how we organise to change society. Indeed, nothing could be further from the truth. We are all the products of the influences and social relationships in our lives, this is a basic idea of (philosophical) materialism. Thus the way our organisations are structured has an impact on us. If the organisation is centralised and hierarchical (no matter how “democratically” controlled any officials or leaders are) then those subject

to it will, as in any hierarchical organisation, see their abilities to manage their own lives, their creative thought and imagination eroded under the constant stream of orders from above. This in turn justifies the pretensions to power of those at the top, as the capacity of self-management of the rank and file is weakened by authoritarian social relationships.

This means anarchist organisations are so structured so that they allow everyone the maximum potential to participate. Such participation is the key for a free organisation. As Malatesta argued:

“The real being is man, the individual. Society or the collectivity. . . if it is not a hollow abstraction, must be made up of individuals. And it is in the organism of every individual that all thoughts and human actions inevitably have their origin, and from being individual they become collective thoughts and acts when they are or become accepted by many individuals. Social action, therefore, is neither the negation nor the complement of individual initiative, but is the resultant of initiatives, thoughts and actions of all individuals who make up society.”[**Anarchy**, p. 36]

Anarchist organisations exist to allow this development and expression of individual initiatives. This empowering of the individual is an important aspect of creating viable solidarity for sheep cannot express solidarity, they only follow the shepherd. Therefore, *“to achieve their ends, anarchist organisations must, in their constitution and operation, remain in harmony with the principles of anarchism; that is, they must know how to blend the free action of individuals with the necessity and the joy of co-operation which serve to develop the awareness and initiative of their members and a means of education for the environment in which they operate and of a moral and material preparation for the future we desire.”* [Errico Malatesta, **The Anarchist Revolution**, p. 95]

As such, anarchist organisations reflect the sort of society anarchists desire. We reject as ridiculous the claim of Marxists and Leninists that the form of organisation we build is irrelevant and therefore we must create highly centralised parties which aim to become the leadership of the working class. No matter how “democratic” such organisations are, they just reflect the capitalist division of labour between brain and manual work and the Liberal ideology of surrendering our ability to govern ourselves to an elected elite. In other words, they just mirror the very society we are opposed to and so will soon produce the very problems **within** so-called anti-capitalist organisations which originally motivated us to oppose capitalism in the first place. Because of this, anarchists regard *“the Marxist party as another statist form that, if it succeeded in ‘seizing power,’ would preserve the power of one human being over another, the authority of the leader over the led. The Marxist party. . . was a mirror image of the very society it professed to oppose, an invasion of the camp of revolutionaries by bourgeois values, methods, and structures.”* [**The Spanish Anarchists**, pp. 179–80] As can be seen from the history of the Russian Revolution, this was the case with the Bolsheviks soon taking the lead in undermining workers’ self-management, soviet democracy and, finally, democracy within the ruling party itself. Of course, from an anarchist (i.e. materialist) point of view, this was highly predictable — after all, *“facts are before ideas; yes, the ideal, as Proudhon said, is but a flower whose root lies in the material conditions of existence.”*

[Bakunin, **God and the State**, p.9] — and so it is unsurprising that hierarchical parties helped to maintain a hierarchical society. In the words of the famous Sonvillier Circular (issued by the libertarian sections of the First International):

“How could one want an egalitarian and free society to issue from an authoritarian organisation? It is impossible.”

We must stress here that anarchists are **not** opposed to organisation and are **not** opposed to organisations of anarchists (i.e. **political** organisations, although anarchists generally reject the term “party” due to its statist and hierarchical associations). Murray Bookchin makes the issues clear when he wrote that the “*real question at issue here is not 0organisation versus non-organisation, but rather what **kind** of organisation ... [anarchist] organisations ... [are] organic developments from below ... They are social movements, combining a creative revolutionary lifestyle with a creative revolutionary theory ... As much as is humanly possibly, they try to reflect the liberated society they seek to achieve ... [and] are built around intimate groups of brothers and sisters — affinity groups ... [with] co-ordination between groups ... discipline, planning, and unity in action. ... achieved **voluntarily**, by means of a self-discipline nourished by conviction and understanding.*” [**Post-Scarcity Anarchism**, pp. 214–215]

Anarchists reject the “centralised” model of the party as it is a “revolutionary” grouping organised on the capitalist model. It is not revolutionary at all. It simply reproduces the very problems within the “revolutionary” movement that, ironically, inspired the initial revolt of its members against capitalism and their move towards socialism. The idea that the membership should run the organisation becomes simply that the majority designates its rulers and, like the bourgeois system of parliamentary democracy it is copied from, quickly becomes drained of any real meaning and becomes a veil thrown over the unlimited power of a few party leaders. The membership does not run the party simply because it elects delegates once a year who, in turn, designate the central committee — no more than the people are sovereign in a parliamentary-style republic because they vote for the deputies who designate the government. Moreover, it trains the membership in accepting a division between leaders and led which, if applied during a revolution, will quickly mean that the party, **not** the masses, have real power.

Ultimately, centralised organisations become very undemocratic and, equally as important, **ineffective**. Hierarchical organisations kill people’s enthusiasm and creativity. Such organisations are organisations where plans and ideas are not adopted because they are the best but simply because it is what a handful of leaders **think** are best for everyone else. Really effective organisations are those which make decisions based frank and open co-operation and debate, where dissent is **not** stifled and ideas are adopted because of their merit, and not **who** suggests them (i.e. the leaders of the party). In their quest for power and command, authoritarians usually end up manipulating processes, railroad their agendas, and in the process alienate people — exactly those people who are new to organising for social change. They cause experienced organisers to quit and put-off people who might otherwise join the movement.

This is why anarchists stress federalist organisation. It ensures that co-ordination flows from below and there is no institutionalised leadership. By organising in a way that reflects the kind of society we want, we train ourselves

in the skills and decision making processes required to make a free and classless society work. Means and ends are united and this ensures that the means used will result in the desired ends. Simply put, libertarian means must be used if you want libertarian ends (see section H.1.6 for further discussion).

In the sections that follow, we discuss the nature and role of anarchist organisation. Anarchists would agree totally with these words of the Situationist Guy Debord that a “*revolutionary organisation must always remember that its objective is not getting people to listen to speeches by expert leaders, but getting them to speak for themselves*” and organise their groups accordingly. Section J.3.1 discusses the basic building block of specifically anarchist organisations, the “*affinity group.*” Sections J.3.2, J.3.3, J.3.4 and J.3.5, we discuss the main types of federations of “*affinity groups*” anarchists create to help spread our message and influence. Then section J.3.6 highlights the role these organisations play in our struggles to create an anarchist society. Many Marxists fail to understand the nature of anarchist organisation and, because of this, misunderstand Bakunin’s expression “*Invisible Dictatorship*” and paint a picture of him (and, by implication, all anarchists) as a hierarchical would-be dictator. Section J.3.7 analyses these claims and shows why they are wrong. Finally, in sections J.3.8 and J.3.9 we discuss anarcho-syndicalism and other anarchists attitudes to it.

The power of ideas cannot be under estimated, for “*if you have an idea you can communicate it to a million people and lose nothing in the process, and the more the idea is propagated the more it acquires in power and effectiveness*” [The Anarchist Revolution, p. 46]. The right idea at the right time, one that reflects the needs of individuals and of required social change, can have a transforming effect on those who hold the idea and the society they live in. That is why organisations that anarchists create to spread their message are so important and why we devote a whole section to them.

Anarchist organisations, therefore, aim to enrich social struggle by their ideas and suggestions but also, far more importantly, enrich the idea by practical experience and activity. In other words, a two way process by which life informs theory and theory aids life. The means by which this social dynamic is created and developed is the underlying aim of anarchist organisation and is reflected in its theoretical role we highlight in the following sections.

J.3.1 What are affinity groups?

Affinity groups are the basic organisation which anarchists create to spread the anarchist idea. The term “*affinity group*” comes from the Spanish F.A.I. (**Iberian Anarchist Federation**) and refers to the organisational form devised by the Spanish Anarchists in their struggles. It is the English translation of “*grupo de afinidad.*” At its most basic, it is a (usually small) group of anarchists who work together to spread their ideas to the wider public, using propaganda, initiating or working with campaigns and spreading their ideas **within** popular organisations (such as unions) and communities. It aims not to be a “leadership” but to give a lead, to act as a catalyst within popular movements. Unsurprisingly it reflects basic anarchist ideas:

“Autonomous, communal and directly democratic, the group combines revolutionary theory with revolutionary lifestyle in its every-

day behaviour. It creates a free space in which revolutionaries can remake themselves individually, and also as social beings. [Murray Bookchin, **Post-Scarcity Anarchism**, p. 221]

The reason for this is simple, for a “*movement that sought to promote a liberatory revolution had to develop liberatory and revolutionary forms. This meant . . . that it had to mirror the free society it was trying to achieve, not the repressive one it was trying to overthrow. If a movement sought to achieve a world united by solidarity and mutual aid, it had to be guided by these precepts; if it sought to achieve a decentralised, stateless, non-authoritarian society, it had to be structured in accordance with these goals.*” [The Spanish Anarchists, p. 180]

The aim of an anarchist (i.e. anti-authoritarian) organisation is to promote a sense of community, of confidence in ones own abilities, to enable all to be involved in the identification, initiation and management of group/communal needs and decisions. Moreover, they must ensure that individuals are in a position (both physically, as part of a group/community, and mentally, as an individual) to manage their own lives and take direct action in the pursuit of individual and communal needs and desires.

Anarchist organisation is about empowering all, to develop “integral” or whole individuals and a community that encourages individuality (not abstract “individualism”) and solidarity. It is about collective decision making from the bottom up, that empowers those at the “base” of the structure and only delegates the work of co-ordinating and implementing the members decisions (and not the power of making decisions for people). In this way the initiative and power of the few (government) is replaced by the initiative and empowerment of all (anarchy).

Affinity groups exist to achieve these aims and are structured to encourage them.

The local affinity group is the means by which anarchists co-ordinate their activities in a community, workplace, social movement and so on. Within these groups, anarchists discuss their ideas, politics and hopes, what they plan to do, write leaflets and organise other propaganda work, discuss how they are going to work within wider organisations like unions, how their strategies fit into their long term plans and goals and so on. It is the basic way that anarchists work out their ideas, pull their resources and get their message across to others. There can be affinity groups for different interests and activities (for example a workplace affinity group, a community affinity group, an anarchy-feminist affinity group, etc., could all exist within the same area, with overlapping members). Moreover, as well as these more “political” activities, the “affinity group” also stresses the “*importance of education and the need to live by Anarchist precepts — the need . . . to create a counter-society that could provide the space for people to begin to remake themselves.*” [Bookchin, **Ibid.**] In other words, “affinity groups” aim to be the “*living germs*” of the new society in **all** aspects, not purely in a structurally way.

These basic affinity groups are not seen as being enough in themselves. Most anarchists see the need for local groups to work together with others in a confederation. Such co-operation aims to pull resources and reduce duplicating efforts, in other words, expanding the options for the individuals and groups who are part of the federation. Such a federation is based upon the “[f]ull autonomy,

full independence and therefore full responsibility of individuals and groups; free accord between those who believe it useful to unite in co-operating for a common aim; moral duty to see through commitments undertaken and to do nothing that would contradict the accepted programme. It is on these bases that the practical structures, and the right tools to give life to the organisation should be build and designed. [Errico Malatesta, **The Anarchist Revolution**, p. 101]

Therefore, affinity groups are self-managed, autonomous groupings of anarchists who unite and work on specific activities and interests. They are a key way for anarchists to co-ordinate their activity and spread their message of individual freedom and voluntary co-operation. However, the description of what an “affinity group” is does not explain **why** anarchists organise in that way. For a discussion on the role these groups play in anarchist theory, see section J.3.6. Essentially, these “affinity groups” are the means by which anarchists actually intervene in social movements and struggles in order to win people to the anarchist idea and so help transform them from struggles **against** injustice into struggles **for** a free society, as we will discuss later.

To aid in this process of propaganda, agitation, political discussion and development, anarchists organise federations of affinity groups. These take three main forms, “**synthesis**” federations (see section J.3.2), “**Platformist**” federations (see section J.3.3 and section J.3.4 for criticism of this tendency) and “**class struggle**” groups (see section J.3.5). However, we must note here that these types of federation are not mutually exclusive Synthesis type federations often have “class struggle” and “platformist” groups within them (although, as will become clear, Platformist federations do not have synthesis groups within them) and most countries have different federations representing the different political perspectives within the movement. Moreover, it should also be noted that no federation will be a totally “pure” expression of each tendency. “Synthesis” groups merge in “class struggle” ones, platformist groups do not subscribe totally to the Platform and so on. We isolate each tendency to show its essential features. In real life few, if any, federations will exactly fit the types we highlight. It would be more precise to speak of organisations which are descended from a given tendency, for example the French Anarchist Federation is obviously mostly influenced by the synthesis tradition but it is not, strictly speaking, 100% synthesis. Lastly, we must also note that the term “class struggle” anarchist group in no way implies that “synthesis” and “platformist” groups do not support the class struggle, they most definitely do — the technical term “class struggle” organisation we use, in other words, does **not** mean that other kinds of organisations are not class-struggle!

All the various types of federation are based on groups of anarchists organising themselves in a libertarian fashion. This is because anarchists try to live by the values of the future to the extent that this is possible under capitalism and try to develop organisations based upon mutual aid and brotherhood, in which control would be exercised from below upward, not downward from above.

It must be stressed anarchists do not reduce the complex issue of political organisation and ideas into **one** organisation but instead recognise that different threads within anarchism will express themselves in different political organisations (and even within the same organisation). Therefore a diversity of anarchist groups and federations is a good sign and expresses the diversity of political and individual thought to be expected in a movement aiming for a society based upon freedom. All we aim in the next four sections is paint

a broad picture of the differences between different perspectives on anarchist organising. However, the role of these federations is as described here, that of an “aid” in the struggle, not a new leadership wanting power.

J.3.2 What are “synthesis” federations?

As noted in the last section, there are three main types of affinity group federation — “synthesis”, “class struggle” (our term) and “platformist.” In this section we discuss “synthesis” federations.

The “synthesis” group acquired its name from the work of the Russian anarchist Voline and the French anarchist Sebastien Faure. Voline published in 1924 a paper calling for “*the anarchist synthesis*” and was also the author of the article in Faure’s **Encyclopedie Anarchiste** on the very same topic. However, its roots lie in the Russian revolution and the **Nabat** federation (or the “*Anarchist Organisations of the Ukraine*”) created in 1918. The aim of the **Nabat** was “*organising all of the life forces of anarchism; bringing together through a common endeavour all anarchists seriously desiring of playing an active part in the social revolution which is defined as a process (of greater or lesser duration) giving rise to a new form of social existence for the organised masses.*” [**No Gods, No Masters**, vol. 2, p. 117]

The “synthesis” organisation is based on uniting all kinds of anarchists in one federation as there is, to use the words of the **Nabat**, “*validity in all anarchist schools of thought. We must consider all diverse tendencies and accept them.*” [cited in “*The Reply*,” **Constructive Anarchism**, p. 32] The “synthesis” organisation attempts to get different kinds of anarchists “*joined together on a number of basic positions and with the awareness of the need for planned, organised collective effort on the basis of federation.*” [**Ibid.**] These basic positions would be based on a synthesis of the viewpoints of the members of the organisation, but each tendency would be free to agree their own ideas due to the federal nature of the organisation.

An example of this synthesis approach is provided by the differing assertions that anarchism is a theory of classes (as stated by the Platform, among others), that anarchism is a humanitarian ideal for all people (supporters of such a position sometimes accuse those who hold a class based version of anarchism of Marxism) and that anarchism is purely about individuals (and so essentially individualist and having nothing to do with humanity or with a class). The synthesis of these positions would be as follows:

“We must create a synthesis and state that anarchism contains class elements as well as humanism and individualist principles ... Its class element is above all its means of fighting for liberation; its humanitarian character is its ethical aspect, the foundation of society; its individualism is the goal of humanity.” [**Ibid.**]

So, as can be seen, the “synthesis” tendency aims to unite all anarchists (be they individualist, mutualist, syndicalist or communist) into one common federation. Thus the “synthesis” viewpoint is “inclusive” and obviously has affinities with the “*anarchism without adjectives*” approach favoured by many anarchists (see section A.3.8 for details). However, in practice many “synthesis” organisations are more restrictive (for example, they could aim to unite all

social anarchists like the French Anarchist Federation does). This means that there can be a difference between the general idea of the synthesis and how it is actually and concretely applied.

The basic idea behind the synthesis is that the anarchist scene (in most countries, at most times, including France in the 1920s and Russia during the revolution and at this time) is divided into three main tendencies: communist anarchism, anarcho-syndicalism, and individualist anarchism. This division can cause severe damage to the anarchist movement, simply because of the many (and often redundant) arguments and diatribes on why “my anarchism is best” can get in the way of working in common in order to fight our common enemies, known as state, capitalism and authority. The “synthesis” federations are defined by agreeing what is the common denominator of the various tendencies within anarchism and agreeing a minimum programme based on this for the federation. This would allow a “*certain ideological and tactical unity among organisations*” within the “synthesis” federation. [Op. Cit., p. 35]

Moreover, as well as saving time and energy for more important tasks, there are technical and efficiency reasons for unifying into one organisation, namely allowing the movement to have access to more resources and being able to co-ordinate them so as to maximise their use and impact. The “synthesis” federation, like all anarchist groups, aims to spread anarchist ideas within society as a whole. They believe that their role is to “*assist the masses only when they need such assistance. . . the anarchists are part of the membership in the economic and social mass organisations [such as trade unions, for example]. They act and build as part of the whole. An immense field of action is opened to them for ideological [sic!], social and creative activity without assuming a position of superiority over the masses. Above all they must fulfil their ideological [sic!] and ethical influence in a free and natural manner. . . [they] only offer ideological assistance, but not in the role of leaders.*” [Op. Cit., p. 33] This, as we shall see in section J.3.6, is the common anarchist position as regards the role of an anarchist group. And, just to stress the point, this also shows that “synthesist” federations are usually class-struggle organisations (i.e. support and take part in the class-struggle as the key means of creating an anarchist society and making the current one freer and fairer).

The great strength of “synthesis” federations, obviously, is that they allow a wide and diverse range of viewpoints to be expressed within the organisation (which can allow the development of political ideas and theories by constant discussion and debate). In addition, they allow the maximum amount of resources to be made available to individuals and groups within the organisation.

This is why we find the original promoters of the “synthesis” arguing that “*that first step toward achieving unity in the anarchist movement which can lead to serious organisation is collective ideological work on a series of important problems that seek the clearest possible collective solution. . . [discussing] concrete questions [rather than “philosophical problems and abstract dissertations”]. . . [and] suggest that there be a publication for discussion in every country where the problems in our ideology [sic!] and tactics can be fully discussed, regardless of how ‘acute’ or even ‘taboo’ it may be. The need for such a printed organ, as well as oral discussion, seems to us to be a ‘must’ because it is the practical way, to try to achieve ‘ideological unity’, ‘tactical unity’, and possibly organisation. . . A full and tolerant discussion of our problems. . . will create a basis for understanding, not only among anarchists, but among different con-*

ceptions of anarchism." [Ibid., p. 35]

The "synthesis" idea for anarchist organisation was taken up by those who opposed the Platform (see next section). For both Faure and Voline, the basic idea was the same, namely that the historical tendencies in anarchism (communist, syndicalist and individualist) must co-operate and work in the same organisation. However, there are differences between Voline's and Faure's points of view. The latter saw these various tendencies as a wealth in themselves and advocated that each tendency would gain from working together in a common organisation. From Voline's point of view, the emergence of these various tendencies was historically needed to discover the in-depth implications of anarchism in various settings (such as the economical, the social and individual life). However, it was the time to go back to anarchism as a whole, an anarchism considerably empowered by what each tendency could give it, and in which tendencies as such should dissolve. Moreover, these tendencies co-existed in every anarchist at various levels, so all anarchists should aggregate in an organisation where these tendencies would disappear (both individually and organisationally, i.e. there would not be an "anarcho-syndicalist" specific tendency inside the organisation, and so forth).

The "synthesis" federation would be based on complete autonomy (within the basic principles of the Federation and Congress decisions, of course) for groups and individuals, so allowing all the different trends to work together and express their differences in a common front. The various groups would be organised in a federal structure, combining to share resources in the struggle against state, capitalism and all other forms of oppression. This federal structure is organised at the local level through a "local union" (i.e. the groups in a town or city), at the regional level (i.e. all groups in, say, Strathclyde are members of the same regional union) up to the "national" level (i.e. all groups in France, say) and beyond.

As every group in the federation is autonomous, it can discuss, plan and initiate an action (such as campaign for a reform, against a social evil, and so on) without having to others in the federation (or have to wait for instructions). This means that the local groups can respond quickly to local issues. This does not mean that each group works in isolation. These initiatives may gain federal support if local groups see the need. The federation can adopt an issue if it is raised at a federal conference and other groups agree to co-operate on that issue. Moreover, each group has the freedom **not** to participate on a specific issue while leaving others to do so. Thus groups can concentrate on what they are interested in most.

The programme and policies of the federation would be agreed at regular delegate meetings and congresses. The "synthesis" federation is "managed" at the federal level by "relations committees" made up of people elected and mandated at the federation congresses. These committees would have a purely administrative role, spreading information, suggestions and proposals coming from groups and individuals within the organisation, for example, or looking after the finances of the federation and so on. They do not have any more rights in regards to this than any other member of the federation (i.e. they could not make a proposal as a committee, just as members of their local group or as individuals). These administrative committees are accountable to the federation and subject to both mandates and recall.

The **French Anarchist Federation** is a good example of a successful fed-

eration which is heavily influenced by “synthesis” ideas (as is the **Italian Anarchist Federation** and many other anarchist federations across the world). Obviously, how effective a “synthesis” federation is depends upon how tolerant members are of each other and how seriously they take their responsibilities towards their federations and the agreements they make.

Of course, there are problems involved in most forms of organisation, and the “synthesis” federation is no exception. While diversity can strengthen an organisation by provoking debate, a diverse grouping can often make it difficult to get things done. Platformist and other critics of the “synthesis” federation argue that it can be turned into a talking shop and any common programme difficult to agree, never mind apply. For example, how can mutualists and communists agree on the ends, never mind the means, their organisation supports? One believes in co-operation within a (modified) market system and reforming capitalism and statism away, while the other believes in the abolition of commodity production and money and revolution as the means of so doing. Ultimately, all they could do would be to agree to disagree and thus any joint programmes and activity would be somewhat limited. It could, indeed, be argued that both Voline and Faure forgot essential points, namely what is this common denominator between the different kinds of anarchism, how do we achieve it and what is in it? For without this agreed common position, many so-called “anarchist synthesist organisations” end up becoming little more than talking shops, escaping from any social perspective or any organisational perspective and soon becoming neither organisations, nor anarchist, nor synthesist as both Faure and Voline meant by the term.

It is this (potential) disunity that lead the authors of the Platform to argue that “[s]uch an organisation having incorporated heterogeneous theoretical and practical elements, would only be a mechanical assembly of individuals each having a different conception of all the questions of the anarchist movement, an assembly which would inevitably disintegrate on encountering reality.” [The **Organisational Platform of the Libertarian Communists**, p. 12] The Platform suggested “*Theoretical and Tactical Unity*” as a means of overcoming this problem, but that term provoked massive disagreement in anarchist circles (see section J.3.4). In reply to the Platform, supporters of the “synthesis” counter by pointing to the fact that “Platformist” groups are usually very small, far smaller than “synthesis” federations (for example, compare the size of the French Anarchist Federation with, say, the Irish based Workers Solidarity Movement or the French Alternative Libertaire). This means, they argue, that the Platform does not, in fact, lead to a more effective organisation, regardless of the claims of its supporters. Moreover, they argue that the requirements for “*Theoretical and Tactical Unity*” help ensure a small organisation as differences would express themselves in splits than constructive activity. Needless to say, the discussion continues within the movement on this issue!

What can be said is that this potential problem within “synthesisism” has been the cause of some organisations failing or becoming little more than talking shops, with each group doing its own thing and so making co-ordination pointless as any agreements made would be ignored (according to many this was a major problem with the **Anarchist Federation of Britain**, for example). Most supporters of the synthesis would argue that this is not what the theory aims for and that the problem lies in a misunderstanding of the theory rather than the theory itself (as can be seen from the FAF and FAI, “synthesis” inspired

federations can be **very** successful). Non-supporters are more critical, with some supporting the “Platform” as a more effective means of organising to spread anarchist ideas and influence (see the next section). Other social anarchists create the “class struggle” type of federation (this is a common organisational form in Britain, for example) as discussed in section J.3.5.

J.3.3 What is the “Platform”?

The Platform is a current within anarcho-communism which has specific suggestions on the nature and form which an anarchist federation takes. Its roots lie in the Russian anarchist movement, a section of which published “*The Organisational Platform of the Libertarian Communists*” when in exile from the Bolshevik dictatorship in Paris, in 1926. The authors of the work included Nestor Makhno, Peter Arshinov and Ida Mett. At the time it provoked intense debate (and still does in most anarchist) circles between supporters of the Platform (usually called “Platformists”) and those who oppose it (which includes other communist-anarchists, anarcho-syndicalists and supporters of the “synthesis”). We will discuss why many anarchists oppose the Platform in the next section. Here we discuss what the Platform argued for.

Like the “synthesis” federation (see last section), the Platform was created in response to the experiences of the Russian Revolution. The authors of the Platform (like Voline and other supporters of the “synthesis”) had participated in that Revolution and saw all their work, hopes and dreams fail as the Bolshevik state triumphed and destroyed any chances of socialism by undermining soviet democracy, workers’ self-management of production, trade union democracy as well as fundamental individual freedoms and rights (see the appendix on “What happened during the Russian Revolution?” for details). Moreover, the authors of the Platform had been leading activists in the Makhnovist movement in the Ukraine, which had successfully resisted both White and Red armies in the name of working class self-determination and anarchism (see “Why does the Makhnovist movement show there is an alternative to Bolshevism? “). Facing the same problems of the Bolshevik government, the Makhnovists had actively encouraged popular self-management and organisation, freedom of speech and of association, and so on, whereas the Bolsheviks had not. Thus they were aware that anarchist ideas not only worked in practice, but that the arguments of Leninists who maintained that Bolshevism (and the policies it introduced at the time) was the only “practical” response to the problems facing a revolution were false.

They wrote the pamphlet in order to examine why the anarchist movement had failed to build on their successes in gaining influence within the working class. As can be seen from their work in the factory committees, where workers organised their own workforces and had begun to build a society based on both freedom and equality, anarchist ideas had proven to be both popular and practical. While repression by the Bolsheviks (as documented by Voline in his classic history of the Russian Revolution, **The Unknown Revolution**, for example) did play a part in this failure, it did not explain everything. Also important, in the eyes of the Platform authors, was the lack of anarchist organisation **before** the revolution. In the first paragraph they state:

“It is very significant that, in spite of the strength and incontestably

positive character of libertarian ideas, and in spite of the facing up to the social revolution, and finally the heroism and innumerable sacrifices borne by the anarchists in the struggle for anarchist communism, the anarchist movement remains weak despite everything, and has appeared, very often, in the history of working class struggles as a small event, an episode, and not an important factor.” [Organisational Platform of the Libertarian Communists, p. 11]

This weakness in the movement derived from a number of causes, the main one being “*the absence of organisational principles and practices*” within the anarchist movement. Indeed, they argued, “*the anarchist movement is represented by several local organisations advocating contradictory theories and practices, having no perspectives for the future, nor of a continuity in militant work, and habitually disappearing, hardly leaving the slightest trace behind them.*” This explained the “*contradiction between the positive and incontestable substance of libertarian ideas, and the miserable state in which the anarchist movement vegetates.*” [Ibid.] For anyone familiar with the anarchist movement in many countries, these words will still strike home. Thus the Platform still appears to many anarchists a relevant and important document, even if they are not Platformists.

The author’s of the Platform proposed a solution to this problem, namely the creation of certain type of anarchist organisation. This organisation would be based upon communist-anarchist ideas exclusively, while recognising syndicalism as a principal method of struggle. Like most anarchists, the Platform placed class and class struggle as the centre of their analysis, recognising that the “*social and political regime of all states is above all the product of class struggle. . . The slightest change in the course of the battle of classes, in the relative locations of the forces of the class struggle, produces continuous modifications in the fabric and structure of society.*” [Op. Cit., p. 14] And, again, like most anarchists, the Platform aimed to “*transform the present bourgeois capitalist society into a society which assures the workers the products of the labours, their liberty, independence, and social and political equality,*” one based on a “*federalist system of workers organisations of production and consumption, united federatively and self-administering.*” In addition, they argued that the “*birth, the blossoming, and the realisation of anarchist ideas have their roots in the life and the struggle of the working masses and are inseparable bound to their fate.*” [Op. Cit., p. 15, p. 19 and p. 15] Again, most anarchists (particularly social anarchists) would agree — anarchist ideas will (and have) wither when isolated from working class life since only working class people, the vast majority, can create a free society and anarchist ideas are expressions of working class experience (remove the experience and the ideas do not develop as they should).

In order to create such a free society it is necessary, argue the Platformists, “*to work in two directions: on the one hand towards the selection and grouping of revolutionary worker and peasant forces on a libertarian communist theoretical basis (a specifically libertarian communist organisation); on the other hand, towards regrouping revolutionary workers and peasants on an economic base of production and consumption (revolutionary workers and peasants organised around production [i.e. syndicalism, unionism]; workers and free peasants co-*

operatives)” [Op. Cit., p. 20] Again, most anarchists would agree with this along with the argument that “*anarchism should become the leading concept of revolution. . . The leading position of anarchist ideas in the revolution suggests an orientation of events after anarchist theory. However, this theoretical driving force should not be confused with the political leadership of the statist parties which leads finally to State Power.*” [Op. Cit., p. 21] The “synthesis” critics of the Platform also recognised the importance of spreading anarchist ideas within popular and revolutionary movements and supporting the class struggle, for example, although they expressed the concept in a different way.

This “*leadership of ideas*” (see also section J.3.6 for more on this) would aim at developing and co-ordinating libertarian feelings already existing within social struggle. “*Although the masses,*” explains the Platform, “*express themselves profoundly in social movements in terms of anarchist tendencies and tenets, these . . . do however remain dispersed, being uncoordinated, and consequently do not lead to the . . . preserving [of] the anarchist orientation of the social revolution.*” [p. 21] The Platform argued that a specific anarchist organisation was required to ensure that the libertarian tendencies initially expressed in any social revolution or movement (for example, free federation, self-management in mass assemblies, mandating of delegates, decentralisation, etc.) do not get undermined by statist and authoritarians who have their own agendas.

However, these principles do not, in themselves, determine a Platformist organisation. After all, most anarcho-syndicalists and non-Platformist communist-anarchists would agree with these positions. The main point which distinguishes the Platform is its position on how an anarchist organisation should be structured and work. This is sketched in the “*Organisational Section,*” the shortest and most contentious section of the whole work. They call this the **General Union of Anarchists**. This is where they introduce the concepts of “*Theoretical and Tactical Unity*” and “*Collective Responsibility,*” concepts which are unique to the Platform.

The first concept, obviously, has two parts. Firstly the members of these organisations are in theoretical agreement with each other. Secondly they agree that if a certain type of work is prioritised, all should take part. Even today within the anarchist movement these are contentious ideas so it is worth exploring them in a little more detail.

By “*Theoretical Unity*” the Platform meant any anarchist organisation must come to an agreement on the theory upon which it is based. In other words, that members of the organisation must agree on a certain number of basic points, such as class struggle, anti-capitalism and anti-statism, and so on. An organisation in which half the members thought that union struggles were important and the other half that they were a waste of time would not be effective as the membership would spend all their time arguing with themselves. While most Platformists agreed that everyone will not agree with everything, they think its important to reach as much agreement as possible, and to translate this into action. Once a theoretical position is reached, the members have to argue it in public (even if they initially opposed it within the organisation but they do have the right to get the decision of the organisation changed by internal discussion).

Which brings us to “*Tactical Unity.*” By “*Tactical Unity*” the Platform meant that the members of an organisation should struggle together **as an organised force** rather than as individuals. Once a strategy has been agreed by the Union, all members would work towards ensuring its success (even if

they initially opposed it). In this way resources and time are concentrated in a common direction, towards an agreed objective.

Thus “*Theoretical and Tactical Unity*” means an anarchist organisation that agrees specific ideas and the means of applying those ideas. The Platform’s basic assumption is that there is a link between coherency and efficiency. By increasing the coherency of the organisation by making collective decisions and applying them, the Platform argues that this will increase the influence of anarchist ideas. Without this, they argue, better organised groups (such as Leninist ones) would be in a better position to have their arguments heard and listened to than anarchists would. Anarchists cannot be complacent, and rely on the hope that the obvious strength and rightness of our ideas will shine through and win the day. As history shows, this rarely happens and when it does, the authoritarians are usually in positions of power to crush the emerging anarchist influence (this was the case in Russia, for example). Platformists argue that the world we live in is the product of struggles between competing ideas of how society should be organised and if the anarchist voice is weak, quiet and disorganised, it will not be heard, and other arguments, other perspectives will win the day.

Which brings us to “*Collective Responsibility*,” which the Platform defines as “*the entire Union will be responsible for the political and revolutionary activity of each member; in the same way, each member will be responsible for the political and revolutionary activity of the Union.*” [Op. Cit., p. 32]

By this term, the Platform meant that each member should support the decisions made by the organisation and that each member should take part in the process of collective decision making process. Without this, argue Platformists, any decisions made will be paper decisions only as individuals and groups would ignore the agreements made by the federation (the Platform calls this “*the tactic of irresponsible individualism*” [Ibid.]). However, with “*Collective Responsibility*,” the strength of all the individuals that make up the group is magnified and collectively applied. However, as one supporter of the Platform notes:

“The Platform doesn’t go into detail about how collective responsibility works in practice. There are issues it leaves untouched such as the question of people who oppose the majority view. We would argue that obviously people who oppose the view of the majority have a right to express their own views, however in doing so they must make clear that they don’t represent the view of the organisation. If a group of people within the organisation oppose the majority decision they have the right to organise and distribute information so that their arguments can be heard within the organisation as a whole. Part of our anarchism is the belief that debate and disagreement, freedom and openness strengthens both the individual and the group to which she or he belongs.” [Red and Black Revolution, no. 4, p. 30]

The last principle in the “*Organisational Section*” of the Platform is “*Federalism*,” which it defines as “*the free agreement of individuals and organisations to work collectively towards a common objective*” and allows the “*reconcil[ing] the independence and initiative of individuals and the organisation with service to the common cause.*” [Op. Cit., p. 33] However, the Platform argues that

this principle has been “*deformed*” within the movement to mean the “*right*” to “*manifest one’s ‘ego,’ without obligation to account for duties as regards the organisation*” one is a member of. [Ibid.] In order to overcome this problem, they stress that “*the federalist type of anarchist organisation, while recognising each member’s rights to independence, free opinion, individual liberty and initiative, requires each member to undertake fixed organisation duties, and demands execution of communal decisions.*” [Op. Cit., pp. 33–4]

As part of their solution to the problem of anarchist organisation, the Platform suggested that each group would have “*its secretariat, executing and guiding theoretically the political and technical work of the organisation.*” [Op. Cit., p. 34] Moreover, the Platform suggests that “*a special organ [must] be created: the executive committee of the Union*” which would “*be in charge*” of “*the execution of decisions taken by the Union with which it is entrusted; the theoretical and organisational orientation of the activity of isolated organisations consistent with the theoretical positions and the general tactical lines of the Union; the monitoring of the general state of the movement; the maintenance of working and organisational links between all the organisations in the Union; and with other organisation.*” The rights, responsibilities and practical tasks of the executive committee are fixed by the congress of the Union. [Ibid.] This suggestion, unsurprisingly, meet with strong disapproval by most anarchists, as we will see in the next section, who argued that this would turn the anarchist movement into a centralised, hierarchical party similar to the Bolsheviks. Needless to say, supporters of the Platform reject this argument and point out that the Platform itself is not written in stone and needs to be discussed fully and modified as required. In fact, few, if any, Platformist groups, do have this “*secretariat*” structure (it could, in fact, be argued that there are no actual “Platformist” groups, rather groups influenced by the Platform, namely on the issues of “*Theoretical and Tactical Unity*” and “*Collective Responsibility*”).

Similarly, most modern day Platformists reject the idea of gathering all anarchists into one organisation. The original Platform seemed to imply that the **General Union** would be an umbrella organisation, which is made up of different groups and individuals. Most Platformists would argue that not only will there never be one organisation which encompasses everyone, they do not think it necessary. Instead they envisage the existence of a number of organisations, each internally unified, each co-operating with each other where possible, a much more amorphous and fluid entity than a General Union of Anarchists.

As well as the original Platform, most Platformists place the **Manifesto of Libertarian Communism** by Georges Fontenis and **Towards a Fresh Revolution** by the “*Friends of Durruti*” as landmark texts in the Platformist tradition. A few anarcho-syndicalists question this last claim, arguing that the “*Friends of Durruti*” manifesto has strong similarities with the CNTs pre-1936 position on revolution and thus is an anarcho-syndicalist document, going back to the position the CNT ignored after July 19th, 1936.

There are numerous Platformist and Platformist influenced organisations in the world today. These include the Irish based **Workers Solidarity Movement**, the British **Anarchist Communist Federation**, the French **Libertarian Alternative**, the Swiss **Libertarian Socialist Organisation**, the Italian **Federation of Anarchist Communists** and the South African **Workers Solidarity Federation**.

In the next section we discuss the objections that most anarchists have towards the Platform.

J.3.4 Why do many anarchists oppose the “Platform”?

When the “Platform” was published it provoked a massive amount of debate and comment, the majority of it critical. The majority of famous anarchists rejected the Platform. Indeed, only Nestor Makhno (who co-authored the work) supported its proposals, with (among others) Alexander Berkman, Emma Goldman, Voline, G.P. Maximoff, Luigi Fabbri, Camilo Berneri and Errico Malatesta rejecting its suggestions on how anarchists should organise. All argued that the Platform was trying to “*Bolshevise anarchism*” or that the authors were too impressed by the “success” of the Bolsheviks in Russia. Since then, it has continued to provoke a lot of debate in anarchist circles. So why did so many anarchists then, and now, oppose the Platform?

While many of the anti-Platformists made points about most parts of the Platform (both Maximoff and Voline pointed out that while the Platform denied the need of a “*Transitional Period*” in theory, they accepted it in practice, for example) the main bone of contention was found in the “*Organisational Section*” with its call for “*Tactical and Theoretical Unity*,” “*Collective Responsibility*” and group and executive “*secretariats*” guiding the organisation. Here most anarchists found ideas they considered incompatible with anarchist ideas. We will concentrate on this issue as it is usually considered as the most important.

Today, in some quarters of the libertarian movement, the Platformists are often dismissed as ‘want-to-be leaders’. Yet this was not where Malatesta and other critics of the Platform took issue. Malatesta and Maximoff both argued in favour of, to use Maximoff’s words, anarchists “*go[ing] into the masses... , work[ing] with them, struggle for their soul, and attempt to win it ideologically [sic!] and give it guidance.*” [**Constructive Anarchism**, p. 19] Moreover, as Maximoff notes, the “synthesis” anarchists come to the same conclusion. Thus all sides of the debate accepted that anarchists should take the lead. The question, as Malatesta and the others saw it, was not whether to lead, but rather how you should lead — a fairly important distinction in the argument. Following Bakunin, Maximoff argued that the question was “*not the rejection of leadership, but making certain it is free and natural.*” [**Ibid.**] Malatesta made the same point and posed two ‘alternatives’: Either we “*provide leadership by advice and example leaving people themselves to ... adopt our methods and solutions if these are, or seem to be, better than those suggested and carried out by others...*” or we “*can also direct by taking over command, that is by becoming a government.*” He asked the Platformists, “*In which manner do you wish to direct?*” [**The Anarchist Revolution**, p. 108]

He goes on to say that while he thought, from his knowledge of Makhno and his work, that the answer must be the second way, he was “*assailed by doubt that [Makhno] would also like to see, within the general movement, a central body that would, in an authoritarian manner, dictate the theoretical and practical programme for the revolution.*” This was because of the “*Executive Committee*” in the Platform which would “*give ideological and organisational*

direction to the [anarchist] association.” [Op. Cit., p. 110]

Maximoff makes the same point when he notes that when the Platform argues that anarchists must “*enter into revolutionary trade unions as an organised force, responsible to accomplish work in the union before the general anarchist organisation and orientated by the latter*” [**The Organisational Platform of the Libertarian Communists**, p. 25] this implies that anarchists in the unions are responsible to the anarchist federation, **not** to the union assemblies that elected them. As he puts it, according to the Platform, anarchists “*are to join the Trades Unions with ready-made recipes and are to carry out their plans, if necessary, against the will of the Unions themselves.*” [**Constructive Anarchism**, p. 19] However, Maximoff’s argument may be considered harsh as the Platform argues that anarchism “*aspires neither to political power nor dictatorship*” [**Op. Cit.**, p. 21] and so they would hardly be urging the opposite principles within the trade union movement. If we take the Platform’s comments within a context informed by the “*leadership of ideas*” concept (see section J.3.6) then what they meant was simply that the anarchist group would convince the union members of the validity of their ideas by argument and so the disagreement becomes one of unclear (or bad) use of language by the Platform’s authors. Something Maximoff would not have disagreed with, we are sure.

Despite many efforts and many letters on the subject (in particular between Malatesta and Makhno) the question of “leadership” could not be clarified to either side’s satisfaction, in part because there was an additional issue for dispute. This was the related issue of organisational principles (which in themselves make up the defining part of the original Platform). Malatesta argued that this did not conform with anarchist methods and principles, and so could not “*help bring about the triumph of anarchism.*” [**The Anarchist Revolution**, p. 97] This was because of two main reasons, the first being the issue of the Platform’s “secretariats” and “executive committee” and the issue of “Collective Responsibility.” We will take each in turn.

With an structure based round “secretariats” and “executive committees” the “*will of the [General] Union [of Anarchists] can only mean the will of the majority, expressed through congresses which nominate and control the **Executive Committee** and decide on all important issues. Naturally, the congresses would consist of representatives elected by the majority of member groups . . . So, in the best of cases, the decisions would be taken by a majority of a majority, and this could easily, especially when the opposing opinions are more than two, represent only a minority.*” This, he argues, “*comes down to a pure majority system, to pure parliamentarianism*” and so non-anarchist in nature. [**Op. Cit.**, p. 100]

As long as a Platformist federation is based on “secretariats” and “executive committees” directing the activity and development of the organisation, this critique is valid. In such a system, as these bodies control the organisation and members are expected to follow their decisions (due to “theoretical and tactical unity” and “collective responsibility”) they are, in effect, the government of the association. While this government may be elected and accountable, it is still a government simply because these bodies have executive power. As Maximoff argues, individual initiative in the Platform “*has a special character . . . Each organisation (i.e. association of members with the right to individual initiative) has its secretariat which . . . **directs** the ideological, political and technical activities of the organisation . . . In what, then, consists the self-reliant activities of*

the rank-and-file members? Apparently in one thing: initiative to obey the secretariat and carry out its directives.” [**Constructive Anarchism**, p. 18] This seems to be the logical conclusion of the structure suggested by the Platform. “*The spirit,*” argued Malatesta, “*the tendency remains authoritarian and the educational effect would remain anti-anarchist.*” [**The Anarchist Revolution**, p. 98]

Malatesta, in contrast, argued that an anarchist organisation must be based on the “[f]ull autonomy, full independence and therefore the full responsibility of individuals and groups” with all organisational work done “freely, in such a way that the thought and initiative of individuals is not obstructed.” The individual members of such an organisation “express any opinion and use any tactic which is not in contradiction with accepted principles and which does not harm the activities of others.” Moreover, the administrative bodies such organisations nominate would “have no executive powers, have no directive powers” leaving it up to the groups and their federal meetings to decide their own fates. While they may be representative bodies, the congresses of such organisations would be “free from any kind of authoritarianism, because they do not lay down the law; they do not impose their own resolutions on others... and do not become binding and enforceable except on those who accept them.” [**Op. Cit.**, p. 101, p. 102, p. 101] Such an organisation does not exclude collective decisions and self-assumed obligations, rather it is based upon them.

Most groups inspired by the Platform, however, seem to reject this aspect of its organisational suggestions. Instead of “secretariats” and “executive committees” they have regular conferences and meetings to reach collective decisions on issues and practice unity that way. Thus the **really** important issue is of “theoretical and tactical unity” and “collective responsibility,” not in the structure suggested by the Platform. Indeed, this issue was the main topic in Makhno’s letter to Malatesta, for example, and so we would be justified in saying that this is the key issues dividing “Platformists” from other anarchists.

So in what way did Malatesta disagree with this concept? As we mentioned in the last section, the Platform defined the idea of “Collective Responsibility” as “*the entire Union will be responsible for the political and revolutionary activity of each member; in the same way, each member will be responsible for the political and revolutionary activity of the Union.*” To which Malatesta commented as follows:

“But if the Union is responsible for what each member does, how can it leave to its members and to the various groups the freedom to apply the common programme in the way they think best? How can one be responsible for an action if it does not have the means to prevent it? Therefore, the Union and in its name the Executive Committee, would need to monitor the action of the individual member and order them what to do and what not to do; and since disapproval after the event cannot put right a previously accepted responsibility, no-one would be able to do anything at all before having obtained the go-ahead, the permission of the committee. And, on the other hand, can an individual accept responsibility for the actions of a collectivity before knowing what it will do and if he cannot prevent it doing what he disapproves of?” [**Op. Cit.**, p. 99]

In other words, the term “collective responsibility” (if taken literally) implies

a highly inefficient and somewhat authoritarian mode of organisation. Before any action could be undertaken, the organisation would have to be consulted and this would crush individual, group and local initiative. The organisation would respond slowly to developing situations, if at all, and this response would not be informed by first hand knowledge and experience. Moreover, this form of organisation implies a surrendering of individual judgement, as members would have to “*submit to the decisions of the majority before they have even heard what those might be.*” [Op. Cit., 101] In the end, all a member could do would be to leave the organisation if they disagree with a tactic or position and could not bring themselves to further it by their actions.

This structure also suggests that the Platform’s commitment to federalism is in words only. As most anarchists critical of the Platform argued, while its authors affirm federalist principles they, in fact, “*outline a perfectly centralised organisation with an Executive Committee that has responsibility to give ideological and organisational direction to the different anarchist organisations, which in turn will direct the professional organisations of the workers.*” [“*The Reply*”, **Constructive Anarchism**, pp. 35–6]

Thus it is likely that “Collective Responsibility” taken to its logical end would actually **hinder** anarchist work by being too bureaucratic and slow. Let us assume that by applying collective responsibility as well as tactical and theoretical unity, anarchist resources and time will be more efficiently utilised. However, what is the point of being “efficient” if the collective decision reached is wrong or is inapplicable to many areas? Rather than local groups applying their knowledge of local conditions and developing theories and policies that reflect these conditions (and co-operating from the bottom up), they may be forced to apply inappropriate policies due to the “Unity” of the Platformist organisation. It is true that Makhno argued that the “*activities of local organisations can be adapted, as far as possible, to suit local conditions*” but only if they are “*consonant with the pattern of the overall organisational practice of the Union of anarchists covering the whole country.*” [The **Struggle Against the State and Other Essays**, p. 62] Which still begs the question on the nature of the Platform’s unity (however, it does suggest that the Platform’s position may be less extreme than might be implied by the text, as we will discuss). That is why anarchists have traditionally supported federalism and free agreement within their organisations, to take into account the real needs of localities.

However, if we do not take the Platform’s definition of “Collective Responsibility” literally or to its logical extreme (as Makhno’s comments suggest) then the differences between Platformists and non-Platformists may not be that far. As Malatesta pointed out in his reply to Makhno’s letter:

“I accept and support the view that anyone who associates and co-operates with others for a common purpose must feel the need to co-ordinate his [or her] actions with those of his [or her] fellow members and do nothing that harms the work of others . . . and respect the agreements that have been made. . . [Moreover] I maintain that those who do not feel and do not practice that duty should be thrown out the of the association.

“Perhaps, speaking of collective responsibility, you mean precisely that accord and solidarity that must exist among members of an association. And if that is so, your expression amounts. . . to an incor-

rect use of language, but basically it would only be an unimportant question of wording and agreement would soon be reached.” [Op. Cit., pp. 107–8]

This, indeed, seems to be the way that most Platformist organisation do operate. They have agreed broad theoretical and tactical positions on various subjects (such as, for example, the nature of trade unions and how anarchists relate to them) while leaving it to local groups to act within these guidelines. Moreover, the local groups do not have to report to the organisation before embarking on an activity. In other words, most Platformist groups do not take the Platform literally and so many differences are, to a large degree, a question of wording.

While many anarchists are critical of Platformist groups for being too centralised for their liking, it is the case that the Platform has influenced many anarchist organisations, even non-Platformist ones (this can be seen in the “class struggle” groups discussed in the next section). This influence has been both ways, with the criticism the original Platform was subjected to having had an effect on how Platformist groups have developed. This, of course, does not imply that there is little or no difference between Platformists and other anarchists. Platformist groups tend to stress “collective responsibility” and “theoretical and tactical unity” more than others, which has caused problems when Platformists have worked within “synthesis” organisations (as was the case in France, for example, which resulted in much bad-feeling between Platformists and others).

Constructive Anarchism by the leading Russian anarcho-syndicalist G.P. Maximoff gathers all the relevant documents in one place. As well as Maximoff’s critique of the Platform, it includes the “synthesis” reply and the exchange of letters between Malatesta and Makhno on the former’s critical article on the Platform (which is also included). **The Anarchist Revolution** also contains Malatesta’s article and the exchange of letters between him and Makhno.

J.3.5 Are there other kinds of anarchist federation?

Another type of anarchist federation is what we term the “*class struggle*” group. Many local anarchist groups in Britain, for example organise in this fashion. They use the term “class struggle” to indicate that their anarchism is based on collective working class resistance as opposed to reforming capitalism via lifestyle changes and the support of, say, co-operatives (many “class struggle” anarchists do these things, of course, but they are aware that they cannot create an anarchist society by doing so). We follow this use of the term here. And just to stress the point again, our use of “class struggle” to describe this type of anarchist federation and group does not imply that “synthesis” or “Platformist” do not support the class struggle. They do!

This kind of group is half-way between the “synthesis” and the “Platform.” The “class struggle” group agrees with the “synthesis” in so far as it is important to have a diverse viewpoints within a federation and that it would be a mistake to try to impose a common-line on different groups in different circumstances as the Platform does. However, like the “Platform,” the class struggle group recognises that there is little point in creating a forced union between totally different

strands of anarchism. Thus the “class struggle” group rejects the idea that individualist or mutualist anarchists should be part of the same organisation as anarchist communists or syndicalists or that anarcho-pacifists should join forces with non-pacifists. Thus the “class struggle” group acknowledges that an organisation which contains viewpoints which are dramatically opposed can lead to pointless debates and the paralysis of action due to the impossibilities of overcoming those differences.

Instead, the “class struggle” group agrees a common set of “aims and principles” which are the basic terms of agreement within the federation. If an individual or group does not agree with this statement then they cannot join. If they are members and try to change this statement and cannot get the others to agree its modification, then they are morally bound to leave the organisation. In other words, the aims and principles is the framework within which individuals and groups apply their own ideas and their interpretation of agreed policies. It means that individuals in a group and the groups within a federation have something to base their local activity on, something which has been agreed collectively. Hence, there would be a common thread to activities and a guide to action (particularly in situations where a group or federation meeting cannot be called). In this way individual initiative and co-operation can be reconciled, without hindering either. In addition, the “*aims and principles*” would show potential members where the anarchist group was coming from.

Such a federation, like all anarchist groups, would be based upon regular assemblies locally and in frequent regional, national, etc., conferences to continually re-evaluate policies, tactics, strategies and goals. In addition, such meetings prevent power from collecting in the higher administration committees created to co-ordinate activity. The regular conferences aim to create federation policies on specific topics and agree common strategies. Such policies, once agreed, are morally binding on the membership, who can review and revise them as required at a later stage but cannot take action which would hinder their application (they do not have to apply them themselves, if they consider them as a big mistake). In other words, “[i]n an anarchist organisation the individual members can express any opinion and use any tactic which is not in contradiction with accepted principles and which does not harm the activities of others.” [Errico Malatesta, **The Anarchist Revolution**, p. 102]

For example, minorities in such a federation can pursue their own policies as long as they clearly state that theirs is a minority position and does not contradict the federation’s aims and principles. In this way the anarchist federation combines united action and dissent, for no general policy will be applicable in all circumstances and it is better for minorities to make mistakes than for them to pursue policies which they know will make even greater problems in their area. As long as their actions and policies do not contradict the federations basic political ideas, then diversity is an essential means for ensuring that the best tactic and ideas are identified. The problem with the “synthesis” grouping is that any such basic political ideas would be hard to agree and be so watered down as to be almost useless (for example, a federation combining individualist and communist anarchists would find it impossible to agree on such things as the necessity for communism, communal ownership, and so on).

Thus, supporters of the “class struggle” group agree with Malatesta when he argued that anarchist groups must be founded on “[f]ull autonomy, full independence and therefore full responsibility of individuals and groups; free accord

between those who believe it is useful to unite in co-operating for a common aim; moral duty to see through commitments undertaken and to do nothing that would contradict the accepted programme. It is on these bases that the practical structures, and the right tools to give life to the organisation should be built and designed. Then the groups, the federations of groups, the federations of federations, the meetings, the congresses, the correspondence committees and so forth. But all this must be done freely, in such a way that the thought and initiative of individuals is not obstructed, and with the sole view of giving greater effect to efforts which, in isolation, would be either impossible or ineffective.” [Op. Cit., p. 101]

The “class struggle” group, like all anarchist groupings, is convinced that (to use Murray Bookchin’s words) “*anarcho-communism cannot remain a mere mood or tendency, wafting in the air like a cultural ambience. It must be organised — indeed **well-organised** — if it is effectively articulate and spread this new sensibility; it must have a coherent theory and extensive literature; it must be capable of duelling with the authoritarian movements [capitalist or state socialist] that try to denature the intuitive libertarian impulses of our time and channel social unrest into hierarchical forms of organisation.*” [“Looking Back at Spain,” pp. 53–96, **The Radical Papers**, p. 90]

J.3.6 What role do these groups play in anarchist theory?

The aim of these groups and federations is to spread anarchist ideas within society and within social movements. They aim to convince people of the validity of anarchist ideas and analysis, of the need for a libertarian transformation of society and of themselves. They do so by working with others as equals and “*through advice and example, leaving people . . . to adopt our methods and solutions if these are, or seem to be, better than those suggested and carried out by others.*” [Errico Malatesta, **The Anarchist Revolution**, p. 108]

The role of “affinity groups” and their federations play a key role in anarchist theory. This is because anarchists are well aware that there are different levels of knowledge and consciousness in society. While it is a basic element of anarchism that people learn through struggle and their own experiences, it is also a fact that different people develop at different speeds, that each individual is unique and subject to different influences. As one anarchist pamphlet puts it, the “*experiences of working class life constantly lead to the development of ideas and actions which question the established order . . . At the same time, different sections of the working class reach different degrees of consciousness.*” [**The Role of the Revolutionary Organisation**, p.3] This can easily be seen from any group of individuals of the same class or even community. Some are anarchists, others Marxists, some social democrats/labourites, others conservatives, other liberals, most “apolitical,” some support trade unions, others are against and so on.

Because they are aware that they are one tendency among many, anarchists organise as anarchists to influence social struggle. Only when anarchist ideas are accepted by the vast majority will an anarchist society be possible. We wish, in other words, to win the most widespread understanding and influence

for anarchist ideas and methods in the working class and in society, primarily because we believe that these alone will ensure a successful revolutionary transformation of society. Hence Malatesta's argument that anarchists "*must strive to acquire overwhelming influence in order to draw the movement towards the realisation of our ideals. But such influence must be won by doing more and better than others, and will be useful of won in that way . . . [therefore] we must deepen, develop and propagate our ideas and co-ordinate our forces in a common action. We must act within the labour movement to prevent it being limited to and corrupted by the exclusive pursuit of small improvements compatible with the capitalist system. . . We must work with . . . [all the] masses to awaken the spirit of revolt and the desire for a free and happy life. We must initiate and support all movements that tend to weaken the forces of the State and of capitalism and to raise the mental level and material conditions of the workers.*" [Life and Ideas, p. 109]

Anarchist organisation exists to help the process by which people come to anarchist conclusions. It aims to make explicit the feelings and thoughts that people have (such as, wage slavery is hell, that the state exists to rip people off and so on) by exposing as wrong common justifications for existing society and social relationships by a process of debate and providing a vision of something better. In other words, anarchist organisations seek to explain and clarify what is happening in society and show why anarchism is the only real solution to social problems. As part of this, we also have combat false ideas such as Liberalism, Social Democracy, right-wing Libertarianism, Leninism and so on, indicating why these proposed solutions are not real ones. In addition, an anarchist organisation must also be a 'collective memory' for the oppressed, keeping alive and developing the traditions of the labour movement and anarchism so that new generations of anarchists have a body of experience to build upon and use in their struggles.

Anarchist organisations see themselves in the role of aiders, **not** leaders. As Voline argued, the minority which is politically aware minority "*should intervene. But, in every place and under all circumstances, . . . [they] should freely participate in the common work, as true collaborators, not as dictators. It is necessary that they especially create an example, and employ themselves. . . without dominating, subjugating, or oppressing anyone. . . Accordingly to the libertarian thesis, it is the labouring masses themselves, who, by means of the various class organisations, factory committees, industrial and agricultural unions, co-operatives, et cetera, federated. . . should apply themselves everywhere, to solving the problems of waging the Revolution. . . As for the 'elite' [i.e. the politically aware], their role, according to the libertarians, is to **help** the masses, enlighten them, teach them, give them necessary advice, impel them to take initiative, provide them with an example, and support them in their action — **but not to direct them governmentally.**" [The Unknown Revolution, pp. 177–8]*

This role is usually called providing a "**leadership of ideas**" (Bakunin used the unfortunate term "*invisible dictatorship*" to express approximately the same idea — see section J.3.7 for details).

Anarchists stress the difference of this concept with authoritarian notions of "leadership" such as Leninist ideas about party leadership where in members of the vanguard party are elected to positions of power or responsibility within an organisation. While both anarchist and Leninist organisations exist to overcome

the problem of “uneven development” within the working class (i.e. the existence of many different political opinions within it), the aims, role and structure of these groups could not be more different. Essentially, Leninist parties (as well as reproducing hierarchical structures within the so-called “revolutionary” organisation) see socialist politics as arising **outside** the working class, in the radical intelligentsia (see Lenin’s **What is to be Done** for details) rather than as the product of working class experience (in this, we must add, Lenin was following standard Social Democratic theory and the ideas of Karl Kautsky — the “Pope of Marxism” — in particular).

Anarchists, on the other hand, argue that rather than being the product of “outside” influence, (libertarian) socialist ideas are the natural product of working class life. In other words, (libertarian) socialist ideas come from **within** the working class. Bakunin, for example, constantly referred to the “*socialist instinct*” of the working classes and argued that the socialist ideal was “*necessarily the product of the people’s historical experience*” and that workers “*most basic instinct and their social situation makes them . . . socialists. They are socialists because of all the conditions of their material existence.*” [quoted by Richard B. Saltman, **The Social and Political Thought of Michael Bakunin**, p. 100, **The Basic Bakunin**, pp. 101–2]

Needless to say, instinct in itself is not enough (if it was, we would be living in an anarchist society!) and so Bakunin, like all anarchists, stressed the importance of self-liberation and self-education through struggle in order to change “*instinct*” into “*thought*.” He argued that there was “*but a single path, that of emancipation through practical action . . . [by] workers’ solidarity in their struggle against the bosses. It means trade unions, organisation, and the federation of resistance funds . . . [Once the worker] begins to fight, in association with his comrades, for the reduction of his working hours and for an increase in his salary. . . and become[s] increasingly accustomed to relying on the collective strength of the workers . . . The worker thus enlisted in the struggle will necessarily . . . recognise himself [or herself] to be a revolutionary socialist.*” [The Basic Bakunin, p. 103]

In addition to recognising the importance of popular organisations (such as trade unions) and of direct action in developing libertarian socialist thought, Bakunin also stressed the need for anarchist groups to work with these organisations and on the mass of the population in general. These groups would play an important role in helping to clarify the ideas of those in struggle and undermining the internal and external barriers against these ideas. The first of these are what Emma Goldman termed the “*internal tyrants*,” the “*ethical and social conventions*” of existing, hierarchical society which accustom people to authoritarian social relationships, injustice, lack of freedom and so on. External barriers are what Chomsky terms “*the Manufacture of Consent*,” the process by which the population at large are influenced to accept the status quo and the dominant elites viewpoint via the education system and media. It is this “*manufacture of consent*” which helps explain why, relatively speaking, there are so few anarchists even though we argue that anarchism is the natural product of working class life. While, objectively, the experiences of life drives working class people to resist domination and oppression, they enter that struggle with a history behind them, a history of education in capitalist schools, of reading pro-capitalist papers, and so on.

This means that while social struggle is radicalising, it also has to combat

years of pro-state and pro-capitalist influences. So even if an anarchist consciousness springs from the real conditions of working class life, because we live in a class society there are numerous counter-tendencies that **inhibit** the development of that consciousness (such as religion, current morality the media, pro-business and pro-state propaganda, state and business repression and so on). This explains the differences in political opinion within the working class, as people develop at different speeds and are subject to different influences and experiences. However, the numerous internal and external barriers to the development of anarchist opinions created our “internal tyrants” and by the process of “manufacturing consent” can be, and are, weakened by rational discussion as well as social struggle and self-activity. Indeed, until such time as we “*learned to defy them all [the internal tyrants], to stand firmly on [our] own ground and to insist upon [our] own unrestricted freedom*” we can never be free or successfully combat the “*manufacture of consent.*” [Emma Goldman, **Red Emma Speaks**, p. 140] And this is where the anarchist group can play a part, for there is an important role to be played by those who have been through this process already, namely to aid those going through it.

Of course the activity of an anarchist group does not occur in a vacuum. In periods of low class struggle, where there is little collective action, anarchist ideas will seem to be utopian and so dismissed by most. In these situations, only a few will become anarchists simply because the experiences of working people do not breed confidence that an alternative is possible to the current system. In addition, if anarchist groups are small, many who are looking for an alternative may join other groups which are more visible and express a libertarian sounding rhetoric (such as Leninist groups, who often talk about workers’ control, workers’ councils and so on while meaning something distinctly different from what anarchists mean by these terms). However, as the class struggle increases and people become more inclined to take collective action, they can become empowered and radicalised by their own activity and be more open to anarchist ideas and the possibility of changing society. In these situations, anarchist groups grow and the influence in anarchist ideas increases. This also explains why anarchist ideas are not as widespread as they could be. It also indicates another important role for the anarchist group, namely to provide an environment and space where those drawn to anarchist ideas can meet and share experiences and ideas during periods of reaction.

The role of the anarchist group, therefore, is **not** to import a foreign ideology into the working class, but rather to help develop and clarify the ideas of those working class people who are moving from “instinct” to the “ideal” and so aid those undergoing that development. They would aid this development by providing propaganda which exposes the current social system (and the rationales for it) as bankrupt as well as encouraging resistance to oppression and exploitation. The former, for Bakunin, allowed the “*bringing [of] a more just general expression, a new and more congenial form to the existent instincts of the proletariat . . . [which] can sometimes facilitate and precipitate development . . . [and] give them an awareness of what they have, of what they feel, of what they already instinctively desire, but never can it give to them what they don’t have.*” The latter “*is the most popular, the most potent, and the most irresistible form of propaganda*” and “*awake[s] in the masses all the social-revolutionary instincts which reside deeply in the heart of every worker*” so allowing instinct to become transformed into “*reflected socialist thought.*” [cited by Richard B. Saltman,

The Social and Political Thought of Michael Bakunin, p. 107, p. 108 and p. 141]

In other words, “*the [anarchist] organisation cannot see itself solely as a propaganda group. Above all it is an assembly of activists. It must actively work in all the grassroots organisations of the working class such as rank and file [trade union] groups, tenants associations, squatters and unemployed groups as well as women’s, black and gay groups . . . It does not try to make these movements into an appendage of the revolutionary organisation just as it respects the autonomy and self-organisation of the rank and file workers movement that may develop . . . [while] spread[ing] its ideas in these movements.*” [**The Role of the Revolutionary Organisation**, p.5] Such an organisation is not vanguardist in the Leninist sense as it recognises that socialist politics derive from working class experience, rather than “science” (as Lenin and Kautsky argued), and that it does not aim to dominate popular movements but rather work within them as equals.

Indeed, Bakunin (in his discussion of the evils of the idea of god) presents an excellent summary of why Leninist ideas of vanguardism always end up created the dictatorship of the party rather than socialism. As he put it:

“[F]rom the moment that the natural inferiority of man and his fundamental incapacity to rise by his own effort, unaided by any divine inspiration, to the comprehension of just and true ideas, are admitted. it becomes necessary to admit also all the theological, political, and social consequences of the positive religions. From the moment that God, the perfect supreme being, is posited face to face with humanity, divine mediators, the elect, the inspired of God spring from the earth to enlighten, direct, and govern in his name the human race.” [**God and the State**, p. 37]

In **What is to be Done?**, Lenin argued that socialist “*consciousness could only be brought to [the workers] from without. . . the working class, exclusively by its own efforts, is able to develop only trade union consciousness*” and that the “*theory of socialism*” was developed by “*the educated representatives of the propertied classes, the intellectuals*” and, in so doing, replaced God with Marxism [**The Essential Works of Lenin**, p. 74] Hence Trotsky’s comments at the Communist Party’s 1921 congress that “*the Party [is] entitled to assert its dictatorship even if that dictatorship temporarily clashed with the passing moods of the workers’ democracy!*” and that it is “*obliged to maintain its dictatorship . . . regardless of temporary vacillations even in the working class*” come as no surprise [quoted by M. Brinton, **The Bolsheviks and Workers’ Control**, p. 78]. They are just the logical, evil consequences of vanguardism (and, of course, it is the Party — upholders of the correct ideology, of “*scientific*” socialism — which determines what is a “*passing mood*” or a “*temporary vacillation*” and so dictatorship is the logical consequence of Leninism). The validity of Bakunin’s argument can easily be recognised. Little wonder anarchists reject the concept of vanguardism totally.

So while we recognise that “advanced” sections do exist within the working class and that anarchists are one such section, we also recognise that **central** characteristic of anarchism is that its politics are derived from the concrete experience of fighting capitalism and statism directly — that is, from the realities

of working class life. This means that anarchists must also learn from working class people in struggle. If we recognise that anarchist ideas are the product of working class experience and self-activity and that these constantly change and develop in light of new experiences and struggles then anarchist theory **must be open to change by learning from non-anarchists**. Not to recognise this fact is to open the door to vanguardism and dogma. Because of this fact, anarchists argue that the relationship between anarchists and non-anarchists must be an egalitarian one, based on mutual interaction and the recognition that no one is infallible or have all the answers — particularly anarchists! With this in mind, while we recognise the presence of “advanced” groups within the working class (which obviously reflects the uneven development within it), anarchists aim to minimise such unevenness by the way anarchist organisations intervene in social struggle, intervention based on involving **all** in the decision making process (as we discuss below).

Thus the general aim of anarchist groups is to spread ideas — such as general anarchist analysis of society and current events, libertarian forms of organisation, direct action and solidarity and so forth — and win people over to anarchism (i.e. to “make” anarchists). This involves both propaganda and participate as equals in social struggle and popular organisation. Anarchists do not think that changing leaders is a solution to the problem of (bad) leadership. Rather, it is a question of making leaders redundant by empowering all. As Malatesta argued, we “*do not want to **emancipate** the people; we want the people to **emancipate themselves**.*” [Op. Cit., p. 90] Thus anarchists “*advocate and practise direct action, decentralisation, autonomy and individual initiative; they should make special efforts to help members [of popular organisations] learn to participate directly in the life of the organisation and to dispense with leaders and full-time functionaries.*” [Op. Cit., p. 125]

This means that anarchists reject the idea that anarchist groups and federations must become the “leaders” of organisations. Rather, we desire anarchist ideas to be commonplace in society and in popular organisations, so that leadership by people from positions of power is replaced by the “*natural influence*” (to use Bakunin’s term) of activists within the rank and file on the decisions made **by** the rank and file. While we will discuss Bakunin’s ideas in more detail in section J.3.7, the concept of “*natural influence*” can be gathered from this comment of Francisco Ascaso (friend of Durruti and an influential anarchist militant in the CNT and FAI in his own right):

“There is not a single militant who as a ‘FAIista’ intervenes in union meetings. I work, therefore I am an exploited person. I pay my dues to the workers’ union and when I intervene at union meetings I do it as someone who us exploited, and with the right which is granted me by the card in my possession, as do the other militants, whether they belong to the FAI or not.” [cited by Abel Paz, **Durruti: The People Armed**, p. 137]

This shows the nature of the “leadership of ideas.” Rather than be elected to a position of power or responsibility, the anarchist presents their ideas at mass meetings and argues his or her case. This means obviously implies a two-way learning process, as the anarchist learns from the experiences of others and the others come in contact with anarchist ideas. Moreover, it is an egalitarian

relationship, based upon discussion between equals rather than urging people to place someone into power above them. And it ensures that everyone in the organisation participants in making, understands and agrees with the decisions reached. This obviously helps the political development of all involved (including, we must stress, the anarchists). As Durruti argued, “*the man [or woman] who alienates his will, can never be free to express himself and follow his own ideas at a union meeting if he feel dominated by the feeblest orator. . . . As long as a man doesn’t think for himself and doesn’t assume his own responsibilities, there will be no complete liberation of human beings.*” [Op. Cit., p. 184]

Because of our support for the “leadership of ideas”, anarchists think that all popular organisations must be open, fully self-managed and free from authoritarianism. Only in this way can ideas and discussion play an important role in the life of the organisation. Since anarchists “*do not believe in the good that comes from above and imposed by force. . . [and] want the new way of life to emerge from the body of the people and advance as they advance. It matters to use therefore that all interests and opinions find their expression in a conscious organisation and should influence communal life in proportion to their importance.*” [Errico Malatesta, Op. Cit., p. 90] Bakunin’s words with regards the first International Workers Association indicate this clearly:

“It must be a people’s movement, organised from the bottom up by the free, spontaneous action of the masses. There must be no secret governmentalism, the masses must be informed of everything . . . All the affairs of the International must be thoroughly and openly discussed without evasions and circumlocutions.” [Bakunin on Anarchism, p. 408]

(Such a assertion by Bakunin may come as a surprise to some readers who are aware — usually via Marxist sources — that Bakunin argued for a “*invisible dictatorship*” in some of his letters. As we discuss in section J.3.7, the claims that Bakunin was a closet authoritarian are simply wrong.)

Given this, anarchists reject the idea of turning the organs created in the class struggle and revolutionary process into hierarchical structures. By turning them from organs of self-management into organs for nominating “*leaders,*” the constructive tasks and political development of the revolution will be aborted before they really begin. The active participation of all will become reduced to the picking of new masters and the revolution will falter. For this reason, anarchists “*differ from the Bolshevik type of party in their belief that genuine revolutionaries must function **within the framework of the forms created by the revolution,** not within forms created by the party. . . . Anarcho-communists seek to persuade the factory committees, assemblies or soviets to make themselves into **genuine organs of popular self-management,** not to dominate them, manipulate them, or hitch them to an all-knowing political party. Anarcho-communists do not seek to rear a state structure over these popular revolutionary organs.*” This means that “*an organisation is needed to propagate ideas systematically — and not ideas alone, but **ideas which promote the concept of self-management.***” In other words, there “*is a need for a revolutionary organisation — but its function must always be kept clearly in mind. Its first task is propaganda . . . In a revolutionary situation, the revolutionary organisation presents the most advanced demands: it is prepared at*

every turn of events to formulate — in the most concrete fashion — the immediate task that should be performed to advance the revolutionary process. It provides the boldest elements in action and in the decision-making organs of the revolution.” [Bookchin, **Post-Scarcity**, p. 140] But what it does not is to supplant those organs or decision-making process by creating institutionalised, hierarchical leadership structures.

Equally as important as **how** anarchists intervene in social struggles and popular organisations and the organisation of those struggles and organisations, there is the question of the nature of that intervention. We would like to quote the following by the British libertarian socialist group **Solidarity** as it sums up the underlying nature of anarchist action and the importance of a libertarian perspective on social struggle and change and how politically aware minorities work within them:

*“**Meaningful action**, for revolutionaries, is whatever increases the confidence, the autonomy, the initiative, the participation, the solidarity, the egalitarian tendencies and the self-activity of the masses and whatever assists in their demystification. **Sterile and harmful action** is whatever reinforces the passivity of the masses, their apathy, their cynicism, their differentiation through hierarchy, their alienation, their reliance on others to do things for them and the degree to which they can therefore be manipulated by others — even by those allegedly acting on their behalf.”* [As We See it]

Part of this “meaningful action” involves encouraging people to **“act for yourselves”** (to use Kropotkin’s words). As we noted in section A.2.7, anarchism is based on **self**-liberation and self-activity is key aspect of this. Hence Malatesta’s argument:

“Our task is that of ‘pushing’ the people to demand and to seize all the freedom they can and to make themselves responsible for providing their own needs without waiting for orders from any kind of authority. Our task is that of demonstrating the uselessness and harmfulness of government, provoking and encouraging by propaganda and action, all kinds of individual and collective activities.

“It is in fact a question of education for freedom, of making people who are accustomed to obedience and passivity consciously aware of their real power and capabilities. One must encourage people to do things for themselves... “ [Op. Cit., pp. 178–9]

This “pushing” people to “do it themselves” is another key role for any anarchist organisation. The encouragement of direct action is just as important as anarchist propaganda and popular participation within social struggle and popular organisations.

As such social struggle developments, the possibility of revolution becomes closer and closer. While we discuss anarchists ideas on social revolution in section J.7, we must note here that the role of the anarchist organisation does not change. As Murray Bookchin argues, anarchists *“seek to persuade the factory committees, assemblies [and other organisations created by people in struggle] ... to make themselves into **genuine organs of popular self-management**,*

not to dominate them, manipulate them, or hitch them to an all-knowing political party.” [**Post-Scarcity Anarchism**, p. 217] In this way, by encouraging self-management in struggle, anarchist lay the foundations of a self-managed society.

J.3.7 Doesn't Bakunin's "*Invisible Dictatorship*" prove that anarchists are secret authoritarians?

This claim is often made by Leninists and other Marxists and expresses a distinct, even wilful, misunderstanding of the role revolutionaries should play in popular movements and the ideas of Bakunin on this issue. In actual fact, the term "*invisible dictatorship*" does not prove that Bakunin or anarchists are secret authoritarians, for reasons we will explain.

Marxists quote Bakunin's terms "*invisible dictatorship*" and "*collective dictatorship*" out of context, using it to "prove" that anarchists are secret authoritarians, seeking dictatorship over the masses. More widely, the question of Bakunin and his "invisible dictatorship" finds its way into the most sympathetic accounts of anarchist ideas. For example, Peter Marshall writes that it is "*not difficult to conclude that Bakunin's invisible dictatorship would be even more tyrannical than a . . . Marxist one*" and that it expressed a "*profound authoritarian and dissimulating streak in his life and work.*" [**Demanding the Impossible**, p. 287] So, the question of setting the record straight about this aspect of Bakunin's theory is of more importance than just correcting a few Leninists. In addition, to do so will help clarify the concept of "*leadership of ideas*" we discussed in the last section. For both these reasons, this section, while initially appearing somewhat redundant and of interest only to academics, is of a far wider interest.

It is particularly ironic that Leninists (followers of a person who created an actual, **very visible**, dictatorship) accuse anarchists of seeking to create a "dictatorship" — but then again, irony and a sense of humour is not usually noted in Leninists and Trotskyists. In a similar fashion, they (quite rightly) attack Bakunin for being anti-Jewish but keep quiet strangely quiet on Marx and Engels anti-Slavism. Indeed, Marx once published an article by Engels which actually preached race hatred and violence — "*that hatred of the Russians was and remains the primary revolutionary passion of the Germans; and since the revolution it extends to the Czechs and the Croatians . . . we . . . can safeguard the revolution only by the most determined terrorism against these Slavic peoples*" and that the "*stubborn Czechs and the Slovaks should be grateful to the Germans, who have taken the trouble to civilise them.*" [cited in **Bakunin on Anarchism**, p.432] Obviously being anti-Slavic is okay, being anti-Jewish is not (they also keep quiet on Marx's anti-Jewish comments). The hypocrisy is clear.

Actually, it is in their attempts to smear anarchism with closet authoritarianism that the authoritarianism of the Marxists come to the fore. For example, in the British Socialist Workers Party journal **International Socialism** number 52, we find this treat of "logic." Anarchism is denounced for being "*necessarily deeply anti-democratic*" due to its "*thesis of the absolute sovereignty of the individual ego.*" Then Hal Draper is quoted arguing that "*[o]f all ideologies, anarchism is the most fundamentally anti-democratic in principle.*" [p. 145] So, because anarchism favours individuals being free and making their own

decisions, it is **less** democratic than Fascism, Nazism and Stalinism! Makes you wonder what they mean by democracy if ideologies which actively promote leader worship and party/leader dictatorships are more “democratic” than anarchism! Of course, in actuality, for most anarchists individual sovereignty implies direct democracy in free associations (see, for example, section A.2.11 or Robert Graham’s excellent essay “*The Anarchist Contract*” in **Reinventing Anarchy, Again**). Any “democracy” which is not based on individual freedom is too contradictory to be taken seriously.

But to return to our subject. Anarchists have two responses to claims that Bakunin (and, by implication, all anarchists) seek an “invisible” dictatorship and so are not true libertarians. Firstly, and this is the point we will concentrate upon in this section, Bakunin’s expression is taken out of context and when placed within its context it takes on a radically different meaning than that implied by critics of Bakunin and anarchism. Secondly, even **if** the expression means what the critics claim it does, it does not refute anarchism as a political theory (any more than Bakunin’s racism or Proudhon’s sexism and racism). This is because anarchists are **not** Bakuninists (or Proudhonists or Kropotkinists or any other person-ist). We recognise other anarchists as what they are, human beings who said lots of important and useful things but, like any other human being, they make mistakes and often do not live up to all of their ideas. For anarchists, it is a question of extracting the useful parts from their works and rejecting the useless (as well as the downright nonsense!). Just because Bakunin said something, it does not make it right! This common-sense approach to politics seems to be lost on Marxists. Indeed, if we take the logic of these Marxists to its conclusion, we must reject everything Rousseau wrote (he was sexist), Marx and Engels (their comments against Slavs spring to mind, along with numerous other racist comments) and so on. But, of course, this never happens to non-anarchist thinkers when Marxists write their articles and books.

However, to return to our main argument, that of the importance of context. What does the context around Bakunin’s term “invisible dictatorship” bring to the discussion? Simply that whenever Bakunin uses the term “invisible” or “collective” dictatorship he also explicitly states his opposition to government (or official) power and **in particular** the idea that anarchist organisations should take such power. For example, the **International Socialist** review mentioned above quotes the following passage from “a Bakuninist document” to “prove” that the “principle of anti-democracy was to leave Bakunin unchallenged at the apex of power”:

“It is necessary that in the midst of popular anarchy, which will constitute the very life and energy of the revolution, unity of thought and revolutionary action should find an organ. This organ must be the secret and world-wide association of the international brethren.”

This passage is from point 9 of Bakunin’s “*Programme and Purpose of the Revolutionary Organisation of International Brothers.*” In the sentence **immediately before** those quoted, Bakunin stated that “[t]his organisation rules out any idea of dictatorship and custodial control.” [**Michael Bakunin: Selected Writings**, p. 172] Strange that this part of point 9 of the programme was not quoted! Nor do they quote Bakunin when he wrote, in point 4 of the same

programme, “[w]e are the natural enemies of those revolutionaries — future dictators, regimentors and custodians of revolution — who... [want] to create new revolutionary States just as centralist and despotic as those we already know ...” Nor, in point 8, that since the “revolution everywhere must be created by the people, and supreme control must always belong to the people organised into a free federation of agricultural and industrial associations ... organised from the bottom upwards by means of revolutionary delegations ... [who] will set out to administer public services, not to rule over peoples.” [Op. Cit., p. 169, p. 172]

(As an aside, we can understand why Leninists would not willing to quote point 8, as Bakunin’s position is far in advance of Marx’s on the structure of revolutionary society. Indeed, it was not until 1917, when Lenin supported the spontaneously created Soviets as the framework of his socialist state — at least in rhetoric, in practice, as we discuss in the appendix on “What happened during the Russian Revolution?”, he did not — that Marxists belatedly discovered the importance of workers’ councils. In other words, Bakunin predicted the rise of workers’ councils as the framework of a socialist revolution — after all the Russian soviets were, originally, “a free federation of agricultural and industrial associations.” It must be embarrassing for Leninists to have one of what they consider as a key contribution to Marxism predicted over 50 years beforehand by someone Marx called an “ignoramus” and a “non-entity as a theoretician.”)

Similarly, when we look at the situations where Bakunin uses the terms “invisible” or “collective” dictatorship (usually in letters to comrades) we find the same thing — the explicit denial **in these same letters** that Bakunin thought the revolutionary association should take state/governmental power. For example, in a letter to Albert Richard (a fellow member of the anarchist “Alliance of Social Democracy”) Bakunin states that “[t]here is only one power and one dictatorship whose organisation is salutary and feasible: it is that collective, invisible dictatorship of those who are allied in the name of our principle.” He then immediately adds that “this dictatorship will be all the more salutary and effective for not being dressed up in any official power or extrinsic character.” Earlier in the letter he argues that anarchists must be “like invisible pilots in the thick of the popular tempest... steer[ing] it [the revolution] not by any open power but by the collective dictatorship of all the allies — a dictatorship without insignia, titles or official rights, and all the stronger for having none of the paraphernalia of power.” Explicitly opposing “Committees of Public Safety and official, overt dictatorship” he explains his idea of a revolution based on “workers hav[ing] joined into associations ... armed and organised by streets and **quartiers**, the federative commune.” [Op. Cit., p. 181, p. 180 and p. 179] Hardly what would be expected from a would-be dictator?

As Sam Dolgoff notes, “an organisation exercising no overt authority, without a state, without official status, without the machinery of institutionalised power to enforce its policies, cannot be defined as a dictatorship... Moreover, if it is borne in mind that this passage is part of a letter repudiating in the strongest terms the State and the authoritarian statism of the ‘Robespierres, the Dantons, and the Saint-Justs of the revolution,’ it is reasonable to conclude that Bakunin used the word ‘dictatorship’ to denote preponderant influence or guidance exercised largely by example... In line with this conclusion, Bakunin used the words ‘invisible’ and ‘collective’ to denote the underground movement exerting this influence in an organised manner.” [Bakunin on Anarchism, p.

This analysis is confirmed by other passages from Bakunin's letters. In a letter to the Nihilist Sergi Nechaev (within which Bakunin indicates exactly how far apart politically they were — which is important as, from Marx onwards, many of Bakunin's opponents quote Nechaev's pamphlets as if they were "Bakunist," when in fact they were not) we find him arguing that:

*"These [revolutionary] groups would not seek anything for themselves, neither privilege nor honour nor power. . . [but] would be in a position to direct popular movements . . . [via] **the collective dictatorship** of a secret organisation. . . The dictatorship. . . does not reward any of the members. . . or the groups themselves. . . with any. . . official power. It does not threaten the freedom of the people, because, lacking any official character, it does not take the place of State control over the people, and because its whole aim. . . consists of the fullest realisation of the liberty of the people.*

*"This sort of dictatorship is not in the least contrary to the free development and the self-development of the people, nor its organisation from the bottom upward. . . for it influences the people exclusively through the natural, personal influence of its members, who have not the slightest power. . . to direct the spontaneous revolutionary movement of the people towards. . . the organisation of popular liberty. . . This secret dictatorship would in the first place, and at the present time, carry out a broadly based popular propaganda. . . and by the power of this propaganda and also by **organisation among the people themselves** join together separate popular forces into a mighty strength capable of demolishing the State."* [Michael Bakunin: Selected Writings, pp. 193–4]

The key aspect of this is the term "*natural influence*." In a letter to Pablo, a Spanish member of the Alliance, we find Bakunin arguing that the Alliance "*will promote the Revolution only through the **natural but never official influence** of all members of the Alliance. . .*" [Bakunin on Anarchism, p. 387] This term was also used in his public writings. For example, we find in one of his newspaper articles Bakunin arguing that the "*very freedom of every individual results from th[e] great number of material, intellectual, and moral influences which every individual around him and which society. . . continually exercise on him*" and that "*everything alive . . . intervene[s] . . . in the life of others. . . [so] we hardly wish to abolish the effect of any individual's or any group of individuals' natural influence upon the masses.*" [The Basic Bakunin, p. 140, p. 141]

Thus "*natural influence*" simply means the effect of communicating with others, discussing your ideas with them and winning them over to your position, nothing more. This is hardly authoritarian, and so Bakunin contrasts this "*natural*" influence with "*official*" influence, which replaced the process of mutual interaction between equals with a fixed hierarchy of command and thereby induced the "*transformation of natural influence, and, as such, the perfectly legitimate influence over man, into a right.*" [cited by Richard B. Saltman, **The Social and Political Thought of Michael Bakunin**, p. 46]

As an example of this difference, consider the case of a union militant (as will become clear, this is the sort of example Bakunin had in mind). As long as

they are part of the rank-and-file, arguing their case at union meetings or being delegated to carry out the decisions of these assemblies then their influence is “*natural*.” However, if this militant is elected into a position with executive power in the union (i.e. becomes a full-time union official, for example, rather than a shop-steward) then their influence becomes “*official*” and so, potentially, corrupting for both the militant and the rank-and-file who are subject to the rule of the official.

Indeed, this notion of “*natural*” influence (or authority) was also termed “*invisible*” by Bakunin — “[*it is only necessary that one worker in ten join the [International Working-Men’s] Association earnestly and with full understanding of the cause for the nine-tenths remaining outside its organisation nevertheless to be influenced invisibly by it. . .*” [The Basic Bakunin, p. 139] So, as can be seen, the terms “*invisible*” and “*collective*” dictatorship used by Bakunin in his letters is strongly related to the term “*natural influence*” used in his public works and seems to be used simply to indicate the effects of an organised political group on the masses. To see this, it is worthwhile to quote Bakunin at length about the nature of this “*invisible*” influence:

“It may be objected that this. . . [invisible] influence. . . suggests the establishment of a system of authority and a new government. . . [but this] would be a serious blunder. The organised effect of the International on the masses. . . is nothing but the entirely natural organisation — neither official nor clothed in any authority or political force whatsoever — of the effect of a rather numerous group of individuals who are inspired by the same thought and headed toward the same goal, first of all on the opinion of the masses and only then, by the intermediary of this opinion (restated by the International’s propaganda), on their will and their deeds. But the governments. . . impose themselves violently on the masses, who are forced to obey them and to execute their decrees. . . The International’s influence will never be anything but one of opinion and the International will never be anything but the organisation of the natural effect of individuals on the masses.” [Op. Cit., pp. 139–40]

Therefore, from both the fuller context provided by the works and letters selectively quoted by anti-anarchists **and** his other writings, we find that rather than being a secret authoritarian, Bakunin was, in fact, trying to express how anarchists could “*naturally influence*” the masses and their revolution. As he himself argues:

*“We are the most pronounced enemies of every sort of official power. . . We are the enemies of any sort of publicly declared dictatorship, we are social revolutionary anarchists. . . if we are anarchists, by what right do we want to influence the people, and what methods will we use? Denouncing all power, with what sort of power, or rather by what sort of force, shall we direct a people’s revolution? **By a force that is invisible. . . that is not imposed on anyone. . . [and] deprived of all official rights and significance.**” [Michael Bakunin: Selected Writings, pp. 191–2]*

Continually opposing “*official*” power, authority and influence, Bakunin used the term “*invisible, collective dictatorship*” to describe the “*natural in-*

fluence” of organised anarchists on mass movements. Rather than express a desire to become a dictator, it in fact expresses the awareness that there is an “uneven” political development within the working class, an unevenness that can only be undermined by discussion within the mass assemblies of popular organisations. Any attempt to by-pass this “unevenness” by seizing or being elected to positions of power (i.e. by “official influence”) would be doomed to failure and result in dictatorship by a party — “triumph of the Jacobins or the Blanquists [or the Bolsheviks, we must add] would be the death of the Revolution.” [Op. Cit., p. 169]

This analysis can be seen from Bakunin’s discussion on union bureaucracy and how anarchists should combat it. Taking the Geneva section of the IWMA, Bakunin notes that the construction workers’ section “*simply left all decision-making to their committees . . . In this manner power gravitated to the committees, and by a species of fiction characteristic of all governments the committees substituted their own will and their own ideas for that of the membership.*” [Bakunin on Anarchism, p. 246] To combat this bureaucracy, “*the construction workers. . . sections could only defend their rights and their autonomy in only one way: the workers called general membership meetings. Nothing arouses the antipathy of the committees more than these popular assemblies. . . In these great meetings of the sections, the items on the agenda was amply discussed and the most progressive opinion prevailed. . .*” [Op. Cit., p. 247]

Given that Bakunin considered “*the federative Alliance of all working men’s [sic!] associations. . . [would] constitute the Commune*” made up of delegates with “*accountable and removable mandates*” we can easily see that the role of the anarchist federation would be to intervene in general assemblies of these associations and ensure, through debate, that “*the most progressive opinion prevailed.*” [Michael Bakunin: Selected Writings, p. 170, p. 171] Rather than seek power, the anarchists would seek **influence** based on the soundness of their ideas, the “*leadership of ideas*” in other words. Thus the anarchist federation “*unleashes their [the peoples] will and gives wider opportunity for their self-determination and their social-economic organisation, which should be created by them alone from the bottom upwards . . . The [revolutionary] organisation . . . [must] not in any circumstances. . . ever be their [the peoples] master . . . What is to be the chief aim and pursue of this organisation? To help the people towards self-determination on the lines of the most complete equality and fullest human freedom in every direction, without the least interference from any sort of domination. . . that is without any sort of government control.*” [Op. Cit., p. 191]

Having shown that the role of Bakunin’s revolutionary organisations is drastically different than that suggested by the selective quotations of Marxists, we need to address two more issues. One, the so-called hierarchical nature of Bakunin’s organisations and, two, their secret nature. Taking the issue of hierarchy first, we can do no better than quote Richard B. Saltman’s summary of the internal organisation of these groups:

“The association’s ‘single will,’ Bakunin wrote, would be determined by ‘laws’ that every member ‘helped to create,’ or at a minimum ‘equally approved’ by ‘mutual agreement.’ This ‘definite set of rules’ was to be ‘frequently renewed’ in plenary sessions wherein each member had the ‘duty to try and make his view prevail,’ but then he must

accept fully the decision of the majority. Thus the revolutionary association's 'rigorously conceived and prescribed plan,' implemented under the 'strictest discipline,' was in reality to be 'nothing more or less than the expression and direct outcome of the reciprocal commitment contracted by each of the members towards the others.'” [The Social and Political Thought of Michael Bakunin, p. 115]

While many anarchists would not agree 100 per cent with this set-up (although we think that most supporters of the “Platform” would) all would agree that it is **not** hierarchical. If anything, it appears quite democratic in nature. Moreover, comments in Bakunin’s letters to other Alliance members support the argument that his revolutionary associations were more democratic in nature than Marxists suggest. In a letter to a Spanish comrade we find him suggesting that “*all [Alliance] groups... should... from now on accept new members not by majority vote, but unanimously.*” In a letter to Italian members of the IWMA he argued that in Geneva the Alliance did not resort to “*secret plots and intrigues.*” Rather:

“Everything was done in broad daylight, openly, for everyone to see... The Alliance had regular weekly open meetings and everyone was urged to participate in the discussions... The old procedure where members sat and passively listened to speakers talking down to them from their pedestal was discarded.

“It was established that all meetings be conducted by informal round-table conversational discussions in which everybody felt free to participate: not to be talked at, but to exchange views...” [Bakunin on Anarchism, p. 386, pp. 405–6]

Moreover, we find Bakunin being out-voted within the Alliance, hardly what we would expect if they **were** top-down dictatorships run by Bakunin (as Marxists claim). The historian T.R. Ravindranathan indicates that after the Alliance was founded “*Bakunin wanted the Alliance to become a branch of the International [Worker’s Association] and at the same time preserve it as a secret society. The Italian and some French members wanted the Alliance to be totally independent of the IWA and objected to Bakunin’s secrecy. Bakunin’s view prevailed on the first question as he succeeded in convincing the majority of the harmful effects of a rivalry between the Alliance and the International. On the question of secrecy, he gave way to his opponents...*” [Bakunin and the Italians, p. 83]

These comments and facts suggest that the picture painted by Marxists of Bakunin and his secret societies is somewhat flawed. Moreover, if Bakunin **did** seek to create a centralised, hierarchical organisation, as Marxists claim, he did not do a good job. We find him complaining that the Madrid Alliance was breaking up (“*The news of the dissolution of the Alliance in Spain saddened Bakunin. he intensified his letter-writing to Alliance members whom he trusted... He tried to get the Spaniards to reverse their decision*”) and we find that while the “Bakunist” Spanish and Swiss sections of the IWMA sent delegates to its infamous Hague congress, the “Bakunist” Italian section did not (and these “missing” votes may have been enough to undermine the rigged congress). Of course, Marxists could argue that these facts show Bakunin’s

cunning nature, but the more obvious explanation is that Bakunin did not create (nor desire to create) a hierarchical organisation with himself at the top. As Juan Gomez Casa notes, the Alliance “*was not a compulsory or authoritarian body . . . [I]n Spain [it] acted independently and was prompted by purely local situations. The copious correspondence between Bakunin and his friends . . . was at all times motivated by the idea of offering advice, persuading, and clarifying. It was never written in a spirit of command, because that was not his style, nor would it have been accepted as such by his associates.*” Moreover, there “*is no trace or shadow of hierarchical organisation in a letter from Bakunin to Mora . . . On the contrary, Bakunin advises ‘direct’ relations between Spanish and Italian Comrades.*” The Spanish comrades also wrote a pamphlet which “*ridiculed the fable of orders from abroad.*” [**Anarchist Organisation**, pp. 37–8, p.25 and p. 40] This is confirmed by George R. Esenwein who argues that “[w]hile it is true that Bakunin’s direct intervention during the early days of the International’s development in Spain had assured the pre-dominance of his influence in the various federations and sections of the FRE [Spanish section of the International], it cannot be said that he manipulated it or otherwise used the Spanish Alliance as a tool for his own subversive designs.” Thus, “*though the Alliance did exist in Spain, the society did not bear any resemblance to the nefarious organisation that the Marxists depicted.*” [**Anarchist Ideology and the Working Class Movement in Spain**, p. 42] Indeed, as Max Nettlau points out, those Spaniards who did break with the Alliance were persuaded of its “*hierarchical organisation. . . not by their own direct observation, but by what they had been told about the conduct of the organisation in the abovementioned countries*” (which included England, where no evidence of any Alliance group has ever been recorded!) [cited by Casa, **Op. Cit.**, pp. 39–40]. In addition, if Bakunin **did** run the Alliance under his own personal dictatorship we would expect it to change or dissolve upon his death. However the opposite happened — “*the Spanish Alliance survived Bakunin, who died in 1876, yet with few exceptions it continued to function in much the same way it had during Bakunin’s lifetime.*” [George R. Esenwein, **Op. Cit.**, p. 43]

Moving on to the second issue, the question of why should the revolutionary organisation be secret? Simply because, at the time of Bakunin’s activism, many states were despotic monarchies, with little or no civil rights. As he argued, “*nothing but a secret society would want to take this [arousing a revolution] on, for the interests of the government and of the government classes would be bitterly opposed to it.*” [**Michael Bakunin: Selected Writings**, p. 188] For survival, Bakunin considered secrecy an essential. As Juan Gomez Casas notes, “[i]n view of the difficulties of that period, Bakunin believed that secret groups of convinced and absolutely trustworthy men were safer and more effective. They would be able to place themselves at the head of developments at critical moments, but only to inspire and to clarify the issues.” [**Op. Cit.**, p. 22] Even Marxists, faced with dictatorial states, have organised in secret. And as George R. Esenwein points out, the “*claim that Bakunin’s organisation scheme was not the product of a ‘hard-headed realism’ cannot be supported in the light of the experiences of the Spanish Alliansists. It is beyond doubt that their adherence to Bakunin’s program greatly contributed to the FRE’s [Spanish section of the First International] ability to flourish during the early part of the 1870s and to survive the harsh circumstances of repression in the period 1874–1881.*” [**Op. Cit.**, p. 224f] However, few, if any, anarchists would agree with

this position now, shaped as it was by Bakunin's personal experiences in Tsarist Russia and other illiberal states (and let us not forget that Bakunin had been imprisoned in the Peter and Paul prison for his activities).

This is not to suggest that all of Bakunin's ideas on the role and nature of anarchist groups are accepted by anarchists today. Most anarchists would reject Bakunin's arguments for secrecy and love of conspiracy, for example (particularly as secrecy cannot help but generate an atmosphere of deceit and, potentially, manipulation). Anarchists remember that anarchism did not spring fully formed and complete from Bakunin's (or any other individual's) head. Rather it was developed over time and by many individuals, inspired by many different experiences and movements. Because of this, anarchists recognise that Bakunin was inconsistent in some ways, as would be expected from a theorist breaking new ground, and this applies to his ideas on how anarchist groups should work within, and the role they should play, in popular movements. Most of his ideas are valid, once we place them into context, some are not. Anarchists embrace the valid ones and voice their opposition to the invalid ones.

In summary, any apparent contradiction (a contradiction which Marxists try hard to maintain and use to discredit anarchism by painting Bakunin as a closet dictator) between the "public" and "private" Bakunin disappears once we place his comments into context within both the letters he wrote and his overall political theory. In fact, rather than promoting a despotic dictatorship over the masses his concept of "*invisible dictatorship*" is very similar to the "*leadership of ideas*" concept we discussed in section J.3.6. As Brian Morris argues, those who, like Leninist Hal Draper, argue that Bakunin was in favour of despotism only come to "*these conclusions by an incredible distortion of the substance of what Bakunin was trying to convey in his letters to Richard and Nechaev*" and "[o]nly the most jaundiced scholar, or one blinded by extreme antipathy towards Bakunin or anarchism, could interpret these words as indicating that Bakunin conception of a secret society implied a revolutionary dictatorship in the Jacobin sense, still less a 'despotism'." [Bakunin: The Philosophy of Freedom, p. 144, p. 149]

J.3.8 What is anarcho-syndicalism?

Anarcho-syndicalism (as mentioned in section A.3.2) is a form of anarchism which applies itself (primarily) to creating industrial unions organised in an anarchist manner, using anarchist tactics (such as direct action) to create a free society. Or, in the words of the International Workers' Association:

"Revolutionary Syndicalism basing itself on the class-war, aims at the union of all manual and intellectual workers in economic fighting organisations struggling for their emancipation from the yoke of wage slavery and from the oppression of the State. Its goal consists in the re-organisation of social life on the basis of free Communism, by means of the revolutionary action of the working-class itself. It considers that the economic organisations of the proletariat are alone capable of realising this aim, and, in consequence, its appeal is addressed to workers in their capacity of producers and creators of social riches, in opposition to the modern political labour parties which

can never be considered at all from the points of view of economic re-organisation. [The Principles of Revolutionary Syndicalism, point 1]

The word “*syndicalism*” is basically an English rendering of the French for “*revolutionary trade unionism*” (“*syndicalisme revolutionarie*”). In the 1890s many anarchists in France started to work within the trade union movement, radicalising it from within. As the ideas of autonomy, direct action, the general strike and political independence of unions which were associated with the French **Confederation Generale du Travail** (General Confederation of Labour) spread across the world (partly through anarchist contacts, partly through word of mouth by non-anarchists who were impressed by the militancy of the CGT), the word “syndicalism” was used to describe movements inspired by the example of the CGT. Thus “syndicalism,” “revolutionary syndicalism” and “anarcho-syndicalism” all basically mean “revolutionary unionism” (the term “industrial unionism” used by the IWW essentially means the same thing).

The main difference is between revolutionary syndicalism and anarcho-syndicalism, with anarcho-syndicalism arguing that revolutionary syndicalism concentrates too much on the workplace and, obviously, stressing the anarchist roots and nature of syndicalism more than revolutionary syndicalism. In addition, particularly in France, anarcho-syndicalism is considered compatible with supporting a specific anarchist organisation to complement the work of the revolutionary unions. Revolutionary syndicalism, in contrast, argues that the syndicalist unions are sufficient in themselves to create libertarian socialism and rejects anarchist groups along with political parties. However, the dividing line can be unclear (and, just to complicate things even more, **some** syndicalists support political parties and are not anarchists — there have been a few Marxist syndicalists, for example. We will ignore these syndicalists in our discussion and concentrate on the libertarian syndicalists). We will use the term syndicalism to describe what each branch has in common.

Syndicalism is different from ordinary trade unionism (sometimes called business unionism by anarchists and syndicalists as it treats the union’s job purely as the seller of its members labour power and acts like any other business). Syndicalism, in contrast with trade unionism, is based on unions managed directly by the rank and file membership rather than by elected officials and bureaucrats. The syndicalist union is not based on where the worker lives (as is the case with many trade unions). Instead, the union is based and run from the workplace. It is there that union meetings are held, where workers are exploited and oppressed and where their economic power lies. Syndicalism is based on local branch autonomy, with each branch having the power to call and end strikes and organise its own affairs. No union officials have the power to declare strikes “unofficial” as every strike decided upon by the membership is automatically “official” simply because the branch decided it in a mass meeting. Power would be decentralised into the hands of the union membership, as expressed in local branch assemblies.

To co-ordinate strikes and other forms of action, these autonomous branches are part of a federal structure. The mass meeting in the workplace mandates delegates to express the wishes of the membership at “labour councils” and “industrial unions.”

The labour council is the federation of all workplace branches of all industries in a geographical area (say, for example, in a city or region) and it has the tasks of, among other things, education, propaganda and the promotion of solidarity between the different union branches in its area. Due to the fact it combines all workers into one organisation, regardless of industry or union, the labour council plays a key role in increasing **class** consciousness and solidarity. This can be seen from both the Italian USI and the Spanish CNT, to take two examples. In the later case, the *“territorial basis of organisation linkage brought all the workers from one area together and fomented working-class solidarity over and before corporate solidarity.”* [J. Romero Maura, *“The Spanish Case”*, contained in **Anarchism Today**, D. Apter and J. Joll (eds.), p. 75] The example of the USI also indicates the validity of French syndicalist Fernand Pelloutier’s passionate defence of the **Bourse du Travail** as a revolutionary force (see Carl Levy, *“Italian Anarchism: 1870–1926”* in **For Anarchism**, David Goodway (ed.), pp. 48–9).

The industrial union, on the other hand, is the federation of union branches **within the same industry** in a given area (there would be a coal miners industry wide union, a software workers industrial union and so on). These councils would organise industry wide struggles and solidarity. In this way workers in the same industry support each other, ensuring that if workers in one workplace goes on strike, the boss cannot swap production to another workplace elsewhere and so weaken and defeat the action (see Berkman’s **ABC of Anarchism**, p. 54, for a fuller discussion of why such industrial unionism is essential to win strikes).

In practice, of course, the activities of these dual federations would overlap: labour councils would support an industry wide strike or action while industrial unions would support action conducted by its member unions called by labour councils. However, we must stress that both the industrial federations and the cross-industry (territorial) labour councils are *“based on the principles of Federalism, on free combination from below upwards, putting the right of self-determination of every member above everything else and recognising only the organic agreement of all on the basis of like interests and common convictions.”* [Rudolf Rocker, **Anarcho-Syndicalism**, p. 53]

As well as being decentralised and organised from the bottom up, the syndicalist union differs from the normal trade union by having no full-time officials. All union business is conducted by elected fellow workers who do their union activities after work or, if it has to be done during work hours, they get the wages they lost while on union business. In this way no bureaucracy of well paid officials is created and all union militants remain in direct contact with their fellow workers. Given that it is their wages, working conditions and so on that are effected by their union activity they have a real interest in making the union an effective organisation and ensuring that it reflects the interests of the rank and file. In addition, all part-time union “officials” are elected, mandated and recallable delegates. If the fellow worker who is elected to the local labour council or other union committee is not reflecting the opinions of those who mandated him or her then the union assembly can countermand their decision, recall them and replace them with someone who **will** reflect the decisions of the union.

The syndicalist union is committed to **direct action** and refuses links with political parties, even labour or “socialist” ones. A key idea of syndicalism is

that of union autonomy — the idea that the workers’ organisation is capable of changing society by its own efforts and that it must control its own fate and not be controlled by any party or other outside group (including anarchist federations). This is sometimes termed “*workerism*” (from the French “*ouvrierisme*”), i.e. workers’ control of the class struggle and their own organisations. Rather than being a cross-class organisation like the political party, the union is a **class** organisation and is so uniquely capable of representing working class aspirations, interests and hopes. There is “*no place in it for anybody who was not a worker. Professional middle class intellectuals who provided both the leadership and the ideas of the socialist political movement, were therefore at a discount. As a consequence the syndicalist movement was, and saw itself as, a purely working class form of socialism . . . [S]yndicalism appears as the great heroic movement of the proletariat, the first movement which took seriously . . . [the argument] that the emancipation of the working class must be the task of labour unaided by middle class intellectuals or by politicians and aimed to establish a genuinely working class socialism and culture, free of all bourgeois taints. For the syndicalists, the workers were to be everything, the rest, nothing.*” [Geoffrey Ostergaard, **The Tradition of Workers’ Control**, p. 38]

Therefore syndicalism is “*consciously anti-parliamentary and anti-political. It focuses not only on the realities of power but also on the key problem of achieving its disintegration. Real power in syndicalist doctrine is economic power. The way to dissolve economic power is to make every worker powerful, thereby eliminating power as a social privilege. Syndicalism thus ruptures all the ties between the workers and the state. It opposes political action, political parties, and any participant in political elections. Indeed it refuses to operate in the framework of the established order and the state . . . [S]yndicalism turns to direct action — strikes, sabotage, obstruction, and above all, the revolutionary general strike. Direct action not only perpetuates the militancy of the workers and keeps alive the spirit of revolt, but awakens in them a greater sense of individual initiative. By continual pressure, direct action tests the strength of the capitalist system at all times and presumably in its most important arena — the factory, where ruled and ruler seem to confront each other most directly.*” [Murray Bookchin, **The Spanish Anarchists**, p. 121]

This does not mean that syndicalism is “apolitical” in the sense of ignoring totally all political issues. This is a Marxist myth. Syndicalists follow other anarchists by being opposed to all forms of authoritarian/capitalist politics but do take a keen interest in “political” questions as they relate to the interests of working people. Thus they do not “ignore” the state, or the role of the state. Indeed, syndicalists are well aware that the state exists to protect capitalist property and power. For example, the British syndicalists’ “*vigorous campaign against the ‘servile state’ certainly disproves the notion that syndicalists ignored the role of the state in society. On the contrary, their analysis of bureaucratic state capitalism helped to make considerable inroads into prevailing Labourist and state socialist assumptions that the existing state could be captured by electoral means and used as an agent of through-going social reform.*” [Bob Holton, **British Syndicalism: 1900–1914**, p. 204]

Indeed, Rudolf Rocker makes the point very clear. “*It has often been charged against Anarcho-Syndicalism,*” he writes, “*that it has no interest in the political structure of the different countries, and consequently no interest in the political*

struggles of the time, and confines its activities entirely to the fight for purely economic demands. This idea is altogether erroneous and springs either from outright ignorance or wilful distortion of the facts. It is not the political struggle as such which the Anarcho-Syndicalist from the modern labour parties, both in principle and tactics, but form of this struggle and the aims which it has in view... their efforts are also directed, even today, at restricting the activities of the state ... The attitude of Anarcho-Syndicalism towards the political power of the present-day state is exactly the same as it takes towards the system of capitalist exploitation ... [and] pursue the same tactics in their fight against ... the state ... [T]he worker cannot be indifferent to the economic conditions of life ... so he cannot remain indifferent to the political structure of his [or her] country ... [Op. Cit., p.63]

Thus syndicalism is not indifferent to or ignores political struggles and issues. Rather, it fights for political change and reforms as it fights for economic ones — by direct action and solidarity. If revolutionary and anarcho-syndicalists “reject any participation in the works of bourgeois parliaments, it is not because they have no sympathy with political struggles in general, but because they are firmly convinced that parliamentary activity is for the workers the very weakest and most hopeless form of the political struggles.” [Op. Cit., p. 65] Syndicalists (like other anarchists) argue that the political and the economic must be **integrated** and that integration must take place in working class organisations, which, for syndicalists, means their unions (or union-like organisations such as workplace councils or assemblies). Rather than being something other people discuss on behalf of working class people, syndicalists, again like all anarchists, argue that politics must no longer be in the hands of so-called experts (i.e. politicians) but instead lie in the hands of those directly affected by it. Also, in this way the union encourages the political development of its members by the process of participation and self-management.

In other words, political issues must be raised in economic and social organisations and discussed there, where working class people have real power. In this they follow Bakunin who argued that an “*it would be absolutely impossible to ignore political and philosophical questions*” and that an “*exclusive preoccupation with economic questions would be fatal for the proletariat.*” Therefore, the unions must be open to all workers, be independent of all political parties and be based on economic solidarity with all workers, in all lands, but there must be “*free discussion of all political and philosophical theories*” “*leaving the sections and federations to develop their own policies*” since “*political and philosophical questions ... [must be] posed in the International ... [by] the proletariat itself ...*” [Bakunin on Anarchism, p. 301, p. 302, p. 297, p. 302]

Thus revolutionary and anarcho-syndicalism are deeply political in the widest sense of the word, aiming for a radical change in political, economic and social conditions and institutions. Moreover, it is political in the narrower sense of being aware of political issues and aiming for political reforms along with economic ones. They are only “apolitical” when it comes to supporting political parties and using bourgeois political institutions, a position which is “political” in the wider sense of course! This is obviously identical to the usual anarchist position (see section J.2)

Which indicates another importance difference between syndicalism and trade unionism. Syndicalism aims at changing society rather than just working within it. Thus syndicalism is revolutionary while trade unionism is reformist.

For syndicalists the union “has a double aim: with tireless persistence, it must pursue betterment of the working class’s current conditions. But, without letting themselves become obsessed with this passing concern, the workers should take care to make possible and imminent the essential act of comprehensive emancipation: the expropriation of capital.” [Emile Pouget, **No Gods, No Masters**, p. 71] Thus syndicalism aims to win reforms by direct action and by this struggle bring the possibilities of a revolution, via the general strike, closer. Indeed any “desired improvement is to be wrested directly from the capitalist. . . [and] must always represent a reduction in capitalist privileges and be a partial expropriation.” [Op. Cit., p. 73] Thus Emma Goldman:

“Of course Syndicalism, like the old trade unions, fights for immediate gains, but it is not stupid enough to pretend that labour can expect humane conditions from inhumane economic arrangements in society. Thus it merely wrests from the enemy what it can force him to yield; on the whole, however, Syndicalism aims at, and concentrates its energies upon, the complete overthrow of the wage system.

“Syndicalism goes further: it aims to liberate labour from every institution that has not for its object the free development of production for the benefit of all humanity. In short, the ultimate purpose of Syndicalism is to reconstruct society from its present centralised, authoritative and brutal state to one based upon the free, federated grouping of the workers along lines of economic and social liberty.

“With this object in view, Syndicalism works in two directions: first, by undermining the existing institutions; secondly, by developing and educating the workers and cultivating their spirit of solidarity, to prepare them for a full, free life, when capitalism shall have been abolished. . .

“Syndicalism is, in essence, the economic expression of Anarchism. . . ”
[Red Emma Speaks, p. 68]

Which, in turn, explains why syndicalist unions are structured in such an obviously libertarian way. On the one hand, it reflects the importance of empowering every worker by creating a union which is decentralised and self-managed, a union which every member plays a key role in determining its policy and activities. Participation ensures that the union becomes a “school for the will” (to use Pouget’s expression) and allows working people to learn how to govern themselves and so do without government and state. On the other hand, “[a]t the same time that syndicalism exerts this unrelenting pressure on capitalism, it tries to build the new social order within the old. The unions and the ‘labour councils’ are not merely means of struggle and instruments of social revolution; they are also the very structure around which to build a free society. The workers are to be educated [by their own activity within the union] in the job of destroying the old propertied order and in the task of reconstructing a stateless, libertarian society. The two go together.” [Murray Bookchin, **Op. Cit.**, p. 121] The syndicalist union is seen as prefiguring the future society, a society which (like the union) is decentralised and self-managed in all aspects.

Thus, as can be seen, syndicalism differs from trade unionism in its structure, its methods and its aims. Its structure, method and aims are distinctly

anarchist. Little wonder the leading syndicalist theorist Fernand Pelloutier argued that the trade union, “*governing itself along anarchic lines,*” must become “*a practical schooling in anarchism.*” [No Gods, No Masters, p. 55, p. 57] In addition, most anarcho-syndicalists support community organisations and struggle alongside the more traditional industry based approach usually associated within syndicalism. While we have concentrated on the industrial side here (simply because this is a key aspect of syndicalism) we must stress that syndicalism can and does lend itself to community struggles, so our comments have a wider application (for example, in the form of community unionism as a means to create community assemblies — see section J.5.1). It is a myth that anarcho-syndicalism ignores community struggles and organisation, as can be seen from the history of the Spanish CNT for example (the CNT helped organise rent strikes, for example).

It must be stressed that a syndicalist union is open to all workers regardless of their political opinions (or lack of them). The union exists to defend workers’ interests as workers and is organised in an anarchist manner to ensure that their interests are fully expressed. This means that an syndicalist organisation is different from an organisation of syndicalists. What makes the union syndicalist is its structure, aims and methods. Obviously things can change (that is true of any organisation which has a democratic structure) but that is a test revolutionary and anarcho-syndicalists welcome and do not shirk from. As the union is self-managed from below up, its militancy and political content is determined by its membership. As Pouget put it, the union “*offers employers a degree of resistance in geometric proportion with the resistance put up by its members.*” [Op. Cit., p. 71] That is why syndicalists ensure that power rests in the members of the union.

Syndicalists have two main approaches to building revolutionary unions — “*dual unionism*” and “*boring from within.*” The former approach involves creating new, syndicalist, unions, in opposition to the existing trade unions. This approach was historically and is currently the favoured way of building syndicalist unions (American, Italian, Spanish, Swedish and numerous other syndicalists built their own union federations in the heyday of syndicalism between 1900 and 1920). “Boring from within” simply means working within the existing trade unions in order to reform them and make them syndicalist. This approach was favoured by French and British syndicalists, plus a few American ones. See also sections J.5.2 and J.5.3 for more on industrial unionism and anarchist perspectives on existing trades unions.

However, these two approaches are not totally in opposition. Many of the dual unions were created by syndicalists who had first worked within the existing trade unions. Once they got sick of the bureaucratic union machinery and of trying to reform it, they split from the reformist unions and formed new, revolutionary, ones. Similarly, dual unionists will happily support trade unionists in struggle and often be “two carders” (i.e. members of both the trade union and the syndicalist one). Rather than being isolated from the majority of trade unionists, supporters of dual unionism argue that they would be in contact with them where it counts, on the shop floor and in struggle rather than in trade union meetings which many workers do not even attend. Dual unionists argue that the trade unions, like the state, are too bureaucratic to be changed and that, therefore, trying to reform them is a waste of time and energy (and it is likely that rather than change the trade union, “boring from within” would

more likely change the syndicalist by watering down their ideas).

However, syndicalists no matter what tactics they prefer, favour autonomous workplace organisations, controlled from below. Both tend to favour syndicalists forming networks of militants to spread anarchist/syndicalist ideas within the workplace. Indeed, such a network (usually called “*Industrial Networks*” — see section J.5.4 for more details) would be an initial stage and essential means for creating syndicalist unions. These groups would encourage syndicalist tactics and rank and file organisation during struggles and so create the potential for building syndicalist unions as syndicalist ideas spread and are seen to work.

While the names “syndicalism” and “anarcho-syndicalism” date from the 1890s in France, the ideas associated with these names have a longer history. Anarcho-syndicalist ideas have developed independently in many different countries and times. As Rudolf Rocker notes, anarcho-syndicalism itself was “*a direct continuation of those social aspirations which took shape in the bosom of the First International and which were best understood and most strongly held by the libertarian wing of the great workers’ alliance . . . Its theoretical assumptions are based on the teachings of Libertarian or Anarchist Socialism, while its form of organisation is largely borrowed from revolutionary Syndicalism.*” [**Anarcho-Syndicalism**, p. 49]

Indeed, anyone familiar with Bakunin’s work will quickly see that much of his ideas prefigure what was latter to become known as syndicalism. Bakunin, for example, argued that the “*organisation of the trade sections, their federation in the International, and their representation by the Chambers of Labour, not only create a great academy, in which the workers of the International, combining theory and practice, can and must study economic science, they also bear in themselves the living germs of the new social order, which is to replace the bourgeois world. They are creating not only the ideas but also the facts of the future itself.*” [quoted by Rocker, **Op. Cit.**, p. 45] Bakunin continually stressed that trade unions were the “*only really efficacious weapons the workers now can use against*” the bourgeoisie, as well as the importance of solidarity and the radicalising and empowering effect of strikes and the importance of the general strike as a means of “*forc[ing] society to shed its old skin.*” [**The Basic Bakunin**, p. 153, p. 150]

(We must stress that we are **not** arguing that Bakunin “invented” syndicalism. Far from it. Rather, we are arguing that Bakunin expressed ideas already developed in working class circles and became, if you like, the “spokes-person” for these libertarian tendencies in the labour movement as well as helping to clarify these ideas in many ways. As Emma Goldman argued, the “*feature which distinguishes Syndicalism from most philosophies is that it represents the revolutionary philosophy of labour conceived and born in the actual struggle and experience of workers themselves — not in universities, colleges, libraries, or in the brain of some scientists.*” [**Op. Cit.**, pp. 65–6] This applies equally to Bakunin and the first International).

Thus, rather than being some sort of revision of anarchism or some sort of “semi-Marxist” movement, syndicalism was, in fact, a reversion to the ideas of Bakunin and the anarchists in the first International (although, as we discuss in the next section, with some slight differences) after the disastrous experience of “*propaganda by the deed*” (see sections A.2.18 and A.5.3). Given the utter nonsense usually written by Marxists (and liberals) about Bakunin, it is not hard to understand why Marxists fail to see the anarchist roots of syndicalism — not

being aware of Bakunin's ideas, they think that anarchism and syndicalism are utterly different while, in fact, (to use Emma Goldman's words) syndicalism "*is, in essence, the economic expression of Anarchism*" and "*under Bakunin and the Latin workers, [the International was] forging ahead along industrial and Syndicalist lines.*" [Red Emma Speaks, p. 68, p. 66] Similarly, we find that the American **Black International** (organised by anarchists in the 1880s) "*anticipated by some twenty years the doctrine of anarcho-syndicalism*" and "*[m]ore than merely resembling the 'Chicago Idea' [of the **Black International**], the IWW's principles of industrial unionism resulted from the conscious efforts of anarchists . . . who continued to affirm . . . the principles which the Chicago anarchists gave their lives defending.*" [Salvatore Salerno, **Red November, Black November**, p. 51 and p. 79] Thus, ironically, many Marxists find themselves in the curious position of ascribing ideas and movements inspired by Bakunin to Marx!

Moreover, ideas similar to anarcho-syndicalism were also developed independently of the libertarian wing of the IWMA nearly 40 years previously in Britain. The idea that workers should organise into unions, use direct action and create a society based around the trade union federation had been developed within the early labour movement in Britain. The Grand National Consolidated Trade Union of Great Britain and Ireland had, as one expert on the early British Labour movement put it, a "*vision [which] is an essentially syndicalist one of decentralised socialism in which trade unions . . . have acquired . . . the productive capacity to render themselves collectively self-sufficient as a class*" and a union based "*House of Trades*" would replace the existing state [Noel Thompson, **The Real Rights of Man**, p.88]. This movement also developed Proudhon's ideas on mutual banks and labour notes decades before he put pen to paper. For an excellent history of this period, see E.P. Thompson's **The Making of the English Working Class** and for a fuller history of proto-syndicalism Rudolf Rocker's **Anarcho-Syndicalism** cannot be bettered.

Thus syndicalism and anarcho-syndicalism (or anarchist-syndicalism) is revolutionary labour unionism. Its theoretical assumptions and organisation are based on the teachings of libertarian socialism (or Anarchism). Syndicalism combines the day-to-day struggle for reforms and improvements in working class life within the framework of existing capitalist society (reforms gained by direct action and considered as partial expropriations) with the long term aim of the overthrow of capitalism and statism. The aim of the union is workers' self-management of production and distribution after the revolution, a self-management which the union is based upon in the here and now.

Syndicalists think that such an organisation is essential for the successful creation of an anarchist society as it builds the new world in the shell of the old, making a sizeable majority of the population aware of anarchism and the benefits of anarchist forms of organisation and struggle. Moreover, they argue that those who reject syndicalism "*because it believes in a permanent organisation of workers*" and urge "*workers to organise 'spontaneously' at the very moment of revolution*" promote a "*con-trick, designed to leave 'the revolutionary movement,' so called, in the hands of an educated class. . . [or] so-called 'revolutionary party' . . . [which] means that the workers are only expected to come in the fray when there's any fighting to be done, and in normal times leave theorising to the specialists or students.*" [Albert Meltzer, **Anarchism: Arguments for and Against**, p. 57] The syndicalist union is seen as a "school" for anarchism,

“the germ of the Socialist economy of the future, the elementary school of Socialism in general. . . [we need to] plant these germs while there is yet time and bring them to the strongest possible development, so as to make the task of the coming social revolution easier and to insure its permanence.” [Rudolf Rocker, **Op. Cit.**, p. 52] A self-managed society can only be created by self-managed means, and as only the practice of self-management can ensure its success, the need for libertarian popular organisations is essential. Syndicalism is seen as the key way working people can prepare themselves for revolution and learn to direct their own lives. In this way syndicalism creates, to use Bakunin’s terms, a true politics of the people, one that does not create a parasitic class of politicians and bureaucrats (*“We wish to emancipate ourselves, to free ourselves”*, Pelloutier wrote, *“but we do not wish to carry out a revolution, to risk our skin, to put Pierre the socialist in the place of Paul the radical”*).

This does not mean that syndicalists do not support organisations spontaneously created by workers’ in struggle (such as workers’ councils, factory committees and so on). Far from it. Anarcho-syndicalists and revolutionary syndicalists have played important parts in these kinds of organisation (as can be seen from the Russian Revolution, the factory occupations in Italy in 1920, the British Shop Steward movement and so on). This is because syndicalism acts as a catalyst to militant labour struggles and serves to counteract class-collaborationist tendencies by union bureaucrats and other labour fakirs. Part of this activity must involve encouraging self-managed organisations where none exist and so syndicalists support and encourage all such spontaneous movements, hoping that they turn into the basis of a syndicalist union movement or a successful revolution. Moreover, most anarcho-syndicalists recognise that it is unlikely that every worker, nor even the majority, will be in syndicalist unions before a revolutionary period starts. This means **new** organisations, created spontaneously by workers in struggle, would have to be the framework of social struggle and the post-capitalist society rather than the syndicalist union as such. All the syndicalist union can do is provide a practical example of how to organise in a libertarian way within capitalism and statism and provide **part** of the framework of the free society, along with other spontaneously created organisations.

Hence spontaneously created organisations of workers in struggle play an important role in revolutionary and anarcho-syndicalist theory. Since syndicalists advocate that it is the workers, using their own organisations who will control their own struggles (and, eventually, their own revolution) in their own interests, not a vanguard party of elite political theorists, this is unsurprising. It matters little if the specific organisations are revolutionary industrial unions, factory committees, workers councils’, or other labour formations. The important thing is that they are created and run by workers themselves. Meanwhile, anarcho-syndicalists are industrial guerrillas waging class war at the point of production in order to win improvements in the here and now and strengthen tendencies towards anarchism by showing that direct action and libertarian organisation is effective and can win partial expropriations of capitalist and state power.

Lastly, we must point out here that while syndicalism has anarchist roots, not all syndicalists are anarchists. A few Marxists have been syndicalists, particularly in the USA where the followers of Daniel De Leon supported Industrial Unionism and helped form the Industrial Workers of the World. The Irish so-

cialist James Connelly was also a Marxist-syndicalist, as was Big Bill Haywood a leader of the IWW and member of the US Socialist Party. Marxist-syndicalists are generally in favour of more centralisation within syndicalist unions (the IWW was by far the most centralised syndicalist union) and often argue that a political party is required to complement the work of the union. Needless to say, anarcho-syndicalists and revolutionary syndicalists disagree, arguing that centralisation kills the spirit of revolt and weakens a unions real strength [Rudolf Rocker, **Anarcho-Syndicalism**, p. 53] and that political parties divide labour organisations needlessly and are ineffective when compared to militant unionism [Op. Cit., p. 51] So not all syndicalists are anarchists and not all anarchists are syndicalists (we discuss the reasons for this in the next section). Those anarchists who are syndicalists often use the term “anarcho-syndicalism” to indicate that they are both anarchists and syndicalists and to stress the libertarian roots and syndicalism.

For more information on anarcho-syndicalist ideas, Rudolf Rocker’s classic introduction to the subject, **Anarcho-Syndicalism** is a good starting place, as is the British syndicalist Tom Brown’s **Syndicalism**. Daniel Guerin’s **No Gods, No Masters** contains articles by leading syndicalist thinkers and is also a useful source of information.

J.3.9 Why are many anarchists not anarcho-syndicalists?

Before discussing why many anarchists are not anarcho-syndicalists, we must clarify a few points first. Let us be clear, non-syndicalist anarchists usually support the ideas of workplace organisation and struggle, of direct action, of solidarity and so on. Thus most non-syndicalist anarchists do not disagree with anarcho-syndicalists on these issues. Indeed, many even support the creation of syndicalist unions. Thus many anarcho-communists like Alexander Berkman, Errico Malatesta and Emma Goldman supported anarcho-syndicalist organisations and even, like Malatesta, helped form such revolutionary union federations (he helped form the FORA in Argentina) and urged anarchists to take a leading role in organising unions. So when we use the term “non-syndicalist anarchist” we are not suggesting that these anarchists reject all aspects of anarcho-syndicalism. Rather, they are critical of certain aspects of anarcho-syndicalist ideas while supporting other aspects of it.

In the past, a few communist-anarchists **did** oppose the struggle for improvements within capitalism as “reformist.” However, these were few and far between and with the rise of anarcho-syndicalism in the 1890s, the vast majority of communist-anarchists recognised that only by encouraging the struggle for reforms would people take them seriously. Only by showing the benefits of anarchist tactics and organisation in practice could anarchist ideas grow in influence. Thus syndicalism was a healthy response to the rise of “abstract revolutionarism” that infected the anarchist movement during the 1880s, particularly in France and Italy. Thus communist-anarchists agree with syndicalists on the importance of struggling for and winning reforms and improvements within capitalism.

Similarly, anarchists like Malatesta also recognised the importance of mass organisations like unions. As he argued, “*to encourage popular organisations of all kinds is the logical consequence of our basic ideas . . . An authoritarian party,*

*which aims at capturing power to impose its ideas, has an interest in the people remaining an amorphous mass, unable to act for themselves and therefore easily dominated . . . But we anarchists do not want to **emancipate** the people; we want the people to **emancipate themselves** . . . we want the new way of life to emerge from the body of the people and correspond to the state of their development and advance as they advance.” [Life and Ideas, p. 90] And this can only occur when there are popular organisations, like trade unions, within which people can express themselves, come to common agreements and act. Moreover, these organisations must be autonomous, self-governing, be libertarian in nature **and** be independent of all parties and organisations (including anarchist ones). The similarity with anarcho-syndicalist ideas is striking.*

So why, if this is the case, are many anarchists not anarcho-syndicalists? There are two main reasons for this. First, there is the question of whether unions are, by their nature, revolutionary organisations. Second, whether syndicalist unions are sufficient to create anarchy by themselves. We will discuss each in turn.

As can be seen from any country, the vast majority of unions are deeply reformist and bureaucratic in nature. They are centralised, with power resting at the top in the hands of officials. This suggests that in themselves unions are not revolutionary. As Malatesta argued, this is to be expected for “*all movements founded on material and immediate interests (and a mass working class movement cannot be founded on anything else), if the ferment, the drive and the unremitting efforts of men [and women] of ideas struggling and making sacrifices for an ideal future are lacking, tend to adapt themselves to circumstances, foster a conservative spirit, and fear of change in those who manage to improve their conditions, and often end up by creating new privileged classes and serving to support and consolidate the system one would want to destroy.*” [Op. Cit., pp. 113-4]

If we look at the **role** of the union within capitalist society we see that in order for it to work, it must offer a reason for the boss to recognise it and negotiate with it. This means that the union must be able to offer the boss something in return for any reforms it gets and this “something” is labour discipline. In return for an improvement in wages or conditions, the union must be able to get workers to agree to submit to the contracts the union signs with their boss. In other words, they must be able to control their members — stop them fighting the boss — if they are to have anything with which to bargain with. This results in the union becoming a third force in industry, with interests separate than the workers which it claims to represent. The role of unionism as a seller of labour power means that it often has to make compromises, compromises it has to make its members agree to. This necessities a tendency for power to be taken from the rank and file of the unions and centralised in the hands of officials at the top of the organisation. This ensures that “*the workers organisation becomes what it must perforce be in a capitalist society — a means not of refusing to recognise and overthrowing the bosses, but simply for hedging round and limiting the bosses’ power.*” [Errico Malatesta, **The Anarchist Revolution**, p. 29]

Anarcho-syndicalists are aware of this problem. That is why their unions are decentralised, self-managed and organised from the bottom up in a federal manner. As Durruti argued:

“No anarchists in the union committees unless at the ground level. In these committees, in case of conflict with the boss, the militant is forced to compromise to arrive at an agreement. The contracts and activities which come from being in this position, push the militant towards bureaucracy. Conscious of this risk, we do not wish to run it. Our role is to analyse from the bottom the different dangers which can beset a union organisation like ours. No militant should prolong his job in committees, beyond the time allotted to him. No permanent and indispensable people.” [Durruti: **The People Armed**, p. 183]

However, structure is rarely enough in itself to undermine the bureaucratic tendencies created by the role of unions in the capitalist economy. While such libertarian structures can slow down the tendency towards bureaucracy, non-syndicalist anarchists argue that they cannot stop it. They point to the example of the French CGT which had become reformist by 1914 (the majority of other syndicalist unions were crushed by fascism or communism before they had a chance to develop fully). Even the Spanish CNT (by far the most successful anarcho-syndicalist union) suffered from the problem of reformism, causing the anarchists in the union to organise the FAI in 1927 to combat it (which it did, very successfully). According to Jose Peirats, the *“participation of the anarchist group in the mass movement CNT helped to ensure that CNT’s revolutionary nature.”* [Anarchists in the Spanish Revolution, p. 241] This indicates the validity of Malatesta’s arguments concerning the need for anarchists to remain distinct of the unions organisationally while working within them (just as Peirat’s comment that *“[b]linkered by participation in union committees, the FAI became incapable of a wider vision”* indicates the validity of Malatesta’s warnings against anarchists taking positions of responsibility in unions! [Op. Cit., pp. 239–40]).

Moreover, even the structure of syndicalist unions can cause problems. *“In modelling themselves structurally on the bourgeois economy, the syndicalist unions tended to become the organisational counterparts of the very centralised apparatus they professed to oppose. By pleading the need to deal effectively with the tightly knit bourgeoisie and state machinery, reformist leaders in syndicalist unions often had little difficulty in shifting organisational control from the bottom to the top.”* [Murray Bookchin, **The Spanish Anarchists**, p. 123]

In addition, as the syndicalist unions grow in size and influence their initial radicalism is usually watered-down. This is because, *“since the unions must remain open to all those who desire to win from the masters better conditions of life, whatever their opinions may be . . . , they are naturally led to moderate their aspirations, first so that they should not frighten away those they wish to have with them, and because, in proportion as numbers increase, those with ideas who have initiated the movement remain buried in a majority that is only occupied with the petty interests of the moment.”* [Errico Malatesta, *“Anarchism and Syndicalism”*, contained in Geoffrey Ostergaard, **The Tradition of Workers’ Control**, p. 150]

Which, ironically given that increased self-management is the means of reducing tendencies towards bureaucracy, means that syndicalist unions have a tendency towards reformism simply because the majority of their members will be non-revolutionary if the union grows in size in non-revolutionary times. This can be seen from the development of the Swedish syndicalist union the SAC,

which went from being a very militant minority union to watering down its politics to retain members in non-revolutionary times

So, if the union's militant strategy succeeds in winning reforms, more and more workers will join it. This influx of non-anarchists and non-syndicalists must, in a self-managed organisation, exert a de-radicalising influence on the unions politics and activities in non-revolutionary times. The syndicalist would argue that the process of struggling for reforms combined with the educational effects of participation and self-management will reduce this influence and, of course, they are right. However, non-syndicalist anarchists would counter this by arguing that the libertarian influences generated by struggle and participation would be strengthened by the work of anarchist groups and, without this work, the de-radicalising influences would outweigh the libertarian ones. In addition, the success of a syndicalist union must be partly determined by the general level of class struggle. In periods of great struggle, the membership will be more radical than in quiet periods and it is quiet periods which cause the most difficulties for syndicalist unions. With a moderate membership the revolutionary aims and tactics of the union will also become moderated. As one academic writer on French syndicalism put it, syndicalism "*was always based on workers acting in the economic arena to better their conditions, build class consciousness, and prepare for revolution. The need to survive and build a working-class movement had always forces syndicalists to adapt themselves to the exigencies of the moment.*" [Barbara Mitchell, "French Syndicalism: An Experiment in Practical Anarchism", contained in **Revolutionary Syndicalism: An International Perspective**, Marcel van der Linden and Wayne Thorpe (eds.), p. 25]

As can be seen from the history of many syndicalist unions (and, obviously, mainstream unions too) this seems to be the case — the libertarian tendencies are outweighed by the de-radicalising ones. This can also be seen from the issue of collective bargaining:

"The problem of collective bargaining foreshadowed the difficulty of maintaining syndicalist principles in developed capitalist societies. Many organisations within the international syndicalist movement initially repudiated collective agreements with employers on the grounds that by a collaborative sharing of responsibility for work discipline, such agreements would expand bureaucratisation within the unions, undermine revolutionary spirit, and restrict the freedom of action that workers were always to maintain against the class enemy. From an early date, however, sometimes after a period of suspicion and resistance, many workers gave up this position. In the early decades of the century it became clear that to maintain or gain a mass membership, syndicalist unions had to accept collective bargaining." [Marcel van der Linden and Wayne Thorpe, **Op. Cit.**, p. 19]

Thus, for most anarchists, "*the Trade Unions are, by their very nature reformist and never revolutionary. The revolutionary spirit must be introduced, developed and maintained by the constant actions of revolutionaries who work from within their ranks as well as from outside, but it cannot be the normal, natural definition of the Trade Unions function.*" [Errico Malatesta, **Life and Ideas**, p. 117]

This does not mean that anarchists should not work within labour organisations. Nor does it mean rejecting anarcho-syndicalist unions as an anarchist tactic. Far from it. Rather it is a case of recognising these organisations for what they are, reformist organisations which are not an end in themselves but one (albeit, an important one) means of preparing the way for the achievement of anarchism. Neither does it mean that anarchists should not try to make labour organisations as anarchistic as possible or have anarchist objectives. Working within the labour movement (at the rank and file level, of course) is essential to gain influence for anarchist ideas, just as working with unorganised workers is also important. But this does not mean that the unions are revolutionary by their very nature, as syndicalism suggests. As history shows, and as syndicalists themselves are aware, the vast majority of unions are reformist. Non-syndicalist anarchists argue there is a reason for that and syndicalist unions are not immune to these tendencies just because they call themselves revolutionary. Due to these tendencies, non-syndicalist anarchists stress the need to organise as anarchists first and foremost in order to influence the class struggle and encourage the creation of autonomous workplace and community organisations to fight that struggle. Rather than fuse the anarchist and working class movement, non-syndicalist anarchists stress the importance of anarchists organising as anarchists to influence the working class movement.

All this does not mean that purely anarchist organisations or individual anarchists cannot become reformist. Of course they can (just look at the Spanish FAI which along with the CNT co-operated with the state during the Spanish Revolution). However, unlike syndicalist unions, the anarchist organisation is not pushed towards reformism due to its role within society. That is an important difference — the institutional factors are not present for the anarchist federation as they are for the syndicalist union federation.

The second reason why many anarchists are not anarcho-syndicalists is the question of whether syndicalist unions are sufficient in themselves to create anarchy. Pierre Monatte, a French syndicalist, argued that “*[s]yndicalism, as the [CGT’s] Congress of Amiens proclaimed in 1906, is sufficient unto itself. . . [as] the working class, having at last attained majority, means to be self-sufficient and to reply on no-one else for its emancipation.*” [The Anarchist Reader, p. 219]

This idea of self-sufficiency means that the anarchist and the syndicalist movement must be fused into one, with syndicalism taking the role of both anarchist group and labour union. Thus a key difference between anarcho-syndicalists and other anarchists is over the question of the need for a specifically anarchist organisation. While most anarchists are sympathetic to anarcho-syndicalism, few totally subscribe to anarcho-syndicalist ideas in their pure form. This is because, in its pure form, syndicalism rejects the idea of anarchist groups and instead considers the union as **the** focal point of social struggle and anarchist activism. However, this “pure” form of syndicalism may be better described as revolutionary syndicalism rather than as anarcho-syndicalism. In France, for example, anarcho-syndicalism is used to describe the idea that unions can be complemented with anarchist groups while revolutionary syndicalism is used to describe the idea of union self-sufficiency. Thus an anarcho-syndicalist may support a specific anarchist federation to work within the union and outside. In the eyes of other anarchists anarcho-syndicalism in its “pure” (revolutionary syndicalist) form makes the error of confusing the anarchist and union move-

ment and so ensures that the resulting movement can do neither work well. As Malatesta put it, “[e]very fusion or confusion between the anarchist movement and the trade union movement ends, either in rendering the later unable to carry out its specific task or by weakening, distorting, or extinguishing the anarchist spirit.” [Life and Ideas, p. 123]

This is not to suggest that anarchists should not work in the labour movement. That would be a mistake. Anarchists should work with the rank and file of the labour movement while keeping their own identity as anarchists and organising as anarchists. Thus Malatesta: “In the past I deplored that the comrades isolated themselves from the working-class movement. Today I deplore that many of us, falling into the contrary extreme, let themselves be swallowed up in the same movement.” [The Anarchist Reader, p. 225]

Most anarchists agree with Malatesta when he argued that “anarchists must not want the Trade Unions to be anarchist, but they must act within their ranks in favour of anarchist aims, as individuals, as groups and as federations of groups. . . [I]n the situation as it is, and recognising that the social development of one’s workmates is what it is, the anarchist groups should not expect the workers’ organisation to act as if they were anarchist, but should make every effort to induce them to approximate as much as possible to the anarchist method.” [Life and Ideas, pp. 124–5] Given that it appears to be the case that labour unions are by nature reformist, they cannot be expected to be enough in themselves when creating a free society. Hence the need for anarchists to organise **as anarchists** as well as alongside their fellow workers as workers in order to spread anarchist ideas on tactics and aims. This activity within existing unions does not mean attempting to “reform” the union in a libertarian manner (although some anarchists would support this approach). Rather it means working with the rank and file of the unions and trying to create autonomous workplace organisations, independent of the trade union bureaucracy and organised in a libertarian way.

This involves creating anarchist organisations separate from but which (in part) works within the labour movement for anarchist ends. Let us not forget that the syndicalist organisation is the union, it organises all workers regardless of their politics. A “union” which just let anarchists joined would not be a union. It would be an anarchist group organised in workplace. As anarcho-syndicalists themselves are aware, an anarcho-syndicalist union is not the same as a union of anarcho-syndicalists. How can we expect an organisation made up of non-anarchists be totally anarchist? Which raises the question of the conflict between being a labour union or a revolutionary anarchist organisation. Because of this tendencies always appeared within syndicalist unions that were reformist and because of this most anarchists, including many anarcho-syndicalists we must note, argue that there is a need for anarchists to work within the rank and file of the existing unions (along with workers who are **not** in a union) to spread their anarchist ideals and aims, and this implies anarchist organisations separate from the labour movement, each if that movement is based on syndicalist unions. As Bakunin argued, the anarchist organisation “is the necessary complement to the International [i.e. the union federation]. But the International and the Alliance [the anarchist federation], while having the same ultimate aims, perform different functions. The International endeavours to unify the working masses . . . regardless of nationality or religious and political beliefs, into one compact body: the Alliance, on the other hand, tries

to give these masses a really revolutionary direction.” This did not mean that the Alliance is imposing a foreign theory onto the members of the unions, because the “*programs of one and the other . . . differ only in the degree of their revolutionary development . . . The program of the Alliance represents the fullest unfolding of the International.*” [**Bakunin on Anarchism**, p. 157]

Which means for most anarchists that syndicalist unions need to be complemented by anarchist organisations. Which means that the syndicalist union is not sufficient in itself to create an anarchist society (needless to say, popular organisations of all sorts are an essential part of creating an anarchist society, they are the framework within which self-management will be practised). The anarchist group is required to promote anarchist tactics of direct action and solidarity, anarchist types of organisation within the union and anarchist aims (the creation of an anarchist society) within the workplace, as well as outside it. This does not imply that anarchists think that unions and other forms of popular organisations should be controlled by anarchists. Far from it! Anarchists are the strongest supporters of the autonomy of all popular organisations. As we indicated in section J.3.6, anarchists desire to influence popular organisations by the strength of our ideas within the rank and file and **not** by imposing our ideas on them.

In addition to these major points of disagreement, there are minor ones as well. For example, many anarchists dislike the emphasis syndicalists place on the workplace and see “*in syndicalism a shift in focus from the commune to the trade union, from all of the oppressed to the industrial proletariat alone, from the streets to the factories, and, in emphasis at least, from insurrection to the general strike.*” [Murray Bookchin, **The Spanish Anarchists**, p. 123] However, most anarcho-syndicalists are well aware that life exists outside the workplace and so this disagreement is largely one of emphasis more than anything else. Similarly, many anarchists disagreed with the early syndicalist argument that a general strike was enough to create a revolution. They argued, with Malatesta in the forefront, that while a general strike would be “*an excellent means for starting the social revolution*” it would be wrong to think that it made “*armed insurrection unnecessary*” since the “*first to die of hunger during a general strike would not be the bourgeois, who dispose of all the stores, but the workers.*” In order for this **not** to occur, the workers would have to take over the stores and the means of production, protected by the police and armed forces and this meant insurrection. [Errico Malatesta, **The Anarchist Reader**, pp. 224–5] Again, however, most modern syndicalists accept this to be the case and see the “*expropriatory general strike,*” in the words of French syndicalist Pierre Besnard, as “*clearly insurrectional.*” [cited by Vernon Richards, **Life and Ideas**, p. 288] We mention this purely to counter Leninist claims that syndicalists subscribe to the same ones they did in the 1890s.

Despite our criticisms we should recognise that the difference between anarchists and anarcho-syndicalists are slight and (often) just a case of emphasis. Most anarchists support anarcho-syndicalist unions where they exist and often take a key role in creating and organising them. Similarly, many self-proclaimed anarcho-syndicalists also support specific organisations of anarchists to work within and outwith the syndicalist union. Anarcho-syndicalist and revolutionary unions, where they still exist, are far more progressive than any other union. Not only do they create democratic unions and create an atmosphere where anarchist ideas are listened to with respect but they also organise and fight in a

way that breaks down the divisions into leaders and led, doers and watchers. On its own this is very good but not good enough. For non-syndicalist anarchists, the missing element is an organisation winning support for anarchist ideas and anarchist methods both within revolutionary unions and everywhere else working class people are brought together.

For a further information on the anarchist critic of syndicalism, we can suggest no better source than the writings of Errico Malatesta. **The Anarchist Reader** contains the famous debate between the syndicalist Pierre Monatte and Malatesta at the International Anarchist conference in Amsterdam in 1907. The books **Malatesta: Life and Ideas** and **The Anarchist Revolution** contain Malatesta's viewpoints on anarchism , syndicalism and how anarchists should work within the labour movement.

J.4 What trends in society aid anarchist activity?

In this section we will examine some modern trends which we regard as being potential openings for anarchists to organise. These trends are of a general nature, partly as a product of social struggle, partly as a response to economic and social crisis, partly involving people's attitudes to big government and big business partly in relation to the communications revolution we are currently living through, and so on. We do this because, as Kropotkin argued, the anarchist "*studies human society as it is now and was in the past. . . He [or she] studies society and tries to discover its **tendencies**, past and present, its growing needs, intellectual and economical, and in his ideal he merely points out in which direction evolution goes.*" [**Anarchism and Anarchist Communism**, p. 24] In this section we highlight just a few of the tendencies in modern society which point in an anarchist direction.

Of course, looking at modern society we see multiple influences, changes which have certain positive aspects in some directions but negative ones in others. For example, the business-inspired attempts to decentralise or reduce (certain) functions of governments. In the abstract, such developments should be welcomed by anarchists for they lead to the reduction of government. In practice such a conclusion is deeply suspect simply because these developments are being pursued to increase the power and influence of business and capital and undermine working class power and autonomy. Similarly, increases in self-employment can be seen, in the abstract, as reducing wage slavery. However, if, in practice, this increase is due to corporations encouraging "independent" contractors to cut wages and worsen working conditions, increase job insecurity and undermine paying for health and other employee packages then is hardly a positive sign. Obviously increases in self-employment would be different if such an increase was the result of an increase in the number of co-operatives, for example.

Thus few anarchists celebrate many apparently "libertarian" developments as they are not the product of social movements and activism, but are the product of elite lobbying for private profit and power. Decreasing the power of the state in (certain) areas while leaving (or increasing) the power of capital is a retrograde step in most, if not all, ways. Needless to say, this "rolling back" of the state does not bring into question its role as defender of property and the interests of the capitalist class — nor could it, as it is the ruling class who introduces and supports these developments.

As an example of these multiple influences, we can point to the economic

crisis which has staggered on since 1973 in many Western countries. This crisis, when it initially appeared, led to calls to reduce taxation (at least for the wealthy, in most countries the tax-burden was shifted even more onto the working class — as was the case in Thatcher’s Britain). In most countries, as a result, government “got off the back” of the wealthy (and got even more comfy on **our** back!). This (along with slower growth) helped to create declining revenue bases in the advanced capitalist nations has given central governments an excuse to cut social services, leaving a vacuum that regional and local governments have had to fill along with voluntary organisations, thus producing a tendency toward decentralisation that dovetails with anarchist ideals.

As Murray Bookchin points out, a sustainable ecological society must shift emphasis away from nation-states as the basic units of administration and focus instead on municipalities — towns, villages, and human-scale cities. Interestingly, the ongoing dismantling of the welfare state is producing such a shift by itself. By forcing urban residents to fend for themselves more than ever before in meeting transportation, housing, social welfare, and other needs, the economic crisis is also forcing them to relearn the arts of teamwork, co-operation, and self-reliance (see his **Remaking Society: Pathways to a Green Future**, p. 183).

Of course the economic crisis also has a downside for anarchists. As hardships and dislocations continue to swell the ranks and increase the militancy of progressive social movements, the establishment is being provoked to use ever more authoritarian methods to maintain control (see D.9). As the crisis deepens over the next few decades, the reactionary tendencies of the state will be reinforced (particularly as the neo-liberal consensus helps atomise society via the market mechanism and the resulting destruction of community and human relationships). However, this is not inevitable. The future depends on our actions in the here and now. In this section of the FAQ we highlight some developments which do, or could, work to the advantage of anarchists. Many of these examples are from the US, but they apply equally to Britain and many other advanced industrial states.

In this section, we aim to discuss tendencies from **below**, not above — tendencies which can truly “roll back” the state rather than reduce its functions purely to that of the armed thug of Capital. The tendencies we discuss here are not the be all nor end all of anarchist activism or tendencies. We discuss many of the more traditionally anarchist “openings” in section J.5 (such as industrial and community unionism, mutual credit, co-operatives, modern schools and so on) and so will not do so here. However, it is important to stress here that such “traditional” openings are not being downplayed — indeed, much of what we discuss here can only become fully libertarian in combination with these more “traditional” forms of **“anarchy in action.”**

For a lengthy discussion of anarchistic trends in society, we recommend Colin Ward’s classic book **Anarchy in Action**. Ward’s excellent book covers many areas in which anarchistic tendencies have been expressed, far more than we can cover here. The libertarian tendencies in society are many. No single work could hope to do them justice.

J.4.1 Why is social struggle a good sign?

Simply because it shows that people are unhappy with the existing society and, more importantly, are trying to change at least some part of it. It suggests that certain parts of the population have reflected on their situation and, potentially at least, seen that **by their own actions** they can influence and change it for the better.

Given that the ruling minority draws its strength of the acceptance and acquiescence of the majority, the fact that a part of that majority no longer accepts and acquiesces is a positive sign. After all, if the majority did not accept the status quo and acted to change it, the class and state system could not survive. Any hierarchical society survives because those at the bottom follow the orders of those above it. Social struggle suggests that some people are considering their own interests, thinking for themselves and saying “no” and this, by its very nature, is an important, indeed, the most important, tendency towards anarchism. It suggests that people are rejecting the old ideas which hold the system up, acting upon this rejection and creating new ways of doing things.

“Our social institutions,” argues Alexander Berkman, *“are founded on certain ideas; as long as the latter are generally believed, the institutions built upon them are safe. Government remains strong because people think political authority and legal compulsion necessary. Capitalism will continue as long as such an economic system is considered adequate and just. The weakening of the ideas which support the evil and oppressive present-day conditions means the ultimate breakdown of government and capitalism.”* [The ABC of Anarchism, p. xv]

Social struggle is the most obvious sign of this change of perspective, this change in ideas, this progress towards freedom.

Social struggle is expressed by direct action. We have discussed both social struggle and direct action before (in sections J.1 and J.2 respectively) and some readers may wonder why we are covering this again here. We do so for two reasons. Firstly, as we are discussing what trends in society help anarchist activity, it would be wrong **not** to highlight social struggle and direct action here. This is because these factors are key tendencies towards anarchism as anarchism will be created by people and social struggle is the means by which people create the new world in the shell of the old. Secondly, social struggle and direct action are key aspects of anarchist theory and we cannot truly present a picture of what anarchism is about without making clear what these are.

So social struggle is a good sign as it suggests that people are thinking for themselves, considering their own interests and working together collectively to change things for the better. As the French syndicalist Emile Pouget argues:

“Direct action . . . means that the working class, forever bridling at the existing state of affairs, expects nothing from outside people, powers or forces, but rather creates its own conditions of struggle and looks to itself for its methodology . . . Direct Action thus implies that the working class subscribes to notions of freedom and autonomy instead of genuflecting before the principle of authority. Now, it is thanks to this authority principle, the pivot of the modern world — democracy being its latest incarnation — that the human being, tied down by a thousand ropes, moral as well as material, is bereft of any

opportunity to display will and initiative.” [Direct Action]

Social struggle means that people come into opposition with the boss and other authorities such as the state and the dominant morality. This challenge to existing authorities generates two related processes: the tendency of those involved to begin taking over the direction of their own activities and the development of solidarity with each other. Firstly, in the course of a struggle, such as a strike, occupation, boycott, and so on, the ordinary life of people, in which they act under the constant direction of the bosses or state, ceases, and they have to think, act and co-ordinate their actions for themselves. This reinforces the expression towards autonomy that the initial refusal that lead to the struggle indicates. Thus struggle re-enforces the initial act of refusal and autonomy by forcing those involved to act for themselves. Secondly, in the process of struggle those involved learn the importance of solidarity, of working with others in a similar situation, in order to win. This means the building of links of support, of common interests, of organisation. The practical need for solidarity to help win the struggle is the basis for the solidarity required for a free society to be viable.

Therefore the real issue in social struggle is that it is an attempt by people to wrestle at least part of the power over their own lives away from the managers, state officials and so on who currently have it and exercise it themselves. This is, by its very nature, anarchistic and libertarian. Thus we find politicians and, of course, managers and property owners, often denouncing strikes and other forms of direct action. This is logical. As direct action challenges the real power-holders in society and because, if carried to its logical conclusion, it would have to replace them, social struggle and direct action can be considered in essence a revolutionary process.

Moreover, the very act of using direct action suggests a transformation within the people using it. *“Direct action’s very powers to fertilise,”* argues Pouget, *“reside in such exercises in imbuing the individual with a sense of his own worth and in extolling such worth. It marshals human resourcefulness, tempers characters and focuses energies. It teaches self-confidence! And self-reliance! And self-mastery! And shifting for oneself!”* Moreover, *“direct action has an unmatched educational value: It teaches people to reflect, to make decisions and to act. It is characterised by a culture of autonomy, an exaltation of individuality and is a fillip to initiative, to which it is the leaven. And this superabundance of vitality and burgeoning of ‘self’ in no way conflicts with the economic fellowship that binds the workers one with another and far from being at odds with their common interests, it reconciles and bolsters these: the individual’s independence and activity can only erupt into splendour and intensity by sending its roots deep into the fertile soil of common agreement.”* [Pouget, **Op. Cit.**]

Emma Goldman also recognised the transforming power of direct action. Anarchists, she argues, *“believe with Stirner that man has as much liberty as he is willing to take. Anarchism therefore stands for direct action, the open defiance of, and resistance to, all laws and restrictions, economic, social and moral. But defiance and resistance are illegal. Therein lies the salvation of man. Everything illegal necessitates integrity, self-reliance, and courage. In short, it calls for free independent spirits. . . ”* [**Red Emma Speaks**, p. 61–2]

Social struggle is the beginning of a transformation of the people involved and their relationships to each other. While its external expression lies in contest-

ing the power of existing authorities, its inner expression is the transformation of people from passive and isolated competitors into empowered, self-directing, self-governing co-operators. Moreover, this process widens considerably what people think is “possible.” Through struggle, by collective action, the fact people **can** change things is driven home, that **they** have the power to govern themselves and the society they live in. Thus struggle can change people’s conception of “what is possible” and encourage them to try and create a better world. As Kropotkin argued:

*“since the times of the [first] International Working Men’s Association, the anarchists have always advised taking an active part in those workers’ organisations which carry on the **direct** struggle of labour against capital and its protector — the State.*

“Such a struggle, they say, . . . permits the worker to obtain some temporary improvements. . . , while it opens his [or her] eyes to the evil that is done by capitalism and the State. . . , and wakes up his thoughts concerning the possibility of organising consumption, production, and exchange without the intervention of the capitalist and the State.” [Kropotkin’s Revolutionary Pamphlets, p. 171]

In other words, social struggle has a **radicalising** and **politicising** effect, an effect which brings into a new light existing society and the possibilities of a better world (“*direct action*”, in Pouget’s words, “*develops the feeling for human personality as well as the spirit of initiative . . . it shakes people out of their torpor and steers them to consciousness.*”). The practical need to unite and resist the boss also helps break down divisions within the working class. Those in struggle start to realise that they need each other to give them the power necessary to get improvements, to change things. Thus solidarity spreads and overcomes divisions between black and white, male and female, heterosexual and homosexual, trades, industries, nationalities and so on. The real need for solidarity to win the fight helps to undermine artificial divisions and show that there are only two groups in society, the oppressed and the oppressors.

Moreover, struggle as well as transforming those involved is also the basis for transforming society as a whole simply because, as well as producing transformed individuals, it also produces new forms of organisation, organisations created to co-ordinate their struggle and which can, potentially at least, become the framework of a libertarian socialist society.

Thus anarchists argue that social struggle opens the eyes of those involved to self-esteem and a sense of their own strength, and the groupings it forms at its prompting are living, vibrant associations where libertarian principles usually come to the fore. We find almost all struggles developing new forms of organisation, forms which are often based on direct democracy, federalism and decentralisation. If we look at every major revolution, we find people creating mass organisations such as workers’ councils, factory committees, neighbourhood assemblies and so on as a means of taking back the power to govern their own lives, communities and workplaces. In this way social struggle and direct action lays the foundations for the future. By actively taking part in social life, people are drawn into creating new forms of organisation, new ways of doing things. In this way they educate themselves in participation, in self-government, in initiative and in asserting themselves. They begin to realise that the only

alternative to management by others is self-management and organise to achieve thus.

Given that remaking society has to begin at the bottom, this finds its expression in direct action, individuals taking the initiative, building new, more libertarian forms of organisation and using the power they have just generated by collective action and organisation to change things by their own efforts. Social struggle is therefore a two way transformation — the external transformation of society by the creation of new organisations and the changing of the power relations within it and the internal transformation of those who take part in the struggle. And because of this, social struggle, “[w]hatever may be the practical results of the struggle for immediate gains, the greatest value lies in the struggle itself. For thereby workers learn that the bosses interests are opposed to theirs and that they cannot improve their conditions, and much less emancipate themselves, except by uniting and becoming stronger than the bosses. If they succeed in getting what they demand, they will be better off . . . and immediately make greater demands and have greater needs. If they do not succeed they will be led to study the causes of their failure and recognise the need for closer unity and greater activism and they will in the end understand that to make their victory secure and definitive, it is necessary to destroy capitalism. The revolutionary cause, the cause of the moral elevation and emancipation of the workers must benefit by the fact that workers unite and struggle for their interests.” [Errico Malatesta, **Life and Ideas**, p. 191]

Hence Nestor Makhno’s comment that “[i]n fact, it is only through that struggle for freedom, equality and solidarity that you reach an understanding of anarchism.” [**The Struggle Against the State and other Essays**, p. 71] The creation of an anarchist society is a **process** and social struggle is the key anarchist tendency within society which anarchists look for, encourage and support. Its radicalising and transforming nature is the key to the growth of anarchist ideas, the creation of libertarian structures and alternatives within capitalism (structures which may, one day, replace capitalism and state) and the creation of anarchists and those sympathetic to anarchist ideas. Its importance cannot be underestimated!

J.4.2 Won’t social struggle do more harm than good?

It is often argued that social struggle, by resisting the powerful and the wealthy, will just do more harm than good. Employers often use this approach in anti-union propaganda, for example, arguing that creating a union will force the company to close and move to less “militant” areas.

There is, of course, some truth in this. Yes, social struggle can lead to bosses moving to more compliant workforces — but, of course, this also happens in periods lacking social struggle too! If we look at the down-sizing mania that gripped the U.S. in the 1980s and 1990s, we see companies down-sizing tens of thousands of people during a period where unions were weak, workers scared about loosing their jobs and class struggle basically becoming mostly informal and “underground.” Moreover, this argument actually indicates the need for anarchism. It is a damning indictment of any social system that it requires

people to kow-tow to their masters otherwise they will suffer economic hardship. It boils down to the argument “*do what you are told, otherwise you will regret it.*” Any system based on that maxim is an affront to human dignity!

It would, in a similar fashion, be easy to “prove” that slave rebellions are against the long term interests of the slaves. After all, by rebelling the slaves will face the anger of their masters. Only by submitting to their master can they avoid this fate and, perhaps, be rewarded by better conditions. Of course, the evil of slavery would continue but by submitting to it they can ensure their life can become better. Needless to say, any thinking and feeling person would quickly dismiss this reasoning as missing the point and being little more than apologetics for an evil social system that treated human beings as things. The same can be said for the argument that social struggles within capitalism do more harm than good. It betrays a slave mentality unfitting for human beings (although fitting for those who desire to live off the backs of workers or desire to serve those who do).

Moreover, this kind of argument ignores a few key points. Firstly, by resistance the conditions of the oppressed can be maintained or even improved. After all, if the boss knows that their decisions will be resisted they may be less inclined to impose speed-ups, longer hours and so on. If they know that their employees will agree to anything then there is every reason to expect them to impose all kinds of oppressions, just as a state will impose draconian laws if it knows that it can get away with it. History is full of examples of non-resistance producing greater evils in the long term and of resistance producing numerous important reforms and improvements (such as higher wages, shorter hours, the right to vote for working class people and women, freedom of speech, the end of slavery, trade union rights and so on).

So social struggle has been proven time and time again to gain successful reforms. For example, before the 8 hour day movement of 1886 in America, for example, most companies argued they could not introduce that reform without doing bust. However, after displaying a militant mood and conducting an extensive strike campaign, hundreds of thousands of workers discovered that their bosses had been lying and they got shorter hours. Indeed, the history of the labour movement shows what bosses say they can afford and the reforms workers can get via struggle are somewhat at odds. Given the asymmetry of information between workers and bosses, this is unsurprising. Workers can only guess at what is available and bosses like to keep their actual finances hidden. Even the threat of labour struggle can be enough to gain improvements. For example, Henry Ford’s \$5 day is often used as an example of capitalism rewarding good workers. However, this substantial pay increase was largely motivated by the unionisation drive by the **Industrial Workers of the World** among Ford workers in the summer of 1913 [Harry Braverman, **Labour and Monopoly Capitalism**, p. 144]. More recently, it was the mass non-payment campaign against the poll-tax in Britain during the late 1980s and early 1990s which helped ensure its defeat (and the 1990 poll-tax riot in London also helped and ensured that the New Zealand government did not introduce a similar scheme in their country too!). In the 1990s, France also saw the usefulness of direct action. Two successive prime ministers (Edouard Balladur and Alain Juppe) tried to impose large scale “reform” programmes that swiftly provoked mass demonstrations and general strikes amongst students, workers, farmers and others. Confronted by crippling disruptions, both governments gave in. Compared to

the experience of, say Britain, France's tradition of direct action politics proved more effective in maintaining existing conditions or even improving on them.

Secondly, and in some ways more importantly, it ignores that by resistance those who take part can the social system they live in can be **changed**. This radicalising effect of social struggle can open new doors for those involved, liberate their minds, empower them and create the potential for deep social change. Without resistance to existing forms of authority a free society cannot be created as people adjust themselves to authoritarian structures and accept what is as the only possibility. By resisting, people transform and empower themselves, as well as transforming society. In addition, new possibilities can be seen (possibilities before dismissed as "utopian") and, via the organisation and action required to win reforms, the framework for these possibilities (i.e. of a new, libertarian, society) created. The transforming and empowering effect of social struggle is expressed well by the Nick DiGaetano, an one time Wobbly who had joined during the 1912 Lawrence strike and then UAW-CIO shop floor militant from the late 1930s to the 1950s. By fighting their bosses for union recognition what the workers gained was not only better conditions and pay but also a changed mentality:

"the workers of my generation from the early days up to now [1958] had what you might call a labour insurrection in changing from a plain, humble, submissive creature into a man. The union made a man out of him ... I am not talking about the benefits ... I am talking about the working conditions and how they affected the men in the plant ... Before they were submissive. Today they are men." [quoted by David Brody, "Workplace Contractualism in comparative perspective", pp. 176–205, Helson Lichtenstein and Howell John Harris (eds.), **Industrial Democracy in America**, p. 204]

Other labour historians note the same radicalising process elsewhere (modern day activists could give more examples!):

"The contest [over wages and conditions] so pervaded social life that the ideology of acquisitive individualism, which explained and justified a society regulated by market mechanisms and propelled by the accumulation of capital, was challenged by an ideology of mutualism, rooted in working-class bondings and struggles... Contests over pennies on or off existing piece rates had ignited controversies over the nature and purpose of the American republic itself." [David Montgomery, **The Fall of the House of Labour**, p. 171]

This radicalising effect is far more dangerous to authoritarian structures than better pay, more liberal laws and so on as they need submissiveness to work. Little wonder that direct action is usually denounced as pointless or harmful by those in power or their spokespersons, for direct action will, taken to its logical conclusion, put them out of a job! Struggle, therefore, holds the possibility of a free society as well as of improvements in the here and now. It also changes the perspectives of those involved, creating new ideas and values to replace the ones of capitalism.

Thirdly, it ignores the fact that such arguments do not imply the end of social struggle and working class resistance and organisation, but rather its **extension**. If, for example, your boss argues that they will move to Mexico if

you do not “shut up and put up” then the obvious solution is to make sure the workers in Mexico are also organised! Bakunin argued this basic point over one hundred years ago, and it is still true — *“in the long run the relatively tolerable position of workers in one country can be maintained only on condition that it be more or less the same in other countries.”* If, for example, workers in Mexico have worse wages and conditions than you do, these same conditions will be used against you as the *“conditions of labour cannot get worse or better in any particular industry without immediately affecting the workers in other industries, and that workers of all trades are inter-linked with real and indissoluble ties of solidarity,”* ties which can be ignored only at your own peril. Ultimately, *“in those countries the workers work longer hours for less pay; and the employers there can sell their products cheaper, successfully competing against conditions where workers working less earn more, and thus force the employers in the latter countries to cut wages and increase the hours of their workers.”* Bakunin’s solution was to organise internationally, to stop this undercutting of conditions by solidarity between workers. As recent history shows, his argument was correct [**The Political Philosophy of Bakunin**, pp. 306–7]. Thus it is **not** social struggle or militancy which is bad, just **isolated** militancy, struggle which ignores the ties of solidarity required to win, extent and keep reforms and improvements. In other words, our resistance must be as transnational as capitalism is.

The idea that social struggle and working class organisation are harmful was expressed constantly in the 1970s. If we look at the arguments of the right in the 1970s, we also find evidence that the “struggle does more harm than good” viewpoint is flawed. With the post-war Keynesian consensus crumbling, the “New Right” argued that trade unions (and strikes) hampered growth and that wealth redistribution (i.e. welfare schemes which returned some of the surplus value workers produced back into their own hands) hindered “wealth creation” (i.e. economic growth). Do not struggle over income, they argued, let the market decide and everyone will be better off.

This argument was dressed up in populist clothes. Thus we find the right-wing guru F.A. von Hayek arguing that, in the case of Britain, the *“legalised powers of the unions have become the biggest obstacle to raising the standards of the working class as a whole. They are the chief cause of the unnecessarily big differences between the best- and worse-paid workers.”* He maintained that *“the elite of the British working class... derive their relative advantages by keeping workers who are worse off from improving their position.”* Moreover, he *“predict[ed] that the average worker’s income would rise fastest in a country where relative wages are flexible, and where the exploitation of workers by monopolistic trade union organisations of specialised workers are effectively outlawed.”* [*“1980s Unemployment and the Unions”* reproduced in **The Economic Decline of Modern Britain**, p. 107, p. 108, p. 110]

Now, if von Hayek’s claims were true we could expect that in the aftermath of Thatcher government’s trade union reforms we would have seen: a rise in economic growth (usually considered as **the** means to improve living standards for workers by the right); a decrease in the differences between high and low paid workers; a reduction in the percentage of low paid workers as they improved their positions when freed from union *“exploitation”*; and that wages rise fastest in countries with the highest wage flexibility. Unfortunately for von Hayek, the actual trajectory of the British economy exposes his claims as nonsense.

Looking at each of his claims in turn we discover that rather than “exploit” other workers, trade unions are an essential means to shift income from capital to labour (which is way capital fights labour organisers tooth and nail). And, equally important, labour militancy aids **all** workers by providing a floor under which wages cannot drop (non-unionised/militant firms in the same industry or area have to offer similar programs to prevent unionisation and be able to hire workers) and by maintaining aggregate demand. This positive role of unions/militancy in aiding **all** workers can be seen by comparing Britain before and after Thatcher’s von Hayek inspired trade union and labour market reforms.

As far as economic growth goes, there has been a steady fall since trade union reforms. In the “bad old days” of the 1970s, with its strikes and “militant unions” growth was 2.4% in Britain. It fell to 2% in the 1980s and fell again to 1.2% in the 1990s [Larry Elliot and Dan Atkinson, **The Age of Insecurity**, p. 236]. So the rate of “wealth creation” (economic growth) has steadily fallen as unions were “reformed” in line with von Hayek’s ideology (and falling growth means that the living standards of the working class as a whole do not rise as fast as they did under the “exploitation” of the “monopolistic” trade unions). If we look at the differences between the highest and lowest paid workers, we find that rather than decrease, they have in fact shown “*a dramatic widening out of the distribution with the best-workers doing much better*” since Thatcher was elected in 1979 [Andrew Glyn and David Miliband (eds.), **Paying for Inequality**, p. 100]

Given that inequality has also increased, the condition of the average worker must have suffered. For example, Ian Gilmore states that “*[i]n the 1980s, for the first time for fifty years. . . the poorer half of the population saw its share of total national income shirk.*” [**Dancing with Dogma**, p. 113] According to Noam Chomsky, “*[d]uring the Thatcher decade, the income share of the bottom half of the population fell from one-third to one-fourth*” and the between 1979 and 1992, the share of total income of the top 20% grew from 35% to 40% while that of the bottom 20% fell from 10% to 5%. In addition, the number of UK employees with weekly pay below the Council of Europe’s “*decency threshold*” increased from 28.3% in 1979 to 37% in 1994 [**World Orders, Old and New**, p. 144, p. 145] Moreover, “*[b]ack in the early 1960s, the heaviest concentration of incomes fell at 80–90 per cent of the mean. . . But by the early 1990s there had been a dramatic change, with the peak of the distribution falling at just 40–50 per cent of the mean. One-quarter of the population had incomes below half the average by the early 1990s as against 7 per cent in 1977 and 11 per cent in 1961. . .*” [Elliot and Atkinson, **Op. Cit.**, p. 235] “*Overall,*” notes Takis Fotopoulos, “*average incomes increased by 36 per cent during this period [1979–1991/2], but 70 per cent of the population had a below average increase in their income.*” [**Towards an Inclusive Democracy**, p. 113]

Looking at the claim that trade union members gained their “*relative advantage by keeping workers who are worse off from improving their position*” it would be fair to ask whether the percentage of workers in low-paid jobs decreased in Britain after the trade union reforms. In fact, the percentage of workers below the Low Pay Unit’s definition of low pay (namely two-thirds of men’s median earnings) **increased** — from 16.8% in 1984 to 26.2% in 1991 for men, 44.8% to 44.9% for women. For manual workers it rose by 15% to 38.4%, and for women by 7.7% to 80.7% (for non-manual workers the figures

were 5.4% rise to 13.7% for men and a 0.5% rise to 36.6%). If unions were gaining at the expense of the worse off, you would expect a **decrease** in the number in low pay, **not** an increase. [**Paying for Inequality**, p.102] An OECD study concluded that “[t]ypically, countries with high rates of collective bargaining and trade unionisation tend to have low incidence of low paid employment.” [**OECD Employment Outlook**, 1996, p. 94]

Nor did unemployment fall after the trade union reforms. As Elliot and Atkinson point out, “[b]y the time Blair came to power [in 1997], unemployment in Britain was falling, although it still remained higher than it had been when the [the last Labour Government of] Callaghan left office in May 1979.” [**Op. Cit.**, p. 258] Von Hayek did argue that falls in unemployment would be “a slow process” but over 10 years of higher unemployment is moving at a snail’s pace! And we must note that part of this fall in unemployment towards its 1970s level was due to Britain’s labour force shrinking (and so, as the July 1997 Budget Statement correctly notes, “the lower 1990s peak [in unemployment] does not in itself provide convincing evidence of improved labour performance.” [p. 77]).

As far as von Hayek’s prediction on wage flexibility leading to the “average worker’s income” rising fastest in a country where relative wages are flexible, it has been proved totally wrong. Between 1967 and 1971, real wages grew (on average) by 2.95% per year (nominal wages grew by 8.94%) [P. Armstrong, A. Glyn and John Harrison, **Capitalism Since World War II**, p.272]. In comparison, in the 1990s real wages grew by 1.1 per cent, according to a TUC press release entitled **Productivity Record, how the UK compares** released in March 1999.

Needless to say, these are different eras so it would also be useful to compare the UK (often praised as a flexible economy after Thatcher’s “reforms”) to France (considered far less flexible) in the 1990s. Here we find that the “flexible” UK is behind the “inflexible” France. Wages and benefits per worker rose by almost 1.2 per cent per year compared to 0.7% for the UK. France’s GDP grew at a faster rate than Britain’s, averaging 1.4 per cent per year, compared with 1.2 per cent. Worker productivity is also behind, since 1979 (Thatcher’s arrival) Britain’s worker productivity has been 1.9 per cent per year compared to France’s 2.2 per cent [Seth Ackerman, “*The Media Vote for Austerity*”, **Extra!**, September/October 1997]. And as Seth Ackerman also notes, “[w]hile France’s dismal record of job creation is on permanent exhibit, it is never mentioned that Britain’s is even more dismal.” [Ibid.]

Moving further afield, we find von Hayek’s prediction falsified yet again. If we look at the USA, frequently claimed as a model economy in terms of wage flexibility and union weakness, we discover that the real wages of the average worker has **decreased** since 1973 (the weekly and hourly earnings of US production and non-supervisory workers, which accounts for 80% of the US workforce, have fallen in real terms by 19.2% and 13.4% respectively [**Economic Report of the President 1995**, Table B-45]). If we look at figures from U.S. Bureau of the Census (Current Population Survey) we can see how increased flexibility has affected income:

Income Growth by Quintile

Quintile	1950-1978	1979-1993
Lowest 20%	138%	-15%
2nd 20%	98	-7
3rd 20%	106	-3
4th 20%	111	5
Highest 20%	99	18

As can be seen, flexible wages and weaker unions have resulted in the direct opposite of von Hayek's predictions. Within the US itself, we discover that higher union density is associated with fewer workers earning around the minimum wage — *“the percentage of those earning around the minimum wage are both substantially higher in right-to-work states [i.e. those that pass anti-union laws] than overall and lower in high union density states than overall”* and *“in right-to-work states . . . wages have traditionally been lower.”* [Oren M. Levin-Waldman, **The Minimum Wage and Regional Wage Structure**] If unions **did** harm non-union workers, we would expect the opposite to occur. It does not. Of course, being utterly wrong has not dented his reputation with the right nor stopped him being quoted in arguments in favour of flexibility and free market reforms.

Moreover, the growth of the US economy has also slowed down as wage flexibility and market reform has increased (it was 4.4% in the 1960s, 3.2% in the 1970s, 2.8% in the 1980s and 1.9% in the first half of the 1990s [Larry Elliot and Dan Atkinson, **The Age of Insecurity**, p. 236]). In addition, inequality in the US has dramatically increased since the 1970s, with income and wealth growth in the 1980s going predominately to the top 20% (and, in fact, mostly to the top 1% of the population). The bottom 80% of the population saw their wealth grow by 1.2% and their income by 23.7% in the 1980s, while for the top 20% the respective figures were 98.2% and 66.3% (the figures for the top 1% were 61.6% and 38.9%, respectively). [Edward N. Wolff, *“How the Pie is Sliced”*, **The American Prospect**, no. 22, Summer 1995]

Comparing the claims of von Hayek to what actually happened after trade union reform and the reduction of class struggle helps to suggest that the claims that social struggle is self-defeating are false (and probably self-serving, considering it is usually bosses and employer supported parties and economists who make these claims). A **lack** of social struggle has been correlated with low economic growth, stagnant (even declining) wages and the creation of purely paid service jobs to replace highly paid manufacturing ones. So while social struggle **may** make capital flee and other problems, lack of it is no guarantee of prosperity (quite the reverse, if the last quarter of the 20th century is anything to go by!). Indeed, a lack of social struggle will make bosses be more likely to cut wages, worsen working conditions and so on — after all, they feel they can get away with it! Which brings home the fact that *“to make their [the working class] victory secure and definitive, it is necessary to destroy capitalism.”* [Errico Malatesta, **Life and Ideas**, p. 191]

Of course, no one can **know** that struggle will make things better. It is a guess; no one can predict the future. Not all struggles are successful and many can be very difficult. If the *“military is a role model for the business world”* (in the words of an ex-CEO of Hill & Knowlton Public Relations [quoted by John Stauber and Sheldon Rampton in **Toxic Sludge Is Good For You!**,

p. 47]), and it is, then **any** struggle against it and other concentrations of power may, and often is, difficult and dangerous at times. But, as Zapata once said, “*better to die on your feet than live on your knees!*” All we can say is that social struggle can and does improve things and, in terms of its successes and transforming effect on those involved, well worth the potential difficulties it can create. Moreover, without struggle there is little chance of creating a free society, dependent as it is on individuals who refuse to bow to authority and have the ability and desire to govern themselves. In addition, social struggle is always essential, not only to **win** improvements, but to **keep** them as well. In order to fully secure improvements you have to abolish capitalism and the state. Not to do so means that any reforms can and will be taken away (and if social struggle does not exist, they will be taken away sooner rather than later). Ultimately, most anarchists would argue that social struggle is not an option — we either do it or we put up with the all the petty (and not so petty) impositions of authority. If we do not say “no” then the powers that be will walk all over us.

As the history of the last 20 years shows, a lack of social struggle is fully compatible with worsening conditions. Ultimately, if you want to be treated as a human being you have to stand up for your dignity — and that means thinking and rebelling. As Bakunin often argued, human development is based on thought and rebellion (see **God and the State**). Without rebellion, without social struggle, humanity would stagnate beneath authority forever and never be in a position to be free. We would agree wholeheartedly with the Abolitionist Frederick Douglass:

“If there is no struggle, there is no progress. Those who profess to favour freedom and yet deprecate agitation are people who want crops without plowing up the ground. They want rain without thunder and lightning. That struggle might be a moral one; it might be a physical one; it might be both moral and physical, but it must be a struggle. Power concedes nothing without a demand. It never did and never will. People might not get all that they work for in this world, but they must certainly work for all they get.”

J.4.3 Are the new social movements a positive development for anarchists?

When assessing the revolutionary potential of our own era, we must note again that modern civilisation is under constant pressure from the potential catastrophes of social breakdown, ecological destruction, and proliferating weapons of mass destruction. These crises have drawn attention as never before to the inherently counter-evolutionary nature of the authoritarian paradigm, making more and more people aware that the human race is headed for extinction if it persists in outmoded forms of thought and behaviour. This awareness produces a favourable climate for the reception of new ideas, and thus an opening for radical educational efforts aimed at creating the mass transformation of consciousness which must take place alongside the creation of new liberatory institutions.

This receptiveness to new ideas has led to a number of new social movements in recent years. From the point of view of anarchism, the four most important of these are perhaps the feminist, ecology, peace, and social justice movements. Each of these movements contain a great deal of anarchist content, particularly insofar as they imply the need for decentralisation and direct democracy. Since we have already commented on the anarchist aspects of the ecology and feminist movements, here we will limit our remarks to the peace and social justice movements.

It is clear to many members of the peace movement that international disarmament, like the liberation of women, saving the planet's ecosystem, and preventing social breakdown, can never be attained without a shift of mass consciousness involving widespread rejection of hierarchy, which is based on the authoritarian principles of domination and exploitation. As C. George Benello argued, “[s]ince peace involves the positive process of replacing violence by other means of settling conflict. . . it can be argued that some sort of institutional change is necessary. For if insurgency is satisfied with specific reform goals, and does not seek to transform the institutional structure of society by getting at its centralised make-up, the war system will probably not go away. This is really what we should mean by decentralising: making institutions serve human ends again by getting humans to be responsible at every level within them.” [From **the Ground Up**, p. 31]

When pursued along gender, class, racial, ethnic, or national lines, these two principles are the primary causes of resentment, hatred, anger, and hostility, which often explode into individual or organised violence. Therefore, both domestic and international peace depend on decentralisation, i.e. dismantling hierarchies, thus replacing domination and exploitation by the anarchist principles of co-operation, sharing, and mutual aid.

But direct democracy is the other side of decentralisation. In order for an organisation to spread power horizontally rather than concentrating it at the apex of hierarchy, all of its members have to have an equal voice in making the decisions that affect them. Hence decentralisation implies direct democracy. So the peace movement implies anarchism, because world peace is impossible without both decentralisation and direct democracy. Moreover, “[s]o long as profits are tied to defence production, speaking truth to the elites involved is not likely to get very far” as “it is only within the boundaries of the profit system that the corporate elites would have any space to move.” [Op. Cit., p. 34] Thus the peace movement implicitly contains a libertarian critique of both forms of the power system — the political and economical.

In addition, certain of the practical aspects of the peace movement also suggest anarchistic elements. The use of non-violent direct action to protest against the war machine can only be viewed as a positive development by anarchists. Not only does it use effective, anarchistic methods of struggle it also radicalises those involved, making them more receptive to anarchist ideas and analysis (after all, as Benello correctly argues, the “*anarchist perspective has an unparalleled relevance today because prevailing nuclear policies can be considered as an ultimate stage in the divergence between the interests of governments and their peoples . . . the implications when revealed serve to raise fundamental questions regarding the advisability of entrusting governments with questions of life and death. . . There is thus a pressing impetus to re-think the role, scale, and structure of national governments.*” [Op. Cit., p. 138]).

If we look at the implications of “*nuclear free zones*” we can detect anarchistic tendencies within them. A nuclear free zone involves a town or region declaring an end of its association with the nuclear military industrial complex. They prohibit the research, production, transportation and deployment of nuclear weapons as well as renouncing the right to be defended by nuclear power. This movement was popular in the 1980s, with many areas in Europe and the Pacific Basin declaring that they were nuclear free zones. As Benello points out, “[t]he development of campaigns for nuclear free zones suggests a strategy which can educate and radicalise local communities. Indeed, by extending the logic of the nuclear free zone idea, we can begin to flesh out a libertarian municipalist perspective which can help move our communities several steps towards autonomy from both the central government and the existing corporate system.” While the later development of these initiatives did not have the radicalising effects that Benello hoped for, they did “represent a local initiative that does not depend on the federal government for action. Thus it is a step toward local empowerment. . . Steps that increase local autonomy change the power relations between the centre and its colonies. . . The nuclear free zone movement has a thrust which is clearly congruent with anarchist ideas. . . The same motives which go into the declaration of a nuclear free zone would dictate that in other areas where the state and the corporate systems services are dysfunctional and involve excessive costs, they should be dispensed with.” [Op. Cit., p. 137, pp. 140–1]

The social justice movement is composed of people seeking fair and compassionate solutions to problems such as poverty, unemployment, economic exploitation, discrimination, poor housing, lack of health insurance, wealth and income inequalities, and the like. Such concerns have traditionally been associated with the left, especially with socialism and trade-unionism. Recently, however, many radicals have begun to perceive the limitations of both Marxist-Leninist and traditional trade-unionist solutions to social justice problems, particularly insofar as these solutions involve hierarchical organisations and authoritarian values.

Following the widespread disillusionment with statism and centrally planned economies generated by the failure of “Communism” in the ex-Soviet Union and Eastern European nations, many radicals, while retaining their commitment to social justice issues, have been searching for new approaches. And in doing so they’ve been drawn into alliances with ecologists, feminists, and members of the peace movement. (This has occurred particularly among the German Greens, many of whom are former Marxists. So far, however, few of the latter have declared themselves to be anarchists, as the logic of the ecology movement requires.)

It is not difficult to show that the major problems concerning the social justice movement can all be traced back to the hierarchy and domination. For, given the purpose of hierarchy, the highest priority of the elites who control the state is necessarily to maintain their own power and privileges, regardless of the suffering involved for subordinate classes.

Today, in the aftermath of 12 years of especially single-minded pursuit of this priority by two Republican administrations, the United States, for example, is reaping the grim harvest: armies of the homeless wandering the streets; social welfare budgets slashed to the bone as poverty, unemployment, and underemployment grow; sweatshops mushrooming in the large cities; over 43 million Americans without any health insurance; obscene wealth inequalities; and so

on. This decay promises to accelerate in the US during the coming years, now that Republicans control both houses of Congress. Britain under the neo-liberal policies of Thatcher and Major has experienced a social deterioration similar to that in the US.

In short, social injustice is inherent in the exploitative functions of the state, which are made possible by the authoritarian form of state institutions and of the state-complex as a whole. Similarly, the authoritarian form of the corporation (and capitalist companies in general) gives rise to social injustice as unfair income differentials and wealth disparity between owners/management and labour.

Hence the success of the social justice movement, like that of the feminist, ecology, and peace movements, depends on dismantling hierarchies. This means not only that these movement all imply anarchism but that they are related in such a way that it's impossible to conceive one of them achieving its goals in isolation from any of the others.

To take just one example, let's consider the relationship between social justice and peace, which can be seen by examining a specific social justice issue: labour rights.

As Dimitrios Roussopoulos points out, the production of advanced weapons systems is highly profitable for capitalists, which is why more technologically complex and precise weapons keep getting built with government help (with the public paying the tab by way of rising taxes).

Now, we may reasonably argue that it's a fundamental human right to be able to choose freely whether or not one will personally contribute to the production of technologies that could lead to the extinction of the human race. Yet because of the authoritarian form of the capitalist corporation, rank-and-file workers have virtually no say in whether the companies for which they work will produce such technologies. (To the objection that workers can always quit if they don't like company policy, the reply is that they may not be able to find other work and therefore that the choice is not free but coerced.) Hence the only way that ordinary workers can obtain the right to be consulted on life-or-death company policies is to control the production process themselves, through self-management.

But we can't expect real self-management to emerge from the present labour relations system in which centralised unions bargain with employers for "concessions" but never for a dissolution of the authoritarian structure of the corporation. As Roussopoulos puts it, self-management, by definition, must be struggled for locally by workers themselves at the grassroots level:

"Production for need and use will not come from the employer. The owners of production in a capitalist society will never begin to take social priorities into account in the production process. The pursuit of ever greater profits is not compatible with social justice and responsibility." [Dissidence]

For these reasons, the peace and social justice movements are fundamentally linked through their shared need for a worker-controlled economy.

We should also note in this context that the impoverished ghetto environments in which the worst victims of social injustice are forced to live tends to desensitise them to human pain and suffering — a situation that is advantageous for military recruiters, who are thereby able to increase the ranks of

the armed forces with angry, brutalised, violence-prone individuals who need little or no extra conditioning to become the remorseless killers prized by the military command. Moreover, extreme poverty makes military service one of the few legal economic options open to such individuals. These considerations illustrate further links between the peace and social justice movements — and between those movements and anarchism, which is the conceptual “glue” that can potentially unite all the new social movement in a single anti-authoritarian coalition.

J.4.4 What is the “*economic structural crisis*”?

There is an ongoing structural crisis in the global capitalist economy. Compared to the post-war “Golden Age” of 1950 to 1973, the period from 1974 has seen a continual worsening in economic performance in the West and for Japan. For example, growth is lower, unemployment is far higher, labour productivity lower as is investment. Average rates of unemployment in the major industrialised countries have risen sharply since 1973, especially after 1979. Unemployment “*in the advanced capitalist countries (the ‘Group of 7’...) increased by 56 per cent between 1973 and 1980 (from an average 3.4 per cent to 5.3 per cent of the labour force) and by another 50 per cent since then (from 5.3 per cent of the labour force in 1980 to 8.0 per cent in 19994).*” [Takis Fotopoulos, **Towards and Inclusive Democracy**, p. 35] Job insecurity has increased (in the USA, for example, there is the most job insecurity since the depression of the 1930s [Op. Cit., p. 141]). In addition, both national economies and the international economy have become far less stable.

This crisis is not confined to the economy. It extends into the ecological and the social. “*In recent years,*” point out Larry Elliot and Dan Atkinson, “*some radical economics have tried to [create] ... an all-embracing measure of well-being called the Index of Sustainable Economic Welfare [ISEW] ... In the 1950s and 1960s the ISEW rose in tandem with per capita GDP. It was a time not just of rising incomes, but of greater social equity, low crime, full employment and expanding welfare states. But from the mid-1970s onwards the two measures started to move apart. GDP per head continued its inexorable rise, but the ISEW start to decline as a result of lengthening dole queues, social exclusion, the explosion in crime, habitat loss, environmental degradation and the growth of environment- and stress-related illness. By the start of the 1990s, the ISEW was almost back to the levels at which it started in the early 1990s.*” [The Age of Insecurity, p. 248] Which indicates well our comments in section C.10, namely that economic factors cannot, and do not, indicate human happiness. However, here we discuss economic factors. This does not imply that the social and ecological crises are unimportant or are reducible to the economy. Far from it. We concentrate on the economic factor simply because this is the factor usually stressed by the establishment and it is useful to indicate the divergence of reality and hype we are currently being subjected to.

Ironically enough, as Robert Brenner points out, “*as the neo-classical medicine has been administered in even stronger doses [since the 1960s], the economy has performed steadily less well. The 1970s were worse than the 1960s, the 1980s worse than the 1970s, and the 1990s have been worse than the 1980s.*” [“The Economics of Global Turbulence”, **New Left Review**, no. 229, p. 236] This is

ironic because during the crisis of Keynesianism in the 1970s the right argued that too much equality and democracy harmed the economy, and so us all in the long run (due to lower growth, sluggish investment and so on). However, after over a decade of pro-capitalist governments, rising inequality, increased freedom for capital and its owners and managers, the weakening of trade unions and so on, economic performance has become worse!

If we look at the USA in the 1990s (usually presented as an economy that “got it right”) we find that the “*cyclical upturn of the 1990s has, in terms of the main macro-economic indicators of growth — output, investment, productivity, and real compensation — has been even less dynamic than its relatively weak predecessors of the 1980s and the 1970s (not to mention those of the 1950s and 1960s).*” [Op. Cit., p. 5] Of course, the economy is presented as a success because inequality is growing, the rich are getting richer and wealth is concentrating into fewer and fewer hands. For the rich and finance capital, it can be considered a “Golden Age” and so is presented as such by the media. Indeed, it is for this reason that it may be wrong to term this slow rot a “crisis” as it is hardly one for the ruling elite. Their share in social wealth, power and income has steadily increased over this period. For the majority it is undoubtedly a crisis (the term “*silent depression*” has been accurately used to describe this) but for those who run the system it has by no means been a crisis.

Indeed, the only countries which saw substantial and dynamic growth after 1973 where those which used state intervention to violate the eternal “laws” of neo-classical economics, namely the South East Asian countries (in this they followed the example of Japan which had used state intervention to grow at massive rates after the war). Of course, before the economic crisis of 1997, “free market” capitalists argued that these countries were classic examples of “free market” economies. For example, right-wing icon F.A von Hayek asserted that “*South Korea and other newcomers*” had “*discovered the benefits of free markets*” when, in fact, they had done nothing of the kind [“*1980s Unemployment and the Unions*” reproduced in **The Economic Decline of Modern Britain**, p. 113]. More recently, in 1995, the **Heritage Foundation** released its index of economic freedom. Four of the top seven countries were Asian, including Japan and Taiwan. All the Asian countries struggling just four years latter were qualified as “free.” However, as Takis Fotopoulos argues, “*it was not laissez-faire policies that induced their spectacular growth. As a number of studies have shown, the expansion of the Asian Tigers was based on massive state intervention that boosted their export sectors, by public policies involving not only heavy protectionism but even deliberate distortion of market prices to stimulate investment and trade.*” [Op. Cit., p. 115] After the crisis, the free-marketeers discovered the statism that had always been there and danced happily on the grave of what used to be called “*the Asian miracle.*”

Such hypocrisy is truly sickening and smacks of a Stalinist/Orwellian desire to re-write history so as to appear always right. Moreover, such a cynical analysis actually undermines their own case for the wonders of the “free market.” After all, until the crisis appeared, the world’s investors — which is to say “the market” — saw nothing but blue skies ahead for these economies. They showed their faith by shoving billions into Asian equity markets, while foreign banks contentedly handed out billions in loans. If Asia’s problems are systemic and the result of these countries’ statist policies, then investors’ failure to recognise this earlier is a blow against the market, not for it.

Still more perverse is that, even as the supporters of “free-market” capitalism conclude that history is rendering its verdict on the Asian model of capitalism, they seem to forget that until the recent crisis they themselves took great pains to deny that such a model existed. Until Asia fell apart, supporters of “free-market” capitalism happily held it up as proof that the only recipe for economic growth was open markets and non-intervention on the part of the state. Needless to say, this re-writing of history will be placed down the memory-hole, along with any other claims which have subsequently been proved utter nonsense.

So, as can be seen, the global economy has been marked by an increasing stagnation, the slowing down of growth, in the western economies (for example, the 1990s business upswing has been the weakest since the end of the Second World War). This is despite (or, more likely, **because of**) the free market reforms imposed and the deregulation of finance capital (we say “because of” simply because neo-classical economics argue that pro-market reforms would increase growth and improve the economy, but as we argued in section C such economics have little basis in reality and so their recommendations are hardly going to produce positive results). Of course as the ruling class have been doing well in this New World Order this underlying slowdown has been ignored and obviously

In recent years crisis (particularly financial crisis) has become increasingly visible, reflecting (finally) the underlying weakness of the global economy. This underlying weakness has been hidden by the speculator performance of the world’s stock markets, whose performance, ironically enough, have helped create that weakness to begin with! As one expert on Wall Street argues, “*Bond markets . . . hate economic strength . . . Stocks generally behave badly just as the real economy is at its strongest. . . Stocks thrive on a cool economy, and wither in a hot one.*” [Wall Street, p. 124] In other words, real economic weakness is reflected in financial strength.

Henwood also notes that “[w]hat might be called the rentier share of the corporate surplus — dividends plus interest as a percentage of pre-tax profits and interest — has risen sharply, from 20–30% in the 1950s to 60% in the 1990s.” [Op. Cit., p. 73] This helps explain the stagnation which has afflicted the economies of the west. The rich have been placing more of their ever-expanding wealth in stocks, allowing this market to rise in the face of general economic torpor. Rather than being used for investment, surplus is being funnelled into the finance markets, markets which do concentrate wealth very successfully (retained earnings in the US have decreased as interest and dividend payments have increased [Brenner, Op. Cit., p. 210]). Given that “*the US financial system performs dismally at its advertised task, that of efficiently directing society’s savings towards their optimal investment pursuits. The system is stupefyingly expensive, gives terrible signals for the allocation of capital, and has surprisingly little to do with real investment.*” [Henwood, Op. Cit., p. 3] As most investment comes from internal funds, the rise in the rentiers (those who derive their incomes from returns on capital) share of the surplus has meant less investment and so the stagnation of the economy. And the weakening economy has increased financial strength, which in turn leads to a weakening in the real economy. A viscous circle, and one reflected in the slowing of economic growth over the last 30 years.

In effect, especially since the end of the 1970s, has seen the increasing dominance of finance capital. This dominance has, in effect, created a market for

government policies as finance capital has become increasingly global in nature. Governments must secure, protect and expand the field of profit-making for financial capital and transnational corporations, otherwise they will be punished by the global markets (i.e. finance capital). These policies have been at the expense of the underlying economy in general, and of the working class in particular:

“Rentier power was directed at labour, both organised and unorganised ranks of wage earners, because it regarded rising wages as a principal threat to the stable order. For obvious reasons, this goal was never stated very clearly, but financial markets understood the centrality of the struggle: protecting the value of their capital required the suppression of labour incomes.” [William Greider, **One World, Ready or Not**, p. 302]

Of course, industrial capital **also** hates labour, so there is a basis of an alliance between the two sides of capital, even if they do disagree over the specifics of the economic policies implemented. Given that a key aspect of the neo-liberal reforms was the transformation of the labour market from a post-war sellers’ market to a nineteenth century buyers’ market, with its effects on factory discipline, wage claims and proneness to strike, industrial capital could not but be happy with its effects. Doug Henwood correctly argues that *“Liberals and populists often search for potential allies among industrialists, reasoning that even if financial interests suffer in a boom, firms that trade in real, rather than fictitious, products would thrive when growth is strong. In general, industrialists are less sympathetic to these arguments. Employers in any industry like slack in the labour market; it makes for a pliant workforce, one unlikely to make demands or resist speedups.”* In addition, *“many non-financial corporations have heavy financial interests.”* [Op. Cit., p. 123, p. 135]

Thus the general stagnation afflicting much of the world, a stagnation which has developed into crisis as the needs of finance have undermined the real economy which, ultimately, it is dependent upon. The contradiction between short term profits and long term survival inherent in capitalism strikes again.

Crisis, as we have noted above, has appeared in areas previously considered as strong economies and it has been spreading. An important aspect of this crisis is the tendency for productive capacity to outstrip effective demand (i.e. the tendency to over-invest relative to the available demand), which arises in large part from the imbalance between capitalists’ need for a high rate of profit and their simultaneous need to ensure that workers have enough wealth and income so that they can keep buying the products on which those profits depend (see section C). Inequality has been increasing in the USA, which means that the economy faces a realisation crisis (see section C.7), a crisis which has so far been avoided by deepening debt for working people (debt levels more than doubled between the 1950s to the 1990s, from 25% to over 60%).

Over-investment has been magnified in the East-Asian Tigers as they were forced to open their economies to global finance. These economies, due to their intervention in the market (and repressive regimes against labour) ensured they were a more profitable place to invest than elsewhere. Capital flooded into the area, ensuring a relative over-investment was inevitable. As we argued in section C.7.2, crisis is possible simply due to the lack of information provided by the

price mechanism — economic agents can react in such a way that the collective result of individually rational decisions is irrational. Thus the desire to reap profits in the Tiger economies resulted in a squeeze in profits as the aggregate investment decisions resulted in over-investment, and so over-production and falling profits.

In effect, the South East Asian economies suffered from a problem termed the “fallacy of composition.” When you are the first Asian export-driven economy, you are competing with high-cost Western producers and so your cheap workers, low taxes and lax environmental laws allow you to under-cut your competitors and make profits. However, as more tigers joined into the market, they end up competing against **each other** and so their profit margins would decrease towards their actual cost price rather than that of Western firms. With the decrease in profits, the capital that flowed into the region flowed back out, thus creating a crisis (and proving, incidentally, that free markets are destabilising and do not secure the best of all possible outcomes). Thus, the rentier regime, after weakening the Western economies, helped destabilise the Eastern ones too.

So, in the short-run, many large corporations and financial companies solved their profit problems by expanding production into “underdeveloped” countries so as to take advantage of the cheap labour there (and the state repression which ensured that cheapness) along with weaker environmental laws and lower taxes. Yet gradually they are running out of third-world populations to exploit. For the very process of “development” stimulated by the presence of Transnational Corporations in third-world nations increases competition and so, potentially, over-investment and, even more importantly, produces resistance in the form of unions, rebellions and so on, which tend to exert a downward pressure on the level of exploitation and profits (for example, in South Korea, labour’ share in value-added increased from 23 to 30 per cent, in stark contrast to the USA, Germany and Japan, simply because Korean workers had rebelled and won new political freedoms).

This process reflects, in many ways, the rise of finance capital in the 1970s. In the 1950s and 1960s, existing industrialised nations experienced increased competition from the ex-Axis powers (namely Japan and Germany). As these nations re-industrialised, they placed increased pressure on the USA and other nations, reducing the global “degree of monopoly” and forcing them to compete with lower cost producers (which, needless to say, reduced the existing companies profits). In addition, full employment produced increasing resistance on the shop floor and in society as a whole (see section C.7.1), squeezing profits even more. Thus a combination of class struggle and global over-capacity resulted in the 1970s crisis. With the inability of the real economy, especially the manufacturing sector, to provide an adequate return, capital shifted into finance. In effect, it ran away from the success of working people asserting their rights at the point of production and elsewhere. This, combined with increased international competition from Japan and Germany, ensured the rise of finance capital, which in return ensured the current stagnationist tendencies in the economy (tendencies made worse by the rise of the Asian Tiger economies in the 1980s).

From the contradictions between finance capital and the real economy, between capitalists’ need for profit and human needs, between over-capacity and demand, and others, there has emerged what appears to be a long-term trend toward **permanent** stagnation of the capitalist economy. This trend has been

apparent for several decades, as evidenced by the continuous upward adjustment of the rate of unemployment officially considered to be “normal” or “acceptable” during those decades, and by other symptoms as well such as falling growth, lower rates of profit and so on.

This stagnation has recently become even more obvious by the development of crisis in many countries and the reactions of central banks trying to revive the real economies that have suffered under their rentier inspired policies. Whether this crisis will become worse is hard to say. The Western powers may act to protect the real economy by adopting the Keynesian policies they have tried to discredit over the last thirty years. However, whether such a bailout will succeed is difficult to tell and may just ensure continued stagnation rather than a real up-turn, if it has any effect at all.

Of course, a deep depression may solve the problem of over-capacity and over-investment in the world and lay the foundations of an up-turn. Such a strategy is, however, very dangerous due to working class resistance it could provoke, the deepness of the slump and the length it could last for. However, this, perhaps, has been the case in the USA in 1997–9 where over 20 years of one-sided class war may have paid off in terms of higher profits and profit rate. However, this may have more to do with the problems elsewhere in the world than a real economic change, in addition to rising consumer debt (there is now negative personal savings rate in the US), a worsening trade deficit and a stock market bubble. In addition, rising productivity has combined with stagnant wages to increase the return to capital and the profit rate (wages fell over much of the 1990s recovery and finally regained their pre-recession 1989 peak in 1999! Despite 8 years of economic growth, the typical worker is back only where they started at the peak of the last business cycle). This drop and slow growth of wages essentially accounts for the rising US profit rate, with the recent growth in real wages being hardly enough to make much of an impact (although it has made the US Federal Reserve increase interest rates to slow down even this increase, which re-enforces our argument that capitalist profits require unemployment and insecurity to maintain capitalist power at the point of production).

Such a situation reflects 1920s America (see section C.7.3 for details) which was also marked by rising inequality, a labour surplus and rising profits and suggests that the new US economy faces the same potential for a slump. This means that the US economy must face the danger of over-investment (relative to demand, of course) sooner or later, perhaps sooner due to the problems elsewhere in the world as a profits-lead growth economy is fragile as it is dependent on investment, luxury spending and working class debt to survive — all of which are more unstable and vulnerable to shocks than workers’ consumption.

Given the difficulties in predicting the future (and the fact that those who try are usually proven totally wrong!), we will not pretend to know it and leave our discussion at highlighting a few possibilities. One thing is true, however, and that is the working class will pay the price of any “solution” — unless they organise and get rid of capitalism and the state. Ultimately, capitalism need profits to survive and such profits came from the fact that workers do not have economic liberty. Thus any “solution” within a capitalist framework means the increased oppression and exploitation of working people.

Faced with negative balance sheets during recessions, the upper strata occasionally panic and agree to some reforms, some distribution of wealth, which

temporarily solves the short-run problem of stagnation by increasing demand and thus permits renewed expansion. However, this short-run solution means that the working class gradually makes economic and political gains, so that exploitation and oppression, and hence the rate of profit, tends to fall (as happened during the post-war Keynesian “Golden Age”). Faced with the dangers of, on the one hand, economic collapse and, on the other, increased working class power, the ruling class may not act until it is too late. So, on the basis that the current crisis may get worse and stagnation turn into depression, we will discuss why the “*economic structural crisis*” we have lived through for the later quarter of the 20th century (and its potential crisis) is important to social struggle in the next section.

J.4.5 Why is this “*economic structural crisis*” important to social struggle?

The “*economic structural crisis*” we out-lined in the last section has certain implications for anarchists and social struggle. Essentially, as C. George Benello argues, “[i]f economic conditions worsen. . . then we are likely to find an openness to alternatives which have not been thought of since the depression of the 1930s. . . It is important to plan for a possible economic crisis, since it is not only practical, but also can serve as a method of mobilising a community in creative ways.” [From the **Ground Up**, p. 149]

In the face of economic stagnation and depression, attempts to improve the rate of exploitation (i.e. increase profits) by increasing the authority of the boss grow. In addition, more people find it harder to make ends meet, running up debts to survive, face homelessness if they are made unemployed, and so on. Such effects make exploitation ever more visible and tend to push oppressed strata together in movements that seek to mitigate, and even remove, their oppression. As the capitalist era has worn on, these strata have become increasingly able to rebel and gain substantial political and economic improvements, which have, in addition, lead to an increasingly willing to do so because of rising expectations (about what is possible) and frustration (about what actually is). This is why, since 1945, the world-wide “*family*” of progressive movements has grown “*ever stronger, ever bolder, ever more diverse, ever more difficult to contain.*” [Immanuel Wallerstein, **Geopolitics and Geoculture**, p. 110] It is true that libertarians, the left and labour have suffered a temporary setback during the past few decades, but with increasing misery of the working class due to neo-liberal policies (and the “economic structural crisis” they create), it is only a matter of time before there is a resurgence of radicalism.

Anarchists will be in the forefront of this resurgence. For, with the discrediting of authoritarian state capitalism (“Communism”) in the Soviet Union and Eastern Europe, the anti-authoritarian faction of the left will increasingly be seen as its only credible one. Thus the ongoing structural crisis of the global capitalist economy, combined with the other developments springing from what Takis Fotopoulos calls (in his book **Towards and Inclusive Democracy**) a “*multidimensional crisis*” (which included economic, political, social, ecological and ideological aspects), could (potentially) lead over the next decade or two to a new **international** anti-authoritarian alliance linking together the new (and

not so new) social movements in the West (feminism, the Green movement, rank-and-file labour militancy, etc.) with non-authoritarian liberation movements in the Third World and new anti-bureaucracy movements in formerly “communist” countries. However, this is only likely to happen if anarchists take the lead in promoting alternatives and working with the mass of the population. Ways in which an anarchist can do this are discussed in some detail in section J.5.

Thus the “economic structural crisis” can aid social struggle by placing the contrast of “*what is*” with what “*could be*” in a clear light. Any crisis brings forth the contradictions in capitalism, between the production of use values (things people need) and of exchange value (capitalist profits), between capitalism’s claims of being based on liberty and the authoritarianism associated with wage labour (“*[t]he general evidence of repression poses an ancient contradiction for capitalism: while it claims to promote human freedom, it profits concretely from the denial of freedom, most especially freedom for the workers employed by capitalist enterprise*” [William Greider, **One World, Ready or Not**, p. 388]) and so on. It shakes to the bone popular faith in capitalism’s ability to “deliver the goods” and gets more and more people thinking about alternatives to a system that places profit above and before people and planet. The crisis also, by its very nature, encourages workers and other oppressed sections of the population to resist and fight back, which in turn generates collective organisation (such as unions or workplace-based assemblies and councils), solidarity and direct action — in other words, collective self-help and the awareness that the problems of working class people can only be solved by themselves, by their own actions and organisations. The 1930s in the USA is a classic example of this process, with very militant struggles taking place in very difficult situations (see Howard Zinn’s **A People’s History of the United States** or Jeremy Brecher’s **Strike!** for details).

In other words, the “economic structural crisis” gives radicals a lot potential to get their message across, even if the overall environment may make success seem difficult in the extreme at times!

As well as encouraging workplace organisation due to the intensification of exploitation and authority provoked by the economic stagnant/depression, the “economic structural crisis” can encourage other forms of libertarian alternatives. For example, “*the practical effect of finance capital’s hegemony was to lock the advanced economies and their governments in a malignant spiral, restricting them to bad choices. Like bondholders in general, the new governing consensus explicitly assumed that faster economic growth was dangerous — threatening to the stable financial order — so nations were effectively blocked from measures that might reduce permanent unemployment or ameliorate the decline in wages. . . The reality of slow growth, in turn, drove the governments into their deepening indebtedness, since the disappointing growth inevitably undermined tax revenues while it expanded the public welfare costs. The rentier regime repeatedly instructed governments to reform their spending priorities — that is, withdraw benefits from dependent citizens. . .*” [**Op. Cit.**, pp. 297–8]

Thus the “economic structural crisis” has resulted in the erosion of the welfare state (at least for the working class, for the elite, state aid is never far away). This development as potential libertarian possibilities. “*The decline of the state,*” argues L. Gambone, “*makes necessary a revitalisation of the notions of direct action and mutual aid. Without Mama State to do it for us, we must create our own social services through mutual aid societies.*” [**Syndicalism in**

Myth and Reality, p. 12] As we argue in more depth in section J.5.16, such a movement of mutual aid has a long history in the working class and, as it is under our control, it cannot be withdrawn from us to enrich and empower the ruling class as state run systems have been. Thus the decline of state run social services could, potentially, see the rise of a network of self-managed, working class alternatives (equally, of course, it could see the end of all services to the most weak sections of our society — which possibility comes about depends on what we do in the here and now. see section J.5.15 for an anarchist analysis of the welfare state).

Food Not Bombs! is an excellent example of practical libertarian alternatives being generated by the economic crisis we are facing. Food Not Bombs helps the homeless through the direct action of its members. It also involves the homeless in helping themselves. It is a community-based group which helps other people in the community who are needy by providing free food to those in need. FNB! also helps other Anarchist political projects and activities.

Food Not Bombs! serves free food in public places to dramatise the plight of the homeless, the callousness of the system and our capacity to solve social problems through our own actions without government or capitalism. The constant harassment of FNB! by the cops, middle classes and the government illustrates their callousness to the plight of the poor and the failure of their institutions to build a society which cares for people more than money and property (and arms, cops and prisons to protect them). The fact is that in the US many working and unemployed people have no **feeling** that they are entitled to basic human needs such as medicine, clothes, shelter, and food. Food Not Bombs! does encourage poor people to make these demands, does provide a space in which these demands can be voiced, and does help to breakdown the wall between hungry and not-hungry. The repression directed towards FNB! by local police forces and governments also demonstrates the effectiveness of their activity and the possibility that it may radicalise those who get involved with the organisation. Charity is obviously one thing, mutual aid is something else. FNB! as it is a politicised movement from below, based on solidarity, is **not** charity, because, in Kropotkin's words, charity "*bears a character of inspiration from above, and, accordingly, implies a certain superiority of the giver upon the receiver*" and hardly libertarian [**Mutual Aid**, p. 222].

The last example of how economic stagnation can generate libertarian tendencies can be seen from the fact that, "*[h]istorically, at times of severe inflation or capital shortages, communities have been forced to rely on their own resources. During the Great Depression, many cities printed their own currency; this works to the extent that a community is able to maintain a viable internal economy which provides the necessities of life, independent of transactions with the outside.*" [C. George Benello, **Op. Cit.**, p. 150]

These local currencies and economies can be used as the basis of a libertarian socialist economy. The currencies would be the basis of a mutual bank (see sections J.5.5 and J.5.6), providing interest-free loans to workers to form co-operatives and so build libertarian alternatives to capitalist firms. In addition, these local currencies could be labour-time based, eliminating the profits of capitalists by allowing workers to exchange the product of their labour with other workers. Moreover, "*local exchange systems strength local communities by increasing their self-reliance, empowering community members, and helping to protect them from the excesses of the global market.*" [Frank Lindenfield, "*Eco-*

nomics for Anarchists,” **Social Anarchism**, no. 23, p. 24] In this way local self-managing communes could be created, communes that replace hierarchical, top-down, government with collective decision making of community affairs based on directly democratic community assemblies (see section J.5.1). These self-governing communities and economies could federate together to co-operate on a wider scale and so create a counter-power to that of state and capitalism.

This confederal system of self-managing communities could also protect jobs as the “*globalisation of capital threatens local industries. A way has to be found to keep capital at home and so preserve the jobs and the communities that depend upon them. Protectionism is both undesirable and unworkable. But worker-ownership or workers’ co-operatives are alternatives.*” [L. Gambone, **Syndicalism in Myth and Reality**, pp.12–13] Local communities could provide the necessary support structures which could protect co-operatives from the corrupting effects of working in the capitalist market (see section J.5.11). In this way, economic liberty (self-management) could replace capitalism (wage slavery) and show that anarchism is a practical alternative to the chaos and authoritarianism of capitalism, even if these examples are fragmentally and limited in nature.

However, these developments should **not** be taken in isolation of collective struggle in the workplace or community. It is in the class struggle that the real potential for anarchy is created. The work of such organisations as Food Not Bombs! and the creation of local currencies and co-operatives are supplementary to the important task of creating workplace and community organisations that can create effective resistance to both state and capitalists, resistance that can overthrow both (see sections J.5.2 and J.5.1 respectively). “*Volunteer and service credit systems and alternative currencies by themselves may not be enough to replace the corporate capitalist system. Nevertheless, they can help build the economic strength of local currencies, empower local residents, and mitigate some of the consequences of poverty and unemployment. . . By the time a majority [of a community are involved it] will be well on its way to becoming a living embodiment of many anarchist ideals.*” [Frank Lindenfield, **Op. Cit.**, p. 28] And such a community would be a great aid in any strike or other social struggle which is going on!

Therefore, the general economic crisis which we are facing has implications for social struggle and anarchist activism. It could be the basic of libertarian alternatives in our workplaces and communities, alternatives based on direct action, solidarity and self-management. These alternatives could include workplace and community unionism, co-operatives, mutual banks and other forms of anarchistic resistance to capitalism and the state. We discuss such alternatives in more detail in section J.5, and so do not do so here.

Before moving on to the next section, we must stress that we are **not** arguing that working class people need an economic crisis to force them into struggle. Such “objectivism” (i.e. the placing of tendencies towards socialism in the development of capitalism, of objective factors, rather than in the class struggle, i.e. subjective factors) is best left to orthodox Marxists and Leninists as it has authoritarian underpinnings (see section H). Rather we are aware that the class struggle, the subjective pressure on capitalism, is not independent of the conditions within which it takes place (and helped to create, we must add). Subjective revolt is always present under capitalism and, in the case of the 1970s crisis, played a role in creating it. Faced with an economic crisis we are indicating

what we can do in response to it and how it could, potentially, generate libertarian tendencies within society. Economic crisis could, in other words, provoke social struggle, collective action and generate anarchic tendencies in society. Equally, it could cause apathy, rejection of collective struggle and, perhaps, the embracing of **false** “solutions” such as right-wing populism, Leninism, Fascism or right-wing “libertarianism.” We cannot predict how the future will develop, but it is true that if we do nothing then, obviously, libertarian tendencies will not grow and develop.

J.4.6 What are implications of anti-government and anti-big business feelings?

According to a report in **Newsweek** (“*The Good Life and its Discontents*” Jan. 8, 1996), feelings of disappointment have devastated faith in government and big business. Here are the results of a survey in which which people were asked whether they had a “*great deal of confidence*” in various institutions:

	1966	1975	1985	1994
Congress	42%	13%	16%	8%
Executive Branch	41%	13%	15%	12%
The press	29%	26%	16%	13%
Major Companies	55%	19%	17%	19%

As can be seen, the public’s faith in major companies plunged 36% over a 28-year period in the survey, an even worse vote of “*no confidence*” than that given to Congress (34%).

Some of the feelings of disappointment with government can be blamed on the anti-big-government rhetoric of conservatives and right-wing populists. But such rhetoric is of potential benefit to anarchists as well. Of course the Right would never dream of **really** dismantling the state, as is evident from the fact that government grew more bureaucratic and expensive under “conservative” administrations than ever before.

Needless to say, this “decentralist” element of right-wing rhetoric is a con. When a politician, economist or business “leader” argues that the government is too big, he is rarely thinking of the same government functions you are. You may be thinking of subsidies for tobacco farmers or defence firms and they are thinking about pollution controls. You may be thinking of reforming welfare for the better, while their idea is to dismantle the welfare state totally. Moreover, with their support for “family values”, “wholesome” television, bans on abortion, and so on their victory would see an increased level of government intrusion in many personal spheres (as well as increased state support for the power of the boss over the worker, the landlord over the tenant and so on).

If you look at what the Right has done and is doing, rather than what it is saying, you quickly see the ridiculous of claims of right-wing “libertarianism” (as well as who is really in charge). Obstructing pollution and health regulations; defunding product safety laws; opening national parks to logging and mining, or closing them entirely; reducing taxes for the rich; eliminating the capital

gains tax; allowing companies to fire striking workers; making it easier for big telecommunications companies to make money; limiting companies' liability for unsafe products — the program here is obviously to help big business do what it wants without government interference, and to help the rich get richer. In other words, increased “freedom” for private power combined with a state whose role is to protect that “liberty.”

Yet along with the pro-business, pro-private tyranny, racist, anti-feminist, and homophobic hogwash disseminated by right-wing radio propagandists and the business-backed media, important decentralist and anti-statist ideas are also being implanted in mass consciousness. These ideas, if consistently pursued and applied in all areas of life (the home, the community, the workplace), could lead to a revival of anarchism in the US — but only if radicals take advantage of this opportunity to spread the message that capitalism is not **genuinely** anti-authoritarian (nor could it ever be), as a social system based on liberty must entail.

This does not mean that right-wing tendencies have anarchistic elements. Of course not. Nor does it mean that anarchist fortunes are somehow linked to the success of the right. Far from it (the reverse is actually the case). Similarly, the anti-big government propaganda of big business is hardly anarchistic. But it does have the advantage of placing certain ideas on the agenda, such as decentralisation. What anarchists try to do is point out the totally contradictory nature of such right-wing rhetoric. After all, the arguments against big government are equally applicable to big business and wage slavery. **If** people are capable of making their own decisions, then why should this capability be denied in the workplace? As Noam Chomsky points out, while there is a “*leave it alone*” and “*do your own thing*” current within society, it in fact “*tells you that the propaganda system is working full-time, because there is no such ideology in the U.S. Business, for example, doesn't believe it. It has always insisted upon a powerful interventionist state to support its interests — still does and always has — back to the origins of American society. There's nothing individualistic about corporations. Those are big conglomerate institutions, essentially totalitarian in character, but hardly individualistic. Within them you're a cog in a big machine. There are few institutions in human society that have such strict hierarchy and top-down control as a business organisation. Nothing there about 'Don't tread on me.' You're being tread on all the time. The point of the ideology is to try to get other people, outside of the sectors of co-ordinated power, to fail to associate and enter into decision-making in the political arena themselves. The point is to atomise everyone else while leaving powerful sectors integrated and highly organised and of course dominating resources.*” He goes on to note that:

“There is a streak of independence and individuality in American culture which I think is a very good thing. This ‘Don't tread on me’ feeling is in many respects a healthy one. It's healthy up to the point where it atomises and keeps you from working together with other people. So it's got its healthy side and its negative side. It's the negative side that's emphasised naturally in the propaganda and indoctrination.” [Keeping the Rabble in Line, pp. 279–80]

As the opinion polls above show, must people direct their dislike and distrust of institutions equally to Big Business, which shows that people are not stupid.

However, the slight decrease in distrust for big business even after a period of massive business-lead class war, down-sizing and so on, is somewhat worrying. Unfortunately, as Gobbels was well aware, tell a lie often enough and people start to believe it. And given the funds available to big business, its influence in the media, its backing of “think-tanks,” the use of Public Relations companies, the support of economic “science,” its extensive advertising and so on, it says a lot for the common sense of people that so many people see big business for what it is. You simply cannot fool all the people all of the time!

However, these feelings can easily be turned into cynicism and a hopelessness that things can change for the better and that the individual can help change society. Or, even worse, they can be twisted into support for the right, authoritarian, populist or (so-called) “Libertarian”-Right. The job for anarchists is to combat this and help point the healthy distrust people have for government and business towards a real solution to societies problems, namely a decentralised, self-managed anarchist society.

J.4.7 What about the communications revolution?

Another important factor working in favour of anarchists is the existence of a sophisticated global communications network and a high degree of education and literacy among the populations of the core industrialised nations. Together these two developments make possible nearly instantaneous sharing and public dissemination of information by members of various progressive and radical movements all over the globe — a phenomenon that tends to reduce the effectiveness of repression by central authorities. The electronic-media and personal-computer revolutions also make it more difficult for elitist groups to maintain their previous monopolies of knowledge. In short, the advent of the Information Age is potentially one of the most subversive variables in the modern equation.

Indeed the very existence of the Internet provides anarchists with a powerful argument that decentralised structures can function effectively in today’s highly complex world. For the net has no centralised headquarters and is not subject to regulation by any centralised regulatory agency, yet it still manages to function quite effectively. Moreover, the net is also an effective way of anarchists and other radicals to communicate their ideas to others, share knowledge and work on common projects (such as this FAQ, for example) and co-ordinate activities and social struggle. By using the Internet, radicals can make their ideas accessible to people who otherwise would not come across anarchist ideas (obviously we are aware that the vast majority of people in the world do not have access to telephones, never mind computers, but computer access is increasing in many countries, making it available, via work, libraries, schools, universities, and so on to more and more working people). In addition, and far more important than anarchists putting their ideas across, the fact is that the net allows everyone with access to express themselves freely, to communicate with others and get access (by visiting webpages and joining mailing lists and newsgroups) and give access (by creating webpages and joining in with on-line arguments) to new ideas and viewpoints. This is very anarchistic as it allows people to express themselves and start to consider new ideas, ideas which may change how they think and act. Of course most people on the planet do not have a telephone, let alone a computer, but that does not undermine the fact that the internet is

a medium in which people can communicate freely (at least until it is totally privatised, then it may prove to be more difficult as the net could become a giant shopping centre).

Of course there is no denying that the implications of improved communications and information technology are ambiguous, implying Big Brother as well the ability of progressive and radical movements to organise. However, the point is only that the information revolution in combination with the other new social developments we are considering **could** (but will not **necessarily**) contribute to a social paradigm shift. Obviously such a shift will not happen automatically. Indeed, it will not happen at all unless there is strong resistance to governmental attempts to limit public access to information technology (e.g. encryption programs) and censor citizens' communications.

How anarchists are very effectively using the Internet to co-ordinate struggles and spread information is discussed in section J.4.9.

This use of the Internet and computers to spread the anarchist message is ironic. The rapid improvement in price-performance ratios of computers, software, and other technology today seems to validate the faith in free markets. But to say that the information revolution proves the inevitable superiority of markets requires a monumental failure of short-term historical memory. After all, not just the Internet, but the computer sciences and computer industry represent a spectacular success of public investment. As late as the 1970s and early 1980s, according to Kenneth Flamm's 1988 book **Creating the Computer**, the federal government was paying for 40 percent of all computer-related research and probably 60 to 75 percent of basic research. Even such modern-seeming gadgets as video terminals, the light pen, the drawing tablet, and the mouse evolved from Pentagon-sponsored research in the 1950s, 1960s and 1970s. Even software was not without state influence, with database software having its roots in US Air Force and Atomic Energy Commission projects, artificial intelligence in military contracts back in the 1950s and airline reservation systems in 1950s air-defence systems. More than half of IBM's Research and Development budget came from government contracts in the 1950s and 1960s.

The motivation was national security, but the result has been the creation of comparative advantage in information technology for the United States that private firms have happily exploited and extended. When the returns were uncertain and difficult to capture, private firms were unwilling to invest, and government played the decisive role. And not for want of trying, for key players in the military first tried to convince businesses and investment bankers that a new and potentially profitable business opportunity was presenting itself, but they did not succeed and it was only when the market expanded and the returns were more definite that the government receded. While the risks and development costs were socialised, the gains were privatised. All of which make claims that the market would have done it anyway highly unlikely.

Looking beyond state aid to the computer industry we discover a "*do-it-yourself*" (and so self-managed) culture which was essential to its development. The first personal computer, for example, was invented by amateurs who wanted to build their own cheap machines. The existence of a "gift" economy among these amateurs and hobbyists was a necessary precondition for the development of PCs. Without this free sharing of information and knowledge, the development of computers would have been hindered. In other words, socialistic relations between developers and within the working environment created the

necessary conditions for the computer revolution. If this community had been marked by commercial relations, the chances are the necessary breakthroughs and knowledge would have remained monopolised by a few companies or individuals, so hindering the industry as a whole.

The first 20 years of the Internet's development was almost completely dependent on state aid — such as the US military or the universities — plus an anti-capitalist “gift economy” between hobbyists. Thus a combination of public funding and community based sharing helped create the framework of the Internet, a framework which is now being claimed as one of capitalism's greatest successes!

Encouragingly, this socialistic “gift economy” is still at the heart of computer/software development and the Internet. For example, the **Free Software Foundation** has developed the **General Public Licence** (GPL). GPL, also known as “*copyleft*”, uses copyright to ensure that software remains free. Copyleft ensures that a piece of software is made available to everyone to use and modify as they desire. The only restriction is that any used or modified copyleft material must remain under copyleft, ensuring that others have the same rights as you did when you used the original code. It creates a commons which anyone may add to, but no one may subtract from. Placing software under GPL means that every contributor is assured that she, and all other users, will be able to run, modify and redistribute the code indefinitely. Unlike commercial software, copyleft code ensures an increasing knowledge base from which individuals can draw from and, equally as important, contribute to. In this way everyone benefits as code can be improved by everyone, unlike commercial code.

Many will think that this essentially anarchistic system would be a failure. In fact, code developed in this way is far more reliable and sturdy than commercial software. Linux, for example, is a far superior operating system than DOS, for example, precisely **because** it draws on the collective experience, skill and knowledge of thousands of developers. Apache, the most popular web-server, is another freeware product and is acknowledged as the best available. While non-anarchists may be surprised, anarchists are not. Mutual aid and co-operation are beneficial in evolution of life, why not in the evolution of software?

For anarchists, this “gift economy” at the heart of the communications revolution is an important development. It shows the superiority of common development and the walls to innovation and decent products generated by property systems. We hope that such an economy will spread increasingly into the “real” world.

J.4.8 What is the significance of the accelerating rate of change and the information explosion?

As Philip Slater points out in **A Dream Deferred**, the cumbersomeness of authoritarian structures becomes more and more glaring as the rate of change speeds up. This is because all relevant information in authoritarian systems must be relayed to a central command before any decisions can be made, in contrast to decentralised systems where important decisions can be made by individuals and small autonomous groups responding immediately to new information. This means that decision making is slower in authoritarian structures,

putting them at a disadvantage relative to more decentralised and democratic structures.

The failure of centrally planned state-capitalist (“Communist”) economies due to overwhelming bureaucratic inertia provides an excellent illustration of the problem in question. Similarly, under private-property capitalism, small and relatively decentralised companies are generally more innovative and productive than large corporations with massive bureaucracies, which tend to be nearly as inflexible and inefficient as their “Communist” counterparts. In a world where the proliferation of information is accelerating at the same time that crucial economic and political decisions must be made ever more quickly, authoritarian structures are becoming increasingly maladaptive. As Slater notes, authoritarian systems simply cannot cope effectively with the information explosion, and for this reason more and more nations are realising they must either “democratise” or fall behind. He cites the epidemic of “democratisation” in Eastern Europe as well as popular pressure for democracy in Communist China as symptomatic of this phenomenon.

Unfortunately, Slater fails to note that the type of “democracy” to which he refers is ultimately a fraud (though better than state-capitalist totalitarianism), since the representative type of government at which it aims is a disguised form of political domination by the corporate rich. Nevertheless, the cumbersomeness of authoritarian structures on which he bases his argument is real enough, and it will continue to lend credibility to the anarchist argument that “representative” political structures embedded in a corporate-state complex of authoritarian institutions is very far from being either true democracy or an efficient way of organising society. Moreover, the critique of authoritarian structures is equally applicable to the workplace as capitalist companies are organised as mini-centrally planned states, with (official) power concentrated in the hands of bosses and managers. Any struggle for increased participation will inevitably take place in the workplace as well (as it has continually done so as long as wage slavery has existed).

J.4.9 What are Netwars?

Netwars refers to the use of the Internet by autonomous groups and social movements to co-ordinate action to influence and change society and fight government or business policy. This use of the Internet has steadily grown over the years, with a Rand corporation researcher, David Ronfeldt, arguing that this has become an important and powerful force (Rand is, and has been since its creation in 1948, a private appendage of the military industrial complex). In other words, activism and activists power and influence has been fuelled by the advent of the information revolution. Through computer and communication networks, especially via the world-wide Internet, grassroots campaigns have flourished, and the most importantly, government elites have taken notice.

Ronfeldt specialises in issues of national security, especially in the areas of Latin American and the impact of new informational technologies. Ronfeldt and another colleague coined the term “*netwar*” a couple years ago in a Rand document entitled “*Cyberwar is Coming!*”. “Netwars” are actions by autonomous groups — especially advocacy groups and social movements — that use informational networks to co-ordinate action to influence, change or fight government

policy.

Ronfeldt's work became a flurry of discussion on the Internet in mid-March 1995 when Pacific News Service correspondent Joel Simon wrote an article about Ronfeldt's opinions on the influence of netwars on the political situation in Mexico after the Zapatista uprising. According to Simon, Ronfeldt holds that the work of social activists on the Internet has had a large influence — helping to co-ordinate the large demonstrations in Mexico City in support of the Zapatistas and the proliferation of EZLN communiqués across the world via computer networks. These actions, Ronfeldt argues, have allowed a network of groups that oppose the Mexican Government to muster an international response, often within hours of actions by it. In effect, this has forced the Mexican government to maintain the facade of negotiations with the EZLN and has on many occasions, actually stopped the army from just going in to Chiapas and brutally massacring the Zapatistas.

Given that Ronfeldt is an employee of the Rand Corporation (described by Paul Dickson, author of the book *“Think Tanks”*, as the *“first military think tank. . . undoubtedly the most powerful research organisation associated with the American military”*) his comments indicate that the U.S. government and its military and intelligence wings are very interested in what the Left and anarchists are doing on the Internet. Given that they would not be interested in this if it was not effective, we can say that this use of the “Information Super-Highway” is a positive example of the use of technology in ways un-planned of by those who initially developed it (let us not forget that the Internet was originally funded by the U.S. government and military). While the internet is being hyped as the next big marketplace, it is being subverted by activists — an example of anarchistic trends within society worrying the powers that be.

Ronfeldt argues that *“the information revolution. . . disrupts and erodes the hierarchies around which institutions are normally designed. It diffuses and redistributes power, often to the benefit of what may be considered weaker, smaller actors.”* He continues, *“multi-organisational networks consist of (often small) organisations or parts of institutions that have linked together to act jointly. . . making it possible for diverse, dispersed actors to communicate, consult, co-ordinate, and operate together across greater distances, and on the basis of more and better information than ever.”* He emphasises that *“some of the heaviest users of the new communications networks and technologies are progressive, centre-left, and social activists. . . [who work on] human rights, peace, environmental, consumer, labour, immigration, racial and gender-based issues.”* In other words, social activists are on the cutting edge of the new and powerful “network” system of organising.

All governments, especially the U.S. government, have been extremely antagonistic to this idea of effective use of information, especially by the political Left and anarchists. The use of the Internet may facilitate another “crisis in democracy” (i.e. the development of **real** democracy rather than the phoney elite kind favoured by capitalism). To fight this possible use of the internet to combat the elite, Ronfeldt maintains that the lesson is clear: *“institutions can be defeated by networks, and it may take networks to counter networks.”* He argues that if the U.S. government and/or military is to fight this ideological war properly with the intent of winning — and he does specifically mention ideology — it must completely reorganise itself, scrapping hierarchical organisation for a more autonomous and decentralised system: a network. In this way, he states,

“we expect that. . . netwar may be uniquely suited to fighting non-state actors”.

Ronfeldt’s research and opinion should be flattering for the political Left. He is basically arguing that the efforts of activists on computers not only has been very effective or at least has the potential, but more importantly, argues that the only way to counter this work is to follow the lead of social activists. Ronfeldt emphasised in a personal correspondence that the *“information revolution is also strengthening civil-society actors in many positive ways, and moreover that netwar is not necessarily a ‘bad’ thing that necessarily is a ‘threat’ to U.S. or other interests. It depends.”* At the same time, anarchists and other activists should understand the important implications of Ronfeldt’s work: government elites are not only watching these actions (big surprise), but are also attempting to work against them.

This can be seen in many countries. For example, in 1995 a number of computer networks, so far confined to Europe, have been attacked or completely shut down. In Italy, members of the Carabinieri Anti-Crime Special Operations Group raided the homes of a number of activists — many active in the anarchist movement. They confiscated journals, magazines, pamphlets, diaries, and video tapes. They also took their personal computers, one of which hosted *“BITS Against the Empire”*, a node of Cybernet and Fidonet networks. The warrant ridiculously charged them for *“association with intent to subvert the democratic order”*, carrying a penalty of 7 to 15 years imprisonment for a conviction.

In Britain, Terminal Boredom bulletin board system (BBS) in Scotland was shutdown by police in 1995 after the arrest of a hacker who was affiliated with the BBS. In the same year Spunk Press, the largest anarchist archive of published material catalogued on computer networks faced a media barrage in the UK press which has falsely accused them of working with known terrorists like the Red Army Faction of Germany, of providing recipes for making bombs and of co-ordinating the *“disruption of schools, looting of shops and attacks on multinational firms.”* Articles by the computer trade magazine, **Computing**, and the **Sunday Times**, entitled *“Anarchism Runs Riot on the Superhighway”* and *“Anarchists Use Computer Highway For Subversion”* respectively, nearly lead one of the organisers of Spunk Press losing his job after the firm he works for received bad publicity. According to the book **Turning up the Heat: MI5 after that cold war** by Lara O’Hara, one of the journalists who wrote the Sunday Times article has contacts with MI5 (the British equivalent of the FBI).

It is not coincidence that this attack has started first against anarchists and libertarian-socialists. They are currently one of the most organised political grouping on the Internet. Even Simon Hill, editor of **Computing** magazine, admits that *“we have been amazed at the level of organisation of these. . . groups who have appeared on the Internet in a short amount of time”.* According to Ronfeldt’s thesis, this makes perfect sense. Who best can exploit a system that *“erodes hierarchy”* and requires the co-ordination of decentralised, autonomous groups in co-operative actions than anarchists and libertarian-socialists?

These attacks may not be confined to anarchists for long. Indeed, many countries have attempted to control the internet, using a number of issues as a means to do so (such as “terrorism”, pornography and so on). Government is not the only institution to notice the power of the Internet in the hands of activists. In America, the Washington Post (*“Mexican Rebels Using a High-Tech Weapon; Internet Helps Rally Support”*, by Tod Robberson), Newsweek (*“When Words are the Best Weapon: How the Rebels Use the Internet and Satellite TV”*,

by Russell Watson) and even CNN have done stories about the importance of the Internet and network communication organisation with respect to the Zapatistas.

It is important to point out that the mainstream media is not interested in the information that circulates across the Internet. No, they are interested in sensationalising the activity, even demonising it. They correctly see that the “rebels” possess an incredibly powerful tool, but the media does not report on what they either are missing or omitting.

A good example of this powerful tool is the incredible speed and range at which information travels the Internet about events concerning Mexico and the Zapatistas. When Alexander Cockburn wrote an article exposing a Chase Manhattan Bank memo about Chiapas and the Zapatistas in Counterpunch, only a small number of people read it because it is only a newsletter with a limited readership. The memo, written by Riordan Roett, was very important because it argued that *“the [Mexican] government will need to eliminate the Zapatistas to demonstrate their effective control of the national territory and of security policy”*. In other words, if the Mexican government wants investment from Chase, it will have to crush the Zapatistas. This information was relatively ineffective when just confined to print. But when it was uploaded to the Internet (via a large number of List-servers and the USENET), it suddenly reached a very large number of people. These people in turn co-ordinated protests against the U.S and Mexican governments and especially Chase Manhattan. Chase was eventually forced to attempt to distance itself from the Roett memo that it commissioned.

Anarchists and the Zapatistas is just the tip of the proverbial iceberg. Currently there are a myriad of social activist campaigns on the Internet. From local issues like the anti-Proposition 187 movement in California to a progressive college network campaign against the Republican *“Contract [on] America,”* the network system of activism is not only working — and working well as Ronfeldt admits — but is growing. It is growing rapidly in numbers of people involved and growing in political and social effectiveness. There are many parallels between the current situation in Chiapas and the drawn out civil war in Guatemala, yet the Guatemalan military has been able to nearly kill without impunity while the Mexican military received a co-ordinated, international attack literally hours after they mobilise their troops. The reason is netwars are effective as Ronfeldt concedes, and when they are used they have been very influential.

It is clear than Rand, and possibly other wings of the establishment, are not only interested in what activists are doing on the Internet, but they think it is working. It is also clear that they are studying our activities and analysing our potential power. We should do the same, but obviously not from the perspective of inhibiting our work, but the opposite: how to further facilitate it. Also, we should turn the tables as it were. They are studying our behaviour and actions — we should study theirs. As was outlined above, we should analyse their movements and attempt to anticipate attacks as much as possible.

As Ronfeldt argues repeatedly, the potential is there for us to be more effective. Information is getting out as is abundantly clear. But we can do better than just a co-ordination of raw information, which has been the majority of the “networking” so far on the Internet. To improve on the work that is being done, we should attempt to provide more — especially in the area of in-depth

analysis. Not just what we are doing and what the establishment is doing, but more to the point, we should attempt to co-ordinate the dissemination of solid analysis of important events. In this way members of the activist network will not only have the advantage of up-to-date information of events, but also a good background analysis of what each event means, politically, socially and/or economically as the case may be.

Thus Netwars are a good example of anarchistic trends within society, the use of communications technology (developed for the state and used by capitalism as a means to aid the selling process) has become a means of co-ordinating activity across the world in a libertarian fashion.

(This section of the FAQ is based on an article by Jason Wehling called “*NetWars’ and Activists’ Power on the Internet*” which has appeared in issue 2 of **Scottish Anarchist** magazine as well as **Z Magazine**)

J.5 What alternative social organisations do anarchists create?

Anarchism is all about “*do it yourself*,” people helping each other out in order to secure a good society to live within and to protect, extend and enrich their personal freedom. As such anarchists are keenly aware of the importance of building alternatives to both capitalism and the state in the here and now. Only by creating practical alternatives can we show that anarchism is a viable possibility and train ourselves in the techniques and responsibilities of freedom:

“If we put into practice the principles of libertarian communism within our organisations, the more advanced and prepared we will be on that day when we come to adopt it completely.” [C.N.T. member, quoted by Graham Kelsey, **Anarchosyndicalism, Libertarian Communism and the State**, p. 79]

By building the new world in the shell of the old, we help create the environment within which individuals can manage their own affairs and develop their abilities to do so. In other words, we create “*schools of anarchism*” which lay the foundations for a better society as well as promoting and supporting social struggle against the current system. Make no mistake, the alternatives we discuss in this section are not an alternative to direct action and the need for social struggle — they are an expression of social struggle and a form of direct action. They are the framework by which social struggle can build and strengthen the anarchist tendencies within capitalist society which will ultimately replace it.

Therefore it is wrong to think that anarchists are indifferent to making life more bearable, even more enjoyable, under capitalism. A free society will not just appear from nowhere, it will be created by individuals and communities with a long history of social struggle and organisation. For as Wilhelm Reich so correctly pointed out:

“Quite obviously, a society that is to consist of ‘free individuals,’ to constitute a ‘free community’ and to administer itself, i.e. to ‘govern itself,’ cannot be suddenly created by decrees. It has to evolve organically.” [**The Mass Psychology of Fascism**, p. 241]

And it is this organic evolution that anarchists promote when they create anarchist alternatives within capitalist society. The alternatives anarchists create

(be they workplace or community unions, co-operatives, mutual banks, and so on) are marked by certain common features such as being self-managed, being based upon equality and decentralisation and working with other groups and associations within a confederal network based upon mutual aid and solidarity. In other words, they are **anarchist** in both spirit and structure and so create a practical bridge between what is and what is possible.

Therefore, anarchists consider the building of alternatives as a key aspect of their activity under capitalism. This is because they, like all forms of direct action, are “schools of anarchy” and also because they make the transition to a free society easier. “*Through the organisations set up for the defence of their interests,*” in Malatesta’s words, “*the workers develop an awareness of the oppression they suffer and the antagonism that divides them from the bosses and as a result begin to aspire to a better life, become accustomed to collective struggle and solidarity and win those improvements that are possible within the capitalist and state regime.*” [**The Anarchist Revolution**, p. 95] By creating viable examples of “*anarchy in action*” we can show that our ideas are practical and convince people of anarchist ideas by “good examples.” Therefore this section of the FAQ will indicate the alternatives anarchists support and **why** we support them.

The approach anarchists take to this activity could be termed “**social unionism**” — the collective action of groups to change certain aspects (and, ultimately, all aspects) of their lives. This “social unionism” takes many different forms in many different areas (some of which, not all, are discussed here) — but they share the same basic aspects of collective direct action, self-organisation, self-management, solidarity and mutual aid. These “social unions” would be a means (like the old labour movement) “*of raising the morale of the workers, accustom them to free initiative and solidarity in a struggle for the good of everyone and render them capable of imagining, desiring and putting into practice an anarchist life.*” [Errico Malatesta, **The Anarchist Revolution**, p. 28]

As will quickly become obvious in this discussion (as if it had not been so before!) anarchists are firm supporters of “**self-help**,” an expression that has been sadly corrupted (like freedom) by the right in recent times. Like “freedom”, “self-help” should be saved from the clutches of the right who have no real claim to that expression. Indeed, anarchism was created from and based itself upon working class self-help — for what other interpretation can be gathered from the famous slogan of the **First International** that “*the emancipation of the working class must be the task of the working class itself*”? So, Anarchists have great faith in the abilities of working class people to work out for themselves what their problems are and act to solve them.

Anarchist support, and promotion, of alternatives is a **key** aspect of this process of self-liberation, and so a key aspect of anarchism. While strikes, boycotts, and other forms of high profile direct action may be more sexy than the long and hard task of creating and building social alternatives, these are the nuts and bolts of creating a new world as well as the infrastructure which supports the “high profile” activities. Hence the importance of highlighting the alternatives anarchists support and build. The alternatives we discuss here is part of the process of building the new world in the shell of the old — and involve both combative organisations (such as community and workplace unions) as well as more defensive/supportive ones (such as co-operatives and mutual banks). Both have their part to play in the class struggle, although the combative ones

are the most important in creating the spirit of revolt and the possibility of creating an anarchist society (which will be reflected in the growth of supportive organisations to aid that struggle).

We must also stress that anarchists look to “natural” tendencies within social struggle as the basis of any alternatives we try to create. As Kropotkin put it, anarchism is based “*on an analysis of **tendencies of an evolution that is already going on in society**, and on **induction** therefrom as to the future.*” It is “*representative ... of the creative, instructive power of the people themselves who aimed at developing institutions of common law in order to protect them from the power-seeking minority.*” In other words, anarchism bases itself on those tendencies that are created by the self-activity of working class people and while developing within capitalism are **in opposition** to it — such tendencies are expressed in organisational form as trade unions and other forms of workplace struggle, cooperatives (both productive and credit), libertarian schools, and so on. For anarchists, anarchism is “*born among the people — in the struggles of real life and not in the philosopher’s studio*” and owes its “*origin to the constructive, creative activity of the people ... and to a protest — a revolt against the external force which had thrust itself upon [communal] ... institutions.*” [**Kropotkin’s Revolutionary Pamphlets**, p. 158, p. 147, p. 150, p. 149] This “*creative activity*” is expressed in the organisations created in the class struggle by working people, some of which we discuss in this section of the FAQ. Therefore, the alternatives anarchists support should not be viewed in isolation of social struggle and working class resistance to hierarchy — the reverse in fact, as these alternatives are almost always expressions of that struggle.

Lastly, we should note that this list of alternatives does not list all the forms of organisation anarchists create. For example, we have ignored solidarity groups and organisations which are created to campaign against or for certain issues or reforms. Anarchists are in favour of such organisations and work within them to spread anarchist ideas, tactics and organisational forms. However, these interest groups (while very useful) do not provide a framework for lasting change as do the ones we highlight below although we stress that anarchists do not ignore such organisations and struggles (see sections J.1.4 and J.1.5 for more details on anarchist opinions on such “single issue” campaigns).

We have also ignored what have been called “*intentional communities*”. This is when a group of individuals squat or buy land and other resources within capitalism and create their own anarchist commune in it. Most anarchists reject this idea as capitalism and the state must be fought, not ignored. In addition, due to their small size, they are rarely viable experiments in communal living and nearly always fail after a short time (for a good summary of Kropotkin’s attitude to such communities, which can be taken as typical, to such schemes see Graham Purchase’s book **Evolution & Revolution**, pp. 122–125). Dropping out will not stop capitalism and the state and while such communities may try to ignore the system, they will find that the system will not ignore them — they will come under competitive and ecological pressures from capitalism whether they like it or not.

Therefore the alternatives we discuss here are attempts to create anarchist alternatives within capitalism and which aim to **change** it (either by revolutionary or evolutionary means). They are based upon **challenging** capitalism and the state, not ignoring them by dropping out. Only by a process of direct

action and building alternatives which are relevant to our daily lives can we revolutionise and change both ourselves and society.

J.5.1 What is community unionism?

Community unionism is our term for the process of creating participatory communities (called “communes” in classical anarchism) within the state.

Basically, a community union is the creation of interested members of a community who decide to form an organisation to fight against injustice in their local community and for improvements within it. It is a forum by which inhabitants can raise issues that affect themselves and others and provide a means of solving these problems. As such, it is a means of directly involving local people in the life of their own communities and collectively solving the problems facing them as both individuals and as part of a wider society. Politics, therefore, is not separated into a specialised activity that only certain people do (i.e. politicians). Instead, it becomes communalised and part of everyday life and in the hands of all.

As would be imagined, like the participatory communities that would exist in an anarchist society, the community union would be based upon a mass assembly of its members. Here would be discussed the issues that effect the membership and how to solve them. Like the communes of a future anarchy, these community unions would be confederated with other unions in different areas in order to co-ordinate joint activity and solve common problems. These confederations, like the basic union assemblies themselves, would be based upon direct democracy, mandated delegates and the creation of administrative action committees to see that the memberships decisions are carried out.

The community union could also raise funds for strikes and other social protests, organise pickets and boycotts and generally aid others in struggle. By organising their own forms of direct action (such as tax and rent strikes, environmental protests and so on) they can weaken the state while building an self-managed infrastructure of co-operatives to replace the useful functions the state or capitalist firms currently provide.

So, in addition to organising resistance to the state and capitalist firms, these community unions could play an important role in creating an alternative economy within capitalism. For example, such unions could have a mutual bank or credit union associated with them which could allow funds to be gathered for the creation of self-managed co-operatives and social services and centres. In this way a communalised co-operative sector could develop, along with a communal confederation of community unions and their co-operative banks.

Such community unions have been formed in many different countries in recent years to fight against particularly evil attacks on the working class. In Britain, groups were created in neighbourhoods across the country to organise non-payment of the conservative government’s community charge (popularly known as the poll tax). Federations of these groups and unions were created to co-ordinate the struggle and pull resources and, in the end, ensured that the government withdrew the hated tax and helped push Thatcher out of government. In Ireland, similar groups were formed to defeat the privatisation of the water industry by a similar non-payment campaign.

However, few of these groups have been taken as part of a wider strategy to

empower the local community but the few that have indicate the potential of such a strategy. This potential can be seen from two examples of community organising in Europe, one in Italy and another in Spain.

In Italy, anarchists have organised a very successful **Municipal Federation of the Base** (FMB) in Spezzano Albanese (in the South of that country). This organisation is “*an alternative to the power of the town hall*” and provides a “*glimpse of what a future libertarian society could be*” (in the words of one activist). The aim of the Federation is “*the bringing together of all interests within the district. In intervening at a municipal level, we become involved not only in the world of work but also the life of the community. . . the FMB make counter proposals [to Town Hall decisions], which aren't presented to the Council but proposed for discussion in the area to raise people's level of consciousness. Whether they like it or not the Town Hall is obliged to take account of these proposals.*” [*Community Organising in Southern Italy*], pp. 16–19, **Black Flag** no. 210, p. 17, p. 18]

In this way, local people take part in deciding what affects them and their community and create a self-managed “dual power” to the local, and national, state. They also, by taking part in self-managed community assemblies, develop their ability to participate and manage their own affairs, so showing that the state is unnecessary and harmful to their interests. In addition, the FMB also supports co-operatives within it, so creating a communalised, self-managed economic sector within capitalism. Such a development helps to reduce the problems facing isolated co-operatives in a capitalist economy — see section J.5.11 — and was actively done in order to “*seek to bring together all the currents, all the problems and contradictions, to seek solutions*” to such problems facing co-operatives [**Ibid.**].

Elsewhere in Europe, the long, hard work of the C.N.T. in Spain has also resulted in mass village assemblies being created in the Puerto Real area, near Cadiz. These community assemblies came about to support an industrial struggle by shipyard workers. As one C.N.T. member explains, “[*e*]very Thursday of every week, in the towns and villages in the area, we had all-village assemblies where anyone connected with the particular issue [of the rationalisation of the shipyards], whether they were actually workers in the shipyard itself, or women or children or grandparents, could go along. . . and actually vote and take part in the decision making process of what was going to take place.” [**Anarcho-Syndicalism in Puerto Real: from shipyard resistance to direct democracy and community control**, p. 6]

With such popular input and support, the shipyard workers won their struggle. However, the assembly continued after the strike and “*managed to link together twelve different organisations within the local area that are all interested in fighting. . . various aspects [of capitalism]*” including health, taxation, economic, ecological and cultural issues. Moreover, the struggle “*created a structure which was very different from the kind of structure of political parties, where the decisions are made at the top and they filter down. What we managed to do in Puerto Real was make decisions at the base and take them upwards.*” [**Ibid.**]

In these ways, a grassroots movement from below has been created, with direct democracy and participation becoming an inherent part of a local political culture of resistance, with people deciding things for themselves directly and without hierarchy. Such developments are the embryonic structures of a world

based around direct democracy and participation, with a strong and dynamic community life. For, as Martin Buber argued, “[t]he more a human group lets itself be represented in the management of its common affairs. . . the less communal life there is in it and the more impoverished it becomes as a community.” [Paths in Utopia, p. 133]

Anarchist support and encouragement of community unionism, by creating the means for communal self-management, helps to enrich the community as well as creating the organisational forms required to resist the state and capitalism. In this way we build the anti-state which will (hopefully) replace the state. Moreover, the combination of community unionism with workplace assemblies (as in Puerto Real), provides a mutual support network which can be very effective in helping winning struggles. For example, in Glasgow, Scotland in 1916, a massive rent strike was finally won when workers came out in strike in support of the rent strikers who been arrested for non-payment.

Such developments indicate that Isaac Puente was correct to argue that:

“Libertarian Communism is a society organised without the state and without private ownership. And there is no need to invent anything or conjure up some new organization for the purpose. The centres about which life in the future will be organised are already with us in the society of today: the free union and the free municipality [or Commune].

“The union: in it combine spontaneously the workers from factories and all places of collective exploitation.

“And the free municipality: an assembly with roots stretching back into the past where, again in spontaneity, inhabitants of village and hamlet combine together, and which points the way to the solution of problems in social life in the countryside.

“Both kinds of organisation, run on federal and democratic principles, will be sovereign in their decision making, without being beholden to any higher body, their only obligation being to federate one with another as dictated by the economic requirement for liaison and communications bodies organised in industrial federations.

“The union and the free municipality will assume the collective or common ownership of everything which is under private ownership at present [but collectively used] and will regulate production and consumption (in a word, the economy) in each locality.

“The very bringing together of the two terms (communism and libertarian) is indicative in itself of the fusion of two ideas: one of them is collectivist, tending to bring about harmony in the whole through the contributions and cooperation of individuals, without undermining their independence in any way; while the other is individualist, seeking to reassure the individual that his independence will be respected.” [Libertarian Communism, pp. 6–7]

The combination of community unionism, along with industrial unionism (see next section), will be the key of creating an anarchist society, Community unionism, by creating the free commune within the state, allows us to become accustomed to managing our own affairs and seeing that an injury to one is an

injury to all. In this way a social power is created in opposition to the state. The town council may still be in the hands of politicians, but neither they nor the central government can move without worrying about what the people's reaction might be, as expressed and organised in their community unions and assemblies.

J.5.2 Why do anarchists support industrial unionism?

Simply because it is effective, expresses our ideas on how industry will be organised in an anarchist society and is a key means of ending capitalist oppression and exploitation. As Max Stirner pointed out the *“labourers have the most enormous power in their hands, and, if they once become thoroughly conscious of it and used it, nothing could withstand them; they would only have to stop labour, regard the product of labour as theirs, and enjoy it. This is the sense of the labour disturbances which show themselves here and there.”* [**The Ego and Its Own**, p. 116]

Libertarian workplace organisation is the best way of organising and exercising this power. However, before discussing why anarchists support industrial unionism, we must point out that the type of unionism anarchists support has very little in common with that associated with reformist or business unions like the TUC in Britain or the AFL-CIO in the USA (see next section).

In such unions, as Alexander Berkman points out, the *“rank and file have little say. They have delegated their power to leaders, and these have become the boss. . . . Once you do that, the power you have delegated will be used against you and your interests every time.”* [**The ABC of Anarchism**, p. 58] Reformist unions, even if they do organise by industry rather than by trade or craft, are top-heavy and bureaucratic. Thus they are organised in the same manner as capitalist firms or the state — and like both of these, the officials at the top have different interests than those at the bottom. Little wonder anarchists oppose such forms of unionism as being counter to the interests of their members. The long history of union officials betraying their members is proof enough of this.

Therefore anarchists propose a different kind of workplace organisation, one that is organised in a totally different manner than the current, mainstream, unions. We will call this new kind of organisation *“industrial unionism”* (although perhaps industrial syndicalism or workplace assemblies may be a better, less confusing, name for it).

Industrial unionism is based upon the idea that workers should directly control their own organisations and struggles. As such, it is based upon workplace assemblies and their confederation between different workplaces in the same industry as well as between different workplaces in the same locality. An industrial union is a union which organises all workers in a given type of industry together into one body. This means that all workers regardless of their actual trade would ideally be in the one union. On a building site, for example, bricklayers, plumbers, carpenters and so on would all be a member of the Building Workers Union. Each trade may have its own sections within the union (so that plumbers can discuss issues relating to their trade for example) but the core decision making focus would be an assembly of all workers employed in a

workplace. As they all have the same boss it is logical for them to have the same union.

However, industrial unionism should **not** be confused with a closed shop situation where workers are forced to join a union when they become a wage slave in a workplace. While anarchists do desire to see all workers unite in one organisation, it is vitally important that workers can leave a union and join another. The closed shop only empowers union bureaucrats and gives them even more power to control (and/or ignore) their members. As anarchist unionism has no bureaucrats, there is no need for the closed shop and its voluntary nature is essential in order to ensure that a union be subject to “exit” as well as “voice” for it to be responsive to its members wishes.

As Albert Meltzer argues, the closed shop means that *“the [trade union] leadership becomes all-powerful since once it exerts its right to expel a member, that person is not only out of the union, but out of a job.”* Anarcho-syndicalism, therefore, *“rejects the closed shop and relies on voluntary membership, and so avoids any leadership or bureaucracy.”* [**Anarchism: Arguments for and against**, p. 56 — also see Tom Wetzel’s excellent article *“The Origins of the Union Shop”*, part 3 of the series *“Why does the union bureaucracy exist?”* in **Ideas & Action** no. 11, Fall 1989 for a fuller discussion of these issues] Without voluntary membership even the most libertarian union may become bureaucratic and unresponsive to the needs of its members and the class struggle (even anarcho-syndicalist unions are subject to hierarchical influences by having to work within the hierarchical capitalist economy although voluntary membership, along with a libertarian structure and tactics, helps combat these tendencies — see section J.3.9).

Obviously this means that anarchist opposition to the closed shop has nothing in common with boss, conservative and right-wing libertarian opposition to it. These groups, while denouncing coercing workers into trades unions, support the coercive power of bosses over workers without a second thought (indeed, given their justifications of sexual harassment and other forms of oppressive behaviour by bosses, we can imagine that they would happily support workers having to join **company** unions to keep their jobs — only when bosses dislike mandatory union membership do these defenders of “freedom” raise their opposition). Anarchist opposition to the closed shop (like their opposition to union bureaucracy) flows from their opposition to hierarchy and authoritarian social relationships. The right-wing’s opposition is purely a product of their pro-capitalist and pro-authority position and the desire to see the worker subject only to **one** boss during working hours, not **two** (particularly if this second one has to represent workers interests to some degree). Anarchists, on the other hand, want to get rid of all bosses during working hours.

In industrial unionism, the membership, assembled in their place of work, are the ones to decide when to strike, when to pay strike pay, what tactics to use, what demands to make, what issues to fight over and whether an action is “official” or “unofficial”. In this way the rank and file is in control of their unions and, by confederating with other assemblies, they co-ordinate their forces with their fellow workers. As syndicalist activist Tom Brown makes clear:

“The basis of the Syndicate is the mass meeting of workers assembled at their place of work. . . The meeting elects its factory committee and delegates. The factory is Syndicate is federated to all other such

committees in the locality. . . In the other direction, the factory, let us say engineering factory, is affiliated to the District Federation of Engineers. In turn the District Federation is affiliated to the National Federation of Engineers. . . Then, each industrial federation is affiliated to the National Federation of Labour . . . how the members of such committees are elected is most important. They are, first of all, not representatives like Members of Parliament who air their own views; they are delegates who carry the message of the workers who elect them. They do not tell the workers what the 'official' policy is; the workers tell them.

"Delegates are subject to instant recall by the persons who elected them. None may sit for longer than two successive years, and four years must elapse before his [or her] next nomination. Very few will receive wages as delegates, and then only the district rate of wages for the industry. . .

"It will be seen that in the Syndicate the members control the organisation — not the bureaucrats controlling the members. In a trade union the higher up the pyramid a man is the more power he wields; in a Syndicate the higher he is the less power he has.

"The factory Syndicate has full autonomy over its own affairs. . . "
[**Syndicalism**, pp. 35–36]

As can be seen, industrial unionism reflects anarchist ideas of organisation — it is organised from the bottom up, it is decentralised and based upon federation and it is directly managed by its members in mass assemblies. It is anarchism applied to industry and the needs of the class struggle. By supporting such forms of organisations, anarchists are not only seeing "anarchy in action", they are forming effective tools which can win the class war. By organising in this manner, workers are building the framework of a co-operative society within capitalism. Rudolf Rocker makes this clear:

"the syndicate. . . has for its purpose the defence of the interests of the producers within existing society and the preparing for and the practical carrying out of the reconstruction of social life . . . It has, therefore, a double purpose: 1. As the fighting organisation of the workers against their employers to enforce the demand of the workers for the safeguarding of their standard of living; 2. As the school for the intellectual training of the workers to make them acquainted with the technical management of production and economic life in general." [**Anarcho-Syndicalism**, p. 51]

Given the fact that workers wages have been stagnating (or, at best, falling behind productivity increases) across the world as the trade unions have been weakened and marginalised (partly because of their own tactics, structure and politics) it is clear that there exists a great need for working people to organise to defend themselves. The centralised, top-down trade unions we are accustomed to have proved themselves incapable of effective struggle (and, indeed, the number of times they have sabotaged such struggle are countless — a result not of "bad" leaders but of the way these unions organise and their role within capitalism). Hence anarchists support industrial unionism (co-operation

between workers assemblies) as an effective alternative to the malaise of official trade unionism. How anarchists aim to encourage such new forms of workplace organisation and struggle will be discussed in the next section.

We are sure that many radicals will consider that such decentralised, confederal organisations would produce confusion and disunity. However, anarchists maintain that the statist, centralised form of organisation of the trades unions would produce indifference instead of involvement, heartlessness instead of solidarity, uniformity instead of unity, and elites instead of equality, nevermind killing all personal initiative by lifeless discipline and bureaucratic ossification and permitting no independent action. The old form of organisation has been tried and tried again — it has always failed. The sooner workers recognise this the better.

One last point. We must note that many anarchists, particularly communist-anarchists, consider unions, even anarchosyndicalist ones, as having a strong reformist tendency (as discussed in section J.3.9). However, all anarchists recognise the importance of autonomous class struggle and the need for organisations to help fight that struggle. Thus anarchist-communists, instead of trying to organise industrial unions, apply the ideas of industrial unionism to workplace struggles. In other words, they would agree with the need to organise all workers into a mass assembly and to have elected, recallable administration committees to carry out the strikers wishes. This means that such anarchists they do not call their practical ideas “anarcho-syndicalism” nor the workplace assemblies they desire to create “unions,” there are **extremely** similar in nature and so we can discuss both using the term “industrial unionism”. The key difference is that many (if not most) anarcho-communists consider that permanent workplace organisations that aim to organise **all** workers would soon become reformist. Because of this they also see the need for anarchist to organise **as anarchists** in order to spread the anarchist message within them and keep their revolutionary aspects at the forefront (and so support industrial networks — see next section).

Therefore while there are slight differences in terminology and practice, all anarchists would support the ideas of industrial unionism we have outlined above.

J.5.3 What attitude do anarchists take to existing unions?

As noted in the last section, anarchists desire to create organisations in the workplace radically different from the existing trade unions. The question now arises, what attitude do anarchists generally take to these existing unions?

Before answering that question, we must stress that anarchists, no matter how hostile to trade unions as bureaucratic, reformist institutions, **are** in favour of working class struggle. This means that when trade union members or other workers are on strike anarchists will support them (unless the strike is totally reactionary — for example, no anarchist would support a strike which is racist in nature). This is because almost all anarchists consider it basic to their politics that you don’t scab and you don’t crawl (a handful of individualist anarchists are the exception). So, when reading anarchist criticisms of trade unions do not

for an instant think we do not support industrial struggles — we do, we are just very critical of the unions that are sometimes involved.

So, what do anarchists think of the trade unions?

For the most part, one could call the typical anarchist opinion toward them as one of “hostile support.” It is hostile insofar as anarchists are well aware of how bureaucratic these unions are and how they continually betray their members. Given that they are usually little more than “business” organisations, trying to sell their members labour-power for the best deal possible, it is unsurprising that they are bureaucratic and that the interests of the bureaucracy are at odds with those of its membership. However, our attitude is “supportive” in that even the worse trade union represents an attempt at working class solidarity and self-help, even if the attempt is now far removed from the initial protests and ideas that set the union up. For a worker to join a trade union means having to recognise, to some degree, that he or she has different interests from their boss. There is no way to explain the survival of the unions other than the fact that there are different class interests, and workers have understood that to promote their own interests they have to organise on class lines.

No amount of conservatism, bureaucracy or backwardness within the unions can obliterate the essential fact of different class interests. The very existence of trade unions testifies to the existence of some level of basic class consciousness — even though most trade unions claim otherwise and that capital and labour have interests in common. As we have argued, anarchists reject this claim with good reason, and the very existence of trade unions show that this is not true. If workers and capitalists have the same interests, trade unions would not exist. Moreover, claiming that the interests of workers and bosses are the same theoretically disarms both the unions and its members and so weakens their struggles (after all, if bosses and workers have similar interests then any conflict is bad and the decisions of the boss must be in workers’ interests!).

Thus anarchist viewpoints reflect the contradictory nature of business/trade unions — on the one hand they are products of workers’ struggle, but on the other they are **very** bureaucratic, unresponsive and centralised and (therefore) their full-time officials have no real interest in fighting against wage labour as it would put them out of a job. Indeed, the very nature of trade unionism ensures that the interests of the union (i.e. the full-time officials) come into conflict with the people they claim to represent.

This can best be seen from the disgraceful activities of the TGWU with respect to the Liverpool dockers in Britain. The union officials (and the TUC itself) refused to support their members after they had been sacked in 1995 for refusing to cross a picket line. The dockers organised their own struggle, contacting dockers’ unions across the world and organising global solidarity actions. Moreover, a network of support groups sprung up across Britain to gather funds for their struggle (and, we are proud to note, anarchists have played their role in supporting the strikers). Many trade unionists could tell similar stories of betrayal by “their” union.

This occurs because trade unions, in order to get recognition from a company, must be able to promise industrial pieces. They need to enforce the contracts they sign with the bosses, even if this goes against the will of its members. Thus trade unions become a third force in industry, somewhere between management and the workers and pursuing its own interests. This need to enforce contracts soon ensures that the union becomes top-down and centralised — otherwise its

members would violate the unions agreements. They have to be able to control their members — which usually means stopping them fighting the boss — if they are to have anything to bargain with at the negotiation table. This may sound odd, but the point is that the union official has to sell the employer labour discipline and freedom from unofficial strikes as part of its side of the bargain. Otherwise the employer will ignore them. The nature of trade unionism is to take power away from out of local members and centralise it into the hands of officials at the top of the organisation.

Thus union officials sell out their members because of the role trade unions play within society, not because they are nasty individuals (although some are). They behave as they do because they have too much power and, being full-time and highly paid, are unaccountable, in any real way, to their members. Power — and wealth — corrupts, no matter who you are. (also see Chapter 11 of Alexander Berkman's **What is Communist Anarchism?** for an excellent introduction to anarchist viewpoints on trade unions).

While, in normal times, most workers will not really question the nature of the trade union bureaucracy, this changes when workers face some threat. Then they are brought face to face with the fact that the trade union has interests separate from theirs. Hence we see trade unions agreeing to wage cuts, redundancies and so on — after all, the full-time trade union official's job is not on the line! But, of course, while such a policy is in the short term interests of the officials, in the longer term it goes against their interests — after all, who wants to join a union which rolls over and presents no effective resistance to employers? Little wonder Michael Moore has a chapter entitled "*Why are Union Leaders So F#!@ing Stupid?*" in his book **Downsize This!** — essential reading to realise how moronic trade union bureaucrats can actually be. Sadly trade union bureaucracy seems to afflict all who enter it with short-sightedness, as seen by the countless times the trade unions have sold-out their members — although the chickens do, finally, come home to roost, as the bureaucrats of the AFL, TUC and other trade unions are finding out in this era of global capital and falling membership. So while the activities of trade union leaders may seem crazy and short-sighted, these activities are forced upon them by their position and role within society — which explains why they are so commonplace and why even radical leaders end up doing exactly the same thing in time.

Few anarchists would call upon members of a trade union to tear-up their membership cards. While some anarchists, particularly communist anarchists and some anarcho-syndicalists have nothing but contempt (and rightly so) for trade unions (and so do not work within them — but will support trade union members in struggle), the majority of anarchists take a more pragmatic viewpoint. If no alternative syndicalist union exists, anarchists will work within the existing unions (perhaps becoming shop-stewards — few anarchists would agree to be elected to positions above this in any trade union, particularly if the post was full-time), spreading the anarchist message and trying to create a libertarian undercurrent which would hopefully blossom into a more anarchistic labour movement.

So most anarchists "support" the trade unions only until they have created a viable libertarian alternative. Thus we will become trade union members while trying to spread anarchist ideas within and outwith them. This means that anarchists are flexible in terms of their activity in the unions. For example, many IWW members were "two-carders." This meant that as well as being

members of the IWW, they were also in the local AFL branch in their place of work and turned to the IWW when the AFL hierarchy refused to back strikes or other forms of direct action. Anarchists encourage rank and file self-activity, **not** endless calls for trade union bureaucrats to act for us (as is unfortunately far too common on the left).

Anarchist activity within trade unions reflects our ideas on hierarchy and its corrupting effects. We reject totally the response of left-wing social democrats, Stalinists and mainstream Trotskyists to the problem of trade union betrayal, which is to try and elect and/or appoint ‘better’ officials. They see the problem primarily in terms of the individuals who hold the posts. However this ignores the fact that individuals are shaped by the environment they live in and the role they play in society. Thus even the most left-wing and progressive individual will become a bureaucrat if they are placed within a bureaucracy — and we must note that the problem of corruption does not spring from the high-wages officials are paid (although this is a factor), but from the power they have over their members (which partly expresses itself in high pay).

Any claim that electing “radical” full-time officials who refuse to take the high wages associated with the position will be better is false. The hierarchical nature of the trade union structure has to be changed, not side-effects of it. As the left has no problem with hierarchy as such, this explains why they support this form of “reform.” They do not actually want to undercut whatever dependency the members has on leadership, they want to replace the leaders with “better” ones (i.e. themselves or members of their party) and so endlessly call upon the trade union bureaucracy to act **for** its members. In this way, they hope, trade unionists will see the need to support a “better” leadership — namely themselves. Anarchists, in stark contrast, think that the problem is not that the leadership of the trade unions is weak, right-wing or does not act but that the union’s membership follows them. Thus anarchists aim at undercutting reliance on leaders (be they left or right) by encouraging self-activity by the rank and file and awareness that hierarchical leadership as such is bad, not individual leaders.

Instead of “reform” from above (which is doomed to failure), anarchists work at the bottom and attempt to empower the rank and file of the trade unions. It is self-evident that the more power, initiative and control that lies with the rank & file membership on the shop floor, the less it will lie with the bureaucracy. Thus anarchists work within and outwith the trade unions in order to increase the power of workers where it actually lies: at the point of production. This is usually done by creating networks of activists who spread anarchist ideas to their fellow workers (see next section — “What are Industrial Networks?”).

These groups *“within the unions should strive to ensure that they [the trade unions] remain open to all workers of whatever opinion or party on the sole condition that there is solidarity in the struggle against the bosses. They should oppose the corporatist spirit and any attempt to monopolise labour or organisation. They should prevent the Unions from becoming the tools of the politicians for electoral or other authoritarian ends; they should preach and practice direct action, decentralisation, autonomy and free initiative. They should strive to help members learn how to participate directly in the life of the organisation and to do without leaders and permanent officials.*

“They must, in short, remain anarchists, remain always in close touch with anarchists and remember that the workers’ organisation is not the end but just

one of the means, however important, of preparing the way for the achievement of anarchism." [Errico Malatesta, **The Anarchist Revolution**, pp. 26–27]

As part of this activity anarchists promote the ideas of Industrial Unionism we highlighted in the last section — namely direct workers control of struggle via workplace assemblies and recallable committees — during times of struggle. However, anarchists are aware that economic struggle (and trade unionism as such) “cannot be an end in itself, since the struggle must also be waged at a political level to distinguish the role of the State.” [Errico Malatesta, **Life and Ideas**, p, 115] Thus, as well as encouraging worker self-organisation and self-activity, anarchist groups also seek to politicise struggles and those involved in them. Only this process of self-activity and political discussion between equals **within** social struggles can ensure the process of working class self-liberation and the creation of new, more libertarian, forms of workplace organisation.

The result of such activity may be a new form of workplace organisation (either workplace assemblies or an anarcho-syndicalist union) or a reformed, more democratic version of the existing trade union (although few anarchists believe that the current trade unions can be reformed). But either way, the aim is to get as many members of the current labour movement to become anarchists as possible or, at the very least, take a more libertarian and radical approach to their unions and workplace struggle.

J.5.4 What are industrial networks?

Industrial networks are the means by which revolutionary industrial unions and other forms of libertarian workplace organisation can be created. The idea of Industrial Networks originated with the British section of the anarcho-syndicalist International Workers’ Association in the late 1980s. It was developed as a means of promoting anarcho-syndicalist/anarchist ideas within the workplace, so creating the basis on which a workplace movement based upon the ideas of industrial unionism (see section J.5.2) could grow and expand.

The idea is very simple. An Industrial Network is a federation of militants in a given industry who support the ideas of anarchism and/or anarcho-syndicalism, namely direct action, solidarity and organisation from the bottom up (the difference between purely anarchist networks and anarcho-syndicalist ones will be highlighted later). In other words, it would “initially be a political grouping in the economic sphere, aiming to build a less reactive but positive organisation within the industry. The long term aim... is, obviously, the creation of an anarcho-syndicalist union.” [Winning the Class War, p. 18]

The Industrial Network would be an organisation of groups of anarchists and syndicalists within a workplace united into an industrial basis. They would pull their resources together to fund a regular bulletin and other forms of propaganda which they would distribute within their workplace and industry. These bulletins and leaflets would raise and discuss issues related to work and how to right back and win as well as placing workplace issues in a social and political context. This propaganda would present anarchist ideas of workplace organisation and resistance as well as general anarchist ideas and analysis. In this way anarchist ideas and tactics would be able to get a wider hearing and anarchists can have an input **as anarchists** into workplace struggles.

Traditionally, many syndicalists and anarcho-syndicalists advocated the *One*

Big Union strategy, the aim of which was to organise all workers into one organisation representing the whole working class. Today, however, most anarcho-syndicalists and all social anarchists advocate workers assemblies for decision making during struggles (the basic form of which we discussed in section J.5.2). The role of the anarchist group or anarcho-syndicalist (or revolutionary) union would basically be to call such workplace assemblies, argue for direct workers control of struggle by these mass assemblies, promote direct action and solidarity, put across anarchist ideas and politics and keep things on the boil, so to speak.

This support for industrial networks exists because most anarcho-syndicalists recognise that they face dual unionism (which means there are more than one union within a given workplace or country). This was the case, historically, in all countries with a large anarcho-syndicalist union movement — in Spain and Italy there were the socialist unions along with the syndicalist ones and so on). Therefore most anarcho-syndicalists do not expect to ever get a majority of the working class into a revolutionary union before a revolutionary situation develops. In addition, anarcho-syndicalists recognise that a revolutionary union “*is not just an economic fighting force, but also an organisation with a political context. To build such a union requires a lot of work and experience*” of which the Industrial Networks are but one aspect. [**Ibid.**]

Thus industrial networks are intended to deal with the actual situation that confronts us, and provide a strategy for moving from our present reality toward out ultimate goals. Where one has only a handful of anarchists and syndicalists in a workplace or scattered across several workplaces there is a clear need for developing ways for these fellow workers to effectively act in union, rather than be isolated and relegated to more general agitation. A handful of anarchists cannot meaningfully call a general strike. But we can agitate around specific industrial issues and organise our fellow workers to do something about them. Through such campaigns we demonstrate the advantages of rank-and-file unionism and direct action, show our fellow workers that our ideas are not mere abstract theory but can be implemented here and now, attract new members and supporters, and further develop our capacity to develop revolutionary unions in our workplaces.

Thus the creation of Industrial Networks and the calling for workplace assemblies is a recognition of where we are now — with anarchist ideas very much in the minority. Calling for workers assemblies is not an anarchist tactic per se, we must add, but a working class one developed and used plenty of times by workers in struggles (indeed, it was how the current trade unions were created). It also puts the onus on the reformists and reactionary unions by appealing directly to their members as workers and showing their bureaucrat organisations and reformist politics by creating an effective alternative to them.

A few anarchists reject the idea of Industrial Networks and instead support the idea of “*rank and file*” groups which aim to put pressure on the current trade unions to become more militant and democratic (a few anarcho-syndicalists think that such groups can be used to reform the trade-unions into libertarian, revolutionary organisations — called “*boring from within*” — but most reject this as utopia, viewing the trade union bureaucracy as unreformable as the state’s). Moreover, opponents of “rank and file” groups argue that they direct time and energy **away** from practical and constructive activity and instead waste them “[b]y constantly arguing for changes to the union struc-

ture. . . the need for the leadership to be more accountable, etc., [and so] they not only [offer] false hope but [channel] energy and discontent away from the real problem — the social democratic nature of reformist trade unions.” [Winning the Class War, p. 11]

Supporters of the “rank and file” approach fear that the Industrial Networks will isolate anarchists from the mass of trade union members by creating tiny “pure” syndicalist unions or anarchist groups. But such a claim is rejected by supporters of Industrial Networks. They maintain that they will be working with trade union members where it counts, in the workplace and not in badly attended, unrepresentative branch meetings. So:

“We have no intention of isolating ourselves from the many workers who make up the rest of the rank and file membership of the unions. We recognise that a large proportion of trade union members are only nominally so as the main activity of social democratic [i.e. reformist] unions is outside the workplace. . . We aim to unite and not divide workers.

“It has been argued that social democratic unions will not tolerate this kind of activity, and that we would be all expelled and thus isolated. So be it. We, however, don’t think that this will happen until. . . workplace militants had found a voice independent of the trade unions and so they become less useful to us anyway. Our aim is not to support social democracy, but to show it up as irrelevant to the working class.” [Op. Cit., p. 19]

Whatever the merits and disadvantages of both approaches are, it seems likely that the activity of both will overlap in practice with Industrial Networks operating within trade union branches and “rank and file” groups providing alternative structures for struggle.

As noted above, there is a slight difference between anarcho-syndicalist supporters of Industrial Networks and communist-anarchist ones. This is to do with how they see the function and aim of these networks. While both agree that such networks should agitate in their industry and call and support mass assemblies to organise resistance to capitalist exploitation and oppression they disagree on who can join the network groups and what they aims should be. Anarcho-syndicalists aim for the Industrial Networks to be the focal point for the building of permanent syndicalist unions and so aim for the Industrial Networks to be open to all workers who accept the general aims of the organisation. Anarcho-communists, however, view Industrial Networks as a means of increasing anarchist ideas within the working class and are not primarily concerned about building syndicalist unions (while many anarcho-communists would support such a development, some do not).

These anarchists, therefore, see the need for workplace-based branches of an anarchist group along with the need for networks of militant ‘rank and file’ workers, but reject the idea of something that is one but pretends to be the other. They argue that, far from avoiding the problems of classical anarcho-syndicalism, such networks seem to emphasise one of the worst problems — namely that of how the organisation remains anarchist but is open to non-anarchists.

But the similarities between the two positions are greater than the differences and so can be summarised together, as we have done here.

J.5.5 What forms of co-operative credit do anarchists support?

Anarchists tend to support must forms of co-operation, including those associated with credit and money. This co-operative credit/banking takes many forms, such as credit unions, LETS schemes and so on. In this section we discuss two main forms of co-operative credit, *mutualism* and *LETS*.

Mutualism is the name for the ideas associated with Proudhon and his **Bank of the People**. Essentially, it is a confederation of credit unions in which working class people pool their funds and savings. This allows credit to be arranged at cost, so increasing the options available to working people as well as abolishing interest on loans by making increasing amount of cheap credit available to working people. LETS stands for Local Exchange Trading Schemes and is a similar idea in many ways (and apparently discovered independently) — see **Bringing the Economy Home from the Market** by V.G. Dobson for a detailed discussion on LETS.

Both schemes revolve around creating an alternative form of currency and credit within capitalism in order to allow working class people to work outwith the capitalist money system by creating “*labour notes*” as a new circulating medium. In this way, it is hoped, workers would be able to improve their living and working conditions by having a source of community-based (very low interest) credit and so be less dependent on capitalists and the capitalist banking system. Some supporters of mutualism considered it as the ideal way of reforming capitalism away. By making credit available to the ordinary worker at very cheap rates, the end of wage slavery would soon occur as workers would work for themselves by either purchasing the necessary tools required for their work or, by their increased bargaining power within the economy, gain industrial democracy from the capitalists by buying them out.

Such ideas have had a long history within the socialist movement, originating in the British socialist movement in the early 19th century. Robert Owen and other Socialists active at the time considered the idea of labour notes and exchanges as a means of improving working class conditions within capitalism and as the means of reforming capitalism into a society of confederated, self-governing communities. Indeed, “*Equitable Labour Exchanges*” were “*founded at London and Birmingham in 1832*” with “*Labour notes and the exchange of small products*” [E.P. Thompson, **The Making of the English Working Class**, p. 870] Apparently independently of these early attempts in England at what would later be called mutualism, P-J Proudhon arrived at the same ideas decades later in France. In his words, “*The People’s Bank quite simply embodies the financial and economic aspects of the principle of modern democracy, that is, the sovereignty of the People, and of the republican motto, ‘Liberty, Equality, Fraternity.’*” [Selected Writings of P-J Proudhon, p. 75] Similarly, in the USA (partly as a result of Joshua Warren’s activities, who got the idea from Robert Owen) there was extensive discussion on labour notes, exchanges and free credit as a means of protecting workers from the evils of capitalism and

ensuring their independence and freedom from wage slavery. When Proudhon's works appeared in North America, the basic arguments were well known.

Therefore the idea that mutual banking using labour money as a means to improve working class living conditions, even, perhaps, to achieve industrial democracy, self-management and the end of capitalism has a long history in Socialist thought. Unfortunately this aspect of socialism became less important with the rise of Marxism (which called these early socialists "*utopian*") attempts at such credit unions and alternative exchange schemes were generally replaced with attempts to build working class political parties. With the rise of Marxian social democracy, constructive socialistic experiments and collective working class self-help was replaced by working within the capitalist state. Fortunately, history has had the last laugh on Marxism with working class people yet again creating anew the ideas of Mutualism (as can be seen by the growth of LETS and other schemes of community money).

J.5.6 What are the key features of mutual credit schemes?

Mutualism, as noted in the last section, is a form of credit co-operation, in which individuals pull their resources together in order to benefit themselves as individuals and as part of a community. LETS is another form of mutualism which developed recently, and apparently developed independently (from its start in Canada, LETS has spread across the world and there are now hundreds of schemes involved hundreds of thousands of people). Mutual banks and LETS have the following key aspects:

1. Co-operation: No-one owns the network. It is controlled by its members directly.
2. Non-exploitative: No interest is charged on account balances or credit. At most administrative costs are charged, a result of it being commonly owned and managed.
3. Consent: Nothing happens without it, there is no compulsion to trade.
4. Money: They use their own type of money (traditionally called "labour-notes") as a means of aiding "honest exchange".

It is hoped, by organising credit, working class people will be able to work for themselves and slowly but surely replace capitalism with a co-operative system based upon self-management. While LETS schemes do not have such grand schemes, historically mutualism aimed at working within and transforming capitalism to socialism. At the very least, LETS schemes reduce the power and influence of banks and finance capital within society as mutualism ensures that working people have a viable alternative to such parasites.

This point is important, as the banking system and money is often considered "neutral" (particularly in capitalist economics). However, as Malatesta correctly argues, it would be "*a mistake to believe ... that the banks are, or are in the main, a means to facilitate exchange; they are a means to speculate on exchange*".

and currencies, to invest capital and to make it produce interest, and to fulfil other typically capitalist operations.” [Life and Ideas, p. 100]

Within capitalism, money is still to a large degree a commodity which is more than a convenient measure of work done in the production of goods and services. As a commodity it can and does go anywhere in the world where it can get the best return for its owners, and so it tends to drain out of those communities that need it most. It is the means by which capitalists can buy the liberty of working people and get them to produce a surplus for them (wealth is, after all, “a power invested in certain individuals by the institutions of society, to compel others to labour for their benefit.” [William Godwin, **The Anarchist Writings of William Godwin**, p. 130]). From this consideration alone, working class control of credit and money is an important part of the class struggle as having access to alternative sources of credit can increase working class options and power.

Moreover, credit is also an important form of social control — people who have to pay their mortgage or visa bill are more pliable, less likely to strike or make other forms of political trouble. And, of course, credit expands the consumption of the masses in the face of stagnant or falling wages while allowing capitalists to profit from it. Indeed, there is a link between the rising debt burden on households in the 1980s and 1990s and the increasing concentration of wealth. This is “because of the decline in real hourly wages and the stagnation in household incomes, the middle and lower classes have borrowed to stay in place; they’ve borrowed from the very rich who have gotten richer. The rich need a place to earn interest on their surplus funds, and the rest of the population makes a juicy lending target.” [Doug Henwood, **Wall Street**, pp. 64–65]

Little wonder that the state (and the capitalists who run it) is so concerned to keep control of money in its own hands or the hands of its agents. With an increase in mutual credit, interest rates would drop, wealth would stay more in working class communities, and the social power of working people would increase (for people would be more likely to struggle for higher wages and better conditions — as the fear of debt repayments would be less).

Therefore, mutualism is an example of what could be termed “**counter-economics**”. By counter-economics we mean the creation of community-based credit unions that do not put their money into “Capital Markets” or into capitalist Banks. We mean finding ways for workers to control their own retirement funds. We mean finding ways of using money as a means of undermining capitalist power and control and supporting social struggle and change.

In this way working people are controlling more and more of the money supply and using it ways that will stop capital from using it to oppress and exploit the working class. An example of why this can be important can be seen from the results of the existing workers’ pension fund system. Currently workers pension funds are being used to invest in capitalist firms (particularly transnationals and other forms of Big Business) and these companies use the invested money to fund their activities. The idea is that by so investing, workers will receive an adequate pension in their old age.

However, the only people actually winning are bankers and big companies. Unsurprisingly, the managers of these pension fund companies are investing in those firms with the highest returns, which are usually those who are downsizing or extracting most surplus value from their workforce (which in turn forces other companies to follow the same strategies to get access to the available funds in

order to survive).

Basically, if you are lending your money to be used to put your fellow worker out of work or increase the power of capital, then you are not only helping to make things harder for others like you, you are also helping making things worse for yourself. No person is an island, and increasing the clout of capital over the working class is going to affect you directly or indirectly. And, of course, it seems crazy to suggest that workers desire to experience insecurity, fear of downsizing and stagnating wages during their working lives in order to have slightly more money when they retire.

This highlights one of the tricks the capitalists are using against us, namely to get us to buy into the system through our fear of old age. Whether it is going into lifelong debt to buy a home or lending our money to capitalists, we are being encouraged to buy into something which we value more than what is right and wrong. This allows us to be more easily controlled by the government. We need to get away from living in fear and stop allowing ourselves to be deceived into behaving like “stakeholders” in Capitalistic and Plutocratic systems. As can be seen from the use of pension funds to buy out firms, increase the size of transnationals and downsize the workforce, such “stakeholding” amounts to trading in the present **and** the future while others benefit.

The real enemies are **not** working people who take part in such pension schemes. It is the people in power, those who manage the pension schemes and companies, who are trying to squeeze every last cent out of working people to finance higher profits and stock prices — which the unemployment and impoverishment of workers on a world-wide scale aids. They control the governments of the world. They are making the “rules” of the current system. Hence the importance of limiting the money they have available, of creating community-based credit unions and mutual risk insurance co-operatives to increase our control over our money and create our own, alternative, means of credit and exchange (as presented as mutualism) which can be used to empower ourselves, aid our struggles and create our own alternatives. Money, representing as it does the power of capital and the authority of the boss, is not “neutral” and control over it plays a role in the class struggle. We ignore such issues at our own peril.

J.5.7 Do most anarchists think mutual credit is sufficient to abolish capitalism?

The short answer is no, they do not. While the Individualist Anarchists and Mutualists (followers of Proudhon) do think that mutual banking is the only sure way of abolishing capitalism, most anarchists do not see mutualism as an end in itself. Few think that capitalism can be reformed away in the manner assumed by Proudhon. Increased access to credit does not address the relations of production and market power which exist within the economy and so any move for financial transformation has to be part of a broader attack on all forms of capitalist social power in order to be both useful and effective (see section B.3.2 for more anarchist views on mutual credit and its uses). So, for most anarchists, it is only in combination with other forms of working class self-activity and self-management that mutualist institutions could play an important role in the class struggle.

By creating a network of mutual banks to aid in creating co-operatives, union organising drives, supporting strikes (either directly by gifts/loans or funding food and other co-operatives which could supply food and other essentials free or at a reduction), mutualism can be used as a means of helping build libertarian alternatives within the capitalist system. Such alternatives, while making life better under the current system, also can play a role in overcoming that system by being a means of aiding those in struggle make ends meet and providing alternative sources of income for black-listed or sacked workers. Thus Bakunin's comments:

“let us co-operate in our common enterprise to make our lives a little bit more supportable and less difficult. Let us, wherever possible, establish producer-consumer co-operatives and mutual credit societies which, though under the present economic conditions they cannot in any real or adequate way free us, are nevertheless important inasmuch they train the workers in the practices of managing the economy and plant the precious seeds for the organisation of the future.” [Bakunin on Anarchism, p. 173]

Therefore, while few anarchists think that mutualism would be enough in itself, it can play a role in the class struggle. As a compliment to direct action and workplace and community struggle and organisation, mutualism has an important role in working class self-liberation. For example, community unions (see section J.5.1) could create their own mutual banks and money which could be used to fund co-operatives and support strikes and other forms of social struggle. In this way a healthy communalised co-operative sector could develop within capitalism, overcoming the problems of isolation facing workplace co-operatives (see section J.5.11) as well as providing a firm framework of support for those in struggle.

Moreover, mutual banking can be a way of building upon and strengthening the anarchistic social relations within capitalism. For even under capitalism and statism, there exists extensive mutual aid and, indeed, anarchistic and communistic ways of living. For example, communistic arrangements exist within families, between friends and lovers and within anarchist organisations.

Mutual banking could be a means of creating a bridge between this alternative (gift) “economy” and capitalism. The mutualist alternative economy would help strength communities and bonds of trust between individuals, and this would increase the scope for increasing the scope of the communistic sector as more and more people help each other out without the medium of exchange — in other words, mutualism will help the gift economy that exists within capitalism to grow and develop.

J.5.8 What would a modern system of mutual banking look like?

The mutual banking ideas of Proudhon could be adapted to the conditions of modern society, as will be described in what follows. (Note: Proudhon is the definitive source on mutualism, but for those who don't read French, there are the works of his American disciples, e.g. William B. Greene's **Mutual**

Banking, and Benjamin Tucker's **Instead of a Book by a Man Too Busy to Write One**).

One scenario for an updated system of mutual banking would be for a community barter association to begin issuing an alternative currency accepted as money by all individuals within the system. This "currency" would not at first take the form of coins or bills, but would be circulated entirely through transactions involving the use of barter-cards, personal checks, and "e-money" transfers via modem/Internet. Let's call this currency-issuing type of barter association a "mutual barter clearinghouse," or just "clearinghouse" for short.

The clearinghouse would have a twofold mandate: first, to extend credit at cost to members; second, to manage the circulation of credit-money within the system, charging only a small service fee (probably one percent or less) which is sufficient to cover its costs of operation, including labour costs involved in issuing credit and keeping track of transactions, insuring itself against losses from uncollectable debts, and so forth.

The clearinghouse would be organised and function as follows. Members of the original barter association would be invited to become subscriber-members of the clearinghouse by pledging a certain amount of property as collateral. On the basis of this pledge, an account would be opened for the new member and credited with a sum of mutual dollars equivalent to some fraction of the assessed value of the property pledged. The new member would agree to repay this amount plus the service fee by a certain date. The mutual dollars in the new account could then be transferred through the clearinghouse by using a barter card, by writing a personal check, or by sending e-money via modem to the accounts of other members, who have agreed to receive mutual money in payment for all debts.

The opening of this sort of account is, of course, the same as taking out a "loan" in the sense that a commercial bank "lends" by extending credit to a borrower in return for a signed note pledging a certain amount of property as security. The crucial difference is that the clearinghouse does not purport to be "lending" a sum of money that it **already has**, as is fraudulently claimed by commercial banks. Instead it honestly admits that it is creating new money in the form of credit. New accounts can also be opened simply by telling the clearinghouse that one wants an account and then arranging with other people who already have balances to transfer mutual money into one's account in exchange for goods or services.

Another form is that associated with LETS systems. In this a number of people get together to form an association. They create a unit of exchange (which is equal in value to a unit of the national currency usually), choose a name for it and offer each other goods and services priced in these units. These offers and wants are listed in a directory which is circulated periodically to members. Members decide who they wish to trade with and how much trading they wish to do. When a transaction is completed, this is acknowledged with a "cheque" made out by the buyer and given to the seller. These are passed on to the system accounts administration which keeps a record of all transactions and periodically sends members a statement of their accounts. The accounts administration is elected by, and accountable to, the membership and information about balances is available to all members.

Unlike the first system described, members do not have to present property as collateral. Members of a LETS scheme can go into "debt" without it, al-

though “debt” is the wrong word as members are not so much going into debt as committing themselves to do some work within the system in the future and by so doing they are creating spending power. The willingness of members to incur such a commitment could be described as a service to the community as others are free to use the units so created to trade themselves. Indeed, the number of units in existence exactly matches the amount of real wealth being exchanged. The system only works if members are willing to spend and runs on trust and builds up trust as the system is used.

It is likely that a fully functioning mutual banking system would incorporate aspects of both these systems. The need for collateral may be used when members require very large loans while the LETS system of negative credit as a commitment to future work would be the normal function of the system. If the mutual bank agrees a maximum limit for negative balances, it may agree to take collateral for transactions that exceed this limit. However, it is obvious that any mutual banking system will find the best means of working in the circumstances it finds itself.

J.5.9 How does mutual credit work?

Let’s consider an example of how business would be transacted in the new system. There are two possibilities, depending on whether the mutual credit is based upon whether the creditor can provide collateral or not. we will take the case with collateral first.

Suppose that A, an organic farmer, pledges as collateral a certain plot of land that she owns and on which she wishes to build a house. The land is valued at, say, \$40,000 in the capitalist market. By pledging the land, A is able to open a credit account at the clearinghouse for, say, \$30,000 in mutual money (a ratio of 3/4). She does so knowing that there are many other members of the system who are carpenters, electricians, plumbers, hardware dealers, and so on who are willing to accept mutual dollars in payment for their products or services.

It’s easy to see why other subscriber-members, who have also obtained mutual credit and are therefore in debt to the clearinghouse for mutual dollars, would be willing to accept such dollars in return for their goods and services. For they need to collect mutual dollars to repay their debts. But why would someone who is not in debt for mutual dollars be willing to accept them as money?

To see why, let’s suppose that B, an underemployed carpenter, currently has no account at the clearinghouse but that he knows about the clearinghouse and the people who operate it. After examining its list of members and becoming familiar with the policies of the new organisation, he’s convinced that it does not extend credit frivolously to untrustworthy recipients who are likely to default. He also knows that if he contracts to do the carpentry on A’s new house and agrees to be paid for his work in mutual money, he’ll then be able to use it to buy groceries, clothes, car repairs, and other goods and services from various people in the community who already belong to the system.

Thus B will be willing, and perhaps even eager (especially if the economy is in recession and regular money is tight) to work for A and receive payment in mutual dollars. For he knows that if he is paid, say, \$8,000 in mutual money

for his labour on A's house, this payment constitutes, in effect, 20 percent of a mortgage on her land, the value of which is represented by her mutual credit. B also understands that A has promised to repay this mortgage by producing new value — that is, by growing organic fruits and vegetables and selling them for mutual dollars to other members of the system — and that it is this promise to produce new wealth which gives her mutual credit its value as a medium of exchange.

To put this point slightly differently, A's mutual credit can be thought of as a lien against goods or services which she has guaranteed to create in the future. As security of this guarantee, she agrees that if she is unable for some reason to fulfil her obligation, the land she has pledged will be sold for mutual dollars to other members. In this way, a value sufficient to cancel her debt (and probably then some) will be returned to the system. This provision insures that the clearinghouse is able to balance its books and gives members confidence that mutual money is sound.

It should be noticed that since new wealth is continually being created, the basis for new mutual credit is also being created at the same time. Thus, suppose that after A's new house has been built, her daughter, C, along with a group of friends D, E, F, . . . , decide that they want to start a collectively owned and operated organic restaurant (which will incidentally benefit A, as an outlet for her produce), but that C and her friends do not have enough collateral to obtain a start-up loan. A, however, is willing to co-sign a note for them, pledging her new house (valued at say, \$80,000) as security. On this basis, C and her partners are able to obtain \$60,000 worth of mutual credit, which they then use to buy equipment, supplies, furniture, advertising, etc. and lease the building necessary to start their restaurant.

This example illustrates one way in which people without property are able to obtain credit in the new system. Another way — for those who cannot find (or perhaps don't wish to ask) someone with property to co-sign for them — is to make a down payment and then use the property which is to be purchased on credit as security, as in the current method of obtaining a home or auto loan. With mutual credit, however, this form of financing can be used to purchase anything, including capital goods.

Which brings us to the case of an individual without means for providing collateral — say, for example A, the organic farmer, does not own the land she works. In such a case, A, who still desires work done, would contact other members of the mutual bank with the skills she requires. Those members with the appropriate skills and who agree to work with her commit themselves to do the required tasks. In return, A gives them a check in mutual dollars which is credited to their account and deducted from hers. She does not pay interest on this issue of credit and the sum only represents her willingness to do some work for other members of the bank at some future date.

The mutual bank does not have to worry about the negative balance, as this does not create a loss within the group as the minuses which have been incurred have already created wealth (pluses) within the system and it stays there. It is likely, of course, that the mutual bank would agree an upper limit on negative balances and require some form of collateral for credit greater than this limit, but for most exchanges this would be unlikely to be relevant.

It is important to remember that mutual dollars have no **intrinsic** value, since they can't be redeemed (at the mutual bank) in gold or anything else.

All they are promises of future labour. Thus, as Greene points out in his work on mutual banking, mutual dollars are “*a mere medium for the facilitation of barter.*” In this respect they are closely akin to the so-called “barter dollars” now being circulated by barter associations through the use of checks and barter cards. To be precise, then, we should refer to the units of mutual money as “mutual barter dollars.” But whereas ordinary barter dollars are created at the same time that a barter transaction occurs and are used to record the values exchanged in that transaction, mutual barter dollars are created **before** any actual barter transaction occurs and are intended to facilitate **future** barter transactions. This fact is important because it can be used as the basis for a legal argument that clearinghouses are essentially barter associations rather than banks, thrifts, or credit unions, and therefore should not be subject to the laws governing the latter institutions.

J.5.10 Why do anarchists support co-operatives?

Support for co-operatives is a common feature in anarchist writings. Indeed, anarchist support for co-operatives is as old as use of the term anarchist to describe our ideas is. So why do anarchists support co-operatives? Basically it is because a co-operative is seen as an example of the future social organisation anarchists want in the present. As Bakunin argued, “*the co-operative system. . . carries within it the germ of the future economic order.*” [**The Philosophy of Bakunin**, p. 385]

Anarchists support all kinds of co-operatives — housing, food, credit unions and productive ones. All forms of co-operation are useful as they accustom their members to work together for their common benefit as well as ensuring extensive experience in managing their own affairs. As such, all forms of co-operatives are useful examples of self-management and anarchy in action (to some degree). However, here we will concentrate on productive co-operatives, i.e. workplace co-operatives. This is because workplace co-operatives, potentially, could **replace** the capitalist mode of production with one based upon associated, not wage, labour. As long as capitalism exists within industry and agriculture, no amount of other kinds of co-operatives will end that system. Capital and wealth accumulates by oppression and exploitation in the workplace, therefore as long as wage slavery exists anarchy will not.

Co-operatives are the “*germ of the future*” because of two facts. Firstly, co-operatives are based on one worker, one vote. In other words those who do the work manage the workplace within which they do it (i.e. they are based on workers’ self-management in some form). Thus co-operatives are an example of the “horizontal” directly democratic organisation that anarchists support and so are an example of “anarchy in action” (even if in an imperfect way) within the economy. In addition, they are an example of working class self-help and self-activity. Instead of relying on others to provide work, co-operatives show that production can be carried on without the existence of a class of masters employing a class of order takers.

Workplace co-operatives also present evidence of the viability of an anarchist “economy.” It is well established that co-operatives are usually more productive and efficient than their capitalist equivalents. This indicates that hierarchical workplaces are **not** required in order to produce useful goods and indeed can be

harmful. Indeed, it also indicates that the capitalist market does not actually allocate resources efficiently (as we will discuss in section J.5.12). So why should co-operatives be more efficient?

Firstly there are the positive effects of increased liberty associated with co-operatives.

Co-operatives, by abolishing wage slavery, obviously increases the liberty of those who work in them. Members take an active part in the management of their working lives and so authoritarian social relations are replaced by libertarian ones. Unsurprisingly, this liberty also leads to an increase in productivity — just as wage labour is more productive than slavery, so associated labour is more productive than wage slavery. Little wonder Kropotkin argued that “*the only guarantee not to be robbed of the fruits of your labour is to possess the instruments of labour. . . man really produces most when he works in freedom, when he has a certain choice in his occupations, when he has no overseer to impede him, and lastly, when he sees his work bringing profit to him and to others who work like him, but bringing in little to idlers.*” [**The Conquest of Bread**, p. 145]

There are also the positive advantages associated with participation (i.e. self-management, liberty in other words). Within a self-managed, co-operative workplace, workers are directly involved in decision making and so these decisions are enriched by the skills, experiences and ideas of all members of the workplace. In the words of Colin Ward:

*“You can be **in** authority, or you can be **an** authority, or you can **have** authority. The first derives from your rank in some chain of command, the second derives special knowledge, and the third from special wisdom. But knowledge and wisdom are not distributed in order of rank, and they are no one person’s monopoly in any undertaking. The fantastic inefficiency of any hierarchical organisation — any factory, office, university, warehouse or hospital — is the outcome of two almost invariable characteristics. One is that the knowledge and wisdom of the people at the bottom of the pyramid finds no place in the decision-making leadership hierarchy of the institution. Frequently it is devoted to making the institution work in spite of the formal leadership structure, or alternatively to sabotaging the ostensible function of the institution, because it is none of their choosing. The other is that they would rather not be there anyway: they are there through economic necessity rather than through identification with a common task which throws up its own shifting and functional leadership.*

“Perhaps the greatest crime of the industrial system is the way it systematically thwarts the investing genius of the majority of its workers.” [**Anarchy in Action**, p. 41]

Also, as workers also own their place of work, they have an interest in developing the skills and abilities of their members and, obviously, this also means that there are few conflicts within the workplace. Unlike capitalist firms, there is no need for conflict between bosses and wage slaves over work loads, conditions or the division of value created between them. All these factors will increase the quality, quantity and efficiency of work and so increases efficient

utilisation of available resources and facilities the introduction of new techniques and technologies.

Secondly, the increased efficiency of co-operatives results from the benefits associated with co-operation itself. Not only does co-operation increase the pool of knowledge and abilities available within the workplace and enriches that source by communication and interaction, it also ensures that the workforce are working together instead of competing and so wasting time and energy. As Alfie Kohn notes (in relation to investigations of in-firm co-operation):

“Dean Tjosvold of Simon Frazer. . . conducted [studies] at utility companies, manufacturing plants, engineering firms, and many other kinds of organisations. Over and over again, Tjosvold has found that ‘co-operation makes a work force motivated’ whereas ‘serious competition undermines co-ordination.’ . . . Meanwhile, the management guru. . . T. Edwards Demming, has declared that the practice of having employees compete against each other is ‘unfair [and] destructive. We cannot afford this nonsense any longer. . . [We need to] work together on company problems [but] annual rating of performance, incentive pay, [or] bonuses cannot live with team work. . . What takes the joy out of learning. . . [or out of] anything? Trying to be number one.’” [No Contest, p. 240]

(The question of co-operation and participation within capitalist firms will be discussed in section J.5.12).

Thirdly, there are the benefits associated with increased equality. Studies prove that business performance deteriorates when pay differentials become excessive. In a study of over 100 businesses (producing everything from kitchen appliances to truck axles), researchers found that the greater the wage gap between managers and workers, the lower their product’s quality. [Douglas Cowherd and David Levine, “*Product Quality and Pay Equity*,” **Administrative Science Quarterly** no. 37 (June 1992), pp. 302–30] Businesses with the greatest inequality were plagued with a high employee turnover rate. Study author David Levine said: “*These organisations weren’t able to sustain a workplace of people with shared goals.*” [quoted by John Byrne in “*How high can CEO pay go?*” **Business Week**, April 22, 1996]

(In fact, the negative effects of income inequality can be seen on a national level as well. Economists Torsten Persson and Guido Tabellini conducted a thorough statistical analysis of historical inequality and growth, and found that nations with more equal incomes generally experience faster productive growth. [“*Is Inequality Harmful for Growth?*”, **American Economic Review** no. 84, June 1994, pp. 600–21] Numerous other studies have also confirmed their findings. Real life yet again disproves the assumptions of capitalism — inequality harms us all, even the capitalist economy which produces it).

This is to be expected. Workers, seeing an increasing amount of the value they create being monopolised by top managers and a wealthy elite and not re-invested into the company to secure their employment prospects, will hardly be inclined to put in that extra effort or care about the quality of their work. Managers who use the threat of unemployment to extract more effort from their workforce are creating a false economy. While they will postpone decreasing profits in the short term due to this adaptive strategy (and enrich themselves in

the process) the pressures placed upon the system will bring a harsh long term effects — both in terms of economic crisis (as income becomes so skewed as to create realisation problems and the limits of adaptation are reached in the face of international competition) and social breakdown.

As would be imagined, co-operative workplaces tend to be more egalitarian than capitalist ones. This is because in capitalist firms, the incomes of top management must be justified (in practice) to a small number of individuals (namely, those shareholders with sizeable stock in the firm), who are usually quite wealthy and so not only have little to lose in granting huge salaries but are also predisposed to see top managers as being very much like themselves and so are entitled to comparable incomes. In contrast, the incomes of top management in worker controlled firms have to be justified to a workforce whose members experience the relationship between management incomes and their own directly and who, no doubt, are predisposed to see their top managers as being workers like themselves and accountable to them. Such an egalitarian atmosphere will have a positive impact on production and efficiency as workers will see that the value they create is not being accumulated by others but distributed according to work actually done (and not control over power). In the Mondragon co-operatives, for example, the maximum pay differential is 14 to 1 (increased from 3 to 1 in a response to outside pressures after much debate, with the actual maximum differential at 9 to 1) while (in the USA) the average CEO is paid over 140 times the average factory worker (up from 41 times in 1960).

Therefore, we see that co-operatives prove (to a greater or lesser extent) the advantages of (and interrelationship between) key anarchist principles such as liberty, equality, solidarity and self-management. Their application, whether all together or in part, has a positive impact on efficiency and work — and, as we will discuss in section J.5.12, the capitalist market actively **blocks** the spread of more efficient productive techniques instead of encouraging them. Even by its own standards, capitalism stands condemned — it does not encourage the efficient use of resources and actively places barriers in the development of human “resources.”

From all this its clear to see why co-operatives are supported by anarchists. We are “*convinced that the co-operative could, potentially, replace capitalism and carries within it the seeds of economic emancipation. . . The workers learn from this precious experience how to organise and themselves conduct the economy without guardian angels, the state or their former employers.*” [Michael Bakunin, **Bakunin on Anarchism**, p. 399] Co-operatives give us a useful insight into the possibilities of a free, socialist, economy. Even within the hierarchical capitalist economy, co-operatives show us that a better future is possible and that production can be organised in a co-operative fashion and that by so doing we can reap the individual and social benefits of working together as equals.

However, this does not mean that all aspects of the co-operative movement find favour with anarchists. As Bakunin pointed out, “*there are two kinds of co-operative: bourgeois co-operation, which tends to create a privileged class, a sort of new collective bourgeoisie organised into a stockholding society: and truly Socialist co-operation, the co-operation of the future which for this very reason is virtually impossible of realisation at present.*” [**Op. Cit.**, p. 385] In other words, while co-operatives are the germ of the future, in the present they are often limited by the capitalist environment they find themselves and narrow

their vision to just surviving within the current system.

For most anarchists, the experience of co-operatives has proven without doubt that, however excellent in principle and useful in practice, if they are kept within the narrow circle of “bourgeois” existence they cannot become dominant and free the masses. This point is argued in Section J.5.11 and so will be ignored here. In order to fully develop, co-operatives must be part of a wider social movement which includes community and industrial unionism and the creation of an anarchistic social framework which can encourage “*truly Socialist co-operation*” and discourage “*bourgeois co-operation*.” As Murray Bookchin correctly argues, “[r]emoved from a libertarian municipalist [or other anarchist] context and movement focused on achieving revolutionary municipalist [or communalist] goals as a **dual power** against corporations and the state, food [and other forms of] co-ops are little more than benign enterprises that capitalism and the state can easily tolerate with no fear of challenge.” [Democracy and Nature no. 9, p. 175]

Therefore, while co-operatives are an important aspect of anarchist ideas and practice, they are not the be all or end all of our activity. Without a wider social movement which creates all (or at least most) of the future society in the shell of the old, co-operatives will never arrest the growth of capitalism or transcend the narrow horizons of the capitalist economy.

J.5.11 If workers really want self-management, why aren't there more producer co-operatives?

Supporters of capitalism suggest that producer co-operatives would spring up spontaneously if workers really wanted them. Their argument is that co-operatives could be financed at first by “*wealthy radicals*” or by affluent workers pooling their resources to buy out existing capitalist firms; then, if such co-operatives were really economically viable and desired by workers, they would spread until eventually they undermined capitalism. They conclude that since this is not happening, it must be because workers’ self-management is either economically unfeasible or is not really attractive to workers or both (see, for example, Robert Nozick, **Anarchy, State, and Utopia**, pp. 250–52).

David Schweickart has decisively answered this argument by showing that the reason there are not more producer co-operatives is structural:

“A worker-managed firm lacks an expansionary dynamic. When a capitalist enterprise is successful, the owner can increase her profits by reproducing her organisation on a larger scale. She lacks neither the means nor the motivation to expand. Not so with a worker-managed firm. Even if the workers have the means, they lack the incentive, because enterprise growth would bring in new workers with whom the increased proceeds would have to be shared. Co-operatives, even when prosperous, do not spontaneously grow. But if this is so, then each new co-operative venture (in a capitalist society) requires a new wealthy radical or a new group of affluent radical workers willing to experiment. Because such people doubtless are in short supply, it follows that the absence of a large and growing co-operative movement proves nothing about the viability of worker self-management,

nor about the preferences of workers.” [Against Capitalism, p. 239]

There are other structural problems as well. For one thing, since their pay levels are set by members’ democratic vote, co-operatives tend to be more egalitarian in their income structure. But this means that in a capitalist environment, co-operatives are in constant danger of having their most skilled members hired away. Moreover, there is a difficulty in raising capital:

“Quite apart from ideological hostility (which may be significant), external investors will be reluctant to put their money into concerns over which they will have little or no control — which tends to be the case with a co-operative. Because co-operatives in a capitalist environment face special difficulties, and because they lack the inherent expansionary dynamic of a capitalist firm, it is hardly surprising that they are far from dominant.” [Ibid., p 240]

In addition, co-operatives face the negative externalities generated by a capitalist economy. The presence of wage labour and investment capital in the economy will tempt successful co-operatives to increase their flexibility to adjust to changes in market changes by hiring workers or issuing shares to attract new investment. In so doing, however, they may end up losing their identities as co-operatives by diluting ownership or by making the co-operative someone’s boss:

“To meet increased production, the producer co-operatives hired outside wage workers. This created a new class of workers who exploit and profit from the labour of their employees. And all this fosters a bourgeois mentality.” [Michael Bakunin, Bakunin on Anarchism, p. 399]

Hence the pressures of working in a capitalist market may result in co-operatives pursuing activities which may result in short term gain or survival, but are sure to result in harm in the long run. Far from co-operatives slowly expanding within and changing a capitalist environment it is more likely that capitalist logic will expand into and change the co-operatives that work in it (this can be seen from the Mondragon co-operatives, where there has been a slight rise in the size of wage labour being used and the fact that the credit union, since 1992, has invested in non-co-operative firms). These externalities imposed upon isolated co-operatives within capitalism (which would not arise within a fully co-operative context) block local moves towards anarchism. The idea that co-operation will simply win out in competition within well developed capitalist economic systems is just wishful thinking. Just because a system is more liberatory and just does not mean it will survive in an authoritarian economic and social environment.

There are also cultural problems as well. As Jon Elster points out, it is a *“truism, but an important one, that workers’ preferences are to a large extent shaped by their economic environment. Specifically, there is a tendency to adaptive preference formation, by which the actual mode of economic organisation comes to be perceived as superior to all others.”* [“From Here to There”, in **Socialism**, p. 110] In other words, people view “what is” as given and feel

no urge to change to “what could be.” In the context of creating alternatives within capitalism, this can have serious effects on the spread of alternatives and indicates the importance of anarchists encouraging the spirit of revolt to break down this mental apathy.

This acceptance of “what is” can be seen, to some degree, by some companies which meet the formal conditions for co-operatives, for example ESOP owned firms in the USA, but lack effective workers’ control. ESOP (Employee Stock Ownership Plans) firms enable a firm’s workforce to gain the majority of a company’s shares but the unequal distribution of shares amongst employees prevents the great majority of workers from having any effective control or influence on decisions. Unlike real co-operatives (based on “one worker, one vote”) these firms are based on “one share, one vote” and so have more in common with capitalist firms than co-operatives.

Moreover, we have ignored such problems as natural barriers to entry into, and movement within, a market (which is faced by all firms) and the difficulties co-operatives can face in finding access to long term credit facilities required by them from capitalist banks (which would effect co-operatives more as short term pressures can result in their co-operative nature being diluted). As Tom Cahill notes, the “*old co-ops [of the nineteenth century] also had the specific problem of . . . giving credit . . . [as well as] problems . . . of competition with price cutting capitalist firms, highlighting the inadequate reservoirs of the under-financed co-ops.*” [*Co-operatives and Anarchism: A contemporary Perspective*”, in **For Anarchism**, edited by Paul Goodway, p. 239]

In addition, the “*return on capital is limited*” in co-operatives [Tom Cahill, **Op. Cit.**, p. 247] which means that investors are less-likely to invest in co-operatives, and so co-operatives will tend to suffer from a lack of investment. Which also suggests that Nozick’s argument that “*don’t say that its against the class interest of investors to support the growth of some enterprise that if successful would end or diminish the investment system. Investors are not so altruistic. They act in personal and not their class interests*” is false [**Op. Cit.**, pp. 252–3]. Nozick is correct, to a degree — but given a choice between high returns from investments in capitalist firms and lower ones from co-operatives, the investor will select the former. This does not reflect the productivity or efficiency of the investment — quite the reverse! — it reflects the social function of wage labour in maximising profits and returns on capital (see next section for more on this). In other words, the personal interests of investors will generally support their class interests (unsurprisingly, as class interests are not independent of personal interests and will tend to reflect them!).

Tom Cahill outlines the investment problem when he writes that the “*financial problem*” is a major reason why co-operatives failed in the past, for “*basically the unusual structure and aims of co-operatives have always caused problems for the dominant sources of capital. In general, the finance environment has been hostile to the emergence of the co-operative spirit. . .*” And he also notes that they were “*unable to devise structuring to maintain a boundary between those who work and those who own or control. . . It is understood that when outside investors were allowed to have power within the co-op structure, co-ops lost their distinctive qualities.*” [**Op. Cit.**, pp. 238–239] Meaning that even **if** co-operative do attract investors, the cost of so doing may be to transform the co-operatives into capitalist firms.

Thus, in spite of “*empirical studies suggest[ing] that co-operatives are at least*

as productive as their capitalist counterparts,” with many having “*an excellent record, superior to conventionally organised firms over a long period*” [Jon Elster, **Op. Cit.**, p. 96], co-operatives are more likely to adapt to capitalism than replace it and adopt capitalist principles of rationality in order to survive. All things being equal, co-operatives are more efficient than their capitalist counterparts — but when co-operatives compete in a capitalist economy, all things are **not** equal.

In spite of these structural and cultural problems, however, there has been a dramatic increase in the number of producer co-operatives in most Western countries in recent years. For example, Saul Estrin and Derek Jones report that co-operatives in the UK grew from 20 in 1975 to 1,600 by 1986; in France they increased from 500 to 1,500; and in Italy, some 7,000 new co-operatives came into existence between 1970 and 1982 [*“Can Employee-owned Firms Survive?”*, Working Paper Series, Department of Economics, Hamilton College (April, May, 1989)]. Italian co-operatives now number well over 20,000, many of them large and having many support structures as well (which aids their development by reducing their isolation and providing long term financial support lacking within the capitalist market).

We have already noted the success of the Mondragon co-operatives in Spain, which created a cluster of inter-locking co-operatives with its own credit union to provide long term financial support and commitment. Thus, in Europe at least, it appears that there **is** a rather “*large and growing co-operative movement,*” which gives the lie to Nozick’s and other supporters of capitalism arguments about co-operatives’ lack of economic viability and/or attractiveness to workers.

However, because co-operatives can survive in a capitalist economy it does not automatically mean that they shall **replace** that economy. Isolated co-operatives, as we argued above, will more likely adapt to capitalist realities than remain completely true to their co-operative promise. For most anarchists, therefore, co-operatives can reach their full potential only as part of a social movement aiming to change society. As part of a wider movement of community and workplace unionism, with mutualist banks to provide long terms financial support and commitment, co-operatives could be communalised into a network of solidarity and support that will reduce the problems of isolation and adaptation. Hence Bakunin:

“We hardly oppose the creation of co-operative associations; we find them necessary in many respects. . . they accustom the workers to organise, pursue, and manage their interests themselves, without interference either by bourgeois capital or by bourgeois control. . . [they must] above all [be] founded on the principle of solidarity and collectivity rather than on bourgeois exclusivity, then society will pass from its present situation to one of equality and justice without too many great upheavals.” [**Op. Cit.**, p. 153]

Co-operation “*will prosper, developing itself fully and freely, embracing all human industry, only when it is based on equality, when all capital . . . [and] the soil, belong to the people by right of collective property.*” [**Ibid.**]

Until then, co-operatives will exist within capitalism but not replace it by market forces — only a **social** movement and collective action can fully secure their full development. As David Schweickart argues:

“Even if worker-managed firms are preferred by the vast majority, and even if they are more productive, a market initially dominated by capitalist firms may not select for them. The common-sense neo-classical dictum that only those things that best accord with people’s desires will survive the struggle of free competition has never been the whole truth with respect to anything; with respect to workplace organisation it is barely a half-truth.” [Op. Cit., p. 240]

This means that while anarchists support, create and encourage co-operatives within capitalism, they understand *“the impossibility of putting into practice the co-operative system under the existing conditions of the predominance of bourgeois capital in the process of production and distribution of wealth.”* Because of this, most anarchists stress the need for more combative organisations such as industrial and community unions and other bodies *“formed,”* to use Bakunin’s words, *“for the organisation of toilers against the privileged world”* in order to help bring about a free society. [Michael Bakunin, **Op. Cit.**, p. 185]

J.5.12 If self-management is more efficient, surely capitalist firms will be forced to introduce it by the market?

While it may be admitted that co-operatives cannot reform capitalism away (see last section), many supporters of “free market” capitalism will claim that a laissez-faire system would see workers self-management spread within capitalism. This is because, as self-management is more efficient than wage slavery, those capitalist firms that introduce it will gain a competitive advantage, and so their competitors will be forced to introduce it or go bust. While not being true anarchistic production, it would (it is argued) be a very close approximation of it and so capitalism could reform itself naturally to get rid of (to a large degree) its authoritarian nature.

While such a notion seems plausible in theory, in practice it does not work. Free market capitalism places innumerable barriers to the spread of worker empowering structures within production, in spite (perhaps, as we will see, **because**) of their more efficient nature. This can be seen from the fact that while the increased efficiency associated with workers’ participation and self-management has attracted the attention of many capitalist firms, the few experiments conducted have failed to spread. This is due, essentially, to the nature of capitalist production and the social relationships it produces.

As we noted in section D.10, capitalist firms (particularly in the west) made a point of introducing technologies and management structures that aimed to deskill and disempower their workers. In this way, it was hoped to make the worker increasingly subject to “market discipline” (i.e. easier to train, so increasing the pool of workers available to replace any specific worker and so reducing workers power by increasing management’s power to fire them). Of course, what actually happens is that after a short period of time while management gained the upper hand, the workforce found newer and more effective ways to fight back and assert their productive power again. While for a short time the technological change worked, over the longer period the balance of forces

changed, so forcing management to continually try to empower themselves at the expense of the workforce.

It is unsurprising that such attempts to reduce workers to order-takers fail. Workers' experiences and help are required to ensure production actually happens at all. When workers carry out their orders strictly and faithfully (i.e. when they "work to rule") production threatens to stop. So most capitalists are aware of the need to get workers to "co-operate" within the workplace to some degree. A few capitalist companies have gone further. Seeing the advantages of fully exploiting (and we do mean exploiting) the experience, skills, abilities and thoughts of their employers which the traditional authoritarian capitalist workplace denies them, some have introduced various schemes to "enrich" and "enlarge" work, increase "co-operation" between workers and their bosses. In other words, some capitalist firms have tried to encourage workers to "participate" in their own exploitation by introducing (in the words of Sam Dolgoff) "*a modicum of influence, a strictly limited area of decision-making power, a voice — at best secondary — in the control of conditions of the workplace.*" [**The Anarchist Collectives**, p. 81] The management and owners still have the power and still reap the majority of benefits from the productive activity of the workforce.

David Noble provides a good summary of the problems associated with experiments in workers' self-management within capitalist firms:

"Participant in such programs can indeed be a liberating and exhilarating experience, awakening people to their own untapped potential and also to the real possibilities of collective worker control of production. As one manager described the former pilots [workers in a General Electric program]: 'These people will never be the same again. They have seen that things can be different.' But the excitement and enthusiasm engendered by such programs, as well as the heightened sense of commitment to a common purpose, can easily be used against the interests of the work force. First, that purpose is not really 'common' but is still determined by management alone, which continues to decide what will be produced, when, and where. Participation in production does not include participation in decisions on investment, which remains the prerogative of ownership. Thus participation is, in reality, just a variation of business as usual — taking orders — but one which encourages obedience in the name of co-operation.

"Second, participation programs can contribute to the creation of an elite, and reduced, work force, with special privileges and more 'co-operative' attitudes toward management — thus at once undermining the adversary stance of unions and reducing membership . . .

"Thirds, such programs enable management to learn from workers — who are now encouraged by their co-operative spirit to share what they know — and, then, in Taylorist tradition, to use this knowledge against the workers. As one former pilot reflected, 'They learned from the guys on the floor, got their knowledge about how to optimise the technology and then, once they had it, they eliminated the Pilot Program, put that knowledge into the machines, and got people

without any knowledge to run them — on the Company's terms and without adequate compensation. They kept all the gains for themselves.' . . .

"Fourth, such programs could provide management with a way to circumvent union rules and grievance procedures or eliminate unions altogether. . . " [**Forces of Production**, pp. 318–9]

Therefore, capitalist-introduced and supported “workers’ control” is very like the situation when a worker receives stock in the company they work for. If it goes some way toward redressing the gap between the value of that person’s labour, and the wage they receive for it, that in itself cannot be a totally bad thing (although, of course, this does not address the issue of workplace hierarchy and the social relations within the workplace itself). The real downside of this is the “carrot on a stick” enticement to work harder — if you work extra hard for the company, your stock will be worth more. Obviously, though, the bosses get rich off you, so the more you work, the richer they get, the more you are getting ripped off. It is a choice that anarchists feel many workers cannot afford to make — they need or at least want the money — but we believe that the stock does not work for many workers, who end up working harder, for less. After all, stocks do not represent all profits (large amounts of which end up in the hands of top management) nor are they divided just among those who labour. Moreover, workers may be less inclined to take direct action, for fear that they will damage the value of “their” company’s stock, and so they may find themselves putting up with longer, more intense work in worse conditions.

However, be that as it may, the results of such capitalist experiments in “workers’ control” are interesting and show **why** self-management will not spread by market forces (and they also bear direct relevance to the question of why **real** co-operatives are not widespread within capitalism — see last section).

According to one expert “[t]here is scarcely a study in the entire literature which fails to demonstrate that satisfaction in work is enhanced or. . . productivity increases occur from a genuine increase in worker’s decision-making power. Findings of such consistency, I submit, are rare in social research.” [Paul B. Lumberg, cited by Hebert Gintis, “The nature of Labour Exchange and the Theory of Capitalist Production”, **Radical Political Economy** vol. 1, p. 252]

In spite of these findings, a “*shift toward participatory relationships is scarcely apparent in capitalist production. . . [this is] not compatible with the neo-classical assertion as to the efficiency of the internal organisation of capitalist production.*” [Herbert Gintz, **Op. Cit.**, p. 252] Why is this the case?

Economist William Lazonick indicates the reason when he writes that “[m]any attempts at job enrichment and job enlargement in the first half of the 1970s resulted in the supply of more and better effort by workers. Yet many ‘successful’ experiments were cut short when the workers whose work had been enriched and enlarged began questioning traditional management prerogatives inherent in the existing hierarchical structure of the enterprise.” [**Competitive Advantage on the Shop Floor**, p. 282]

This is an important result, as it indicates that the ruling sections within capitalist firms have a vested interest in **not** introducing such schemes, even though they are more efficient methods of production. As can easily be imagined, managers have a clear incentive to resist participatory schemes (and David Schweickart notes, such resistance, “often bordering on sabotage, is well known

and widely documented” [Against Capitalism, p. 229]). As an example of this, David Noble discusses a scheme (called the Pilot Program) ran by General Electric at Lynn, Massachusetts, USA in the late 1960s:

“After considerable conflict, GE introduced a quality of work life program . . . which gave workers much more control over the machines and the production process and eliminated foremen. Before long, by all indicators, the program was succeeding — machine use, output and product quality went up; scrap rate, machine downtime, worker absenteeism and turnover when down, and conflict on the floor dropped off considerably. Yet, little more than a year into the program — following a union demand that it be extended throughout the shop and into other GE locations — top management abolished the program out of fear of losing control over the workforce. Clearly, the company was willing to sacrifice gains in technical and economic efficiency in order to regain and insure management control.” [Progress Without People, p. 65f]

However, it could be claimed that owners, being concerned by the bottom-line of profits, could **force** management to introduce participation. By this method, competitive market forces would ultimately prevail as individual owners, pursuing profits, reorganise production and participation spreads across the economy. Indeed, there are a few firms that **have** introduced such schemes, but there has been no tendency for them to spread. This contradicts “free market” capitalist economic theory which states that those firms which introduce more efficient techniques will prosper and competitive market forces will ensure that other firms will introduce the technique.

This is for three reasons.

Firstly, the fact is that within “free market” capitalism **keeping** (indeed strengthening) skills and power in the hands of the workers makes it harder for a capitalist firm to maximise profits (i.e. unpaid labour). It strengthens the power of workers, who can use that power to gain increased wages (i.e. reduce the amount of surplus value they produce for their bosses).

Workers’ control basically leads to a usurpation of capitalist prerogatives — including their share of revenues and their ability to extract more unpaid labour during the working day. While in the short run workers’ control may lead to higher productivity (and so may be toyed with), in the long run, it leads to difficulties for capitalists to maximise their profits. So, *“given that profits depend on the integrity of the labour exchange, a strongly centralised structure of control not only serves the interests of the employer, but dictates a minute division of labour irrespective of considerations of productivity. For this reason, the evidence for the superior productivity of ‘workers control’ represents the most dramatic of anomalies to the neo-classical theory of the firm: worker control increases the effective amount of work elicited from each worker and improves the co-ordination of work activities, while increasing the solidarity and delegitimising the hierarchical structure of ultimate authority at its root; hence it threatens to increase the power of workers in the struggle over the share of total value.”* [Hebert Gintz, **Op. Cit.**, p. 264]

So, a workplace which had extensive workers participation would hardly see the workers agreeing to reduce their skill levels, take a pay cut or increase their

pace of work simply to enhance the profits of capitalists. Simply put, profit maximisation is not equivalent to technological efficiency. By getting workers to work longer, more intensely or in more unpleasant conditions can increase profits but does not yield more output for the **same** inputs. Workers' control would curtail capitalist means of enhancing profits by changing the quality and quantity of work. It is **this** requirement which also aids in understanding why capitalists will not support workers' control — even though it is more efficient, it reduces the ability of capitalists to maximise profits by minimising labour costs. Moreover, demands to change the nature of workers' inputs into the production process in order to maximise profits for capitalists would provoke a struggle over the time and intensity of work and over the share of value added going to workers, management and owners and so destroy the benefits of participation.

Thus power within the workplace plays a key role in explaining why workers' control does not spread — it reduces the ability of bosses to extract more unpaid labour from workers.

The second reason is related to the first. It too is based on the power structure within the company but the power is related to control over the surplus produced by the workers rather than the ability to control how much surplus is produced in the first place (i.e. power over workers).

Hierarchical management is the way to ensure that profits are channelled into the hands of a few. By centralising power, the surplus value produced by workers can be distributed in a way which benefits those at the top (i.e. management and capitalists). Profit maximisation under capitalism means the maximum profits available for capitalists — **not** the maximum difference between selling price and cost as such. This difference explains the strange paradox of workers' control experiments being successful but being cancelled by management. The paradox is easily explained once the hierarchical nature of capitalist production (i.e. of wage labour) is acknowledged. Workers' control, by placing (some) power in the hands of workers, undermines the authority of management and, ultimately, their power to control the surplus produced by workers and allocate it as they see fit. Thus, while workers' control does reduce costs, increase efficiency and productivity (i.e. maximise the difference between prices and costs) it (potentially) reduces profit maximisation by undermining the power (and so privileges) of management to allocate that surplus as they see fit.

Increased workers' control reduces the capitalists potential to maximise **their** profits and so will be opposed by both management **and** owners. Indeed, it can be argued that hierarchical control of production exists solely to provide for the accumulation of capital in a few hands, **not** for efficiency or productivity (see Stephan A. Margin, “*What do Bosses do? The Origins and Functions of Hierarchy in Capitalist Production*”, **Op. Cit.**, pp. 178–248). This is why profit maximisation does not entail efficiency and can actively work against it.

As David Noble argues, power is the key to understanding capitalism, **not** the drive for profits as such:

“In opting for control [over the increased efficiency of workers' control] ... management ... knowingly and, it must be assumed, willingly, sacrificed profitable production. Hence [experiences such as] the Pilot Program [at GE] ... illustrates not only the ultimate management priority of power over both production and profit within the firm, but also the larger contradiction between the preservation

of private power and prerogatives, on the one hand, and the social goals of efficient, quality, and useful production, on the other . . .

“It is a common confusion, especially on the part of those trained in or unduly influenced by formal economics (liberal and Marxist alike), that capitalism is a system of profit-motivated, efficient production. This is not true, nor has it ever been. If the drive to maximise profits, through private ownership and control over the process of production, it has never been the end of that development. The goal has always been domination (and the power and privileges that go with it) and the preservation of domination. There is little historical evidence to support the view that, in the final analysis, capitalists play by the rules of the economic game imagined by theorists. There is ample evidence to suggest, on the other hand, that when the goals of profit-making and efficient production fail to coincide with the requirements of continued dominance, capital will resort to more ancient means: legal, political, and, of need be, military. Always, behind all the careful accounting, lies the threat of force. This system of domination has been legitimated in the past by the ideological invention that private ownership of the means of production and the pursuit of profit via production are always ultimately beneficial to society. Capitalism delivers the goods, it is argued, better, more cheaply, and in larger quantity, and in so doing, fosters economic growth . . . The story of the Pilot Program — and it is but one among thousands like it in U.S. industry — raises troublesome questions about the adequacy of this mythology as a description of reality.” [Forces of Production, pp. 321–2]

Hierarchical organisation (i.e. domination) is essential to ensure that profits are controlled by a few and can, therefore, be allocated by them in such a way to ensure their power and privileges. By undermining management authority, workers’ control undermines that power to maximise profits in a certain direction even though it increases “profits” (the difference between prices and costs) in the abstract. As workers’ control starts to extend (or management sees its potential to spread) into wider areas such as investment decisions, how to allocate the surplus (i.e. profits) between wages, investment, dividends, management pay and so on, then they will seek to end the project in order to ensure their power over both the workers and the surplus they, the workers, produce. In this they will be supported by those who actually own the company who obviously would not support a regime which will not ensure the maximum return on their investment. This maximum return would be endangered by workers’ control, even though it is technically more efficient, as control over the surplus rests with the workers and not a management elite with similar interests and aims as the owners — an egalitarian workplace would produce an egalitarian distribution of surplus, in other words (as proven by the experience of workers’ co-operatives). In the words of one participant of the GE workers’ control project — *“If we’re all one, for manufacturing reasons, we must share in the fruits equitably, just like a co-op business.”* [quoted by Noble, **Op. Cit.**, p. 295] Such a possibility is one no owner would agree to.

Thirdly, to survive within the “free” market means to concentrate on the short term. Long term benefits, although greater, are irrelevant. A free market

requires profits **now** and so a firm is under considerable pressure to maximise short-term profits by market forces (a similar situation occurs when firms invest in “green” technology, see section E.5).

Participation requires trust, investment in people and technology and a willingness to share the increased value added that result from workers’ participation with the workers who made it possible. All these factors would eat into short term profits in order to return richer rewards in the future. Encouraging participation thus tends to increase long term gains at the expense of short-term ones (for it ensures that workers do not consider participation as a con, they must experience **real** benefits in terms of power, conditions and wage rises). For firms within a free market environment, they are under pressure from shareholders and their financiers for high returns as soon as possible. If a company does not produce high dividends then it will see its stock fall as shareholders move to those companies that do. Thus the market **forces** companies (and banks, who in turn loan over the short term to companies) to act in such ways as to maximise short term profits.

If faced with a competitor which is not making such investments (and which is investing directly into deskilling technology or intensifying work loads which lowers their costs) and so wins them market share, or a downturn in the business cycle which shrinks their profit margins and makes it difficult for the firm to meet its commitments to its financiers and workers, a company that intends to invest in people and trust will usually be rendered unable to do so. Faced with the option of empowering people in work or deskilling them and/or using the fear of unemployment to get workers to work harder and follow orders, capitalist firms have consistently chosen (and probably preferred) the latter option (as occurred in the 1970s).

Thus, workers’ control is unlikely to spread through capitalism because it entails a level of working class consciousness and power that is incompatible with capitalist control. In other words, “[i]f the hierarchical division of labour is necessary for the extraction of surplus value, then worker preferences for jobs threatening capitalist control will not be implemented.” [Hebert Gintis, **Op. Cit.**, p. 253] The reason why it is more efficient, ironically, ensures that a capitalist economy will not select it. The “free market” will discourage empowerment and democratic workplaces, at best reducing “co-operation” and “participation” to marginal issues (and management will still have the power of veto).

In addition, moves towards democratic workplaces within capitalism is an example of the system in conflict with itself — pursuing its objectives by methods which constantly defeat those same objectives. As Paul Carden argues, the “*capitalist system can only maintain itself by trying to reduce workers into mere order-takers... At the same time the system can only function as long as this reduction is never achieved... [for] the system would soon grind to a halt... [However] capitalism constantly has to **limit this participation** (if it didn’t the workers would soon start deciding themselves and would show in practice now superfluous the ruling class really is).*” [**Revolution and Modern Capitalism**, pp. 45–46]

The experience of the 1970s supports this thesis well. Thus “workers’ control” within a capitalist firm is a contradictory thing — too little power and it is meaningless, too much and workplace authority structures and short-term profits (i.e. capitalist share of value added) can be harmed. Attempts to make

oppressed, exploited and alienated workers work if they were neither oppressed, exploited nor alienated will always fail.

For a firm to establish committed and participatory relations internally, it must have external supports — particularly with providers of finance (which is why co-operatives benefit from credit unions and co-operating together). The price mechanism proves self-defeating to create such supports and that is why we see “participation” more fully developed within Japanese and German firms (although it is still along way from fully democratic workplaces), who have strong, long term relationships with local banks and the state which provides them with the support required for such activities. As William Lazonick notes, Japanese industry had benefited from the state ensuring “*access to inexpensive long-term finance, the sine qua non of innovating investment strategies*” along with a host of other supports, such as protecting Japanese industry within their home markets so they could “*develop and utilise their productive resources to the point where they could attain competitive advantage in international competition.*” [Op. Cit., p. 305] The German state provides its industry with much of the same support.

Therefore, “participation” within capitalist firms will have little or no tendency to spread due to the “automatic” actions of market forces. In spite of such schemes being more efficient, capitalism will not select them because they empower workers and make it hard for capitalists to maximise their short term profits. Hence capitalism, by itself, will have no tendency to produce more libertarian organisational forms within industry. Those firms that do introduce such schemes will be the exception rather than the rule (and the schemes themselves will be marginal in most respects and subject to veto from above). For such schemes to spread, collective action is required (such as state intervention to create the right environment and support network or — from an anarchist point of view — union and community direct action).

However such schemes, as noted above, are just forms of self-exploitation, getting workers to help their robbers and so **not** a development anarchists seek to encourage. We have discussed this here just to be clear that, firstly, such forms of structural reforms are **not** self-management, as managers and owners still have the real power, and, secondly, even if such forms are somewhat liberatory, market forces will not select them (i.e. collective action would be required).

For anarchists “*self-management is not a new form of mediation between workers and their bosses . . . [it] refers to the very process by which the workers themselves overthrow their managers and take on their own management and the management of production in their own workplace.*” [Sam Dolgoff, Op. Cit., p. 81] Hence our support for co-operatives, unions and other self-managed structures created and organised from below by and for working class people.

J.5.13 What are Modern Schools?

Modern schools are alternative schools, self-managed by students, teachers and parents which reject the authoritarian schooling methods of the modern “education” system. Such schools have a feature of the anarchist movement since the turn of the 20th century while interest in libertarian forms of education has been a feature of anarchist theory from the beginning. All the major anarchist thinkers, from Godwin through Proudhon, Bakunin and Kropotkin to modern

activists like Colin Ward, have stressed the importance of libertarian (or “rational”) education, education that develops all aspects of the student (mental and physical — and so termed “integral” education) as well as encouraging critical thought and mental freedom. The aim of such education is, to use Proudhon’s words, ensure that the “*industrial worker, the man [sic!] of action and the intellectual would all be rolled into one*” [cited by Steward Edward in **The Paris Commune**, p. 274]

Anyone involved in radical politics, constantly and consistently challenges the role of the state’s institutions and their representatives within our lives. The role of bosses, the police, social workers, the secret service, middle managers, doctors and priests are all seen as part of a hierarchy which exists to keep us, the working class, subdued. It is relatively rare though for the left-wing to call into question the role of teachers. Most left wing activists and a large number of libertarians believe that education is good, all education is good, and education is always good. As Henry Barnard, the first US commissioner of education, appointed in 1867, exhorted, “*education always leads to freedom*”.

Those involved in libertarian education believe the contrary. They believe that national education systems exist only to produce citizens who’ll be blindly obedient to the dictates of the state, citizens who will uphold the authority of government even when it runs counter to personal interest and reason, wage slaves who will obey the orders of their boss most of the time and consider being able to change bosses as freedom. They agree with William Godwin (one of the earliest critics of national education systems) when he wrote in **An Enquiry Concerning Political Justice** that “*the project of a national education ought to be discouraged on account of its obvious alliance with national government . . . Government will not fail to employ it to strengthen its hand and perpetuate its institutions. . . Their views as instigator of a system will not fail to be analogous to their views in their political capacity.*” [cited by Colin Ward, **Anarchy in Action**, p. 81]

With the growth of industrialism in the 19th century schools triumphed, not through a desire to reform but as an economic necessity. Industry did not want free thinking individuals, it wanted workers, instruments of labour, and it wanted them punctual, obedient, passive and willing to accept their disadvantaged position. According to Nigel Thrift, many employers and social reformers became convinced that the earliest generations of workers were almost impossible to discipline (i.e. to get accustomed to wage labour and workplace authority). They looked to children, hoping that “*the elementary school could be used to break the labouring classes into those habits of work discipline now necessary for factory production. . . Putting little children to work at school for very long hours at very dull subjects was seen as a positive virtue, for it made them habituated, not to say naturalised, to labour and fatigue.*” [quoted by Juliet B. Schor in **The Overworked American**, p. 61]

Thus supporters of Modern Schools recognise that the role of education is an important one in maintaining hierarchical society — for government and other forms of hierarchy (such as wage labour) must always depend on the opinion of the governed. Francisco Ferrer (the most famous supporter of Modern Schooling due to his execution by the Spanish state in 1909) argued that:

“Rulers have always taken care to control the education of the people. They know their power is based almost entirely on the school and

they insist on retaining their monopoly. The school is an instrument of domination in the hands of the ruling class. [cited by Clifford Harper, **Anarchy: A Graphic Guide**, p. 100]

Little wonder, then, that Emma Goldman argued that the “*modern method of education*” has “*little regard for personal liberty and originality of thought. Uniformity and imitation is [its] motto*” and that the school “*is for the child what the prison is for the convict and the barracks for the soldier — a place where everything is being used to break the will of the child, and then to pound, knead, and shape it into a being utterly foreign to itself.*” [Red Emma Speaks, p. 118, p. 116]

Hence the importance of Modern Schools. It is a means of spreading libertarian education within a hierarchical society and undercut one of the key supports for that society — the education system. Instead of hierarchical education, Modern schools exist to “*develop the individual through knowledge and the free play of characteristic traits, so that [the child] may become a social being, because he had learned to know himself [or herself], to know his [or her] relation to his fellow[s]...*” [Emma Goldman, **Op. Cit.**, p. 121] It would, in Stirner’s words, be “*an education for freedom, not for subservience.*”

The Modern School Movement (also known as the Free School Movement) over the past century has been an attempt to represent part of this concern about the dangers of state and church schools and the need for libertarian education. The idea of libertarian education is that knowledge and learning should be linked to real life processes and personal usefulness and should not be the preserve of a special institution. Thus Modern Schools are an attempt to establish an environment for self development in an overly structured and rationalised world. An oasis from authoritarian control and as a means of passing on the knowledge to be free.

“The underlying principle of the Modern School is this: education is a process of drawing out, not driving in; it aims at the possibility that the child should be left free to develop spontaneously, directing his [or her] own efforts and choosing the branches of knowledge which he desires to study... the teacher... should be a sensitive instrument responding to the needs of the child... a channel through which the child may attain so much of the ordered knowledge of the world as he shows himself [or herself] ready to receive and assimilate.” [Emma Goldman, **Op. Cit.**, p. 126]

The Modern School bases itself on libertarian education techniques. Libertarian education, very broadly, seeks to produce children who will demand greater personal control and choice, who think for themselves and question all forms of authority:

“We don’t hesitate to say we want people who will continue to develop. People constantly capable of destroying and renewing their surroundings and themselves: whose intellectual independence is their supreme power, which they will yield to none; always disposed for better things, eager for the triumph of new ideas, anxious to crowd many lives into the life they have. It must be the aim of the school to show the children that there will be tyranny as long as one person

depends on another." [Ferrer, quoted by Clifford Harper, **Op. Cit.**, p. 100]

Thus the Modern School insists that the child is the centre of gravity in the education process — and that education is just that, **not** indoctrination:

"I want to form a school of emancipation, concerned with banning from the mind whatever divides people, the false concepts of property, country and family so as to attain the liberty and well-being which all desire. I will teach only simple truth. I will not ram dogma into their heads. I will not conceal one iota of fact. I will teach not what to think but how to think." [Ferrer, cited by Harper, **Op. Cit.**, pp. 99–100]

The Modern School has no rewards or punishments, exams or mark — the everyday "*tortures*" of conventional schooling. And because practical knowledge is more useful than theory, lessons were often held in factories, museums or the countryside. The school was also used by the parents, and Ferrer planned a Popular University.

"Higher education, for the privileged few, should be for the general public, as every human has a right to know; and science, which is produced by observers and workers of all countries and ages, ought not be restricted to class." [Ferrer, cited by Harper, **Op. Cit.**, p. 100]

Thus Modern Schools are based on encouraging self-education in a co-operative, egalitarian and libertarian atmosphere in which the pupil (regardless of age) can develop themselves and their interests to the fullest of their abilities. In this way Modern Schools seek to create anarchists by a process of education which respects the individual and gets them to develop their own abilities in a conducive setting.

Modern Schools have been a constant aspect of the anarchist movement since the later 1890s. The movement was started in France by Louise Michel and Sebastien Faure, where Francisco Ferrer became acquainted with them. He founded his Modern School in Barcelona in 1901, and by 1905 there were 50 similar schools in Spain (many of them funded by anarchist groups and trade unions and, from 1919 onward, by the C.N.T. — in all cases the autonomy of the schools was respected). In 1909, Ferrer was falsely accused by the Spanish government of leading an insurrection and executed in spite of world-wide protest and overwhelming proof of his innocence. His execution, however, gained him and his educational ideas international recognition and inspired a Modern School progressive education movement in Britain, France, Belgium, Holland, Italy, Germany, Switzerland, Poland, Czechoslovakia, Yugoslavia, Argentina, Brazil, Mexico, China, Japan and, on the greatest scale, in the USA.

However, for most anarchists, Modern Schools are not enough in themselves to produce a libertarian society. They agree with Bakunin's argument that "*[f]or individuals to be moralised and become fully human . . . three things are necessary: a hygienic birth, all-round education, accompanied by an upbringing based on respect for labour, reason, equality, and freedom and a social environment wherein each human individual will enjoy full freedom and really by, **de jure** and **de facto**, the equal of every other.*"

“Does this environment exist? No. Then it must be established. . . [otherwise] in the existing social environment . . . on leaving [libertarian] schools they [the student] would enter a society governed by totally opposite principles, and, because society is always stronger than individuals, it would prevail over them . . . [and] demoralise them.” [**The Basic Bakunin**, p, 174]

Because of this, Modern Schools must be part of a mass working class revolutionary movement which aims to build as many aspects of the new world as possible in the old one before, ultimately, replacing it. Otherwise they are just useful as social experiments and their impact on society marginal. Little wonder, then, that Bakunin supported the International Workers Association’s resolution that urged *“the various sections [of the International] to establish public courses . . . [based on] all-round instruction, in order to remedy as much as possible the insufficient education that workers currently receive.”* [quoted by Bakunin, **Op. Cit.**, p. 175]

Thus, for anarchists, this process of education is **part of** the class struggle, not in place of it and so *“the workers [must] do everything possible to obtain all the education they can in the material circumstances in which they currently find themselves . . . [while] concentrat[ing] their efforts on the great question of their economic emancipation, the mother of all other emancipations.”* [Michael Bakunin, **Op. Cit.**, p. 175]

Before finishing, we must stress that hierarchical education (like the media), cannot remove the effects of actual life and activity in shaping/changing people and their ideas, opinions and attitudes. While education is an essential part of maintaining the status quo and accustoming people to accept hierarchy, the state and wage slavery, it cannot stop individuals from learning from their experiences, ignoring their sense of right and wrong, recognising the injustices of the current system and the ideas that it is based upon. This means that even the best state (or private) education system will still produce rebels — for the **experience** of wage slavery and state oppression (and, most importantly, **struggle**) is shattering to the **ideology** spoon-fed children during their “education” and reinforced by the media.

For more information on Modern Schools see Paul Avrich’s **The Modern School Movement: Anarchism and education in the United States**, Emma Goldman’s essay *“Francisco Ferrer and the Modern School”* in **Anarchism and Other Essays** and A.S Neil’s **Summerhill**. For a good introduction to anarchist viewpoints on education see *“Kropotkin and technical education: an anarchist voice”* by Michael Smith in **For Anarchism** and Michael Bakunin’s *“All-Round Education”* in **The Basic Bakunin**. For an excellent summary of the advantages and benefits of co-operative learning, see Alfie Kohn’s **No Contest**.

J.5.14 What is Libertarian Municipalism?

In his article *“Theses on Libertarian Municipalism”* [in **The Anarchist Papers**, Black Rose Press, 1986], Murray Bookchin has proposed a non-parliamentary electoral strategy for anarchists. He has repeated this proposal in many of his later works, such as **From Urbanisation to Cities** and has made it — at least in the USA — one of the many alternatives anarchists are involved in. The main points of his argument are summarised below, followed by a brief commentary.

According to Bookchin, *“the proletariat, as do all oppressed sectors of society, comes to life when it sheds its industrial habits in the free and spontaneous activity of **communising**, or taking part in the political life of the community.”* In other words, Bookchin thinks that democratisation of local communities may be as strategically important, or perhaps more important, to anarchists than workplace struggles.

Since local politics is humanly scaled, Bookchin argues that it can be participatory rather than parliamentary. Or, as he puts it, *“[t]he anarchic ideal of decentralised, stateless, collectively managed, and directly democratic communities — of confederated municipalities or ‘communes’ — speaks almost intuitively, and in the best works of Proudhon and Kropotkin, consciously, to the transforming role of libertarian municipalism as the framework of a liberatory society. . . .”* He also points out that, historically, the city has been the principle countervailing force to imperial and national states, haunting them as a potential challenge to centralised power and continuing to do so today, as can be seen in the conflicts between national government and municipalities in many countries.

But, despite the libertarian potential of urban politics, “urbanisation” — the growth of the modern megalopolis as a vast wasteland of suburbs, shopping malls, industrial parks, and slums that foster political apathy and isolation in realms of alienated production and private consumption — is antithetical to the continued existence of those aspects of the city that might serve as the framework for a libertarian municipalism. *“When urbanisation will have effaced city life so completely that the city no longer has its own identity, culture, and spaces for consociation, the bases for democracy — in whatever way the word is defined — will have disappeared and the question of revolutionary forms will be a shadow game of abstractions.”*

Despite this danger, however, Bookchin thinks that a libertarian politics of local government is still possible, provided anarchists get their act together. *“The Commune still lies buried in the city council; the sections still lie buried in the neighbourhood; the town meeting still lies buried in the township; confederal forms of municipal association still lie buried in regional networks of towns and cities.”*

What would anarchists do electorally at the local level? Bookchin proposes that they change city and town charters to make political institutions participatory. *“An organic politics based on such radical participatory forms of civic association does not exclude the right of anarchists to alter city and town charters such that they validate the existence of directly democratic institutions. And if this kind of activity brings anarchists into city councils, there is no reason why such a politics should be construed as parliamentary, particularly if it is confined to the civic level and is consciously posed against the state.”*

In a latter essay, Bookchin argues that Libertarian Municipalism *“depends upon libertarian leftists running candidates at the local level, calling for the division of municipalities into wards, where popular assemblies can be created that bring people into full and direct participation in political life . . . municipalities would [then] confederate into a dual power to oppose the nation-state and ultimately dispense with it and with the economic forces that underpin statism as such.”* [Democracy and Nature no. 9, p. 158] This would be part of a social wide transformation, whose *“[m]inimal steps . . . include initiating Left Green municipalist movements that propose neighbourhood and town assemblies*

— even if they have only moral functions at first — and electing town and city councillors that advance the cause of these assemblies and other popular institutions. These minimal steps can lead step-by-step to the formation of confederal bodies. . . Civic banks to fund municipal enterprises and land purchases; the fostering of new ecologically-orientated enterprises that are owned by the community. . . ” [From *Urbanisation to Cities*, p. 266]

Thus Bookchin sees Libertarian Municipalism as a process by which the state can be undermined by using elections as the means of creating popular assemblies. Part of this process, he argues, would be the “municipalisation of property” which would “bring the economy *as a whole* into the orbit of the public sphere, where economic policy could be formulated by the *entire* community.” [Op. Cit. p. 235]

Bookchin considers Libertarian Municipalism as the key means of creating an anarchist society, and argues that those anarchists who disagree with it are failing to take their politics seriously. “It is curious,” he notes, “that many anarchists who celebrate the existence of a ‘collectivised’ industrial enterprise, here and there, with considerable enthusiasm despite its emergence within a thoroughly bourgeois economic framework, can view a municipal politics that entails ‘elections’ of any kind with repugnance, even if such a politics is structured around neighbourhood assemblies, recallable deputies, radically democratic forms of accountability, and deeply rooted localist networks.” [“Theses on Libertarian Municipalism”]

In evaluating Bookchin’s proposal, several points come to mind.

Firstly, it is clear that Libertarian Municipalism’s arguments in favour of community assemblies is important and cannot be ignored. Bookchin is right to note that, in the past, many anarchists placed far too much stress on workplace struggles and workers’ councils as the framework of a free society. Many of the really important issues that affect us cannot be reduced to workplace organisations, which by their very nature disenfranchise those who do not work in industry (such as housewives, the old, and so on). And, of course, there is far more to life than work and so any future society organised purely around workplace organisations is reproducing capitalism’s insane glorification of economic activity, at least to some degree. So, in this sense, Libertarian Municipalism has a very valid point — a free society will be created and maintained within the community as well as in the workplace.

Secondly, Bookchin and other Libertarian Municipalists are totally correct to argue that anarchists should work in their local communities. As noted in section J.5.1, many anarchists are doing just that and are being very successful as well. However, most anarchists reject the idea that using elections are a viable means of “struggle toward creating new civic institutions out of old ones (or replacing the old ones altogether).” [From *Urbanisation to Cities*, p. 267]

The most serious problem has to do with whether politics in most cities has already become too centralised, bureaucratic, inhumanly scaled, and dominated by capitalist interests to have any possibility of being taken over by anarchists running on platforms of participatory democratisation. Merely to pose the question seems enough to answer it. There is no such possibility in the vast majority of cities, and hence it would be a waste of time and energy for anarchists to support libertarian municipalist candidates in local elections — time and energy that could be more profitably spent in direct action. If the central

governments are too bureaucratic and unresponsive to be used by Libertarian Municipalists, the same can be said of local ones too.

The counter-argument to this is that even if there is no chance of such candidates being elected, their standing for elections would serve a valuable educational function. The answer to this is: perhaps, but would it be more valuable than direct action? And would its educational value, if any, outweigh the disadvantages of electioneering mentioned in sections J.2.2 and J.2.4, such as the fact that voting ratifies the current system? Given the ability of major media to marginalise alternative candidates, we doubt that such campaigns would have enough educational value to outweigh these disadvantages. Moreover, being an anarchist does not make one immune to the corrupting effects of electioneering (as highlighted in section J.2.6). History is littered with radical, politically aware movements using elections and ending up becoming part of the system they aimed to transform. Most anarchists doubt that Libertarian Municipalism will be any different — after all, it is the circumstances the parties find themselves in which are decisive, not the theory they hold (the social relations they face will transform the theory, not vice versa, in other words).

Lastly, most anarchists question the whole process on which Libertarian Municipalism bases itself on. The idea of communes is a key one of anarchism and so strategies to create them in the here and now are important. However, to think that using alienated, representative institutions to abolish these institutions is mad. As the Italian activists (who organised a neighbourhood assembly by non-electoral means) argue, “[t]o accept power and to say that the others were acting in bad faith and that we would be better, would **force** non-anarchists towards direct democracy. We reject this logic and believe that organisations must come from the grassroots.” [“Community Organising in Southern Italy”, pp. 16–19, **Black Flag** no. 210, p. 18]

Thus Libertarian Municipalism reverses the process by which community assemblies will be created. Instead of anarchists using elections to build such bodies, they must work in their communities directly to create them (see section J.5.1 — “What is Community Unionism?” for more details). Using the catalyst of specific issues of local interest, anarchists could propose the creation of a community assembly to discuss the issues in question and organise action to solve them. Instead of a “*confederal municipalist movement run[ning] candidates for municipal councils with demands for the institution of public assemblies*” [Murray Bookchin, **Op. Cit.**, p. 229] anarchists should encourage people to create these institutions themselves and empower themselves by collective self-activity. As Kropotkin argued, “*Laws can only **follow** the accomplished facts; and even if they do honestly follow them — which is usually **not** the case — a law remains a dead letter so long as there are not on the spot the living forces required for making the **tendencies** expressed in the law an accomplished **fact**.*” [Kropotkin’s **Revolutionary Pamphlets**, p. 171] Most anarchists, therefore, think it is far more important to create the “*living forces*” within our communities directly than waste energy in electioneering and the passing of laws creating or “legalising” community assemblies. In other words, community assemblies can only be created from the bottom up, by non-electoral means, a process which Libertarian Municipalism confuses with electioneering.

So, while Libertarian Municipalism **does** raise many important issues and correctly stresses the importance of community activity and self-management, its emphasis on electoral activity undercuts its liberatory promise. For most an-

archists, community assemblies can only be created from below, by direct action, and (because of its electoral strategy) a Libertarian Municipalist movement will end up being transformed into a copy of the system it aims to abolish.

J.5.15 What attitude do anarchists take to the welfare state?

Currently we are seeing a concerted attempt to rollback the state within society. This has been begun by the right-wing in the name of “freedom,” “individual dignity and responsibility” and “efficiency.” The position of anarchists to this process is mixed. On the one hand, we are all in favour of reducing the size of the state and increasing individual responsibility and freedom, but, on the other, we are well aware that this process is part of an attack on the working class and tends to increase the power of the capitalists over us as the state’s (direct) influence is reduced. Thus anarchists appear to be on the horns of a dilemma — or, at least, apparently.

So what attitude **do** anarchists take to the welfare state and the current attacks on it? (see next section for a short discussion of business based welfare)

First we must note that this attack of “welfare” is somewhat selective. While using the rhetoric of “self-reliance” and “individualism,” the practitioners of these “tough love” programmes have made sure that the major corporations continue to get state hand-outs and aid while attacking social welfare. In other words, the current attack on the welfare state is an attempt to impose market discipline on the working class while increasing state protection for the ruling class. Therefore, most anarchists have no problem in social welfare programmes as these can be considered as only fair considering the aid the capitalist class has always received from the state (both direct subsidies and protection and indirect support via laws that protect property and so on). And, for all their talk of increasing individual choice, the right-wing remain silent about the lack of choice and individual freedom during working hours within capitalism.

Secondly, most of the right-wing inspired attacks on the welfare state are inaccurate. For example, Noam Chomsky notes that the *“correlation between welfare payments and family life is real, though it is the reverse of what is claimed [by the right]. As support for the poor has declined, unwed birth-rates, which had risen steadily from the 1940s through the mid-1970s, markedly increased. ‘Over the last three decades, the rate of poverty among children almost perfectly correlates with the birth-rates among teenage mothers a decade later,’ Mike Males points out: ‘That is, child poverty seems to lead to teenage childbearing, not the other way around.’”* [“Rollback III”, **Z Magazine**, April, 1995] The same can be said for many of the claims about the evil effects of welfare which the rich and large corporations wish to save others (but not themselves) from. Such altruism is truly heart warming.

Thirdly, we must note that while most anarchists **are** in favour of collective self-help and welfare, we are opposed to the welfare state. Part of the alternatives anarchists try and create are self-managed and communal community welfare projects (see next section). Moreover, in the past, anarchists and syndicalists were at the forefront in opposing state welfare schemes (introduced, we may note, **not** by socialists but by liberals and other supporters of capitalism to

undercut support for radical alternatives and aid long term economic development by creating the educated and healthy population required to use advanced technology and fight wars). Thus we find that:

“Liberal social welfare legislation. . . were seen by many [British syndicalists] not as genuine welfare reforms, but as mechanisms of social control. Syndicalists took a leading part in resisting such legislation on the grounds that it would increase capitalist discipline over labour, thereby undermining working class independence and self-reliance.”
[Bob Holton, **British Syndicalism: 1900–1914**, p. 137]

Anarchists view the welfare state much as some feminists do. While they note the “*patriarchal structure of the welfare state*” they are also aware that it has “*also brought challenges to patriarchal power and helped provide a basis for women’s autonomous citizenship.*” [Carole Pateman, “*The Patriarchal Welfare State*”, in **The Disorder of Women**, p. 195] She does on to note that “*for women to look at the welfare state is merely to exchange dependence on individual men for dependence on the state. The power and capriciousness of husbands is replaced by the arbitrariness, bureaucracy and power of the state, the very state that has upheld patriarchal power. . . [this] will not in itself do anything to challenge patriarchal power relations.*” [**Ibid.**, p. 200]

Thus while the welfare state does give working people more options than having to take **any** job or put up with **any** conditions, this relative independence from the market and individual capitalists has come at the price of dependence on the state — the very institution that protects and supports capitalism in the first place. And as we have become painfully aware in recent years, it is the ruling class who has most influence in the state — and so, when it comes to deciding what state budgets to cut, social welfare ones are first in line. Given that state welfare programmes are controlled by the state, **not** working class people, such an outcome is hardly surprising. Not only this, we also find that state control reproduces the same hierarchical structures that the capitalist firm creates.

Unsurprisingly, anarchists have no great love of such state welfare schemes and desire their replacement by self-managed alternatives. For example, taking municipal housing, Colin Ward writes:

“The municipal tenant is trapped in a syndrome of dependence and resentment, which is an accurate reflection of his housing situation. People care about what is theirs, what they can modify, alter, adapt to changing needs and improve themselves. They must have a direct responsibility for it.

“... The tenant take-over of the municipal estate is one of those obviously sensible ideas which is dormant because our approach to municipal affairs is still stuck in the groves of nineteenth-century paternalism.” [**Anarchy in Action**, p.73]

Looking at state supported education, Ward argues that the “*universal education system turns out to be yet another way in which the poor subsidise the rich.*” Which is the least of its problems, for “*it is in the nature of public authorities to run coercive and hierarchical institutions whose ultimate function*

is to perpetuate social inequality and to brainwash the young into the acceptance of their particular slot in the organised system.” [Op. Cit., p. 83, p. 81]

The role of state education as a means of systematically indoctrinating the working class is reflected in William Lazonick’s essay “*The Subjection of Labour to Capital: The rise of the Capitalist System*”:

“The Education Act of 1870... [gave the] state... the facilities... to make education compulsory for all children from the age of five to the age of ten. It had also erected a powerful system of ideological control over the next generation of workers... [It] was to function as a prime ideological mechanism in the attempt by the capitalist class through the medium of the state, to continually reproduce a labour force which would passively accept [the] subjection [of labour to the domination of capital]. At the same time it had set up a public institution which could potentially be used by the working class for just the contrary purpose.” [Radical Political Economy Vol. 2, p. 363]

Lazonick, as did Pateman, indicates the contradictory nature of welfare provisions within capitalism. On the one hand, they are introduced to help control the working class (and to improve long term economic development). On the other hand, these provisions can be used by working class people as weapons against capitalism and give themselves more options than “work or starve” (the fact that the recent attack on welfare in the UK — called, ironically enough, **welfare to work** — involves losing benefits if you refuse a job is not a surprising development). Thus we find that welfare acts as a kind of floor under wages. In the US, the two have followed a common trajectory (rising together and falling together). And it is **this**, the potential benefits welfare can have for working people, that is the **real** cause for the current capitalist attacks upon it.

Because of this contradictory nature of welfare, we find anarchists like Noam Chomsky arguing that (using an expression popularised by South American rural workers unions) “*we should ‘expand the floor of the cage.’ We know we’re in a cage. We know we’re trapped. We’re going to expand the floor, meaning we will extend to the limits what the cage will allow. And we intend to destroy the cage. But not by attacking the cage when we’re vulnerable, so they’ll murder us... You have to protect the cage when it’s under attack from even worse predators from outside, like private power. And you have to expand the floor of the cage, recognising that it’s a cage. These are all preliminaries to dismantling it. Unless people are willing to tolerate that level of complexity, they’re going to be of no use to people who are suffering and who need help, or, for that matter, to themselves.*” [**Expanding the Floor of the Cage**]

Thus, even though we know the welfare state is a cage and an instrument of class power, we have to defend it from a worse possibility — namely, the state as “pure” defender of capitalism with working people with few or no rights. At least the welfare state does have a contradictory nature, the tensions of which can be used to increase our options. And one of these options is its abolition **from below!**

For example, with regards to municipal housing, anarchists will be the first to agree that it is paternalistic, bureaucratic and hardly a wonderful living experience. However, in stark contrast with the “libertarian” right who desire to

privatise such estates, anarchists think that “*tenants control*” is the best solution as it gives us the benefits of individual ownership **along with** community (and so without the negative points of property, such as social atomisation). And anarchists agree with Colin Ward when he thinks that the demand for “*tenant control*” must come from below, by the “*collective resistance*” of the tenants themselves, perhaps as a growth from struggles against rent increases. [Op. Cit., p. 73]

And it is here that we find the ultimate irony of the right-wing, “free market” attempts to abolish the welfare state — neo-liberalism wants to end welfare **from above**, by means of the state (which is the instigator of this “individualistic” “reform”). It does not seek the end of dependency by self-liberation, but the shifting of dependency from state to charity and the market. In contrast, anarchists desire to abolish welfare from below, by the direct action of those who receive it by a “*multiplicity of mutual aid organisations among claimants, patients, victims*” for this “*represents the most potent lever for change in transforming the welfare state into a genuine welfare society, in turning community care into a caring community.*” [Colin Ward, Op. Cit., p. 125]

Ultimately, unlike the state socialist/liberal left, anarchists reject the idea that the case of socialism, of a free society, can be helped by using the state. Like the right, the left see political action in terms of the state. All its favourite policies have been statist — state intervention in the economy, nationalisation, state welfare, state education and so on. Whatever the problem, the left see the solution as lying in the extension of the power of the state. And, as such, they continually push people in relying on **others** to solve their problems for them (moreover, such state-based “aid” does not get to the core of the problem. All it does is fight the symptoms of capitalism and statism without attacking their root causes — the system itself).

Invariably, this support for the state is a move away from working class people, of trusting and empowering them to sort out their own problems. Indeed, the left seem to forget that the state exists to defend the collective interests of capitalists and other sections of the ruling class and so could hardly be considered a neutral body. And, worst of all, they have presented the right with the opportunity of stating that freedom from the state means the same thing as the freedom of the market (and as we have explained in detail in sections B, C and D, capitalism is based upon domination — wage labour — and needs many repressive measures in order to exist and survive). Anarchists are of the opinion that changing the boss for the state (or vice versa) is only a step sideways, **not** forward! After all, it is **not** working people who control how the welfare state is run, it is politicians, “experts” and managers who do so. Little wonder we have seen elements of the welfare state used as a weapon in the class war **against** those in struggle (for example, in Britain during the 1980s the Conservative Government made it illegal to claim benefits while on strike, so reducing the funds available to workers in struggle and helping bosses force strikers back to work faster).

Therefore, anarchists consider it far better to encourage those who suffer injustice to organise themselves and in that way they can change what **they** think is actually wrong, as opposed to what politicians and “experts” claim is wrong. If sometimes part of this struggle involves protecting aspects of the welfare state (“*expanding the floor of the cage*”) so be it — but we will never stop there and will use such struggles as a step in abolishing the welfare state

from below by creating self-managed, working class, alternatives. As part of this process anarchists also seek to **transform** those aspects of the welfare state they may be trying to “protect”. They do not defend an institution which **is** paternalistic, bureaucratic and unresponsive. For example, if we are involved in trying to stop a local state-run hospital or school from closing, anarchists would try to raise the issue of self-management and local community control into the struggle in the hope of going beyond the status quo.

Not only does this mean that we can get accustomed to managing our own affairs collectively, it also means that we can ensure that whatever “safety-nets” we create for ourselves do what we want and not what capital wants. In the end, what we create and run by our own activity will be more responsive to our needs, and the needs of the class struggle, than reformist aspects of the capitalist state. This much, we think, is obvious. And it is ironic to see elements of the “radical” and “revolutionary” left argue against this working class self-help (and so ignore the **long** tradition of such activity in working class movements) and instead select for the agent of their protection a state run by and for capitalists!

There are two traditions of welfare within society, one of “*fraternal and autonomous associations springing from below, the other that of authoritarian institutions directed from above.*” [Colin Ward, **Op. Cit.**, p. 123] While sometimes anarchists are forced to defend the latter against the greater evil of “free market” corporate capitalism, we never forget the importance of creating and strengthening the former. A point we will discuss more in section J.5.16 when we highlight the historical examples of self-managed communal welfare and self-help organisations.

J.5.16 Are there any historical examples of collective self-help?

Yes, in all societies we see working people joining together to practice mutual aid and solidarity. These take many forms, such as trade and industrial unions, credit unions and friendly societies, co-operatives and so on, but the natural response of working class people to the injustices of capitalism was to practice collective “self-help” in order to improve their lives and protect their friends, communities and fellow workers.

Unfortunately, this “*great tradition of working class self-help and mutual aid was written off, not just as irrelevant, but as an actual impediment, by the political and professional architects of the welfare state. . . The contribution that the recipients had to make to all this theoretical bounty was ignored as a mere embarrassment — apart, of course, for paying for it. . . The socialist ideal was rewritten as a world in which everyone was entitled to everything, but where nobody except the providers had any actual say about anything. We have been learning for years, in the anti-welfare backlash, what a vulnerable utopia that was.*” [Colin Ward, **Social Policy: an anarchist response**, p. 3]

Ward terms this self-help (and self-managed) working class activity the “*welfare road we failed to take.*”

Indeed, anarchists would argue that self-help is the natural side effect of freedom. There is no possibility of radical social change unless people are free to decide for themselves what their problems are, where their interests lie and

are free to organise for themselves what they want to do about them. Self-help is a natural expression of people taking control of their own lives and acting for themselves. Anyone who urges state action on behalf of people is no socialist and any one arguing against self-help as “bourgeois” is no anti-capitalist. It is somewhat ironic that it is the right who have monopolised the rhetoric of “self-help” and turned it into yet another ideological weapon against working class direct action and self-liberation (although, saying that, the right generally likes individualised self-help — given a strike or squatting or any other form of **collective** self-help movement they will be the first to denounce it):

“The political Left has, over the years, committed an enormous psychological error in allowing this kind of language [“self-help”, “mutual aid”, “standing on your own two feet” and so on] to be appropriated by the political Right. If you look at the exhibitions of trade union banners from the last century, you will see slogans like Self Help embroidered all over them. It was those clever Fabians and academic Marxists who ridiculed out of existence the values by which ordinary citizens govern their own lives in favour of bureaucratic paternalising, leaving those values around to be picked up by their political opponents.” [Colin Ward, **Talking Houses**, p. 58]

We cannot be expected to provide an extensive list of working class collective self-help and social welfare activity here, all we can do is present an overview. For a discussion of working class self-help and co-operation through the centuries we can suggest no better source than Kropotkin’s **Mutual Aid**. Here we will (using other sources than **Mutual Aid**) indicate a few examples of collective welfare in action.

In the case of Britain, we find that the “*newly created working class built up from nothing a vast network of social and economic initiatives based on self-help and mutual aid. The list is endless: friendly societies, building societies, sick clubs, coffin clubs, clothing clubs, up to enormous federated enterprises like the trade union movement and the Co-operative movement.*” [Colin Ward, **Social Policy: an anarchist response**, p. 2]

The historian E.P. Thompson confirms this picture of a wide network of working class self-help organisations:

“Small tradesmen, artisans, labourers — all sought to insure themselves against sickness, unemployment, or funeral expenses through membership of . . . friendly societies.” These were “*authentic evidence of independent working-class culture and institutions . . . out of which . . . trade unions grew, and in which trade union officers were trained.*” Friendly societies “*did not ‘proceed from’ an idea: both the ideas and institutions arose from a certain common experience . . . In the simple cellular structure of the friendly society, with its workaday ethos of mutual aid, we see many features which were reproduced in more sophisticated and complex form in trade unions, co-operatives, Hampden clubs, Political Unions, and Chartist lodges. . . Every kind of witness in the first half of the nineteenth century — clergymen, factory inspectors, Radical publicists — remarked upon the extent of mutual aid in the poorest districts. In times of emergency, unemployment, strikes, sickness, childbirth, then it was the poor who ‘helped every one his neighbour.’*” [The Making of the English Working Class, p. 458, pp. 460–1, p. 462]

Taking the United States, Sam Dolgoff presents an excellent summary of similar self-help activities by the American working class:

“Long before the labour movement got corrupted and the state stepped in, the workers organised a network of co-operative institutions of all kinds: schools, summer camps for children and adults, homes for the aged, health and cultural centres, credit associations, fire, life, and health insurance, technical education, housing, etc.” [**The American Labour Movement: A New Beginning**, p. 74]

Dolgoff, like all anarchists, urges workers to “*finance the establishment of independent co-operative societies of all types, which will respond adequately to their needs*” and that such a movement “*could constitute a realistic alternative to the horrendous abuses of the ‘establishment’ at a fraction of the cost.*” [**Op. Cit.**, p. 74, pp. 74–75]

In this way a network of self-managed, communal, welfare associations and co-operatives could be built — paid for, run by and run for working class people. Such a network could be initially build upon, and be an aspect of, the struggles of claimants, patients, tenants, and other users of the current welfare state (see last section).

The creation of such a co-operative, community-based, welfare system will not occur over night. Nor will it be easy. But it **is** possible, as history shows. And, of course, it will have its problems, but as Colin Ward notes, that “*the standard argument against a localist and decentralised point of view, is that of universalism: an equal service to all citizens, which it is thought that central control achieves. The short answer to this is that it doesn’t!*” [Colin Ward, **Op. Cit.**, p. 6] He notes that richer areas generally get a better service from the welfare state than poorer ones, thus violating the claims of equal service. And a centralised system (be it state or private) will most likely allocate resources which reflect the interests and (lack of) knowledge of bureaucrats and experts, **not** on where they are best used or the needs of the users.

Anarchists are sure that a **confederal** network of mutual aid organisations and co-operatives, based upon local input and control, can overcome problems of localism far better than a centralised one — which, due to its lack of local input and participation will more likely **encourage** parochialism and indifference than a wider vision and solidarity. If you have no real say in what affects you, why should you be concerned with what affects others? Centralisation leads to disempowerment, which in turn leads to indifference, **not** solidarity. Rudolf Rocker reminds us of the evil effects of centralism when he writes:

“For the state centralisation is the appropriate form of organisation, since it aims at the greatest possible uniformity in social life for the maintenance of political and social equilibrium. But for a movement whose very existence depends on prompt action at any favourable moment and on the independent thought and action of its supporters, centralism could but be a curse by weakening its power of decision and systematically repressing all immediate action. If, for example, as was the case in Germany, every local strike had first to be approved by the Central, which was often hundreds of miles away and was not usually in a position to pass a correct judgement on

the local conditions, one cannot wonder that the inertia of the apparatus of organisation renders a quick attack quite impossible, and there thus arises a state of affairs where the energetic and intellectually alert groups no longer serve as patterns for the less active, but are condemned by these to inactivity, inevitably bringing the whole movement to stagnation. Organisation is, after all, only a means to an end. When it becomes an end in itself, it kills the spirit and the vital initiative of its members and sets up that domination by mediocrity which is the characteristic of all bureaucracies. [Anarcho-Syndicalism, p. 54]

And, as an example, he notes that while the highly centralised German labour movement “*did not raise a finger to avert the catastrophe*” of Hitler’s seizing power and “*which in a few months beat their organisation completely to pieces*” the exact opposite happened in Spain (“*where Anarcho-Syndicalism had maintained its hold upon organised labour from the days of the First International*”). There the anarcho-syndicalist C.N.T. “*frustrated the criminal plans of Franco*” and “*by their heroic example spurred the Spanish workers and peasants to the battle.*” Without the heroic resistance of the Anarcho-Syndicalist labour unions the Fascist reaction would have dominated the whole country in a matter of weeks. [Op. Cit., p. 53]

This is unsurprising, for what else is global action other than the product of thousands of local actions? Solidarity within our class is the flower that grows from the soil of our local self-activity, direct action and self-organisation. Unless we act and organise locally, any wider organisation and action will be hollow. Thus **local** organisation and empowerment is essential to create and maintain wider organisations and mutual aid.

To take another example of the benefits of a self-managed welfare system, we find that it “*was a continual complaint of the authorities [in the late eighteenth and early nineteenth century] that friendly societies allowed members to withdraw funds when on strike.*” [E.P. Thompson, Op. Cit., p. 461f] The same complaints were voiced in Britain about the welfare state allowing strikers to claim benefit while on strike. The Conservative Government of the 1980s changed that by passing a law barring those in industrial dispute to claim benefits — and so removing a potential support for those in struggle. Such a restriction would have been far harder (if not impossible) to impose on a network of self-managed mutual aid co-operatives. And such institutions would have not become the plaything of central government financial policy as the welfare state and the taxes working class people have to pay have become.

All this means that anarchists reject totally the phoney choice between private and state capitalism we are usually offered. We reject both privatisation **and** nationalisation, both right and left wings (of capitalism). Neither state nor private health care are user-controlled — one is subject to the requirements of politics and the other places profits before people. As we have discussed the welfare state in the last section, it is worthwhile to quickly discuss privatised welfare and why most anarchists reject this option even more than state welfare.

Firstly, all forms of private healthcare/welfare has to pay dividends to capitalists, fund advertising, reduce costs to maximise profits by standardising the “caring” process — i.e. McDonaldisation — and so on, all of which inflates prices and produces substandard service across the industry as a whole. According to

Alfie Kohn, the “[m]ore hospitals and clinics are being run by for-profit corporations; many institutions, forced to battle for ‘customers,’ seem to value a skilled director of marketing more highly than a skilled caregiver. As in any other economic sector, the race for profits translates into pressure to reduce costs, and the easiest way to do it here is to cut back on services to unprofitable patients, that is, those who are more sick than rich . . .” “The result: hospital costs are actually **higher** in areas where there is more competition for patients.” [Alfie Kohn, **No Contest**, p. 240] In the UK, attempts to introduce “market forces” into the National Health Service also lead to increased costs as well as inflating the services bureaucracy.

Looking at Chile, hyped by those who desire to privatise Social Security, we find similar disappointing results (well, disappointing for the working class at least, as we will see). Seemingly, Chile’s private system has achieved impressive average returns on investment. However, once commissions are factored in, the real return for individual workers is considerably lower. For example, although the average rate of return on funds from 1982 through 1986 was 15.9 percent, the real return after commissions was a mere 0.3 percent! Between 1991 and 1995, the pre-commission return was 12.9 percent, but with commissions it fell to 2.1 percent. According to Doug Henwood, the “*competing mutual funds have vast sales forces, and the portfolio managers all have their vast fees. All in all, administrative costs . . . are almost 30% of revenues, compared to well under 1% for the U.S. Social Security system.*” [**Wall Street**, p. 305] Although market competition was supposed to lower commissions in Chile, the private pension fund market is dominated by a handful of companies. These, according to economists Peter Diamond and Salvador Valdes-Prieto, form a “*monopolistic competitive market*” rather than a truly competitive one. A similar process seems to be taking place in Argentina, where commissions have remained around 3.5 percent of taxable salary. As argued in section C.4, such oligopolistic tendencies are inherent in capitalism and so this development is not unexpected.

Even if commission costs were lowered (perhaps by regulation), the impressive returns on capital seen between 1982 and 1995 (when the real annual return on investment averaged 12.7 percent) are likely not to be sustained. These average returns coincided with boom years in Chile, complemented by government’s high borrowing costs. Because of the debt crisis of the 1980s, Latin governments were paying double-digit real interest rates on their bonds — the main investment vehicle of social security funds. In effect, government was subsidising the “private” system by paying astronomical rates on government bonds.

Another failing of the system is that only a little over half of Chilean workers make regular social security contributions. While many believe that a private system would reduce evasion because workers have a greater incentive to contribute to their own personal retirement accounts, 43.4 percent of those affiliated with the new system in June of 1995 did not contribute regularly (see Stephen J. Kay, “*The Chile Con: Privatizing Social Security in South America,*” **The American Prospect** no. 33, July-August 1997, pp. 48–52 for details).

All in all, privatisation seems to be beneficial only to middle-men and capitalists, if Chile is anything to go by. As Henwood argues, while the “*infusion of money*” resulting from privatising social security “*has done wonders for the Chilean stock market*” “*projections are that as many as half of future retirees will draw a poverty-level pension.*” [**Op. Cit.**, pp. 304–5]

So, anarchists reject private welfare as a con (and an even bigger one than

state welfare). Instead we try to create **real** alternatives to hierarchy, be it state or capitalist, in the here and now which reflect our ideas of a free and just society. For, when it boils down to it, freedom cannot be given, only taken and this process of **self**-liberation is reflected in the alternatives we build to help win the class war.

The struggle **against** capitalism and statism requires that we build **for** the future (*“the urge to destroy is a creative urge”* — Bakunin) and, moreover, we should remember that *“he who has no confidence in the creative capacity of the masses and in their capability to revolt doesn’t belong in the revolutionary movement. He should go to a monastery and get on his knees and start praying. Because he is no revolutionist. He is a son of a bitch.”* [Sam Dolgoff, quoted by Ulrike Heider, **Anarchism: left, right, and green**, p. 12]

J.6 What methods of child rearing do anarchists advocate?

Anarchists have long been aware of the importance of child rearing and education. As such, we are aware that child rearing should aim to develop “*a well-rounded individuality*” and not “*a patient work slave, professional automaton, tax-paying citizen, or righteous moralist.*” [Emma Goldman, **Red Emma Speaks**, p. 108] In this section of the FAQ we will discuss anarchist approaches to child rearing bearing in mind “*that it is through the channel of the child that the development of the mature man must go, and that the present ideas of . . . educating or training . . . are such as to stifle the natural growth of the child.*” [Ibid., p. 107]

If one accepts the thesis that the authoritarian family is the breeding ground for both individual psychological problems and political reaction, it follows that anarchists should try to develop ways of raising children that will not psychologically cripple them but instead enable them to accept freedom and responsibility while developing natural self-regulation. We will refer to children raised in such a way as “*free children.*”

Work in this field is still in its infancy (no pun intended). Wilhelm Reich is again the main pioneer in this field (an excellent, short introduction to his ideas can be found in Maurice Brinton’s **The Irrational in Politics**). In **Children of the Future**, Reich made numerous suggestions, based on his research and clinical experience, for parents, psychologists, and educators striving to develop libertarian methods of child rearing. (He did not use the term “libertarian,” but that is what his methods are.)

Hence, in this and the following sections we will summarise Reich’s main ideas as well as those of other libertarian psychologists and educators who have been influenced by him, such as A.S. Neill and Alexander Lowen. Section J.6.1 will examine the theoretical principles involved in raising free children, while subsequent sections will illustrate their practical application with concrete examples. Finally, in section J.6.8, we will examine the anarchist approach to the problems of adolescence.

Such an approach to child rearing is based upon the insight that children “*do not constitute anyone’s property: they are neither the property of the parents nor even of society. They belong only to their own future freedom.*” [Michael Bakunin, **The Political Philosophy of Bakunin**, p. 327] As such, what happens to a child when it is growing up **shapes** the person they become and

the society they live in. The key question for people interested in freedom is whether “*the child [is] to be considered as an individuality, or as an object to be moulded according to the whims and fancies of those about it?*” [Emma Goldman, **Op. Cit.**, p. 107] Libertarian child rearing is the means by which the individuality of the child is respected and developed.

This is in stark contrast to standard capitalist (and individualist anarchist we should note) claim that children are the **property** of their parents. If we accept that children **are** the property of their parents then we are implicitly stating that a child’s formative years are spent in slavery, hardly a relationship which will promote the individuality and freedom of the child or the wider society. Little wonder that most anarchists reject such assertions. Instead they argue that the “*rights of the parents shall be confined to loving their children and exercising over them . . . authority [that] does not run counter to their morality, their mental development, or their future freedom.*” [Bakunin, **Op. Cit.**, p. 327] Being someone’s property (i.e. slave) runs counter to all these and “*it follows that society, the whole future of which depends upon adequate education and upbringing of children. . . , has not only the right but also the duty to watch over them. . .*” [**Ibid.**, p. 327]

Hence child rearing is **part** of society, a communal process by which children learn what it means to be an individual by being respected as one by others. In Bakunin’s words, “*real freedom — that is, the full awareness and the realisation thereof in every individual, pre-eminently based upon a feeling of one’s dignity and upon the genuine respect for someone else’s freedom and dignity, i.e. upon justice — such freedom can develop in children only through the rational development of their minds, character and will.*” [**Op. Cit.**, p. 327]

We wish to point out at the beginning that a great deal of work remains to be done in this field. Therefore our comments should be regarded merely as tentative bases for further reflection and research by those involved with raising and educating children. There is, and cannot be, any “rule book” for raising free children, because to follow an inflexible rule book is to ignore the fact that each child and its environment is unique and therefore demands unique responses from its parents. Hence the “principles” of libertarian child rearing to which we will refer should not be thought of as rules, but rather, as experimental hypotheses to be tested by parents within their own situation by applying their intelligence and deriving their own individual conclusions.

Bringing up children must be like education, and based on similar principles, namely “*upon the free growth and development of the innate forces and tendencies of the child. In this way alone can we hope for the free individual and eventually also for a free community, which shall make interference and coercion of human growth impossible.*” [Goldman, **Op. Cit.**, p. 115] Indeed, child rearing and education **cannot** be separated as life itself is an education and so must share the same principles and viewed as a process of “*development and exploration, rather than as one of repressing a child’s instincts and inculcating obedience and discipline.*” [Martha A. Ackelsberg, **Free Women of Spain**, p. 132]

Moreover, the role of parental example is very important to raising free children. Children often learn by mimicking their parents — children do what their parents do, not as they say. If their mother and father lie to each other, scream, fight and so on, then the child will probably do so as well. Children’s behaviour does not come out thin air, they are a product of the environment they

are brought up in (partly by, initially at least, copying the parent). Children can only be encouraged by example, not by threats and commands. How parents act can be an obstacle to the development of a free child. Parents must, therefore, be aware that they must do more than just **say** the right things, but also act as anarchists in order to produce free children.

The sad fact is that most modern people have lost the ability to raise free children, and regaining this ability will be a long process of trial and error and parent education in which it is to be hoped that each succeeding generation will learn from the failures and successes of their predecessors, and so improve. In the best-case scenario, over the course of a few generations the number of progressive parents will continue to grow and raise ever freer children, who in turn will become even more progressive parents themselves, thus gradually changing mass psychology in a libertarian direction. Such changes **can** come about very fast, as can be seen from various communes all over the world and especially in the Israel-Palestine kibbutz where society is organised according to libertarian principles, and children are mainly growing in their collective homes. As Reich puts it:

“We have learned that instead of a jump into the realm of the Children of the Future, we can hope for no more than a steady advance, in which the healthy new overlaps the sick old structure, with the new slowly outgrowing the old.” [**Children of the Future**, pp. 38–39]

By means of freedom-based child rearing and education, along with other methods of consciousness raising, as well as encouraging resistance to the existing social order anarchists hope to prepare the psychological foundation for a social paradigm shift, from authoritarian to libertarian institutions and values. And indeed, a gradual cultural evolution toward increasing freedom does seem to exist. For example, as A.S. Neill writes in **Summerhill**, *“There is a slow trend to freedom, sexual and otherwise. In my boyhood, a woman went bathing wearing stockings and a long dress. Today, women show legs and bodies. Children are getting more freedom with every generation. Today, only a few lunatics put cayenne pepper on a baby’s thumb to stop sucking. Today, only a few countries beat their children in school.”* [p. 115]

Most anarchists believe that, just as charity begins at home, so does the anarchist revolution. As some anarchists raise their own children in capitalist society and/or are involved in the raising and education of the children of other parents, they can practice in part libertarian principles even before the revolution. Hence we think it is important to discuss libertarian child rearing in some detail.

J.6.1 What are the main principles of raising free children and the main obstacles to implementing those principles?

Let’s consider the obstacles first. As Reich points out, the biggest one is the training and character of most parents, physicians, and educators. Based on his clinical experience, Reich maintained that virtually all adults in our society have some degree of psychological problems, which is manifested somatically as a rigid

muscular “*armour*”: chronic muscular tensions and spasms in various regions of the body. One of the main functions of this armour is to inhibit the pleasurable sensations of life-energy that naturally “*stream*” or flow through an unarmoured body. Reich postulated that there is one basic bioenergy (“*orgone*”) in the body, identical with what Freud called “*libido*,” which, besides animating the tissues and organs is also the energy of sex and the emotions (we should note that most anarchists do not subscribe to Reich’s idea of “orgone” — the existence of which, we may note, has not been proved. However, the idea of character armour, by which individuals within a hierarchical society create psychological walls/defences around themselves is one most anarchists accept. Such walls will obviously have an effect both on the mental and physical state of the individual, and their capacity for living a free life and experiencing pleasure). This means that the pleasurable “streamings” of this bioenergy, which can be felt when the muscular armour is relaxed, have an erotic or “libidinous” quality. Thus an unarmoured organism (such as a new-born infant) automatically experiences pleasure with every breath, a pleasure derived from perception of the natural bioenergetic processes within its body. Such a mode of being in the world makes life intrinsically worth living and renders superfluous all questions about its “meaning” or “purpose” — questions that occur only to armoured people, who have lost contact with their bioenergetic core of bodily sensations (or it is distorted, and so is changed from a source of pleasures to a source of suffering) and thus restricts their capacity to fully enjoy life.

It is important for those involved in child rearing and education to understand how armouring develops in the new-born child. Reich points out that under the influence of a compulsive, pleasure-denying morality, children are taught to inhibit the spontaneous flow of life-energy in the body. Similarly, they are taught to disregard most bodily sensations. Due to Oedipal conflicts in the patriarchal family (see below), parents usually take the most severely repressive disciplinary measures against sexual expressions of life-energy in children. Thus, all erotic feelings, including the erotically-tinged “streaming” sensations, come to be regarded as “bad,” “animalistic,” etc., and so their perception begins to arouse anxiety, which leads, among other bad results, to chronic muscular tensions as a way of cutting off or defending against such perceptions and their attendant anxiety. Shallow breathing, for example, reduces the amount of life-energy available to flow into excitation and emotion; tightening the muscles of the pelvic floor and abdomen reduces sexual feelings, and so on. As these tensions become chronic and unconscious, piling up in layer after layer of muscular armour, the person is eventually left with a feeling of inner emptiness or “deadness” and — not surprisingly — a lack of joy in life.

For those who fail to build a stable physical and psychological armour around themselves to suppress these feelings and sensation, they just twist them and are flooded again and again with intense unpleasant feelings and sensations.

Muscular armouring has its most profound effect on back pains and various respiration problems. Reich found that the “normal” man or woman in our society **cannot** spontaneously take full, deep, natural breaths, which involves both the chest and abdomen. Instead, most people (except when making a conscious effort) restrict their breathing through unconscious tensing of various muscles. Since the natural response to any restriction in the ability to breathe is anxiety, people growing up in repressive cultures such as ours are plagued by a tendency toward chronic anxiety. As a defence against this anxiety, they

develop further layers of muscular armouring, which further restricts their ability to breathe, and so on, in a vicious circle. In other words, it is **literally** true that, as Max Stirner said, one cannot “*take breath*” in our authoritarian society with its life-denying atmosphere based on punishments, threats, and fear.

Of course sex is not the only expression of life-energy that parents try to stifle in children. There are also, for example, the child’s natural vocal expressions (shouting, screaming, bellowing, crying, etc.) and natural body motility. As Reich notes,

“Small children go through a phase of development characterised by vigorous activity of the voice musculature. The joy the infant derives from loud noises (crying, shrieking, and forming a variety of sounds) is regarded by many parents as pathological aggressiveness. The children are accordingly admonished not to scream, to be ‘still,’ etc. The impulses of the voice apparatus are inhibited, its musculature becomes chronically contracted, and the child becomes quiet, ‘well-brought-up,’ and withdrawn. The effect of such mistreatment is soon manifested in eating disturbances, general apathy, pallor of the face, etc. Speech disturbances and retardation of speech development are presumably caused in this manner. In the adult we see the effects of such mistreatment in the form of spasms of the throat. The automatic constrictions of the glottis and the deep throat musculature, with subsequent inhibition of the aggressive impulses of the head and neck, seems to be particularly characteristic.” [Op. Cit., p. 128]

(And we must add, that the suppression of the urge to move all children have is most destructive to the 15% or so of “Hyper-active” children, whose urge to move is hard to suppress.)

“Clinical experience has taught us,” Reich concludes, *“that small children must be allowed to ‘shout themselves out’ when the shouting is inspired by pleasure. This might be disagreeable to some parents, but questions of education must be decided **exclusively in the interests of the child**, not in those of the adults.” [Ibid.]*

Besides deadening the pleasurable streamings of life energy in the body, muscular armouring also functions to inhibit the anxiety generated by the presence of anti-social, cruel, and perverse impulses within the psyche (impulses referred to by Reich as “*secondary*” drives) — for example, destructiveness, sadism, greed, power hunger, brutality, rape fantasies, etc. Ironically, these secondary drives result from the **suppression of the primary drives** (e.g. for sex, physical activity, vocal expression, etc.) and the sensations of pleasure associated with them. The secondary drives develop because, when muscular armouring sets in and a person loses touch with his or her bioenergetic core and other emotional urges, the only emotional expressions that can get through the thick, hard wall of armour are distorted, harsh, and/or mechanical. Thus, for example, a heavily armoured person who tries to express love may find that the emotion is shredded by the wall of armour and comes out in distorted form as an impulse to hurt the person loved (sadism) — an impulse that causes anxiety and then has to be repressed. In other words, compulsive morality (i.e. acting according to externally imposed rules) becomes necessary to control the secondary drives **which compulsion itself creates**. By such processes, authoritarian child-rearing becomes self-justifying. Thus:

*“Psychoanalysts have failed to distinguish between primary natural and secondary perverse, cruel drives, and they are continuously killing nature in the new-born while they try to extinguish the ‘brutish little animal.’ They are completely ignorant of the fact that it is **exactly this killing of the natural principle which creates the secondary perverse and cruel nature**, human nature so called, and that these artificial cultural creations in turn make compulsive moralism and brutal laws necessary” [Ibid., p. 17–18].*

Moralism, however, can never get at the root of the problem of secondary drives, but in fact only increases the pressure of crime and guilt. The real solution is to let children develop what Reich calls **natural self-regulation**. This can be done only by not subjecting them to punishment, coercion, threats, moralistic lectures and admonitions, withdrawal of love, etc. in an attempt to inhibit their spontaneous expression of natural life-impulses. The systematic development of the emphatic tendencies of the young infant is the best way to “socialise” and restrict activities that are harmful to the others. As A.S. Neill points out, *“self-regulation implies a belief in the goodness of human nature; a belief that there is not, and never was, original sin.”* [Op. Cit., p. 103]

According to Neill, children who are given freedom from birth and not forced to conform to parental expectations spontaneously learn how to keep themselves clean and develop social qualities like courtesy, common sense, an interest in learning, respect for the rights of others, and so forth (see next section). However, once the child has been armoured through authoritarian methods intended to **force** it to develop such qualities, it becomes what Reich calls *“biopathic”* — out of touch with its living core and therefore no longer able to develop self-regulation. In this stage it becomes harder and harder for the pro-social emotions to shape the developing mode of life of the new member of society. At that point, when the secondary drives develop, parental authoritarianism becomes a **necessity**. As Reich puts it:

“This close interrelation between biopathic behaviour and authoritarian countermeasures seems to be automatic. Self-regulation appears to have no place in and no influence upon emotions which do not come from the living core directly but only as if through a thick hard wall. Moreover, one has the impression that secondary drives cannot stand self-regulatory conditions of existence. They force sharp discipline on the part of the educator or parent. It is as if a child with an essentially secondary-drive structure feels that it cannot function or exist without disciplinary guidance. This is paralleled by the interlacing of self-regulation in the healthy child with self-regulation in the environment. Here the child cannot function unless it has freedom of decision and movement. It cannot tolerate discipline any more than the armoured child can tolerate freedom.”

This inability to tolerate freedom, which the vast majority of people develop **automatically** from the way they are raised, is what makes the whole subject of armouring and its prevention of crucial importance to anarchists. Reich concludes that if parents do not suppress nature in the first place, then no anti-social drives will be created and no authoritarianism will be required to suppress them: *“What you so desperately and vainly try to achieve by way of*

compulsion and admonition is there in the new-born infant ready to live and function. Let it grow as nature requires, and change our institutions accordingly” [Ibid., p. 47, emphasis in original].

As Alexander Lowen points out in **Fear of Life**, parents are particularly anxious to suppress the sexual expressions of life energy in their children because of unresolved Oedipal conflicts within themselves.

Hence, in order to raise psychologically healthy children, parents need to acquire self-knowledge, particularly of how Oedipal conflicts, sibling rivalry, and other internal conflicts develop in family relationships, and to free themselves as much as possible from neurotic forms of armouring. The difficulty of parents acquiring such self-knowledge and sufficiently de-conditioning themselves is obviously another obstacle to raising self-regulated children.

However, the greatest obstacle is the fact that armouring and other twisting mechanisms set in so very early in life, i.e. soon after birth. Reich emphasises that **with the first armour blockings, the infant’s self-regulatory powers begin to wane.** *“They become steadily weaker as the armouring spreads over the whole organism, and they **must** be replaced by compulsive, moral principles if the child is to exist and survive in its given environment.”* [Ibid., pp. 44–45] Hence it is important for parents to obtain a thorough knowledge of what armouring and other rigid suppressions are and how they function, so that from the beginning they can prevent (or at least decrease) them from forming in their children. Some practical examples of how this can be done will be discussed in the next section.

Finally, Reich cautions that it is crucial to avoid any mixing of concepts. *“One cannot mix a bit of self-regulation with a bit of moral demand. Either we trust nature as basically decent and self-regulatory or we do not, and then there is only one way, that of training by compulsion. It is essential to grasp the fact that the two ways of upbringing do not go together.”* [Ibid., p. 46]

J.6.2. What are some examples of libertarian child-rearing methods applied to the care of newborn infants?

According to Reich, the problems of parenting a free child actually begin before conception, with the need for a prospective mother to free herself as much as possible from chronic muscular tensions, especially in the pelvic area, which may inhibit the optimal development of a foetus. As Reich points out, the mother’s body provides the environment for the child from the moment the embryo is formed until the moment of birth, and strong muscular armouring in her pelvis as a result of sexual repression or other emotional problems is very detrimental. Such a mother will have a bioenergetically “dead” and possibly spastic uterus, which can traumatise an infant even before it is born by reducing the circulation of blood and body fluids and making the energy metabolism inefficient, thus damaging the child’s vitality.

Moreover, it has been found in many studies that not only the physical health of the mother can influence the foetus. Various psychological stresses influence the chemical and hormonal environment, affecting the foetus. Even short ones, when acute, can have significant effects on it.

Immediately after birth, it is important for the mother to establish contact with her child. This means, basically, constant loving attention to the baby, expressed by plenty of holding, cuddling, playing, etc., and especially by breast feeding. By such “*orgonotic*” contact (to use Reich’s term), the mother is able to establish the initial emotional bonding with the new born, and a non-verbal understanding of the child’s needs. This is only possible, however, if she is in touch with her own internal processes — emotional and cognitive — and bioenergetic core, i.e. is not too neurotically armoured (in Reich’s terminology). Thus:

*“The orgonotic sense of contact, a function of the . . . energy field of both the mother and the child, is unknown to most specialists; however, the old country doctor knew it well. . . **Orgonotic contact is the most essential experiential and emotional element in the interrelationship between mother and child, particularly prenatally and during the first days and weeks of life. The future fate of the child depends on it. It seems to be the core of the new-born infant’s emotional development.**” [Ibid. p. 99]*

It is less crucial but still important for the father to establish orgonotic contact as well, although since fathers lack the primary means of establishing it — namely the ability to breast feed — their contact can never be as close as the mother’s (see below).

A new-born child has only one way of expressing its needs: through crying. Crying has many nuances and can convey much more than the level of distress of the child. If a mother is unable to establish contact at the most basic emotional (“*bioenergetic*,” according to Reich) level, she will be unable to understand intuitively what needs the child is expressing through its crying. Any unmet needs will in turn be felt by the child as a deprivation, to which it will respond with a wide array of negative emotions and deleterious physiological processes and emotional tension. If continued for long, such tensions can become chronic and thus the beginning of “*armouring*” and adaptation to a “cruel” reality.

The most important factor in the establishment of bonding is the tender physical contact between mother and infant is undoubtedly breast feeding. Thus:

*“The most salient place of contact in the infant’s body is the bioenergetically highly charged mouth and throat. This body organ reaches out immediately for gratification. **If the nipple of the mother reacts to the infant’s sucking movements in a biophysically normal manner with sensations of pleasure, it will become strongly erect and the orgonotic excitation of the nipple will become one with that of the infant’s mouth, just as in the orastically gratifying sexual act, in which the male and female genitals luminate and fuse orgonotically.** There is nothing ‘abnormal’ or ‘disgusting’ in this. Every healthy mother experiences the sucking as pleasure and yields to it. . . However, about 80 percent of all women suffer from vaginal anaesthesia and frigidity. Their nipples are correspondingly anorgonotic, i.e. ‘dead.’ The mother may develop anxiety or loathing in response to what would*

naturally be a sensation of pleasure aroused in the breast by the infant's sucking. This is why so many mothers do not want to nurse their babies." [pp. 115–116]

Reich and other libertarian psychologists therefore maintain that the practice of bottle feeding is harmful, particularly if it completely replaces breast feeding from the day of birth, because it eliminates one of the most important forms of establishing bioenergetic contact between mother and child. This lack of contact can then contribute in later life to "oral" forms of neurotic character structure or traits. (For more on these, see Alexander Lowen, **Physical Dynamics of Character Structure**, Chapter 9, "The Oral Character"). Lowen believes that the practice of breast feeding should be continued for about three years, as it usually is among "primitive" peoples, and that weaning before this time is experienced as a major trauma. "[I]f the breast is available to a child for about three years, which I believe to be the time required to fulfil a child's oral needs, weaning causes very little trauma, since the loss of this pleasure is offset by the many other pleasures the child can then have." [**Depression and the Body**, p. 133]

Another harmful practice in infant care is the compulsive-neurotic method of feeding children on schedule, invented by Pirquet in Vienna, which "was devastatingly wrong and harmful to countless children." Frustration of oral needs through this practice (which is fortunately less in vogue now than it was fifty years ago), is guaranteed to produce neurotic armouring in infants.

As Reich puts it, "As long as parents, doctors, and educators approach infants with false, unbending behaviour, inflexible opinions, condescension, and officiousness, instead of with organotic contact, infants will continue to be quiet, withdrawn, apathetic, 'autistic,' 'peculiar,' and, later, 'little wild animals,' whom the cultivated feel they have to 'tame.'" [**Op. Cit.** p. 124]

Another harmful practice is allowing the baby to "cry itself out." Thus: "Parking a baby in a baby carriage in the garden, perhaps for hours at a time, is a dangerous practice. No one can know what agonising feelings of fear and loneliness a baby can experience on waking up suddenly to find himself alone in a strange place. Those who have heard a baby's screams on such occasions have some idea of the cruelty of this stupid custom." [Neill, **Summerhill**, p. 336] Indeed, in **The Physical Dynamics of Character Structure**, Lowen has traced specific neuroses, particularly depression, to this practice. Hospitals also have been guilty of psychologically damaging sick infants by isolating them from their mothers, a practice that has undoubtedly produced untold numbers of neurotics and psychopaths.

Also, as Reich notes, "the sadistic habit of circumcision will soon be recognised as the senseless, fanatical cruelty it truly is." [**Op. Cit.**, p. 68] He remarks that he has observed infants who took over two weeks to "recover" from the trauma of circumcision, a "recovery" that left permanent psychological scars in the form of chronic muscular tensions in the pelvic floor. These tensions form the first layer of pelvic armouring, to which sexual repression and other inhibitions (especially those acquired during toilet training) later add.

The diaphragm, however, is perhaps the most important area to protect from early armouring. After observing infants for several years in a research setting, Reich concluded that armouring in babies usually appears first as a blocking of free respiration, expressed as harsh, rough, uneven, or laboured breathing,

which may lead to colds, coughs, bronchitis, etc.

“The early blocking of respiration seemed to gain importance rapidly as more children were observed. Somehow the diaphragmatic region appeared to respond first and most severely to emotional, bioenergetic discomfort.” [Ibid., p. 110] Hence the infant’s breathing is a key indicator of its emotional health, and any disturbance is a signal that something is wrong. Or, as Neill puts it, *“The sign of a well-reared child is his free, uninhibited breathing. It shows that he is not afraid of life.”* [Op. Cit., p. 131]

Neill sums up the libertarian attitude toward the care of infants as follows: *“Self-regulation means the right of a baby to live freely without outside authority in things psychic and somatic. It means that the baby feeds when it is hungry; that it becomes clean in habits only when it wants to; that it is never stormed at nor spanked; that it is always loved and protected.”* [Op. Cit. p. 105]

Obviously self-regulation doesn’t mean leaving the baby alone when it heads toward a cliff or starts playing with an electrical socket. Anarchists do not advocate a lack of common sense. We recognise that adults must override an infant’s will when it is a question of protecting its physical safety. As Neill writes, *“Only a fool in charge of young children would allow unbarred bedroom windows or an unprotected fire in the nursery. Yet, too often, young enthusiasts for self-regulation come to my school as visitors, and exclaim at our lack of freedom in locking poison in a lab closet, or our prohibition about playing on the fire escape. The whole freedom movement is marred and despised because so many advocates of freedom have not got their feet on the ground.”* [Ibid., p. 106]

Nevertheless, the libertarian position does not imply that a child should be **punished** for getting into a dangerous situation. Nor is the best thing to do in such a case to shout in alarm (unless that is the only way to warn the child before it is too late), but simply to remove the danger without any fuss. As Neill says, *“Unless a child is mentally defective, he will soon discover what interests him. Left free from excited cries and angry voices, he will be unbelievably sensible in his dealing with material of all kinds.”* [Ibid., p. 108] Provided, of course, that he or she has been allowed self-regulation from the beginning, and thus has not developed any irrational, secondary drives.

J.6.3 What are some examples of libertarian child-rearing methods applied to the care of young children?

The way to raise a free child becomes clear when one considers how an **unfree** child is raised. Thus imagine the typical infant, John Smith, whose upbringing A.S. Neill describes:

*“His natural functions were left alone during the diaper period. But when he began to crawl and perform on the floor, words like **naughty** and **dirty** began to float about the house, and a grim beginning was made in teaching him to be clean.*

“Before this, his hand had been taken away every time it touched his

genitals; and he soon came to associate the genital prohibition with the acquired disgust about faeces. Thus, years later, when he became a travelling salesman, his story repertoire consisted of a balanced number of sex and toilet jokes.

*“Much of his training was conditioned by relatives and neighbours. Mother and father were most anxious to be correct — to do the proper thing — so that when relatives or next-door neighbours came, John had to show himself as a well-trained child. He had to say **Thank you** when Auntie gave him a piece of chocolate; and he had to be most careful about his table manners; and especially, he had to refrain from speaking when adults were speaking.” [Summerhill, p. 97]*

When he was little older, things got worse for John. *“All his curiosity about the origins of life were met with clumsy lies, lies so effective that his curiosity about life and birth disappeared. The lies about life became combined with fears when at the age of five his mother found him having genital play with his sister of four and the girl next door. The severe spanking that followed (Father added to it when he came home from work) forever conveyed to John the lesson that sex is filthy and sinful, something one must not even think of.” [Ibid.]*

Of course, parents’ ways of imparting negative messages about sex are not necessarily this severe, especially in our allegedly enlightened age. However, it is not necessary for a child to be spanked or even scolded or lectured in order to acquire a sex-negative attitude. Children are very intuitive and will receive the message “sex is bad” from subtle parental cues like facial expressions, tone of voice, embarrassed silence, avoidance of certain topics, etc. Mere “toleration” of sexual curiosity and play is far different in its psychological effects from positive affirmation.

Based on the findings of clinical psychiatry, Reich postulated a “*first puberty*” in children, from the ages of about 3 to 6, when the child’s attention shifts from the satisfaction of oral needs to an interest in its sexuality — a stage characterised by genital play of all kinds. The parents’ task at this stage is not only to allow children to engage in such play, but to encourage it. *“In the child, before the age of four or five, genitality has not yet fully developed. The task here plainly consists of removing the obstacles in the way of natural development toward full genitality. To fulfil this task, we must agree that a first puberty in children exists; that genital games are the peak of its development; that lack of genital activity is a sign of sickness and not of health, as previously assumed; and that healthy children play genital games of all kinds, which should be encouraged and not hindered.” [Children of the Future, p. 66]*

Along the same lines, to prevent the formation of sex-negative attitudes means that nakedness should never be discouraged. *“The baby should see its parents naked from the beginning. However, the child should be told when he is ready to understand that some people don’t like to see children naked and that, in the presence of such people, he should wear clothes.” [Neill, Summerhill, p. 229]*

Neill maintains that not only should parents never spank or punish a child for genital play, but that spanking and other forms of punishment should never be used in **any** circumstances, because they instil fear, turning children into cowards and often leading to phobias. *“Fear must be entirely eliminated — fear*

of adults, fear of punishment, fear of disapproval, fear of God. Only hate can flourish in an atmosphere of fear.” [Ibid., p. 124]

Punishment also turns children into sadists. “*The cruelty of many children springs from the cruelty that has been practised on them by adults. You cannot be beaten without wishing to beat someone else... Every beating makes a child sadistic in desire or practice.*” [Ibid., p. 269, 271] This is obviously an important consideration to anarchists, as sadistic drives provide the psychological ground for militarism, war, police brutality, and so on. Such drives are undoubtedly also part of the desire to exercise hierarchical authority, with its possibilities for using negative sanctions against subordinates as an outlet for sadistic impulses.

Child beating is particularly cowardly because it is a way for adults to vent their hatred, frustration, and sadism on those who are unable to defend themselves. Such cruelty is, of course, always rationalised with excuse like “it hurts me more than it does you,” etc., or explained in moral terms, like “I don’t want my boy to be soft” or “I want him to prepare him for a harsh world” or “I spank my children because my parents spanked me, and it did me a hell of a lot of good.” But despite such rationalisations, the fact remains that punishment is always an act of hate. To this hate, the child responds in kind by hating the parents, followed by fantasy, guilt, and repression. For example, the child may fantasise the father’s death, which immediately causes guilt, and so is repressed. Often the hatred induced by punishment emerges in fantasies that are seemingly remote from the parents, such as stories of giant killing — always popular with children because the giant represents the father. Obviously, the sense of guilt produced by such fantasies is very advantageous to organised religions that promise redemption from “sin.” It is surely no coincidence that such religions are enthusiastic promoters of the sex-negative morality and disciplinarian child rearing practices that keep supplying them with recruits.

What is worse, however, is that punishment actually **creates** “problem children.” This is so because the parent arouses more and more hatred (and diminishing trust in other human beings) in the child with each spanking, which is expressed in still worse behaviour, calling for more spankings, and so on, in a vicious circle. In contrast, “*The self-regulated child does not need any punishment,*” Neill argues, “*and he does not go through this hate cycle. He is never punished and he does not need to behave badly. He has no use for lying and for breaking things. His body has never been called filthy or wicked. He has not needed to rebel against authority or to fear his parents. Tantrums he will usually have, but they will be short-lived and not tend toward neurosis.*” [Ibid., p. 166]

We could cite many further examples of how libertarian principles of child-rearing can be applied in practice, but we must limit ourselves to these few. The basic principles can be summed up as follows: Get rid of authority, moralism, and the desire to “improve” and “civilise” children. Allow them to be themselves, without pushing them around, bribing, threatening, admonishing, lecturing, or otherwise forcing them to do anything. Refrain from action unless the child, by expressing their “freedom” restricts the freedom of others and **explain** what is wrong about such actions and never mechanically punish.

This is, of course, a radical philosophy, which few parents are willing to follow. It is quite amazing how people who call themselves libertarians in political and economic matters draw the line when it comes to their behaviour within the family — as if such behaviour had no wider social consequences! Hence,

the opponents of children's freedom are legion, as are their objections to libertarian child rearing. In the next few sections we will examine some of the most common of these objections.

J.6.4 If children have nothing to fear, how can they be good?

Obedience that is based on fear of punishment, this-worldly or otherworldly, is not really goodness, it is merely cowardice. True morality (i.e. respect for others and one-self) comes from inner conviction based on experience, it cannot be imposed from without by fear. Nor can it be inspired by hope of reward, such as praise or the promise of heaven, which is simply bribery. As noted in the previous section, if children are given as much freedom as possible from the day of birth and not forced to conform to parental expectations, they will spontaneously learn the basic principles of social behaviour, such as cleanliness, courtesy, and so forth. But they must be allowed to develop them **at their own speed**, at the natural stage of their growth, not when parents think they should develop them. And what is "natural" timing must be discovered by observation, not by defining it a priori based on one's own expectations.

Can a child really be taught to keep itself clean without being punished for getting dirty? According to many psychologists, it is not only possible but **vitaly important** for the child's mental health to do so, since punishment will give the child a fixed and repressed interest in his bodily functions. As Reich and Lowen have shown, for example, various forms of compulsive and obsessive neuroses can be traced back to the punishments used in toilet training. Dogs, cats, horses, and cows have no complexes about excrement. Complexes in human children come from the manner of their instruction.

As Neill observes, "*When the mother says **naughty** or **dirty** or even **tut tut**, the element of right and wrong arises. The question becomes a **moral** one — when it should remain a **physical** one.*" He suggests that the **wrong** way to deal with a child who likes to play with faeces is to tell him he is being dirty. "*The right way is to allow him to live out his interest in excrement by providing him with mud or clay. In this way, he will sublimate his interest without repression. He will live through his interest; and in doing so, kill it.*" [Summerhill, p. 174]

Similarly, sceptics will probably question how children can be induced to eat a healthy diet without threats of punishment. The answer can be discovered by a simple experiment: set out on the table all kinds of foods, from candy and ice cream to whole wheat bread, lettuce, sprouts, and so on, and allow the child complete freedom to choose what is desired or to eat nothing at all if he or she is not hungry. Parents will find that the average child will begin choosing a balanced diet after about a week, after the desire for prohibited or restricted foods has been satisfied. This is an example of what can be called "trusting nature." That the question of how to "train" a child to eat properly should even be an issue says volumes about how little the concept of freedom for children is accepted or even understood, in our society. Unfortunately, the concept of "training" still holds the field in this and most other areas.

The disciplinarian argument that that children must be **forced** to respect

property is also defective, because it always requires some sacrifice of a child's play life (and childhood should be devoted to play, not to "preparing for adulthood," because playing is what children spontaneously do). The libertarian view is that a child should arrive at a sense of value out of his or her own free choice. This means not scolding or punishing them for breaking or damaging things. As they grow out of the stage of preadolescent indifference to property, they learn to respect it naturally.

"But shouldn't a child at least be punished for stealing?" it will be asked. Once again, the answer lies in the idea of trusting nature. The concept of "mine" and "yours" is adult, and children naturally develop it as they become mature, but not before. This means that normal children will "steal" — though that is not how they regard it. They are simply trying to satisfy their acquisitive impulses; or, if they are with friends, their desire for adventure. In a society so thoroughly steeping in the idea of respect for property as ours, it is no doubt difficult for parents to resist societal pressure to punish children for "stealing." The reward for such trust, however, will be a child who grows into a healthy adolescent who respects the possessions of others, not out of a cowardly fear of punishment but from his or her own self-nature.

J.6.5 But how can children learn *ethics* if they are not given punishments, prohibitions, and religious instruction?

Most parents believe that, besides taking care of their child's physical needs, the teaching of ethical/moral values is their main responsibility and that without such teaching the child will grow up to be a "little wild animal" who acts on every whim, with no consideration for others. This idea arises mainly from the fact that most people in our society believe, at least passively, that human beings are naturally bad and that unless they are "trained" to be good they will be lazy, mean, violent, or even murderous. This, of course, is essentially the idea of "original sin." Because of its widespread acceptance, nearly all adults believe that it is their job to "improve" children.

According to libertarian psychologists, however, there is no original sin. In fact, it would be more accurate to say that there is "original virtue." As we have seen, Reich found that externally imposed, compulsive morality actually **causes** immoral behaviour by creating cruel and perverse "*secondary drives*." Neill puts it this way: "*I find that when I smash the moral instruction a bad boy has received, he becomes a good boy.*" [Summerhill, p. 250]

Unconscious acceptance of some form of the idea of original sin is, as mentioned previously, the main recruiting tool of organised religions, as people who believe they are born "sinners" feel a strong sense of guilt and need for redemption. Therefore Neill advises parents to "eliminate any need for redemption, by telling the child that he is born good — not born bad." This will help keep them from falling under the influence of life-denying religions, which are inimical to the growth of a healthy character structure.

As Reich points out, "*The Church, because of its influence on the sexuality of youth, is an institution that exerts an extremely damaging effect on health.*" [Children of the Future, p. 217] Citing ethnological studies, he notes the

following:

“Among those primitive peoples who lead satisfactory, unimpaired sexual lives, there is no sexual crime, no sexual perversion, no sexual brutality between man and woman; rape is unthinkable because it is unnecessary in their society. Their sexual activity flows in normal, well-ordered channels which would fill any cleric with indignation and fear, because the pale, ascetic youth and the gossiping, child-beating woman do not exist in these primitive societies. They love the human body and take pleasure in their sexuality. They do not understand why young men and women should not enjoy their sexuality. But when their lives are invaded by the ascetic, hypocritical morass and by the Church, which bring them ‘culture’ along with exploitation, alcohol, and syphilis, they begin to suffer the same wretchedness as ourselves. They begin to lead ‘moral’ lives, i.e. to suppress their sexuality, and from then on they decline more and more into a state of sexual distress, which is the result of sexual suppression. At the same time, they become sexually dangerous; murders of spouses, sexual diseases, and crimes of all sorts start to appear.” [Ibid., p. 193]

Such crimes in our society would be greatly reduced if libertarian child rearing practices were widely followed. These are obviously important considerations for anarchists, who are frequently asked to explain how crime can be prevented in an anarchist society. The answer is that if people are not suppressed during childhood there will be far less crime, because the secondary-drive structure that leads to anti-social behaviour of all kinds will not be created in the first place. In other words, the solution to the so-called crime problem is not more police, more laws, or a return to the disciplinarianism of “traditional family values,” as conservatives claim, but depends mainly on **getting rid** of such values.

There are other problems as well with the moralism taught by organised religions. One danger is making the child a hater. *“If a child is taught that certain things are sinful, his love of life must be changed to hate. When children are free, they never think of another child as being a sinner.”* [Neill, **Op. Cit.**, p. 245] From the idea that certain people are sinners, it is a short step to the idea that certain classes or races of people are more “sinful” than others, leading to prejudice, discrimination, and persecution of minorities as an outlet for repressed anger and sadistic drives — drives that are created in the first place by moralistic training during early childhood. Once again, the relevance for anarchism is obvious.

A further danger of religious instruction is the development of a fear of life. *“Religion to a child most always means only fear. God is a mighty man with holes in his eyelids: He can see you wherever you are. To a child, this often means that God can see what is being done under the bedclothes. And to introduce fear into a child’s life is the worst of all crimes. Forever the child says nay to life; forever he is an inferior; forever a coward.”* [Ibid., p. 246] People who have been threatened with fear of an afterlife in hell can never be entirely free of neurotic anxiety about security in **this** life. In turn, such people become easy targets of ruling-class propaganda that plays upon their material insecurity, e.g. the rationalisation of imperialistic wars as necessary to “preserve

jobs” (cited, for example, by US Secretary of State James Baker as one rationale for the Gulf War).

J.6.6 But how will a free child ever learn unselfishness?

Another common objection to self-regulation is that children can only be taught to be **unselfish** through punishment and admonition. Again, however, such a view comes from a distrust of nature and is part of the common attitude that nature is mere “raw material” to be shaped by human beings according to their own wishes. The libertarian attitude is that unselfishness develops at the proper time — which is **not** during childhood. Children are primarily egoists, generally until the beginning of puberty, and until then they usually don’t have the ability to identify with others. Thus:

*“To ask a child to be unselfish is wrong. Every child is an egoist and the world belongs to him. When he has an apple, his one wish is to eat that apple. The chief result of mother’s encouraging him to share it with his little brother is to make him hate the little brother. Altruism comes later — comes naturally — **if the child is not taught to be unselfish**. It probably never comes at all if the child has been forced to be unselfish. By suppressing the child’s selfishness, the mother is fixing that selfishness forever.”* [Neill, **Op. Cit.**, pp. 250–251]

Unfulfilled wishes (like all “unfinished business”) live on in the unconscious. Hence children who are pressured too hard — “taught” — to be unselfish will, while conforming outwardly with parental demands, unconsciously repress part of their real, selfish wishes, and these repressed infantile desires will make the person selfish (and possibly neurotic) throughout life. Moreover, telling children that what they want to do is “wrong” or “bad” is equivalent to teaching them to hate themselves, and it is a well-known principle of psychology that people who do not love themselves cannot love others. Thus moral instruction, although it aims to develop altruism and love for others, is actually self-defeating, having just the opposite result.

Moreover, such attempts to produce “unselfish” children (and so adults) actually works **against** developing the individuality of the child and their abilities to develop their own abilities (in particular their ability of critical thought). As Erich Fromm puts it, “[n]ot to be selfish implies not to do what one wishes, to give up one’s own wishes for the sake of those in authority. . . . Aside from its obvious implication, it means ‘don’t love yourself,’ ‘don’t be yourself,’ but submit yourself to something more important than yourself, to an outside power or its internalisation, ‘duty.’ ‘Don’t be selfish’ becomes one of the most powerful ideological tools in suppressing spontaneity and the free development of personality. Under the pressure of this slogan one is asked for every sacrifice and for complete submission: only those acts are ‘unselfish’ which do not serve the individual but somebody or something outside himself.” [Man for Himself, p. 127]

While such “unselfishness” is ideal for creating “model citizens” and willing wage slaves, it is not conducive for creating anarchists or even developing individuality. Little wonder Bakunin celebrated the urge to rebel and saw it as the key to human progress! Fromm goes on to note that selfishness and self-love, “*far from being identical, are actually opposites*” and that “*selfish persons are incapable of loving others... [or] loving themselves...*” [Op. Cit., p. 131] Individuals who do not love themselves, and so others, will be more willing to submit themselves to hierarchy than those who do love themselves and are concerned for their own, and others, welfare. Thus the contradictory nature of capitalism, with its contradictory appeals to selfish and unselfish behaviour, can be understood as being based upon lack of self-love, a lack which is promoted in childhood and one which libertarians should be aware of and combat.

Indeed, much of the urge to “teach children unselfishness” is actually an expression of adults’ will to power. Whenever parents feel the urge to impose directives on their children, they would be wise to ask themselves whether the impulse comes from their own power drive or their own selfishness. For, since our culture strongly conditions us to seek power over others, what could be more convenient than having a small, weak person at hand who cannot resist one’s will to power? Instead of issuing directives, libertarians believe in letting social behaviour develop naturally, which it will do after other people’s opinions becomes important **to the child**. As Neill points out, “*Everyone seeks the good opinion of his neighbours. Unless other forces push him into unsocial behaviour, a child will naturally want to do that which will cause him to be well-regarded, but this desire to please others develops at a certain stage in his growth. The attempt by parents and teachers to artificially accelerate this stage does the child irreparable damage.*” [Neill, Op. Cit., p. 256]

Therefore, parents should allow children to be “selfish” and “ungiving”, free to follow their own childish interests throughout their childhood. And when their individual interests clash with social interests (e.g. the opinion of the neighbours), the individual interests should take precedence. Every interpersonal conflict of interest should be grounds for a lesson in dignity on one side and consideration on the other. Only by this process can a child develop their individuality. By so doing they will come to recognise the individuality of others and this is the first step in developing ethical concepts (which rest upon mutual respect for others and their individuality).

J.6.7 Isn’t what you call “libertarian child-rearing” just another name for spoiling the child?

No. This objection confuses the distinction between freedom and license. To raise a child in freedom does not mean letting him or her walk all over you; it does not mean never saying “no.” It is true that free children are not subjected to punishment, irrational authority, or moralistic admonitions, but they are not “free” to violate the rights of others. As Neill puts it, “*in the disciplined home, the children have **no** rights. In the spoiled home, they have **all** the rights. The proper home is one in which children and adults have equal rights.*” Or again, “*To let a child have his own way, or do what he wants to **at another’s expense**, is bad for the child. It creates a spoiled child, and the spoiled child is*

a bad citizen." [Summerhill, p. 107, 167]

There will inevitably be conflicts of will between parents and children, and the healthy way to resolve them is to come to some sort of a compromise agreement. The unhealthy ways are either to resort to authoritarian discipline or to spoil the child by allowing it to have all the social rights. Libertarian psychologists argue that no harm is done to children by insisting on one's individual rights, but that the harm comes from moralism, i.e. when one introduces the concepts of right and wrong or words like "naughty," "bad," or "dirty," which produce guilt.

Therefore it should not be thought that free children are free to "do as they please." Freedom means doing what one likes so long as it doesn't infringe on the freedom of others. Thus there is a big difference between compelling a child to stop throwing stones at others and compelling him or her to learn geometry. Throwing stones infringes on others' rights, but learning geometry involves only the child. The same goes for forcing children to eat with a fork instead of their fingers; to say "please" and "thank you;" to tidy up their rooms, and so on. Bad manners and untidiness may be annoying to adults, but they are not a violation of adults' rights. One could, of course, define an adult "right" to be free of annoyance from **anything** one's child does, but this would simply be a license for authoritarianism, emptying the concept of children's rights of all content.

As mentioned, giving children freedom does not mean allowing them to endanger themselves physically. For example, a sick child should not be asked to decide whether he wants to go outdoors or take his prescribed medicine, nor a run-down and overtired child whether she wants to go to bed. But the imposition of such forms of necessary authority is compatible with the idea that children should be given as much responsibility as they can handle at their particular age. For only in this way can they develop self-assurance. And again, it is important for parents to examine their own motives when deciding how much responsibility to give their child. Parents who insist on choosing their children's clothes for them, for example, are generally worried that little Tommy might select clothes that would reflect badly on his parents' social standing.

As for those who equate "discipline" in the home with "obedience," the latter is usually required of a child to satisfy the adults' desire for power. Self-regulation means that there are no power games being played with children, no loud voice saying "You'll do it because I say so, or else!" But, although this irrational, power-seeking kind of authority is absent in the libertarian home, there still remains what can be called a kind of "authority," namely adult protection, care, and responsibility, as well as the insistence on one's own rights. As Neill observes, "*Such authority sometimes demands obedience but at other times gives obedience. Thus I can say to my daughter, 'You can't bring that mud and water into our parlour.' That's no more than her saying to me, 'Get out of my room, Daddy. I don't want you here now,' a wish that I, of course, obey without a word*" [Op. Cit., p. 156]. Therefore there will still be "discipline" in the libertarian home, but it will be of the kind that protects the individual rights of each family member.

Raising children in freedom also does not imply giving them a lot of toys, money, and so on. Reichians have argued that children should not be given everything they ask for and that it is better to give them too little than too much. Under constant bombardment by commercial advertising campaigns, parents today generally tend to give their children far too much, with the result

that the children stop appreciating gifts and rarely value any of their possessions. This same applies to money, which, if given in excess, can be detrimental to children's' creativity and play life. If children are not given too many toys, they will derive creative joy out of making their own toys out of whatever free materials are at hand — a joy of which they are robbed by overindulgence. Psychologists point out that parents who give too many presents are often trying to compensate for giving too little love.

There is less danger in rewarding children than there is in punishing them, but rewards can still undermine a child's morale. This is because, firstly, rewards are superfluous and in fact often **decrease** motivation and creativity, as several psychological studies have shown (see section I.4.10). Creative people work for the pleasure of creating; monetary interests are not central (or necessary) to the creative process. Secondly, rewards send the wrong message, namely, that doing the deed for which the reward is offered is not worth doing for its own sake and the pleasure associated with productive, creative activity. And thirdly, rewards tend to reinforce the worst aspects of the competitive system, leading to the attitude that money is the only thing which can motivate people to do the work that needs doing in society.

These are just a few of the considerations that enter into the distinction between spoiling children and raising them in freedom. In reality, it is the punishment and fear of a disciplinarian home that **spoils** children in the most literal sense, by destroying their childhood happiness and creating warped personalities. As adults, the victims of disciplinarianism will generally be burdened with one or more anti-social secondary drives such as sadism, destructive urges, greed, sexual perversions, etc., as well as repressed rage and fear. The presence of such impulses just below the surface of consciousness causes anxiety, which is automatically defended against by layers of rigid muscular armouring, which leaves the person stiff, frustrated, bitter, and burdened with feelings of inner emptiness. In such a condition, people easily fall victim to the capitalist gospel of super-consumption, which promises that money will enable them to fill the inner void by purchasing commodities — a promise that, of course, is hollow.

The neurotically armoured person also tends to look for scapegoats on whom to blame his or her frustration and anxiety and against whom repressed rage can be vented. Reactionary politicians know very well how to direct such impulses against minorities or "hostile nations" with propaganda designed to serve the interests of the ruling elite. Most importantly, however, the respect for authority combined with sadistic impulses which is acquired from a disciplinarian upbringing typically produces a submissive/authoritarian personality — a man or woman who blindly follows the orders of "superiors" while at the same time desiring to exercise authority on "subordinates," whether in the family, the state bureaucracy, or the corporation. In this way, the "traditional" (e.g., authoritarian, disciplinarian, patriarchal) family is the necessary foundation for authoritarian civilisation, reproducing it and its attendant social evils from generation to generation. Irving Staub's **Roots of Evil** includes interviews of imprisoned SS men, who, in the course of extensive interviews (meant to determine how ostensibly "normal" people could perform acts of untold ruthlessness and violence) revealed that they overwhelmingly came from authoritarian, disciplinarian homes.

J.6.8 What is the anarchist position on teenage sexual liberation?

One of the biggest problems of adolescence is sexual suppression by parents and society in general. The teenage years are the time when sexual energy is at its height. Why, then, the absurd demand that teenagers “wait until marriage,” or at least until leaving home, before becoming sexually active? Why are there laws on the books in “advanced” countries like the United States that allow a 19-year-old “boy” who makes love with his 17-year-old girlfriend, with her full consent, to be **arrested** by the girl’s parents (!) for “statutory rape?”

To answer such questions, let us recall that the ruling class is not interested in encouraging mass tendencies toward democracy and independence and pleasure not derived from commodities but instead supports whatever contributes to mass submissiveness, docility, dependence, helplessness, and respect for authority — traits that perpetuate the hierarchies on which ruling-class power and privileges depend.

We have noted earlier that, because sex is the most intense form of pleasure (one of the most prominent contributors for intimacy and bonding people) and involves the bioenergy of the body and emotions, repression of sexuality is the most powerful means of psychologically crippling people and giving them a submissive/authoritarian character structure (as well as alienating people from each other). As Reich observes, such a character is composed of a mixture of “*sexual impotence, helplessness, a need for attachments, a nostalgia for a leader, fear of authority, timidity, and mysticism.*” As he also points out, “*people structured in this manner are **incapable of democracy.** All attempts to build up or maintain genuine democratically directed organisations come to grief when they encounter these character structures. They form the psychological soil of the masses in which dictatorial strivings and bureaucratic tendencies of democratically elected leaders can develop. . . [Sexual suppression] produces the authority-fearing, life-fearing vassal, and thus constantly creates new possibilities whereby a handful of men in power can rule the masses.*” [**The Sexual Revolution: Toward a Self-Regulating Character Structure**, p. 82, emphasis added]

No doubt most members of the ruling elite are not fully conscious that their own power and privileges depend on the mass perpetuation of sex-negative attitudes. Nevertheless, they unconsciously sense it. Sexual freedom is the most basic and powerful kind, and every conservative or reactionary instinctively shudders at the thought of the “social chaos” it would unleash — that is, the rebellious, authority-defying type of character it would nourish. This is why “family values,” and “religion” (i.e. discipline and compulsive sexual morality) are the mainstays of the conservative/reactionary agenda. Thus it is crucially important for anarchists to address every aspect of sexual suppression in society. And this means affirming the right of adolescents to an unrestricted sex life.

There are numerous arguments for teenage sexual liberation. For example, many teen suicides could be prevented by removing the restrictions on adolescent sexuality. This becomes clear from ethnological studies of sexually unrepulsive “primitive” peoples. Thus:

“All reports, whether by missionaries or scholars, with or without the proper indignation about the ‘moral depravity’ of ‘savages,’ state that the puberty rites of adolescents lead them immediately into a

sexual life; that some of these primitive societies lay great emphasis on sexual pleasure; that the puberty rite is an important social event; that some primitive peoples not only do not hinder the sexual life of adolescents but encourage it in every way, as, for instance, by arranging for community houses in which the adolescents settle at the start of puberty in order to be able to enjoy sexual intercourse. Even in those primitive societies in which the institution of strict monogamous marriage exists, adolescents are given complete freedom to enjoy sexual intercourse from the beginning of puberty to marriage. None of these reports contains any indication of sexual misery or suicide by adolescents suffering from unrequited love (although the latter does of course occur). The contradiction between sexual maturity and the absence of genital sexual gratification is non-existent.”
[*Ibid.*, p. 85]

Teenage sexual repression is also closely connected with crime. If there are hundreds of teenagers in a neighbourhood who have no place to pursue intimate sexual relationships, they will do it in dark corners, in cars or vans, etc., always on the alert and anxious lest someone discover them. Under such conditions, full gratification is impossible, leading to a build-up of tension, frustration and stagnation of bioenergy (sexual stasis). Thus they feel unsatisfied, disturb each other, become jealous and angry, get into fights, turn to drugs as a substitute for a satisfying sex life, vandalise property to let off “steam” (repressed rage), or even murder someone. As Reich notes, “*juvenile delinquency is the visible expression of the subterranean sexual crisis in the lives of children and adolescents. And it may be predicted that no society will ever succeed in solving this problem, the problem of juvenile psychopathology, unless that society can muster the courage and acquire the knowledge to regulate the sexual life of its children and adolescents in a sex-affirmative manner.*” [*Ibid.*, p. 271]

For these reasons, it is clear that a solution to the “gang problem” also depends on adolescent sexual liberation. We are not suggesting, of course, that gangs themselves suppress sexual activity. Indeed, one of their main attractions to teens is undoubtedly the hope of more opportunities for sex as a gang member. However, gangs’ typical obsessiveness with the promiscuous, pornographic, sadistic, and other “dark” aspects of sex shows that by the time children reach the gang age they have already developed unhealthy secondary drives due to the generally sex-negative and repressive environment in which they have grown up. The expression of such drives is **not** what anarchists mean by “sexual freedom.” Rather, anarchist proposals for teenage liberation are based on the premise that unrestricted sexuality in early childhood is the necessary condition for a **healthy** sexual freedom in adolescence.

Applying these insights to our own society, it is clear that teenagers should not only have ample access to a private room where they can be undisturbed with their sexual partners, but that parents should actively **encourage** such behaviour for the sake of their child’s health and happiness (while, of course, encouraging the knowledge and use of contraceptives and safe sex in general as well as respect for the other person involved in the relationship). This last point (of respecting others) is essential. As Maurice Brinton points out, attempts at sexual liberation will encounter two kinds of responses from established society — direct opposition and attempts at recuperation. The second response takes

the form of “*first alienating and reifying sexuality, and then of frenetically exploiting this empty shell for commercial ends. As modern youth breaks out of the dual stranglehold of the authoritarian patriarchal family it encounters a projected image of free sexuality which is in fact a manipulatory distortion of it.*” This can be seen from the use of sex in advertising to the successful development of sex into a major consumer industry.

However, such a development is the opposite of the healthy sexuality desired by anarchists. This is because “*sex is presented as something to be consumed. But the sexual instinct differs from certain other instincts. . . [as it can be satisfied only by] another human being, capable of thinking, acting, suffering. The alienation of sexuality under the conditions of modern capitalism is very much part of the general alienating process, in which people are converted into objects (in this case, objects of sexual consumption) and relationships are drained of human content. Undiscriminating, compulsive sexual activity, is not sexual freedom — although it may sometimes be a preparation for it (which repressive morality can never be). The illusion that alienated sex is sexual freedom constitutes yet another obstacle on the road to total emancipation. Sexual freedom implies a realisation and understanding of the autonomy of others.*” [**The Irrational in Politics**, p. 60, p. 61]

Therefore, anarchists see teenage sexual liberation as a means of developing free individuals **as well as** reducing the evil effects of sexual repression (which, we must note, also helps dehumanise individuals by encouraging the objectification of others, and in a patriarchal society, particularly of women).

J.6.9 But isn't this concern with teenage sexual liberation just a distraction from issues that should be of more concern to anarchists, like restructuring the economy?

It would be insulting to teenagers to suggest that sexual freedom is, or should be, their **only** concern. Many teens have a well-developed social conscience and are keenly interested in problems of economic exploitation, poverty, social breakdown, environmental degradation, and the like.

However, it is essential for anarchists to guard against the attitude typically found in Marxist-Leninist parties that spontaneous discussions about the sexual problems of youth are a “diversion from the class struggle.” Such an attitude is economistic (not to mention covertly ascetic), because it is based on the premise that the economy must be the focus of all revolutionary efforts toward social change. No doubt restructuring the economy is important, but without mass sexual liberation no working class revolution be complete. In a so called free society, there will not be enough people around with the character structures necessary to create a **lasting** worker-controlled economy — i.e. people who are capable of accepting freedom with responsibility. Instead, the attempt to force the creation of such an economy without preparing the necessary psychological soil for its growth will lead to a quick reversion to some new form of hierarchy and exploitation.

Moreover, for most teenagers, breaking free from the sexual suppression that

threatens to cripple them psychologically is a major issue in their lives. For this reason, not many of them are likely to be attracted to the anarchist “freedom” movement if its exponents limit themselves to dry discussions of surplus value, alienated labour, and so forth. Instead, addressing sexual questions and problems must be integrated into a multi-faceted attack on the total system of domination. Teens should feel confident that anarchists are on the side of sexual pleasure and are not revolutionary ascetics demanding self-denial for the “sake of the revolution.” Rather, it should be stressed that the capacity for full sexual enjoyment is the an essential part of the revolution. Indeed, *“incessant questioning and challenge to authority on the subject of sex and of the compulsive family can only complement the questioning and challenge to authority in other areas (for instance on the subject of who is to dominate the work process — or the purpose of work itself). Both challenges stress the autonomy of individuals and their domination of over important aspects of their lives. Both expose the alienated concepts which pass for rationality and which govern so much of our thinking and behaviour. The task of the conscious revolutionary is to make both challenges explicit, to point out their deeply subversive content, and to explain their inter-relation.”* [Maurice Brinton, **Op. Cit.**, p. 62]

We noted previously that in pre-patriarchal society, which rests on the social order of primitive communism, children have complete sexual freedom and that the idea of childhood asceticism develops as matricentric clan societies turn toward patriarchy in the economy and social structure (see section B.1.5). This sea-change in social attitudes toward childhood sexuality allows the authority-oriented character structure to develop instead of the formerly non-authoritarian ones. Ethnological research has shown that in pre-patriarchal societies, the general nature of work life in the collective corresponds with the free sexuality of children and adolescents — that is, there are no rules coercing children and adolescents into specific forms of sexual life, and this creates the psychological basis for voluntary integration into the collective and voluntary discipline in work. This historical fact supports the premise that widespread sex-positive attitudes are a necessary condition of a viable libertarian socialism.

Psychology also clearly shows that every impediment to infantile and adolescent sexuality by parents, teachers, or administrative authorities must be stopped. As anarchists, our preferred way of doing so is by direct action. Thus we should encourage teens to feel that they have every chance of building their own lives. This will certainly not be an obstacle to or a distraction from their involvement in the anarchist movement. On the contrary, if they can gradually solve the problem of (e.g.) private rooms themselves, they will work on other social projects with greatly increased pleasure and concentration. For, contrary to Freud, Reichian psychologists argue that beyond a certain point, excess sexual energy cannot be sublimated in work or any other purposeful activity but actually disturbs work by making the person restless and prone to fantasies, thus hindering concentration.

Besides engaging in direct action, anarchists can also support legal protection of infantile and adolescent sexuality (repeal of the insane statutory rape laws would be one example), just as they support legislation that protects workers’ right to strike, family leave, and so forth. However, as Reich observes, *“under no circumstances will the new order of sexual life be established by the decree of a central authority.”* [**Ibid.**, p. 279] That was a Leninist illusion. Rather, it will be established from the bottom up, by the gradual process of ever more

widespread dissemination of knowledge about the adverse personal and social effects of sexual suppression, which will lead to mass acceptance of libertarian child-rearing and educational methods.

A society in which people are capable of sexual happiness will be one where they prefer to “*make love, not war,*” and so will provide the best guarantee for the general security. Then the anarchist project of restructuring the economic and political systems will proceed spontaneously, based on a spirit of joy rather than hatred and revenge. Only then can it be defended against reactionary threats, because the majority will be on the side of freedom and capable of using it responsibly, rather than unconsciously longing for an authoritarian father-figure to tell them what to do.

Therefore, concern and action upon teenage sexual liberation (or child rearing in general or libertarian education) is a **key** part of social struggle and change. In no way can it be considered a “distraction” from “important” political and economic issues as some “serious” revolutionaries like to claim. As Martha A. Ackelsberg notes (in relation to the practical work done by the ***Mujeres Libres*** group during the Spanish Revolution):

“Respecting children and educating them well was vitally important to the process of revolutionary change. Ignorance made people particularly vulnerable to oppression and suffering. More importantly, education prepared people for social life. Authoritarian schools (or families), based upon fear, prepared people to be submissive to an authoritarian government [or within a capitalist workplace]. Different schools and families would be necessary to prepare people to live in a society without domination.” [**Free Women of Spain**, p. 133]

J.7 What do anarchists mean by “*social revolution*”?

In anarchist theory, “*social revolution*” means far more than just revolution. For anarchists, a true revolution is far more than just a change in the political makeup, structure or form of a society. It must transform all aspects of a society — political, economic, social, interpersonal relationships, sexual and so on — and the individuals who comprise it. Indeed, these two transformations go hand in hand, complementing each other and supporting each other — individuals, while transforming society, transform themselves in the process.

As Alexander Berkman put it, “*there are revolutions and revolutions. Some revolutions change only the governmental form by putting a new set of rulers in place of the old. These are political revolutions, and as such they are often met with little resistance. But a revolution that aims to abolish the entire system of wage slavery must also do away with the power of one class to oppress another. That is, it is not any more a mere change of rulers, of government, not a political revolution, but one that seeks to alter the whole character of society. That would be a **social** revolution.*” [ABC of Anarchism, p. 34]

It means two related things. Firstly, it means transforming all aspects of society and not just tinkering with certain aspects of the current system. Where political revolution means, in essence, changing bosses, social revolution means changing society. Thus social revolution signifies a change in the social, economic and cultural and sexual in a libertarian direction, a transformation in the way society is organised and run. Social revolution, in other words, does not aim to alter one form of subjection for another, but to do away with everything that can enslave and oppress the individual. Secondly, it means bringing about this fundamental change **directly** by the mass of people in society, rather than relying on political means of achieving this end, in the style of Marxist-Leninists and other authoritarian socialists. For anarchists, such an approach is a political revolution only and doomed to failure. Hence the “*actual, positive work of the social revolution must . . . be carried out by the toilers themselves, by the labouring people.*” [Alexander Berkman, **Op. Cit.**, p. 45]

That is not to say that an anarchist social revolution is not political in content — far from it; it should be obvious to anyone reading this FAQ that there are considerable political theories at work within anarchism. What we **are** saying, however, is that anarchists do not seek to seize power and attempt, through control of law enforcement and the military (in the style of governments)

to bring change about from the top-down. Rather, we seek to bring change upward from below, and in so doing, make such a revolution inevitable and not contingent on the machinations of a political vanguard. As Durruti argued, “[w]e never believed that the revolution consisted of the seizure of power by a minority which would impose a dictatorship on the people . . . We want a revolution by and for the people. Without this no revolution is possible. It would be a Coup d’Etat, nothing more.” [quoted by Abel Paz, **Durruti: The People Armed**, pp. 135–7]

Thus, for anarchists, a social revolution is a movement from below, of the oppressed and exploited struggling for their own freedom. Moreover, such a revolution does not appear as if by magic. Rather, it is the case that revolutions “are not improvised. They are not made at will by individuals. They come about through the force of circumstance and are independent of any deliberate will or conspiracy.” [Michael Bakunin, quote by Brian Morris, **Bakunin: The Philosophy of Freedom**, p. 139] They are, in fact, a product of social evolution and of social struggle. As Malatesta reminds us:

“the oppressed masses . . . have never completely resigned themselves to oppression and poverty, and who today more than ever than ever show themselves thirsting for justice, freedom and wellbeing, are beginning to understand that they will not be able to achieve their emancipation except by union and solidarity with all the oppressed, with the exploited everywhere in the world. And they also understand that the indispensable condition for their emancipation which cannot be neglected is the possession of the means of production, of the land and of the instruments of labour.” [**Anarchy**, p. 30]

Thus any social revolution proceeds from the daily struggles of working class people (just as anarchism does). It is not an event, rather it is a **process** — a process which is occurring at this moment. Thus, for anarchists, a social revolution is not something in the future but an process which is occurring in the here and now. As German Anarchist Gustav Landauer put it:

“The State is not something that can be destroyed by a revolution, but it is a condition, a certain relationship between human beings, a mode of human behaviour; we destroy it by contracting other relationships, by behaving differently.” [quoted by George Woodcock, **Anarchism**, p. 421]

This does not mean that anarchists do not recognise that a revolution will be marked by, say, insurrectionary events (such as a general strike, wide scale occupations of land, housing, workplaces, etc., actual insurrections and so on). Of course not, it means that we place these events in a process, within social movements and that they do not occur in isolation from history or the evolution of ideas and movements within society.

Berkman echoes this point when he argued that while “a social revolution is one that entirely changes the foundation of society, its political, economic and social character,” such a change “must **first** take place in the ideas and opinions of the people, in the minds of men [and women].” This means that “the social revolution must be prepared. Prepared in these sense of furthering evolutionary process, of enlightening the people about the evils of present-day

society and convincing them of the desirability and possibility, of the justice and practicability of a social life based on liberty." [Alexander Berkman, **Op. Cit.**, p. 38] And such preparation would be the result of social struggle in the here and now, social struggle based on direct action, solidarity and self-managed organisations. While Berkman concentrates on the labour movement in his classic work, but his comments are applicable to all social movements:

"In the daily struggle of the proletariat such an organisation [a syndicalist union] would be able to achieve victories about which the conservative union, as at present built, cannot even dream. . . Such a union would soon become something more than a mere defender and protector of the worker. It would gain a vital realisation of the meaning of unity and consequent power, of labour solidarity. The factory and shop would serve as a training camp to develop the worker's understanding of his proper role in life, to cultivate his [or her] self-reliance and independence, teach him [or her] mutual help and co-operation, and make him [or her] conscious of his [or her] responsibility. He will learn to decide and act on his [or her] own judgement, not leaving it to leaders or politicians to attend to his [or her] affairs and look out for his [or her] welfare. . . He [or she] will grow to understand that present economic and social arrangements are wrong and criminal, and he [or she] will determine to change them. The shop committee and union will become the field of preparation for a new economic system, for a new social life." [**Op. Cit.**, p. 59]

In other words, the struggle against authority, exploitation, oppression and domination in the here and now is the start of the social revolution. It is this daily struggle which creates free people and the organisations it generates "*bear . . . the living seed of the new society which is to replace the old one. They are creating not only the ideas, but also the facts of the future itself.*" [Michael Bakunin, **Bakunin On Anarchism**, p. 255] Hence Bakunin's comment that anarchists think socialism will be attained only "*by the development and organisation, not of the political but of the social organisation (and, by consequence, anti-political) power of the working masses as much in the towns as in the countryside.*" [**Michael Bakunin: Selected Writings**, pp. 197–8] Such social power is expressed in economic and community organisations such as self-managed unions and workplace/community assemblies (see section J.5).

Anarchists try and follow the example of our Spanish comrades in the C.N.T. and F.A.I. who, when "*faced with the conventional opposition between reformism and revolution, they appear, in effect, to have put forward a third alternative, seeking to obtain immediate practical improvements through the actual development, in practice, of autonomous, libertarian forms of self-organisation.*" [Nick Rider, "*The Practice of Direct Action: The Barcelona Rent Strike of 1931*", in **For Anarchism**, pp. 79–105, David Goodway (ed.), p. 99] While doing this, anarchists must also "*beware of ourselves becoming less anarchist because the masses are not ready for anarchy.*" [Malatesta, **Life and Ideas**, p. 162]

Therefore, revolution and anarchism is the product of struggle, a social process in which anarchist ideas spread and develop. However, "*[t]his does not mean. . . that to achieve anarchy we must wait till everyone becomes an anarchist. On the contrary. . . under present conditions only a small minority,*

favoured by specific circumstances, can manage to conceive what anarchy is. It would be wishful thinking to hope for a general conversion before a change actually took place in the kind of environment in which authoritarianism and privilege now flourish. It is precisely for this reason that [we] . . . need to organise for the bringing about of anarchy, or at any rate that degree of anarchy which could become gradually feasible, as soon as a sufficient amount of freedom has been won and a nucleus of anarchists somewhere exists that is both numerically strong enough and able to be self-sufficient and to spread its influence locally.” [Errico Malatesta, **The Anarchist Revolution**, pp. 83–4]

Thus anarchists influence the struggle, the revolutionary process by encouraging anarchistic tendencies within those who are not yet anarchists but are instinctively acting in a libertarian manner. Anarchists spread the anarchist message to those in struggle and support libertarian tendencies in it as far as they can. In this way, more and more people will become anarchists and anarchy will become increasingly possible. We discuss the role of anarchists in a social revolution in section J.7.4 and will not do so now.

For anarchists, a social revolution is the end product of years of social struggle. It is marked by the transformation of a given society and the breaking down of all forms of oppression and the creation of new ways of living, new forms of self-managed organisation, a new attitude to live itself. Moreover, we do not wait for the future to introduce such transformations in our daily life. Rather, we try and create as much anarchistic tendencies in today’s society as possible in the firm belief that in so doing we are pushing the creation of a free society nearer.

So anarchists, including revolutionary ones, try to make the world more libertarian and so bring us closer to freedom. Few anarchists think of anarchy as something in (or for) the distant future, rather it is something we try and create in the here and now by living and struggling in a libertarian manner. Once enough people do this, then a more extensive change towards anarchy (i.e. a revolution) is inevitable.

J.7.1 Are all anarchists revolutionaries?

No, far from it. While most anarchists do believe that a social revolution is required to create a free society, some reject the idea. This is because they think that revolutions are by their very nature violent and coercive and so are against anarchist principles. In the words of Proudhon (in reply to Marx):

*“Perhaps you still hold the opinion that no reform is possible without a helping **coup de main**, without what used to be called a revolution but which is quite simply a jolt. I confess that my most recent studies have led me to abandon this view, which I understand and would willingly discuss, since for a long time I held it myself. I do not think that this is what we need in order to succeed, and consequently we must not suggest **revolutionary** action as the means of social reform because this supposed means would simply be an appeal to force and to arbitrariness. In brief, it would be a contradiction.”* [Selected Writings of Pierre-Joseph Proudhon, p. 151]

Also they point to the fact that the state is far better armed than the general population, better trained and (as history proves) more than willing to slaughter as many people as required to restore “order.” In face of this power, they argue, revolution is doomed to failure.

Those opposed to revolution come from all tendencies of the movement. Traditionally, Individualist anarchists are usually against the idea of revolution, as was Proudhon. However, with the failure of the Russian Revolution and the defeat of the C.N.T.-F.A.I. in Spain, some social anarchists have rethought support for revolution. Rather than seeing revolution as the key way of creating a free society they consider it doomed to failure as the state is too strong a force to be overcome by insurrection. Instead of revolution, such anarchists support the creation of alternatives, such as co-operatives, mutual banks and so on, which will help transform capitalism into libertarian socialism. Such alternative building, combined with civil disobedience and non-payment of taxes, is seen as the best way to creating anarchy.

Most revolutionary anarchists agree on the importance of building libertarian alternatives in the here and now. They would agree with Bakunin when he argued that such organisations as libertarian unions, co-operatives and so on are essential *“so that when the Revolution, brought about by the natural force of circumstances, breaks out, there will be a real force at hand which knows what to do and by virtue thereof is capable of taking the Revolution into its own hands and imparting to it a direction salutary for the people: a serious, international organisation of worker’s organisations of all countries, capable of replacing the departing political world of the States and the bourgeoisie.”* [**The Political Philosophy of Bakunin**, p. 323] Thus, for most anarchists, the difference of evolution and revolution is one of little import — anarchists should support libertarian tendencies within society as they support revolutionary situations when they occur.

Moreover, revolutionary anarchists argue that, ultimately, capitalism cannot be reformed away nor will the state wither away under the onslaught of libertarian institutions and attitudes. They do not consider it possible to *“burn Property little by little”* via *“some system of economics”* which will *“put back into society . . . the wealth which has been taken out of society by another system of economics”*, to use Proudhon’s expression. [**Op. Cit.**, p. 151] Therefore, libertarian tendencies within capitalism may make life better under that system but they cannot, ultimately, get rid of it. This implies a social revolution, they argue. Such anarchists agree with Alexander Berkman when he writes:

“This is no record of any government or authority, of any group or class in power having given up its mastery voluntarily. In every instance it required the use of force, or at least the threat of it.”
[**ABC of Anarchism**, p. 32]

Even the end of State capitalism (“Communism”) in the Eastern Block does not contradict this argument. Without the mass action of the population, the regime would have continued. Faced with a massive popular revolt, the Commissars realised that it was better to renounce power than have it taken from them. Thus mass rebellion, the start of any true revolution, was required.

Moreover, the argument that the state is too powerful to be defeated has been proven wrong time and time again. Every revolution has defeated a military machine which previously been claimed to be unbeatable. For example,

the people armed is Spain defeated the military in two-thirds of the country. Ultimately, the power of the state rests on its troops following orders. If those troops rebel, then the state is powerless. That is why anarchists have always produced anti-militarist propaganda urging troops to join strikers and other people in revolt. Revolutionary anarchists, therefore, argue that any state can be defeated, if the circumstances are right and the work of anarchists is to encourage those circumstances.

In addition, revolutionary anarchists argue that even if anarchists did not support revolutionary change, this would not stop such events happening. Revolutions are the product of developments in human society and occur whether we desire them or not. They start with small rebellions, small acts of refusal by individuals, groups, workplaces, communities and grow. These acts of rebellion are inevitable in any hierarchical society, as is their spreading wider and wider. Revolutionary anarchists argue that anarchists must, by the nature of our politics and our desire for freedom, support such acts of rebellion and, ultimately, social revolution. Not to do so means ignoring people in struggle against our common enemy and ignoring the means by which anarchists ideas and attitudes will grow within existing society. Thus Alexander Berkman is right when he wrote:

“That is why it is no prophecy to foresee that some day it must come to decisive struggle between the masters of life and the dispossessed masses.

“As a matter of fact, that struggle is going on all the time. There is a continuous warfare between capital and labour. That warfare generally proceeds within so-called legal forms. But even these erupt now and then in violence, as during strikes and lockouts, because the armed fist of government is always at the service of the masters, and that fist gets into action the moment capital feels its profits threatened: then it drops the mask of ‘mutual interests’ and ‘partnership’ with labour and resorts to the final argument of every master, to coercion and force.

“It is therefore certain that government and capital will not allow themselves to be quietly abolished if they can help it; nor will they miraculously ‘disappear’ of themselves, as some people pretend to believe. It will require a revolution to get rid of them.” [Op. Cit., p. 33]

However, all anarchists are agreed that any revolution should be as non-violent as possible. Violence is the tool of oppression and, for anarchists, violence is only legitimate as a means of self-defence against authority. Therefore revolutionary anarchists do not seek “violent revolution” — they are just aware that when people refuse to kow-tow to authority then that authority will use violence against them. This use of violence has been directed against non-violent forms of direct action and so those anarchists who reject revolution will not avoid state violence directed against.

Nor do revolutionary anarchists think that revolution is in contradiction to the principles of anarchism. As Malatesta put it, “[f]or two people to live in peace they must both want peace; if one insists on using force to oblige the other to work for him and serve him, then the other, if he wishes to retain his dignity

as a man and not be reduced to abject slavery, will be obliged, in spite of his love of peace, to resist force with adequate means." [Malatesta, **Life and Ideas**, p. 54] Under any hierarchical system, those in authority do not leave those subject to them in peace. The boss does not treat his/her workers as equals, working together by free agreement without differences in power. Rather, the boss orders the worker about and uses the threat of sanctions to get compliance. Similarly with the state. Under these conditions, revolution cannot be authoritarian — for it is not authoritarian to destroy authority! To quote Rudolf Rocker:

"We . . . know that a revolution cannot be made with rosewater. And we know, too, that the owning classes will never yield up their privileges spontaneously. On the day of victorious revolution the workers will have to impose their will on the present owners of the soil, of the subsoil and of the means of production, which cannot be done — let us be clear on this — without the workers taking the capital of society into their own hands, and, above all, without their having demolished the authoritarian structure which is, and will continue to be, the fortress keeping the masses of the people under dominion. Such an action is, without doubt, an act of liberation; a proclamation of social justice; the very essence of social revolution, which has nothing in common with the utterly bourgeois principle of dictatorship." [**Anarchism and Sovietism**]

Errico Malatesta comments reflect well the position of revolutionary anarchists with regards to the use of force:

"We neither seek to impose anything by force nor do we wish to submit to a violent imposition.

"We intend to use force against government, because it is by force that we are kept in subjection by government.

"We intend to expropriate the owners of property because it is by force that they withhold the raw materials and wealth, which is the fruit of human labour, and use it to oblige others to work in their interest.

"We shall resist with force whoever would wish by force, to retain or regain the means to impose his will and exploit the labour of others. . .

"With the exception of these cases, in which the use of violence is justified as a defence against force, we are always against violence, and for self-determination." [**Op. Cit.**, p. 56]

This is the reason why most anarchists are revolutionaries. They do not think it against the principles of anarchism and consider it the only real means of creating a free society — a society in which the far greater, and permanent, violence which keeps the majority of humanity in servitude can be ended once and for all.

J.7.2 Is social revolution possible?

One objection to the possibility of social revolution is based on what we might call “the paradox of social change.” This argument goes as follows: authoritarian institutions reward and select people with an authoritarian type of personality for the most influential positions in society; such types of people have both (a) an interest in perpetuating authoritarian institutions (from which they benefit) and (b) the power to perpetuate them; hence they create a self-sustaining and tightly closed system which is virtually impervious to the influence of non-authoritarian types. Therefore, institutional change presupposes individual change, which presupposes institutional change, and so on. Unless it can be shown, then, that institutions and human psychology can both be changed **at the same time**, hope for a genuine social revolution (instead of just another rotation of elites) appears to be unrealistic.

Connected with this problem is the fact that the psychological root of the hierarchical society is addiction to power — over other people, over nature, over the body and human emotions — and that this addiction is highly contagious. That is, as soon as any group of people anywhere in the world becomes addicted to power, those within range of their aggression also feel compelled to embrace the structures of power, including centralised control over the use of deadly force, in order to protect themselves from their neighbours. But once these structures of power are adopted, authoritarian institutions become self-perpetuating.

In this situation, fear becomes the underlying emotion behind the conservatism, conformity, and mental inertia of the majority, who in that state become vulnerable to the self-serving propaganda of authoritarian elites alleging the necessity of the state, strong leaders, militarism, “law and order,” capitalist bosses, etc. Hence the simultaneous transformation of institutions and individual psychology becomes even more difficult to imagine.

Serious as these obstacles may be, they do not warrant despair. To see why, let’s note first that “paradigm shifts” in science have not generally derived from new developments in one field alone but from a convergence of cumulative developments in several different fields at once. For example, the Einsteinian revolution which resulted in the overthrow of the Newtonian paradigm was due to simultaneous progress in mathematics, physics, astronomy and other sciences that all influenced, reacted on, and cross-fertilised each other (see Thomas Kuhn, **The Structure of Scientific Revolutions**, 1962). Similarly, if there is going to be a “paradigm shift” in the social realm, i.e. from hierarchical to non-hierarchical institutions, it is likely to emerge from the convergence of a number of different socio-economic and political developments at the same time. We have discussed these developments in section J.4 and so will not repeat ourselves here. In a hierarchical society, the oppression which authority produces resistance, and so hope. The “*instinct for freedom*” cannot be repressed forever.

That is why anarchists stress the importance of direct action and self-help (see sections J.2 and J.4). By the very process of struggle, by practising self-management, direct action, solidarity people create the necessary “paradigm shift” in both themselves and society as a whole. In the words of Malatesta, “[o]nly freedom or the struggle for freedom can be the school for freedom.” [**Life and Ideas**, p. 59] Thus the struggle against authority is the school of anarchy — it encourages libertarian tendencies in society and the transformation of individuals into anarchists. In a revolutionary situation, this process is accelerated.

It is worth quoting Murray Bookchin at length on this subject:

“Revolutions are profoundly educational processes, indeed veritable cauldrons in which all kinds of conflicting ideas and tendencies are sifted out in the minds of a revolutionary people. . .

“Individuals who enter into a revolutionary process are by no means the same after the revolution as they were before it began. Those who encounter a modicum of success in revolutionary times learn more within a span of a few weeks or months than they might have learned over their lifetime in non-revolutionary times. Conventional ideas fall away with extraordinary rapidity; values and prejudices that were centuries in the making disappear almost overnight. Strikingly innovative ideas are quickly adopted, tested, and, where necessary, discarded. Even newer ideas, often flagrantly radical in character, are adopted with an élan that frightens ruling elites — however radical the latter may profess to be — and they soon become deeply rooted in the popular consciousness. Authorities hallowed by age-old tradition are suddenly divested of their prestige, legitimacy, and power to govern. . .

*“So tumultuous socially and psychologically are revolutions in general that they constitute a standing challenge to ideologues, including sociobiologists, who assert that human behaviour is fixed and human nature predetermined. Revolutionary changes reveal a remarkable flexibility in ‘human nature,’ yet few psychologists have elected to study the social and psychological tumult of revolution as well as the institutional changes it so often produces. Thus much must be said with fervent emphasis: **to continue to judge the behaviour of a people during and after a revolution by the same standards one judged them by beforehand is completely myopic.***

“I wish to argue [like all anarchists] that the capacity of a revolution to produce far-reaching ideological and moral changes in a people stems primarily from the opportunity it affords ordinary, indeed oppressed, people to exercise popular self-management — to enter directly, rapidly, and exhilaratingly into control over most aspects of their social and personal lives. To the extent that an insurrectionary people takes over the reins of power from the formerly hallowed elites who oppressed them and begins to restructure society along radically populist lines, individuals grow aware of latent powers within themselves that nourish their previously suppressed creativity, sense of self-worth, and solidarity. They learn that society is neither immutable nor sanctified, as inflexible custom had previously taught them; rather, it is malleable and subject, within certain limits, to change according to human will and desire.” [The Third Revolution, vol. 1, pp. 6–7]

So, social revolutions are possible. Anarchists anticipate successful co-operation within certain circumstance. People who are in the habit of taking orders from bosses are not capable of creating a new society. Tendencies towards freedom, self-management, co-operation and solidarity are not simply an act of ethical

will which overcomes the competitive and hierarchical behaviour capitalism generates within those who live in it. Capitalism is, as Malatesta argued, based on competition — and this includes the working class. Thus conflict is endemic to working class life under capitalism. However, *co-operation* is stimulated within our class by our struggles to survive in and resist the system. This tendency for co-operation generated by struggle against capitalism also produces the habits required for a free society — by struggling to change the world (even a small part of it), people also change themselves. Direct action produces empowered and self-reliant people who can manage their own affairs themselves. It is on the liberating effects of struggle, the tendencies towards individual and collective self-management and direct action it generates, the needs and feelings for solidarity and creative solutions to pressing problems it produces that anarchists base their positive answer on whether social revolution is possible. History has shown that we are right. It will do so again.

J.7.3 Doesn't revolution mean violence?

While many try and paint revolutions (and anarchists) as being violent by their very nature, the social revolution desired by anarchists is essentially non-violent. This is because, to quote Bakunin, “[i]n order to launch a radical revolution, it is . . . necessary to attack positions and things and to destroy [the institution of] property and the State, but there will be no need to destroy men and to condemn ourselves to the inevitable reaction which is unfailingly produced in every society by the slaughter of men.” [Michael Bakunin: Selected Writings, pp. 168–9]

As Bakunin noted elsewhere, the end of property is also non-violent:

*“How to smash the tyranny of capital? Destroy capital? But that would be to destroy all the riches accumulated on earth, all primary materials, all the instruments of labour, all the means of labour. . . Thus capital cannot and must not be destroyed. It must be preserved . . . there is but a single solution — **the intimate and complete union of capital and labour** . . . the workers must obtain not individual but **collective** property in capital . . . the collective property of capital . . . [is] the absolutely necessary conditions for of the emancipation **of labour and of the workers.**”* [The Basic Bakunin, pp. 90–1]

The essentially non-violent nature of anarchist ideas of social revolution can be seen from the Seattle General Strike of 1919. Here is a quote from the Mayor of Seattle (we do not think we need to say that he was not on the side of the strikers):

“The so-called sympathetic Seattle strike was an attempted revolution. That there was no violence does not alter the fact . . . The intent, openly and covertly announced, was for the overthrow of the industrial system; here first, then everywhere . . . True, there were no flashing guns, no bombs, no killings. Revolution, I repeat, doesn't need violence. The general strike, as practised in Seattle, is of itself the weapon of revolution, all the more dangerous because quiet. To succeed, it must suspend everything; stop the entire life stream of a

community . . . That is to say, it puts the government out of operation. And that is all there is to revolt — no matter how achieved.” [quoted by Howard Zinn, **A People’s History of the United States**, pp. 370–1]

If the strikers had occupied their workplaces and local communities can created popular assemblies then the attempted revolution would have become an actual one without any use of violence at all. This indicates the strength of ordinary people and the relative weakness of government and capitalism — they only work when they can force people to respect them.

In Italy, a year latter, the occupations of the factories and land started. As Malatesta pointed out, “*in Umanita Nova [the daily anarchist newspaper] we . . . said that if the movement spread to all sectors of industry, that is workers and peasants followed the example of the metallurgists, of getting rid of the bosses and taking over the means of production, the revolution would succeed without shedding a single drop of blood.*” Thus the “*occupation of the factories and the land suited perfectly our programme of action.*” [**Life and Ideas**, p. 135]

Therefore the notion that a social revolution is necessarily violent is a false one. For anarchists, social revolution is essentially an act of self-liberation (of both the individuals involved and society as a whole). It has nothing to do with violence, quite the reverse, as anarchists see it as the means to end the rule and use of violence in society. Therefore anarchists hope that any revolution is essentially non-violent, with any violence being defensive in nature.

Of course, many revolutions are marked by violence. However, as Alexander Berkman argues, this is not the aim of anarchism or the revolution and has far more to do with previous repression and domination than anarchist ideas:

“We know that revolution begins with street disturbances and outbreaks; it is the initial phase which involves force and violence. But that is merely the spectacular prologue of the real revolution. The age long misery and indignity suffered by the masses burst into disorder and tumult, the humiliation and injustice meekly borne for decades find vents in facts of fury and destruction. That is inevitable, and it is solely the master class which is responsible for this preliminary character of revolution. For it is even more true socially than individually that ‘whoever sows the wind will reap the whirlwind;’ the greater the oppression and wretchedness to which the masses had been made to submit, the fiercer the rage [of] the social storm. All history proves it . . .” [**ABC of Anarchism**, p. 50]

He also argues that “[m]ost people have very confused notions about revolution. To them it means just fighting, smashing things, destroying. It is the same as if rolling up your sleeves for work should be considered the work itself that you have to do. The fighting bit of the revolution is merely the rolling up of your sleeves.” The task of the revolution is the “*destruction of the existing conditions*” and “*conditions are not destroyed [by] breaking and smashing things. You can’t destroy wage slavery by wrecking the machinery in the mills and factories . . . You won’t destroy government by setting fire to the White House.*” He correctly points out that to think of revolution “*in terms of violence and destruction is to misinterpret and falsify the whole idea of it. In practical appli-*

ation such a conception is bound to lead to disastrous results.” [Op. Cit., pp. 40–1]

Thus when anarchists like Bakunin speak of revolution as “destruction” they mean that the idea of authority and obedience must be destroyed, along with the institutions that are based on such ideas. We do not mean, as can be clearly seen, the destruction of people or possessions. Nor do we imply the glorification of violence — quite the reserve, as anarchists seek to limit violence to that required for self-defence against oppression and authority.

Therefore a social revolution **may** involve some violence. It may also mean no-violence at all. It depends on the revolution and how widely anarchist ideas are spread. One thing is sure, for anarchists social revolution is **not** synonymous violence. Indeed, violence usually occurs when the ruling class resists the action of the oppressed — that is, when those in authority act to protect their social position.

The wealthy and their state will do anything in their power to prevent having a large enough percentage of anarchists in the population to simply “ignore” the government and property out of existence. If things got that far, the government would suspend the legal rights, elections and round up influential subversives. The question is, what do anarchists do in response to these actions? If anarchists are in the majority or near it, then defensive violence would likely succeed. For example, “*the people armed*” crushed the fascist coup of July 19th, 1936 in Spain and resulted in one of the most important experiments in anarchism the world has ever seen. This should be contrasted with the aftermath of the factory occupations in Italy in 1920 and the fascist terror which crushed the labour movement. In other words, you cannot just ignore the state even if the majority are acting, you need to abolish it and organise self-defence against attempts to re-impose it or capitalism.

We discuss the question of self-defence and the protection of the revolution in section J.7.6.

J.7.4 What would a social revolution involve?

Social revolution necessitates putting anarchist ideas into daily practice. Therefore it implies that direct action, solidarity and self-management become increasingly the dominant form of living in a society. It implies the transformation of society from top to bottom. We can do no better than quote Errico Malatesta on what revolution means:

“The Revolution is the creation of new living institutions, new groupings, new social relationships; it is the destruction of privileges and monopolies; it is the new spirit of justice, of brotherhood, of freedom which must renew the whole of social life, raise the moral level and the material conditions of the masses by calling on them to provide, through their direct and conscious action, for their own futures. Revolution is the organisation of all public services by those who in them in their own interest as well as the public’s; Revolution is the destruction of all of coercive ties; it is the autonomy of groups, of communes, of regions; Revolution is the free federation brought about by a desire for brotherhood, by individual and collective interests, by

the needs of production and defence; Revolution is the constitution of innumerable free groupings based on ideas, wishes, and tastes of all kinds that exist among the people; Revolution is the forming and disbanding of thousands of representative, district, communal, regional, national bodies which, without having any legislative power, serve to make known and to co-ordinate the desires and interests of people near and far and which act through information, advice and example. Revolution is freedom proved in the crucible of facts — and lasts so long as freedom lasts. . .” [Life and Ideas, p. 153]

This, of course, presents a somewhat wide vision of the revolutionary process. We will need to give some more concrete examples of what a social revolution would involve. However, before so doing, we stress that these are purely examples drawn from previous revolutions and are not written in stone. Every revolution creates its own forms of organisation and struggle. The next one will be no different. Just as we argued in section I, an anarchist revolution will create its own forms of freedom, forms which may share aspects with previous forms but which are unique to themselves. All we do here is give a rough overview of what we expect (based on previous revolutions) to see occur in a social revolution. We are not predicting the future. As Kropotkin put it:

*“A question which we are often asked is: ‘How will you organise the future society on Anarchist principles?’ If the question were put to . . . someone who fancies that a group of men [or women] is able to organise society as they like, it would seem natural. But in the ears of an Anarchist, it sounds very strangely, and the only answer we can give to it is: ‘We cannot organise you. It will depend upon **you** what sort of organisation you choose.’”* [Act for Yourself, p. 32]

And organise themselves they have. In each social revolution, the oppressed have organised themselves into many different self-managed organisations. These bodies include the Sections during the Great French Revolution, the workers councils (“soviets” or “rate”) during the Russian and German revolutions, the industrial and rural collectives during the Spanish Revolution, the workers councils during the Hungarian revolution of 1956, assemblies and action committees during the 1968 revolt in France, and so on. These bodies were hardly uniform in nature and some were more anarchistic than others, but the tendency towards self-management and federation existing in them all. This tendency towards anarchistic solutions and organisation is not unsurprising, for, as Nestor Makhno argued, “[i]n carrying through the revolution, under the impulsion of the anarchism that is innate in them, the masses of humanity search for free associations. Free assemblies always command their sympathy. The revolutionary anarchist must help them to formulate this approach as best they can.” [The Struggle Against the State and Other Essays, p. 85]

In addition, we must stress that we are discussing an **anarchist** social revolution in this section. As we noted in section I.2.2, anarchists recognise that any revolution will take on different forms in different areas and develop in different ways and at different speeds. We leave it up to others to describe their vision of revolution (for Marxists, the creation of a “workers’ state” and the seizure of power by the “proletarian” vanguard or party, and so on).

So what would a libertarian social revolution involve? Firstly, a revolution *“it is not the work of one day. It means a whole period, mostly lasting for several years, during which the country is in a state of effervescence; when thousands of formerly indifferent spectators take a lively part in public affairs . . . [and] criticises and repudiates the institutions which are a hindrance to free development; when it boldly enters upon problems which formerly seemed insoluble.”* [Peter Kropotkin, **Op. Cit.**, pp. 25–6] Thus, it would be a **process** in which revolutionary attitudes, ideas, actions and organisations spread in society until the existing system is overthrown and a new one takes its place. It does not come overnight. Rather it is an accumulative development, marked by specific events of course, but fundamentally it goes on in the fabric of society. For example, the **real** Russian revolution went on during the period between the 1917 February and October insurrections when workers took over their workplaces, peasants seized their land and new forms of social life (soviets, factory committees, co-operatives, etc.) were formed and people lost their previous submissive attitudes to authority by using direct action to change their lives for the better (see **The Unknown Revolution** by Voline for more details and evidence of this revolutionary process in action). Similarly, the Spanish Revolution occurred after the 19th of July, 1936, when workers again took over their workplaces, peasants formed collectives and militias were organised to fight fascism (see **Collectives in the Spanish Revolution** by Gaston Leval for details).

Secondly, *“there **must** be a rapid modification of outgrown economical and political institutions, an overthrow of the injustices accumulated by centuries past, a displacement of wealth and political power.”* [**Op. Cit.**, p. 25]

This aspect is the key one. Without the abolition of the state and capitalism, no real revolution has taken place. As Bakunin argued, *“the program of social revolution”* is *“the abolition of all exploitation and all political or juridical as well as governmental and bureaucratic oppression, in other words, to the abolition of all classes through the equalisation of economic conditions, and the abolition of their last buttress, the state.”* That is, *“the total and definitive liberation of the proletariat from economic exploitation and state oppression.”* [**Statism and Anarchy**, pp. 48–9]

We should stress here that, regardless of what Marxists may say, anarchists see the destruction of capitalism occurring **at the same time** as the destruction of the state. We do not aim to abolish the state first, then capitalism as Engels asserted we did. This perspective of a simultaneous political and economic revolution is clearly seen when Bakunin wrote that a city in revolt would *“naturally make haste to organise itself as best it can, in revolutionary style, after the workers have joined into associations and made a clean sweep of all the instruments of labour and every kind of capital and building; armed and organised by streets and **quartiers**, they will form the revolutionary federation of all the **quartiers**, the federative commune. . . All . . . the revolutionary communes will then send representatives to organise the necessary services and arrangements for production and exchange . . . and to organise common defence against the enemies of the Revolution.”* [**Michael Bakunin: Selected Writings**, p. 179]

As can be seen from Bakunin’s comments just quoted that an essential part of a social revolution is the *“expropriation of landowners and capitalists for the benefit of all.”* This would be done by workers occupying their workplaces and placing them under workers’ self-management. Individual self-managed work-

places would then federate on a local and industrial basis into workers' councils to co-ordinate joint activity, discuss common interests and issues as well as ensuring common ownership and universalising self-management. "*We must push the workers to take possession of the factories, to federate among themselves and work for the community, and similarly the peasants should take over the land and the produce usurped by the landlords, and come to an agreement with the industrial workers on the necessary exchange of goods.*" [Errico Malatesta, **Op. Cit.**, p. 198 and p. 165]

In this way capitalism is replaced by new economic system based on self-managed work. The end of hierarchy in the economy, in other words. These workplace assemblies and local, regional, etc., federations would start to organise production to meet human needs rather than capitalist profit. While most anarchists would like to see the introduction of communistic relations begin as quickly as possible in such an economy, most are realistic enough to recognise that tendencies towards libertarian communism will be depend on local conditions. As Malatesta argued:

"It is then that graduation really comes into operation. We shall have to study all the practical problems of life: production, exchange, the means of communication, relations between anarchist groupings and those living under some kind of authority, between communist collectives and those living in an individualistic way; relations between town and country, the utilisation for the benefit of everyone of all natural resources of the different regions [and so on] . . . And in every problem [anarchists] should prefer the solutions which not only are economically superior but which satisfy the need for justice and freedom and leave the way open for future improvements, which other solutions might not." [**Op. Cit.**, p. 173]

No central government could organise such a transformation. No centralised body could comprehend the changes required and decide between the possibilities available to those involved. Hence the very complexity of life, and the needs of social living, will push a social revolution towards anarchism. "*Unavoidably,*" argued Kropotkin, "*the Anarchist system of organisation — free local action and free grouping — will come into play.*" [**Op. Cit.**, p. 72] Without this local action and the free agreement between local groups to co-ordinate activity, a revolution would be dead in the water and fit only to produce a new bureaucratic class structure, as the experience of the Russian Revolution proves. Unless the economy is transformed from the bottom up by those who work within it, socialism is impossible. If it is re-organised from the top-down by a centralised body all that will be achieved is state capitalism and rule by bureaucrats instead of capitalists.

Therefore, the key economic aspect of a social revolution is the end of capitalist oppression by the direct action of the workers themselves and their re-organisation of their work and the economy by their own actions, organisations and initiative from the bottom-up. As Malatesta argued:

"To destroy radically this oppression without any danger of it re-emerging, all people must be convinced of their right to the means of production, and be prepared to exercise this basic right by expropri-

ating the landowners, the industrialists and financiers, and putting all social wealth at the disposal of the people.” [Op. Cit., p. 167]

However, the economic transformation is but part of the picture. As Kropotkin argued, “*throughout history we see that each change in the economic relations of a community is accompanied by a corresponding change in what may be called political organisation . . . Thus, too, it will be with Socialism. If it contemplates a new departure in economics it must be prepared for a new departure in what is called political organisation.*” [Op. Cit., p. 39] Thus the anarchist social revolution also aims to abolish the state and create a confederation of self-governing communes to ensure its final elimination. To really destroy something you must replace it with something better. Hence anarchism will destroy the state by a confederation of self-managed, free communities (or communes).

This destruction of the state is essential. This is because “*those workers who want to free themselves, or even only to effectively improve their conditions, will be forced to defend themselves from the government . . . which by legalising the right to property and protecting it with brute force, constitutes a barrier to human progress, which must be beaten down . . . if one does not wish to remain indefinitely under present conditions or even worse.*” Therefore, “[f]rom the economic struggle one must pass to the political struggle, that is to the struggle against government.” [Malatesta, Op. Cit., p. 195]

Thus a social revolution will have to destroy the state bureaucracy and the states forces of violence and coercion (the police, armed forces, intelligence agencies, and so on). If this is not done then the state will come back and crush the revolution. Such a destruction of the state does not involve violence against individuals, but rather the end of hierarchical organisations, positions and institutions. It would involve, for example, the disbanding of the police, army, navy, state officialdom etc. and the transformation of police stations, army and naval bases, state bureaucracy’s offices into something more useful (or, as in the case of prisons, their destruction). Town halls would be occupied and used by community and industrial groups, for example. Mayors’ offices could be turned into creches, for example. Police stations, if they have not been destroyed, could, perhaps, be turned into storage centres for goods. In William Morris’ utopian novel, **News from Nowhere**, the Houses of Parliament were turned into a manure storage facility. And so on. Those who used to work in such occupations would be asked to pursue a more fruitful way of life or leave the community. In this way, all harmful and useless institutions would be destroyed or transformed into something useful and of benefit to society.

In addition, as well as the transformation/destruction of the buildings associated with the old state, the decision making process for the community previously usurped by the state would come back into the hands of the people. Alternative, self-managed organisations would be created in every community to manage community affairs. From these community assemblies, confederations would spring up to co-ordinate joint activities and interests. These neighbourhood assemblies and confederations would be means by which power would be dissolved in society and government finally eliminated in favour of freedom (both individual and collective).

Ultimately, anarchism means creating positive alternatives to existing institutions which provide some useful function. For example, we propose self-management as an alternative to capitalist production. We propose self-governing

communes to organise social life instead of the state. “*One only destroys, and effectively and permanently,*” argued Malatesta, “*that which one replaces by something else; and to put off to a later date the solution of problems which present themselves with the urgency of necessity, would be to give time to the institutions one is intending to abolish to recover from the shock and reassert themselves, perhaps under other names, but certainly with the same structure.*” [Op. Cit., p. 159] This was the failure of the Spanish Revolution, which ignored the state rather than abolish it via new, self-managed organisations (see section I.8).

Hence a social revolution would see the “[o]rganisation of social life by means of free association and federations of producers and consumers, created and modified according to the wishes of their members, guided by science and experience, and free from any kind of imposition which does not spring from natural needs, to which everyone, convinced by a feeling of overriding necessity, voluntarily submits.” [Errico Malatesta, **Life and Ideas**, p. 184]

These organisations, we must stress, are usually products of the revolution and the revolutionary process itself:

*“Assembly and community must arise from within the revolutionary process itself; indeed, the revolutionary process must be the formation of assembly and community, and with it, the destruction of power. Assembly and community must become ‘fighting words,’ not distinct panaceas. They must be created as **modes of struggle** against existing society . . . The future assemblies of people in the block, the neighbourhood or the district — the revolutionary sections to come — will stand on a higher social level than all the present-day committees, syndicates, parties and clubs adorned by the most resounding ‘revolutionary’ titles. They will be the living nuclei of utopia in the decomposing body of bourgeois society”* In this way, the “*specific gravity of society . . . [will] be shifted to its base — the armed people in permanent assembly.*” [**Post-Scarcity Anarchism**, pp. 167–8 and pp. 168–9]

Such organisations are required because, in the words of Murray Bookchin, “[f]reedom has its forms . . . a liberatory revolution always poses the question of what social forms will replace existing ones. At one point or another, a revolutionary people must deal with how it will manage the land and the factories from which it requires the means of life. It must deal with the manner in which it will arrive at decisions that affect the community as a whole. Thus if revolutionary thought is to be taken at all seriously, it must speak directly to the problems and forms of social management.” [Op. Cit., p. 143] If this is not done, capitalism and the state will not be destroyed and the social revolution will fail. Only by destroying hierarchical power by abolishing state and capitalism by self-managed organisations can individuals free themselves and society.

As well as these economic and political changes, there would be other changes as well — far too many to chronicle here. For example, “[w]e will see to it that all empty and under-occupied houses are used so that no one will be without a roof over his [or her] head. We will hasten to abolish banks and title deeds and all that represents and guarantees the power of the State and capitalist privilege. And we will try to reorganise things in such a way that it will be impossible for

bourgeois society to be reconstituted.” [Malatesta, **Op. Cit.**, p. 165] Similarly, free associations will spring up on a whole range of issues and for a whole range of interests and needs. Social life will become transformed, as will many aspects of personal life and personal relationships. We cannot say in which way, but there will be a general libertarian movement in all aspects of life as women resist and overcome sexism, gays resist and end homophobia, the young will expect to be treated as individuals, not property, and so on.

Society will become more diverse, open, free and libertarian in nature. And, hopefully, it and the struggle that creates it will be **fun** — anarchism is about making life worth living and so any struggle must reflect that. The use of fun in the struggle is important. There is no incongruity in conducting serious business and having fun. We are sure this will piss off the “serious” Left no end. The aim of revolution is to emancipate **individuals** not abstractions like “the proletariat,” “society,” “history” and so on. And having fun is part and parcel of that liberation. As Emma Goldman said, “*If I can’t dance, it’s not my revolution.*” Revolutions should be “***festivals of the oppressed***” — we cannot “*resolve the anarchic, intoxicating phase that opens all the great revolutions of history merely into an expression of class interest and the opportunity to redistribute social wealth.*” [Murray Bookchin, **Op. Cit.**, p. 277f]

Therefore a social revolution involves a transformation of society from the bottom up by the creative action of working class people. This transformation would be conducted through self-managed organisations which will be the basis for abolishing hierarchy, state and capitalism. “*There can be no separation of the revolutionary process from the revolutionary goal. A society based on self-administration must be achieved by means of self-administration. . . . If we define ‘power’ as the power of man over man, power can only be destroyed by the very process in which man acquires power over his own life and in which he not only ‘discovers’ himself, but, more meaningfully, formulates his selfhood in all its social dimensions.*” [Murray Bookchin, **Op. Cit.**, p. 167]

J.7.5 What is the role of anarchists in a social revolution?

All the great social revolutions have been spontaneous. Indeed, it is cliché that the revolutionaries are usually the most surprised when a revolution breaks out. Nor do anarchists assume that a revolution will initially be libertarian in nature. All we assume is that there will be libertarian tendencies which anarchists are work within and try and strengthen. Therefore the role of anarchists and anarchist organisations is to try and push a revolution towards a social revolution by encouraging the tendencies we discussed in the last section and by arguing for anarchist ideas and solutions. In the words of Vernon Richards:

“We do not for one moment assume that all social revolutions are necessarily anarchist. But whatever form the revolution against authority takes, the role of anarchists is clear: that of inciting the people to abolish capitalistic property and the institutions through which it exercises its power for the exploitation of the majority by a minority.” [Lessons of the Spanish Revolution, p. 44]

For anarchists, their role in a social revolution is clear. They try to spread anarchist ideas and encourage autonomous organisation and activity by the oppressed. For example, during the Russian Revolution anarchists and anarcho-syndicalists played a key role in the factory committee movement for workers' self-management. They combated Bolshevik attempts to substitute state control for workers' self-management and encouraged workplace occupations and federations of factory committees (see Maurice Brinton's **The Bolsheviks and Workers' Control** for a good introduction to the movement for workers' self-management during the Russian Revolution and Bolshevik hostility to it). Similarly, they supported the soviets (councils elected by workers in their workplaces) but opposed their transformation from revolutionary bodies into state organs (and so little more than organs of the Communist Party and so the enemies of self-management). The anarchists tried to "*work for their conversion from centres of authority and decrees into non-authoritarian centres, regulating and keeping things in order but not suppressing the freedom and independence of local workers' organisations. They must become centres which link together these autonomous organisations.*" [G. P. Maksimov in Paul Avrich (ed.) **The Anarchists in the Russian Revolution**, p. 105]

Therefore, the anarchist role, as Murray Bookchin puts it, is to "*preserve and extend the anarchic phase that opens all the great social revolutions*" by working "*within the framework of the forms created by the revolution, not within the forms created by the party. What this means is that their commitment is to the revolutionary organs of self-management . . . to the **social** forms, not the **political** forms. Anarcho-communists [and other revolutionary anarchists] seek to persuade the factory committees, assemblies or soviets to make themselves into **genuine organs of popular self-management**, not to dominate them, manipulate them, or hitch them to an all-knowing political party.*" [**Post-Scarcity Anarchism**, p. 215 and p. 217]

Equally as important, "*is that the people, all people, should lose their sheep-like instincts and habits with which their minds have been inculcated by an age-long slavery, and that they should learn to think and act freely. It is to this great task of spiritual liberation that anarchists must especially devote their attention.*" [Malatesta, **Op. Cit.**, pp. 160–1] Unless people think and act for themselves, no social revolution is possible and anarchy will remain just a tendency with authoritarian societies.

Practically, this means the encouragement of self-management and direct action. Anarchists thus "*push the people to expropriate the bosses and put all goods in common and organise their daily lives themselves, through freely constituted associations, without waiting for orders from outside and refusing to nominate or recognise any government or constituted body in whatever guise . . . even in a provisional capacity, which ascribes to itself the right to lay down the law and impose with force its will on others.*" [Malatesta, **Op. Cit.**, p. 197] This is because, to quote Bakunin, anarchists do "*not accept, even in the process of revolutionary transition, either constituent assemblies, provisional governments or so-called revolutionary dictatorships; because we are convinced that revolution is only sincere, honest and real in the hands of the masses, and that when it is concentrated in those of a few ruling individuals it inevitably and immediately becomes reaction.*" [**Michael Bakunin: Selected Writings**, p. 237]

As the history of every revolution shows, "*revolutionary government*" is a contradiction in terms. Government bodies mean "*the transferring of initiative*

from the armed workers to a central body with executive powers. By removing the initiative from the workers, the responsibility for the conduct of the struggle and its objectives [are] also transferred to a governing hierarchy, and this could have no other than an adverse effect on the morale of the revolutionary fighters.” [Vernon Richards, **Lessons of the Spanish Revolution**, pp. 42–3] Such a centralisation of power means the suppression of local initiatives, the replacing of self-management with bureaucracy and the creation of a new, exploitative and oppressive class of officials and party hacks. Only when power rests in the hands of everyone can a social revolution exist and a free society created. If this is not done, if the state replaces the self-managed associations of a free people, all that happens is the replacement of one class system by another. This is because the state is an instrument of minority rule — it can never become an instrument of majority rule, its centralised, hierarchical and authoritarian nature excludes such a possibility (see section H.3.7 for more discussion on this issue).

Therefore an important role of anarchists is to undermine hierarchical organisation by creating self-managed ones, by keeping the management and direction of a struggle or revolution in the hands of those actually conducting it. It is **their** revolution, **not** a party’s and so they should control and manage it. They are the ones who have to live with the consequences of it. *“The revolution is safe, it grows and becomes strong,”* correctly argues Alexander Berkman, *“as long as the masses feel that they are direct participants in it, that they are fashioning their own lives, that **they** are making the revolution, that they **are** the revolution. But the moment that their activities are usurped by a political party or are centred in some special organisation, revolutionary effort becomes limited to a comparatively small circle from the which the large masses are practically excluded. The natural result of that [is that] popular enthusiasm is dampened, interest gradually weakens, initiative languishes, creativeness wanes, and the revolution becomes the monopoly of a clique which presently turns dictator.”* [Op. Cit., p. 65]

The history of every revolution proves this point, we feel, and so the role of anarchists (like those described in section J.3) is clear — to keep a revolution revolutionary by encouraging libertarian ideas, organisation, tactics and activity. To requote Emma Goldman:

“No revolution can ever succeed as factor of liberation unless the MEANS used to further it be identical in spirit and tendency with the PURPOSE to be achieved.” [**Patterns of Anarchy**, p. 113]

Anarchists, therefore, aim to keep the means in line with the goal and their role in any social revolution is to combat authoritarian tendencies and parties while encouraging working class self-organisation, self-activity and self-management and the spreading of libertarian ideas and values within society.

J.7.6 How could an anarchist revolution defend itself?

To some, particularly Marxists, this section may seem in contradiction with anarchist ideas. After all, did Marx not argue in a diatribe against Proudhon

that anarchist “*abolishing the state*” implies the “*laying down of arms*” by the working class? However, as will become very clear nothing could be further from the truth. Anarchists have always argued for defending a revolution — by force, if necessary. Anarchists do not think that abolishing the state involves “*laying down arms*.” We argue that Marx (and Marxists) confuse self-defence by “*the people armed*” with the state, a confusion which has horrific implications (as the history of the Russian Revolution shows — see the appendix on “What happened during the Russian Revolution?” for details).

So how would an anarchist revolution (and by implication, society) defend itself? Firstly, we should note that it will **not** defend itself by creating a centralised body, a new state. If it did this then the revolution will have failed and a new class society would have been created (a society based on state bureaucrats and oppressed workers as in the Soviet Union). Thus we reject Marx’s notion of “*a revolutionary and transitory form*” of state as confused in the extreme. [Marx quoted by Lenin, **Essential Works of Lenin**, p. 315] Rather, we seek libertarian means to defend a libertarian revolution. What would these libertarian means be?

History, as well as theory, points to them. In all the major revolutions of this century which anarchists took part in they formed militias to defend freedom. For example, anarchists in many Russian cities formed “Black Guards” to defend their expropriated houses and revolutionary freedoms. In the Ukraine, Nestor Makhno helped organise a peasant-worker army to defend the social revolution against authoritarians of right and left. In the Spanish Revolution, the C.N.T. and F.A.I. organised militias to free those parts of Spain under fascist rule after the military coup in 1936.

(As an aside, we **must** point out that these militias had nothing in common — bar the name — with the present “militia movement” in the United States. The anarchist militias were organised in a libertarian manner and aimed to defend an anti-statist, anti-capitalist revolution from pro-state, pro-capitalist forces. In contrast, the US “militia movement” is organised in a military fashion, defend property rights and want to create their own governments.)

These anarchist militias were as self-managed as possible, with any “officers” elected and accountable to the troops and having the same pay and living conditions as them. Nor did they impose their ideas on others. When a militia liberated a village, town or city they called upon the population to organise their own affairs, as they saw fit. All the militia did was present suggestions and ideas to the population. For example, when the Makhnovists passed through a district they would put on posters announcing:

“The freedom of the workers and the peasants is their own, and not subject to any restriction. It is up to the workers and peasants to act, to organise themselves, to agree among themselves in all aspects of their lives, as they themselves see fit and desire. . . The Makhnovists can do no more than give aid and counsel . . . In no circumstances can they, nor do they wish to, govern.” [quoted by Peter Marshall, **Demanding the Impossible**, p. 473]

Needless to say, the Makhnovists counselled the workers and peasants “*to set up free peasants’ and workers’ councils*” as well as to expropriate the land and means of production. They argued that “*[f]reedom of speech, of the press and*

of assembly is the right of every toiler and any gesture contrary to that freedom constitutes an act of counter-revolution.” [No Gods, No Masters, vol. 2, pp. 157–8] The Makhnovists also organised regional congresses of peasants and workers to discuss revolutionary and social issues (a fact that annoyed the Bolsheviks, leading to Trotsky trying to ban one congress and arguing that “*participation in said congress will be regarded as an act of high treason.*” [Op. Cit., p. 151] Little wonder workers’ democracy withered under the Bolsheviks!).

The Makhnovists declared principles were voluntary enlistment, the election of officers and self-discipline according to the rules adopted by each unit themselves. Remarkably effective, the Makhnovists were the force that defeated Denikin’s army and helped defeat Wrangel. After the Whites were defeated, the Bolsheviks turned against the Makhnovists and betrayed them. However, while they existed the Makhnovists defended the freedom of the working class to organise themselves against both right and left statists. See Voline’s **The Unknown Revolution** and Peter Arshinov’s **History of the Makhnovist Movement** for more information or the appendix on “Why does the Makhnovist movement show there is an alternative to Bolshevism?” of this FAQ.

A similar situation developed in Spain. After defeating the military/fascist coup on 19th of July, 1936, the anarchists organised self-managed militias to liberate those parts of Spain under Franco. These groups were organised in a libertarian fashion from the bottom up:

*“The establishment of war committees is acceptable to all confederal militias. We start from the individual and form groups of ten, which come to accommodations among themselves for small-scale operations. Ten such groups together make up one **centuria**, which appoints a delegate to represent it. Thirty **centurias** make up one column, which is directed by a war committee, on which the delegates from the **centurias** have their say... although every column retains its freedom of action, we arrive at co-ordination of forces, which is not the same thing as unity of command.”* [No Gods, No Masters, vol. 2, pp. 256–7]

Like the Makhnovists, the anarchist militias in Spain were not only fighting against reaction, they were fighting for a better world. As Durruti argued, “*Our comrades on the front know for whom and for what they fight. They feel themselves revolutionaries and they fight, not in defence of more or less promised new laws, but for the conquest of the world, of the factories, the workshops, the means of transportation, their bread and the new culture.*” [Op. Cit., p. 248]

When they liberated towns and villages, the militia columns urged workers and peasants to collectivise the land and means of production, to re-organise life in a libertarian fashion. All across anti-Fascist Spain workers and peasants did exactly that (see section I.8 for more information). The militias only defended the workers’ and peasants’ freedom to organise their own lives as they saw fit and did not force them to create collectives or dictate their form.

Unfortunately, like the Makhnovists, the C.N.T. militias were betrayed by their so-called allies on the left. The anarchist troops were not given enough arms and were left on the front to rot in inaction. The “unified” command by the Republican State preferred not to arm libertarian troops as they would use these arms to defend themselves and their fellow workers against the Republican

and Communist led counter-revolution. Ultimately, the “*people in arms*” won the revolution and the “People’s army” which replaced it lost the war. See Abel Paz’s **Durruti: The People Armed**, Vernon Richards **Lessons of the Spanish Revolution** and George Orwell’s **Homage to Catalonia** for more information.

While the cynic may point out that, in the end, these revolutions and militias were defeated, it does not mean that their struggle was in vain or a future revolution will not succeed. That would be like arguing in 1940 that democracy is inferior to fascism because the majority of democratic states had been (temporarily) defeated by fascism or fascist states. It does not mean that these methods will fail in the future or that we should embrace apparently more “successful” approaches which end in the creation of a society the total opposite of what we desire (means determine ends, after all, and statist means will create statist ends and apparent “successes” — like Bolshevism — are the greatest of failures in terms of our ideas and ideals). All we are doing here is pointing how anarchists have defended revolutions in the past and that these methods were successful for a long time in face of tremendous opposition forces.

Thus, in practice, anarchists have followed Malatesta’s argument for the “*creation of a voluntary militia, without powers to interfere as militia in the life of the community, but only to deal with any armed attacks by the forces of reaction to re-establish themselves, or to resist outside intervention by countries as yet not in a state of revolution.*” [Op. Cit., p. 166] This militia would be based on an armed population and “[t]he power of the people in arms can only be used in the defence of the revolution and the freedoms won by their militancy and their sacrifices.” [Vernon Richards, **Lessons of the Spanish Revolution**, p. 44] It does not seek to impose a revolution, for you cannot impose freedom or force people to be free against their will.

Hence anarchists would seek to defend a revolution because, while anarchism “*is opposed to any interference with your liberty . . . [and] against all invasion and violence*” it recognises that when “*any one attacks you, then it is he who is invading you, he who is employing violence against you. You have a right to defend yourself. More than that, it is your duty, as an anarchist to protect your liberty, to resist coercion and compulsion. . . In other words, the social revolution will attack no one, but it will defend itself against invasion from any quarter.*” [Alexander Berkman, **ABC of Anarchism**, p. 81]

As Berkman stresses, this revolutionary defence “*must be in consonance with th[e] spirit [of anarchism]. Self-defence excludes all acts of coercion, of persecution or revenge. It is concerned only with repelling attack and depriving the enemy of opportunity to invade you.*” Any defence would be based on “*the strength of the revolution . . . First and foremost, in the support of the people . . . If they feel that they themselves are making the revolution, that they have become masters of their lives, that they have gained freedom and are building up their welfare, then in that very sentiment you have the greatest strength of the revolution. . . Let them believe in the revolution, and they will defend it to the death.*” Thus the “*armed workers and peasants are the only effective defence of the revolution.*” [Op. Cit., pp. 81–81]

Part of this strength lies in liberty, so no attempt would be made to “defend” the revolution against mere talk, against the mere expression of an opinion. To “*suppress speech and press is not only a theoretical offence against liberty; it is a direct blow at the very foundations of the revolution. . . It would generate fear*

and distrust, would hatch conspiracies, and culminate in a reign of terror which has always killed revolution in the past.” [Op. Cit., p. 83]

Moreover, in the case of foreign intervention, the importance of international solidarity is important. As Bakunin argued, “*a social revolution cannot be a revolution in one nation alone. It is by nature an international revolution.*” [Michael Bakunin: Selected Writings, p. 49] Thus any foreign intervention would face the problems of solidarity actions and revolts on its own doorstep and not dare send its troops abroad for long, if at all. Ultimately, the only way to support a revolution is to make your own.

Within the revolutionary area, it is the actions of liberated people than will defend it. Firstly, the population would be armed and so counter-revolutionaries would face stiff opposition to their attempts to recreate authority. Secondly, they would face liberated individuals who would reject their attempts:

*“The only way in which a state of Anarchy can be obtained is for each man [or woman] who is oppressed to act as if he [or she] were at liberty, in defiance of all authority to the contrary . . . In practical fact, territorial extension is necessary to ensure permanency to any given individual revolution. In speaking of the Revolution, we signify the aggregate of so many successful individual and group revolts as will enable every person within the revolutionised territory to act in perfect freedom . . . without having to constantly dread the prevention or the vengeance of an opposing power upholding the former system . . . Under these circumstance it is obvious that any visible reprisal could and would be met by a resumption of the same revolutionary action on the part of the individuals or groups affected, and that the **maintenance** of a state of Anarchy in this manner would be far easier than the gaining of a state of Anarchy by the same methods and in the face of hitherto unshaken opposition.” [Kropotkin, Op. Cit., pp. 87–8]*

Thus any authoritarian would face the direct action of a free people, of free individuals, who would refuse to co-operate with the would-be authorities and join in solidarity with their friends and fellow workers to resist them. The only way a counter-revolution could spread internally is if the mass of the population can become alienated from the revolution and this is impossible in an anarchist revolution as power remains in their hands. If power rests in their hands, there is no danger from counter-revolutionaries.

In the end, an anarchist revolution can be defended only by applying its ideas as widely as possible. Its defence rests in those who make it. If the revolution is an expression of their needs, desires and hopes then it will be defended with the full passion of a free people. Such a revolution **may** be defeated by superior force, who can tell? But the possibility is that it will not and that is what makes it worth trying. To not act because of the possibility of failure is to live half a life. Anarchism calls upon everyone to live the kind of life they deserve as unique individuals and desire as human beings. Individually we can make a difference, together we can change the world.

Appendix: Anarchism and “anarcho”-capitalism

This appendix exists for one reason, namely to explain why the idea of “anarcho”-capitalism is a bogus one. While we have covered this topic in section F, we thought that this appendix should be created in order to discuss in more detail why anarchists reject both “anarcho”-capitalism and its claims to being anarchist.

This appendix has three parts. The first two sections are our critique of Bryan Caplan’s “anarcho”-capitalist “Anarchist Theory FAQ.” Caplan’s FAQ is the main on-line attempt to give the oxymoron of “anarcho”-capitalism some form of justification and so it is worthwhile explaining, using his FAQ as the base, why such an attempt fails. The last part of this appendix is the original version of section F,

As we will prove, Caplan’s FAQ fails in its attempt to show that “anarcho” capitalism can be considered as part of the anarchist movement and in fact his account involves extensive re-writing of history. This appendix is in two parts, a reply to Caplan’s most recent FAQ release (version 5.2) and an older reply to version 4.1.1 (which was originally section F.10 of the FAQ). The introduction to the reply to version 4.1.1 indicates what most anarchists think of Caplan’s FAQ and its claims of “objectivity” as so we will not repeat ourselves here.

We decided to replace the original version of section F with an edited version simply because the original section was too long in respect to the rest of the FAQ. While this FAQ may have started out as a rebuttal to “anarcho”-capitalist claims of being anarchist, it no longer is. As such, in an *anarchist* FAQ section F became redundant as “anarcho”-capitalism is a fringe ideology even within the USA. If it were not for their presence on the web and some academics taking their claims to being anarchists at face value, we would only mention them in passing.

We have decided to include this appendix as it is really an addition to the main body of the FAQ. Parties interested in why “anarcho”-capitalist claims are false can explore this appendix, those who are interested in anarchist politics can read the FAQ without having to also read too many arguments between anarchists and capitalists. We should, perhaps, thank Caplan for allowing us an opportunity of explaining the ideas of such people as Proudhon and Tucker, allowing us to quote them and so bring their ideas to a wider audience and for indicating that anarchism, in all its forms, has always opposed capitalism and always will.

Replies to Some Errors and Distortions in Bryan Caplan’s “Anarchist Theory FAQ” version 5.2

1. Individualist Anarchists and the socialist movement.

Caplan, in his FAQ, attempts to rewrite anarchist history by trying to claim that the individualist anarchists were forerunners of the so-called “anarcho-capitalist” school. However, as is so often the case with Caplan’s FAQ, nothing could be further from the truth.

In section 5 (What major subdivisions may be made among anarchists?) of his FAQ, Caplan writes that:

“A large segment of left-anarchists is extremely sceptical about the anarchist credentials of anarcho-capitalists, arguing that the anarchist movement has historically been clearly leftist. In my own view, it is necessary to re-write a great deal of history to maintain this claim.”

He quotes Carl Landauer’s **European Socialism: A History of Ideas and Movements** as evidence:

“To be sure, there is a difference between individualistic anarchism and collectivistic or communistic anarchism; Bakunin called himself a communist anarchist. But the communist anarchists also do not acknowledge any right to society to force the individual. They differ from the anarchistic individualists in their belief that men, if freed from coercion, will enter into voluntary associations of a communistic type, while the other wing believes that the free person will prefer a high degree of isolation. The communist anarchists repudiate the right of private property which is maintained through the power of the state. The individualist anarchists are inclined to maintain private property as a necessary condition of individual independence, without fully answering the question of how property could be maintained without courts and police.”

Caplan goes on to state that *“the interesting point is that before the emergence of modern anarcho-capitalism Landauer found it necessary to distinguish two strands of anarchism, only one of which he considered to be within the broad socialist tradition.”*

However, what Caplan seems to ignore is that both individualist and social anarchists agree that there **is** a difference between the two schools of anarchist thought! Some insight. Of course, Caplan tries to suggest that Landauer’s non-discussion of the individualist anarchists is somehow “evidence” that their ideas are not socialistic. Firstly, Landauer’s book is about **European** Socialism. Individualist anarchism was almost exclusively based in America and so hardly falls within the book’s subject area. Secondly, from the index Kropotkin is mentioned on **two** pages (one of which a footnote). Does that mean Kropotkin was not a socialist? Of course not. It seems likely, therefore, that Landauer is using the common Marxist terminology of defining Marxism as Socialism, while calling other parts of the wider socialist movement by their self-proclaimed names of anarchism, syndicalism and so on. Hardly surprising that Kropotkin is hardly mentioned in a history of “Socialism” (i.e. Marxism).

As noted above, both schools of anarchism knew there was a difference between their ideas. Kropotkin and Tucker, for example, both distinguished between two types of anarchism as well as two types of socialism. Thus Caplan’s *“interesting point”* is just a banality, a common fact which anyone with a basic familiarity of anarchist history would know. Kropotkin in his justly famous essay on Anarchism for **The Encyclopaedia Britannica** also found it necessary to distinguish two strands of anarchism. As regards Caplan’s claims that only one of these strands of anarchism is *“within the broad socialist tradition”* all we can say is that both Kropotkin **and** Tucker considered their ideas and movement to be part of the broader socialist tradition. According to an expert on Individualist Anarchism, Tucker *“looked upon anarchism as a branch of the general socialist movement”* [James J. Martin, **Men Against the State**, pp. 226–7]. Other writers on Individualist Anarchism have noted the same fact (for example, Tucker *“definitely thought of himself a socialist”* [William O. Reichart, **Partisans of Freedom: A Study in American Anarchism**, p. 156]). As evidence of the anti-socialist nature of individualist anarchism, Caplan’s interpretation of Landauer’s words is fundamentally nonsense. If you look at the writings of people like Tucker you will see that they called themselves socialists and considered themselves part of the wider socialist movement. No one familiar with Tucker’s works could overlook this fact.

Interestingly, Landauer includes Proudhon in his history and states that he was *“the most profound thinker among pre-Marxian socialists.”* [p. 67] Given that Caplan elsewhere in his FAQ tries to co-opt Proudhon into the “anarcho”-capitalist school as well as Tucker, his citing of Landauer seems particularly dishonest. Landauer presents Proudhon’s ideas in some depth in his work within a chapter headed *“The three Anticapitalistic Movements.”* Indeed, he starts his discussion of Proudhon’s ideas with the words *“In France, post-Utopian socialism begins with Peter Joseph Proudhon.”* [p. 59] Given that both Kropotkin and Tucker indicated that Individualist Anarchism followed Proudhon’s economic and political ideas the fact that Landauer states that Proudhon was a socialist implies that Individualist Anarchism is also socialist (or “Leftist” to use Caplan’s term).

Tucker and the other individualist anarchists considered themselves as fol-

lowers of Proudhon's ideas (as did Bakunin and Kropotkin). For example, Tucker stated that his journal **Liberty** was “*brought into existence as a direct consequence of the teachings of Proudhon*” and “*lives principally to spread them.*” [cited by Paul Avrich in his “*Introduction*” to **Proudhon and his “Bank of the People**” by Charles A. Dana]

Obviously Landauer considered Proudhon a socialist and if Individualist Anarchism follows Proudhon's ideas then it, too, must be socialist.

Unsurprisingly, then, Tucker also considered himself a socialist. To state the obvious, Tucker and Bakunin both shared Proudhon's opposition to **private** property (in the capitalist sense of the word), although Tucker confused this opposition (and possibly the casual reader) by talking about possession as “property.”

So, it appears that Caplan is the one trying to rewrite history.

2. Why is Caplan's definition of socialism wrong?

Perhaps the problem lies with Caplan's “definition” of socialism. In section 7 (Is anarchism the same thing as socialism?) he states:

“If we accept one traditional definition of socialism — ‘advocacy of government ownership of the means of production’ — it seems that anarchists are not socialists by definition. But if by socialism we mean something more inclusive, such as ‘advocacy of the strong restriction or abolition of private property,’ then the question becomes more complex.”

Which are hardly traditional definitions of socialism unless you are ignorant of socialist ideas! By definition one, Bakunin and Kropotkin are not socialists. As far as definition two goes, all anarchists were opposed to (capitalist) private property and argued for its abolition and its replacement with possession. The actual forms of possession differed from between anarchist schools of thought, but the common aim to end private property (capitalism) was still there. To quote Dana, in a pamphlet called “*a really intelligent, forceful, and sympathetic account of mutual banking*” by Tucker, individualist anarchists desire to “*destroy the tyranny of capital,- that is, of property*” by mutual credit. [Charles A. Dana, **Proudhon and his “Bank of the People**”, p. 46]

Interestingly, this second definition of socialism brings to light a contradiction in Caplan's account. Elsewhere in the FAQ he notes that Proudhon had “*ideas on the desirability of a modified form of private property.*” In fact, Proudhon did desire to restrict private property to that of possession, as Caplan himself seems aware. In other words, even taking his own definitions we find that Proudhon would be considered a socialist! Indeed, according to Proudhon, “*all accumulated capital is collective property, no one may be its exclusive owner.*” [Selected Writings of Pierre-Joseph Proudhon, p. 44] Thus Jeremy Jennings' summary of the anarchist position on private property:

“The point to stress is that all anarchists [including Spooner and Tucker], and not only those wedded to the predominant twentieth-century strain of anarchist communism have been critical of private property to the extent that it was a source of hierarchy and privilege.”

He goes on to state that anarchists like Tucker and Spooner “*agreed with the proposition that property was legitimate only insofar as it embraced no more than the total product of individual labour.*” [“Anarchism”, **Contemporary Political Ideologies**, Roger Eatwell and Anthony Wright (eds.), p. 132]

The idea that socialism can be defined as state ownership or even opposition to, or “abolition” of, all forms of property is not one which is historically accurate for all forms of socialism. Obviously communist-anarchists and syndicalists would dismiss out of hand the identification of socialism as state ownership, as would Individualist Anarchists like Tucker and Joseph Labadie. As for opposition or abolition of all forms of “private property” as defining socialism, such a position would have surprised communist-anarchists like Kropotkin (and, obviously, such self-proclaimed socialists as Tucker and Labadie).

For example, in **Act for Yourselves** Kropotkin explicitly states that a peasant “*who is in possession of just the amount of land he can cultivate*” would not be expropriated in an anarchist revolution. Similarly for the family “*inhabiting a house which affords them just enough space . . . considered necessary for that number of people*” and the artisan “*working with their own tools or handloom*” would be left alone [pp. 104–5]. He makes the same point in **The Conquest of Bread** [p. 61] Thus, like Proudhon, Kropotkin replaces **private property** with **possession** as the former is “*theft*” (i.e. it allows exploitation, which “*indicate[s] the scope of Expropriation*” namely “*to everything that enables any man [or woman]. . . to appropriate the product of other’s toil*” [**The Conquest of Bread**, p. 61])

Even Marx and Engels did not define socialism in terms of the abolition of all forms of “private property.” Like anarchists, they distinguished between that property which allows exploitation to occur and that which did not. Looking at the **Communist Manifesto** we find them arguing that the “*distinguishing feature of Communism is not the abolition of property generally, but the abolition of bourgeois property*” and that “*Communism deprives no man of the power to appropriate the products of society; all that it does is to deprive him of the power to subjugate the labour of others by means of such appropriation.*” Moreover, they correctly note that “property” has meant different things at different times and that the “*abolition of existing property relations is not at all a distinctive feature of Communism*” as “[a]ll property relations in the past have continually been subject to historical change consequent upon the change in historical conditions.” As an example, they argue that the French Revolution “*abolished feudal property in favour of bourgeois property.*” [**The Manifesto of the Communist Party**, p.47, p. 49 and p. 47]

Which means that the idea that socialism means abolishing “private property” is **only** true for those kinds of property that are used to exploit the labour of others. Nicholas Walter sums up the anarchist position when he wrote that anarchists “*are in favour of the private property which cannot be used by one person to exploit another.*” [**Reinventing Anarchy**, p. 49] In other words, property which is no longer truly **private** as it is used by those who do not own it. In effect, the key point of Proudhon’s **What is Property?**, namely the difference between possession and property. Which means that rather than desire the abolition of all forms of “private property,” socialists (of all kinds, libertarian and authoritarian) desire the abolition of a specific kind of property, namely that kind which allows the exploitation and domination of others. To ignore this distinction is to paint a very misleading picture of what socialism

stands for.

This leaves the “*the strong restriction . . . of private property*” definition of socialism. Here Caplan is on stronger ground. Unfortunately, by using that definition the Individualist Anarchists, like the Social Anarchists, are included in socialist camp, a conclusion he is trying to avoid. As **every** anarchist shares Proudhon’s analysis that “*property is theft*” and that **possession** would be the basis of anarchism, it means that every anarchist is a socialist (as Labadie always claimed). This includes Tucker and the other Individualist Anarchists. For example, Joseph Labadie stated that “*the two great sub-divisions of Socialists*” (anarchists and State Socialists) both “*agree that the resources of nature — land, mines, and so forth — should not be held as private property and subject to being held by the individual for speculative purposes, that use of these things shall be the only valid title, and that each person has an equal right to the use of all these things. They all agree that the present social system is one composed of a class of slaves and a class of masters, and that justice is impossible under such conditions.*” [What is Socialism?] Tucker himself argued that the anarchists’ “*occupancy and use*” title to land and other scare material would involve a change (and, in effect, “*restriction*”) of current (i.e. capitalist) property rights:

“It will be seen from this definition that Anarchistic property concerns only products. But anything is a product upon which human labour has been expended. It should be stated, however, that in the case of land, or of any other material the supply of which is so limited that all cannot hold it in unlimited quantities, Anarchism undertakes to protect no titles except such as are based on actual occupancy and use.” [Instead of a Book, p. 61]

and so:

“no advocate of occupancy and use believes that it can be put in force until as a theory it has been accepted as generally . . . seen and accepted as is the prevailing theory of ordinary private property.”
[Occupancy and Use versus the Single Tax]

So, as can be seen, Individualist Anarchism rejected important aspects of capitalist property rights. Given that the Individualist Anarchists were writing at a time when agriculture was still the largest source of employment this position on land is much more significant than it first appears. In effect, Tucker and the other American Anarchists were advocating a **massive** and **fundamental** change in property-rights, in the social relationships they generated and in American society. This is, in other words, a very “*strong restriction*” in capitalist property rights (and it is **this** type of property Caplan is referring to, rather than “property” in the abstract).

However, such a “definition” of socialism as “restricting” private property is flawed as it does not really reflect anarchist ideas on the subject. Anarchists, in effect, reject the simplistic analysis that because a society (or thinker) accepts “property” that it (or he/she) is capitalistic. This is for two reasons. Firstly, the term “property” has been used to describe a wide range of situations and institutions. Thus Tucker used the term “property” to describe a society in which capitalist property rights were **not** enforced. Secondly, and far more importantly, concentrating on “property” rights in the abstract ignores the social

relationships it generates. Freedom is product of social interaction, not one of isolation. This means that the social relationships generated in a given society are the key to evaluating it — not whether it has “property” or not. To look at “property” in the abstract is to ignore people and the relationships they create between each other. And it is these relationships which determine whether they are free or not (and so exploited or not). Caplan’s use of the anti-property rights “definition” of socialism avoids the central issue of freedom, of whether a given society generates oppression and exploitation or not. By looking at “property” Caplan ignores liberty, a strange but unsurprising position for a self-proclaimed “libertarian” to take.

Thus both of Caplan’s “definitions” of socialism are lacking. A “*traditional*” one of government ownership is hardly that and the one based on “property” rights avoids the key issue while, in its own way, includes **all** the anarchists in the socialist camp (something Caplan, we are sure, did not intend).

So what would be a useful definition of socialism? From our discussion on property we can instantly reject Caplan’s biased and simplistic starting points. In fact, a definition of socialism which most socialists would agree with would be one that stated that “*the whole produce of labour ought to belong to the labourer*” (to use words Thomas Hodgskin, an early English socialist, from his essay **Labour Defended against the Claims of Capital**). Tucker stated that “*the bottom claim of Socialism*” was “*that labour should be put in possession of its own,*” that “*the natural wage of labour is its product*” (see his essay **State Socialism and Anarchism**). This definition also found favour with Kropotkin who stated that socialism “*in its wide, generic, and true sense*” was an “*effort to abolish the exploitation of labour by capital.*” [**Kropotkin’s Revolutionary Pamphlets**, p. 169]

From this position, socialists soon realised that (to again quote Kropotkin) “*the only guarantee not to be robbed of the fruits of your labour is to possess the instruments of labour.*” [**The Conquest of Bread**, p. 145] Because of this socialism also could be defined as “*the workers shall own the means of production,*” as this automatically meant that the product would go to the producer, and, in fact, this could also be a definition of socialism most socialists would agree with. The form of this ownership, however, differed from socialist tendency to socialist tendency (some, like Proudhon, proposed co-operative associations, others like Kropotkin communal ownership, others like the Social Democrats state ownership and so on). Moreover, as the economy changed in the 19th century, so did socialist ideas. Murray Bookchin gives a good summary of this process:

*“Th[e] growing shift from artisanal to an industrial economy gave rise to a gradual but major shift in socialism itself. For the artisan, socialism meant producers’ co-operatives composed of men who worked together in small shared collectivist associations . . . For the industrial proletariat, by contrast, socialism came to mean the formation of a mass organisation that gave factory workers the collective power to expropriate a plant that no single worker could properly own. . . They advocated **public** ownership of the means of production, whether by the state or by the working class organised in trade unions.”* [**The Third Revolution**, vol. 2, p. 262]

So, in this evolution of socialism we can place the various brands of anarchism. Individualist anarchism is clearly a form of artisanal socialism (which reflects its American roots) while communist anarchism and anarcho-syndicalism are forms of industrial (or proletarian) socialism (which reflects its roots in Europe). Proudhon's mutualism bridges these extremes, advocating as it does artisan socialism for small-scale industry and agriculture and co-operative associations for large-scale industry (which reflects the state of the French economy in the 1840s to 1860s). The common feature of all these forms of anarchism is opposition to usury and the notion that "*workers shall own the means of production.*" Or, in Proudhon's words, "*abolition of the proletariat.*" [Op. Cit., p. 179] As one expert on Proudhon points out, Proudhon's support for "*association*" (or "*associative socialism*") "*anticipated all those later movements*" which demanded "*that the economy be controlled neither by private enterprise nor by the state . . . but by the producers*" such as "*the revolutionary syndicalists*" and "*the students of 1968.*" [K. Steven Vincent, **Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, p. 165] "*Industrial Democracy must. . . succeed Industrial Feudalism,*" to again quote Proudhon. [Op. Cit., p. 167]

Thus the common agreement between all socialists was that capitalism was based upon exploitation and wage slavery, that workers did not have access to the means of production and so had to sell themselves to the class that did. Thus we find Individualist Anarchists arguing that the whole produce of labour ought to belong to the labourer and opposing the exploitation of labour by capital. To use Tucker's own words:

"the fact that one class of men are dependent for their living upon the sale of their labour, while another class of men are relieved of the necessity of labour by being legally privileged to sell something that is not labour. . . And to such a state of things I am as much opposed as any one. But the minute you remove privilege . . . every man will be a labourer exchanging with fellow-labourers . . . What Anarchistic-Socialism aims to abolish is usury . . . it wants to deprive capital of its reward." [Instead of a Book, p. 404]

By ending wage labour, anarchist socialism would ensure "*The land to the cultivator. The mine to the miner. The tool to the labourer. The product to the producer*" and so "*everyone [would] be a proprietor*" and so there would be "*no more proletaires*" (in the words of Ernest Lesigne, quoted favourably by Tucker as part of what he called a "*summary exposition of Socialism from the standpoint of Anarchism*" [Op. Cit., p. 17, p. 16]). Wage labour, and so capitalism, would be no more and "*the product [would go] to the producer.*" The Individualist Anarchists, as Wm. Gary Kline correctly points out, "*expected a society of largely self-employed workmen with no significant disparity of wealth between any of them.*" [The Individualist Anarchists, p. 104] In other words, the "*abolition of the proletariat*" as desired by Proudhon.

Therefore, like all socialists, Tucker wanted to end usury, ensure the "*product to the producer*" and this meant workers owning and controlling the means of production they used ("*no more proletaires*"). He aimed to do this by reforming capitalism away by creating mutual banks and other co-operatives (he notes that Individualist Anarchists followed Proudhon, who "*would individualise and*

associate” the productive and distributive forces in society [as quoted by James J. Martin, **Men Against the State**, p. 228]). Here is Kropotkin on Proudhon’s reformist mutualist-socialism:

*“When he proclaimed in his first memoir on property that ‘Property is theft’, he meant only property in its present, Roman-law, sense of ‘right of use and abuse’; in property-rights, on the other hand, understood in the limited sense of **possession**, he saw the best protection against the encroachments of the state. At the same time he did not want violently to dispossess the present owners of land, dwelling-houses, mines, factories and so on. He preferred to **attain the same end** by rendering capital incapable of earning interest.”* [Kropotkin’s **Revolutionary Pamphlet’s**, pp. 290–1 — emphasis added]

In other words, like all anarchists, Proudhon desired to see a society without capitalists and wage slaves (“*the same end*”) but achieved by different means. When Proudhon wrote to Karl Marx in 1846 he made the same point:

*“through Political Economy we must turn the theory of Property against Property in such a way as to create what you German socialists call **community** and which for the moment I will only go so far as calling **liberty** or **equality**.”* [Selected Writings of Pierre-Joseph Proudhon, p. 151]

In other words, Proudhon shared the common aim of all socialists (namely to abolish capitalism, wage labour and exploitation) but disagreed with the means. As can be seen, Tucker placed himself squarely in this tradition and so could (and did) call himself a socialist. Little wonder Joseph Labadie often said that “*All anarchists are socialists, but not all socialists are anarchists.*” That Caplan tries to ignore this aspect of Individualist Anarchism in an attempt to co-opt it into “anarcho”-capitalism indicates well that his FAQ is not an objective or neutral work.

Caplan states that the “*United States has been an even more fertile ground for individualist anarchism: during the 19th-century, such figures as Josiah Warren, Lysander Spooner, and Benjamin Tucker gained prominence for their vision of an anarchism based upon freedom of contract and private property.*”

However, as indicated, Tucker and Spooner did **not** support private property in the capitalist sense of the word and Kropotkin and Bakunin, no less than Tucker and Spooner, supported free agreement between individuals and groups. What does that prove? That Caplan seems more interested in the words Tucker and Proudhon used rather than the meanings **they** attached to them. Hardly convincing.

Perhaps Caplan should consider Proudhon’s words on the subject of socialism:

“Modern Socialism was not founded as a sect or church; it has seen a number of different schools.” [Selected Writings of Pierre-Joseph Proudhon, p. 177]

If he did perhaps he would who see that the Individualist Anarchists were a school of socialism, given their opposition to exploitation and the desire to see its end via their political, economic and social ideas.

3. Was Proudhon a socialist or a capitalist?

In section 8 (Who are the major anarchist thinkers?), Caplan tries his best to claim that Proudhon was not really a socialist at all. He states that “*Pierre[-Joseph] Proudhon is also often included [as a “left anarchist”] although his ideas on the desirability of a modified form of private property would lead some to exclude him from the leftist camp altogether.*”

“Some” of which group? Other anarchists, like Bakunin and Kropotkin? Obviously not — Bakunin claimed that “*Proudhon was the master of us all.*” According to George Woodcock Kropotkin was one of Proudhon’s “*confessed disciples.*” Perhaps that makes Bakunin and Kropotkin proto-capitalists? Obviously not. What about Tucker? He called Proudhon “*the father of the Anarchistic school of Socialism.*” [**Instead of a Book**, p. 381] And, as we noted above, the socialist historian Carl Lauderdale considered Proudhon a socialist, as did the noted British socialist G.D.H. Cole in his **History of Socialist Thought** (and in fact called him one of the “*major prophets of Socialism.*”). What about Marx and Engels, surely they would be able to say if he was a socialist or not? According to Engels, Proudhon was “*the Socialist of the small peasant and master-craftsman.*” [Marx and Engels, **Selected Works**, p. 260]

In fact, the only “left” (i.e. social) anarchist of note who seems to place Proudhon outside of the “leftist” (i.e. anarchist) camp is Murray Bookchin. In the second volume of **The Third Revolution** Bookchin argues that “*Proudhon was no socialist*” simply because he favoured “*private property.*” [p. 39] However, he does note the “*one moral provision [that] distinguished the Proudhonist contract from the capitalist contract*” namely “*it abjured profit and exploitation.*” [**Op. Cit.**, pp. 40–41] — which, of course, places him in the socialist tradition (see last section). Unfortunately, Bookchin fails to acknowledge this or that Proudhon was totally opposed to wage labour along with usury, which, again, instantly places him in ranks of socialism (see, for example, the **General Idea of the Revolution**, p. 98, pp. 215–6 and pp. 221–2, and his opposition to state control of capital as being “*more wage slavery*” and, instead, urging whatever capital required collective labour to be “*democratically organised workers’ associations*” [**No Gods, No Masters**, vol. 1, p. 62]).

Bookchin (on page 78) quotes Proudhon as arguing that “*association*” was “*a protest against the wage system*” which suggests that Bookchin’s claims that Proudhonian “*analysis minimised the social relations embodied in the capitalist market and industry*” [p. 180] is false. Given that wage labour is **the** unique social relationship within capitalism, it is clear from Proudhon’s works that he did not “minimise” the social relations created by capitalism, rather the opposite. Proudhon’s opposition to wage labour clearly shows that he focused on the **key** social relation which capitalism creates — namely the one of domination of the worker by the capitalist.

Bookchin **does** mention that Proudhon was “*obliged in 1851, in the wake of the associationist ferment of 1848 and after, to acknowledge that association of some sort was unavoidable for large-scale enterprises.*” [p. 78] However, Proudhon’s support of industrial democracy pre-dates 1851 by some 11 years. He stated in **What is Property?** that he “*preach[ed] emancipation to the proletaires; association to the labourers*” and that “*leaders*” within industry “*must be chosen from the labourers by the labourers themselves.*” [p. 137 and p. 414] It is significant that the first work to call itself anarchist opposed property along with

the state, exploitation along with oppression and supported self-management against hierarchical relationships within production (“anarcho”-capitalists take note!). Proudhon also called for “*democratically organised workers’ associations*” to run large-scale industry in his 1848 Election Manifesto. [**No Gods, No Masters**, vol. 1, p. 62] Given that Bookchin considers as “*authentic artisanal socialists*” those who called for **collective** ownership of the means of production, but “*exempted from collectivisation the peasantry*” [p. 4] we have to conclude that Proudhon was such an “authentic” artisanal socialist! Indeed, at one point Bookchin mentions the “*individualistic artisanal socialism of Proudhon*” [p. 258] which suggests a somewhat confused approach to Proudhon’s ideas!

In effect, Bookchin makes the same mistake as Caplan; but, unlike Caplan, he should know better. Rather than not being a socialist, Proudhon is obviously an example of what Bookchin himself calls “*artisanal socialism*” (as Marx and Engels recognised). Indeed, he notes that Proudhon was its “*most famous advocate*” and that “*nearly all so-called ‘utopian’ socialists, even [Robert] Owen — the most labour-orientated — as well as Proudhon — essentially sought the equitable distribution of property.*” [p. 273] Given Proudhon’s opposition to wage labour and capitalist property and his support for industrial democracy as an alternative, Bookchin’s position is untenable — he confuses socialism with communism, rejecting as socialist all views which are not communism (a position he shares with right-libertarians).

He did not always hold this position, though. He writes in **The Spanish Anarchists** that:

“Proudhon envisions a free society as one in which small craftsmen, peasants, and collectively owned industrial enterprises negotiate and contract with each other to satisfy their material needs. Exploitation is brought to an end. . . Although these views involve a break with capitalism, by no means can they be regarded as communist ideas. . . ”
[p. 18]

In contrast to some of Bookchin’s comments (and Caplan) K. Steven Vincent is correct to argue that, for Proudhon, justice “*applied to the economy was associative socialism*” and so Proudhon is squarely in the socialist camp [**Pierre-Joseph Proudhon and the Rise of French Republican Socialism**, p. 228].

However, perhaps all these “leftists” are wrong (bar Bookchin, who **is** wrong, at least some of the time). Perhaps they just did not understand what socialism actually is (and as Proudhon stated “*I am socialist*” [**Selected Writing of Pierre-Joseph Proudhon**, p. 195] and described himself as a socialist many times this also applies to Proudhon himself!). So the question arises, did Proudhon support private property in the capitalist sense of the word? The answer is no. To quote George Woodcock summary of Proudhon’s ideas on this subject we find:

“He [Proudhon] was denouncing the property of a man who uses it to exploit the labour of others, without an effort on his own part, property distinguished by interest and rent, by the impositions of the non-producer on the producer. Towards property regarded as ‘possession,’ the right of a man to control his dwelling and the land and

tools he needs to live, Proudhon had no hostility; indeed he regarded it as the cornerstone of liberty. [“On Proudhon’s ‘What is Property?’”, **The Raven** No. 31, pp. 208–9]

George Crowder makes the same point:

*“The ownership he opposes is basically that which is unearned . . . including such things as interest on loans and income from rent. This is contrasted with ownership rights in those goods either produced by the work of the owner or necessary for that work, for example his dwelling-house, land and tools. Proudhon initially refers to legitimate rights of ownership of these goods as ‘possession,’ and although in his latter work he calls **this** ‘property,’ the conceptual distinction remains the same.”* [**Classical Anarchism**, pp. 85–86]

Indeed, according to Proudhon himself, the “*accumulation of capital and instrument is what the capitalist owes to the producer, but he never pays him for it. It is this fraudulent deprivation which causes the poverty of the worker, the opulence of the idle and the inequality of their conditions. And it is this, above all, which has so aptly been called the exploitation of man by man.*” [**Selected Writings of Pierre-Joseph Proudhon**, p. 43]

He called his ideas on possession a “*third form of society, the synthesis of communism and property*” and calls it “*liberty.*” [**The Anarchist Reader**, p. 68]. He even goes so far as to say that property “*by its despotism and encroachment, soon proves itself oppressive and anti-social.*” [**Op. Cit.**, p. 67] Opposing private property he thought that “*all accumulated capital is collective property, no one may be its exclusive owner.*” Indeed, he considered the aim of his economic reforms “*was to rescue the working masses from capitalist exploitation.*” [**Selected Writings of Pierre-Joseph Proudhon**, p. 44, p. 80]

In other words, Proudhon considered capitalist property to be the source of exploitation and oppression and he opposed it. He explicitly contrasts his ideas to that of capitalist property and **rejects** it as a means of ensuring liberty.

Caplan goes on to claim that “[s]ome of Proudhon’s other heterodoxies include his defence of the right of inheritance and his emphasis on the genuine antagonism between state power and property rights.”

However, this is a common anarchist position. Anarchists are well aware that possession is a source of independence within capitalism and so should be supported. As Albert Meltzer puts it:

“All present systems of ownership mean that some are deprived of the fruits of their labour. It is true that, in a competitive society, only the possession of independent means enables one to be free of the economy (that is what Proudhon meant when, addressing himself to the self-employed artisan, he said ‘property is liberty’, which seems at first sight a contradiction with his dictum that it was theft)”[**Anarchism: Arguments For and Against**, pp. 12–13]

Malatesta makes the same point:

“Our opponents . . . are in the habit of justifying the right to private property by stating that property is the condition and guarantee of liberty.

“And we agree with them. Do we not say repeatedly that poverty is slavery?”

“But then why do we oppose them?”

“The reason is clear: in reality the property that they defend is capitalist property. . . which therefore depends on the existence of a class of the disinherited and dispossessed, forced to sell their labour to the property owners for a wage below its real value. . . This means that workers are subjected to a kind of slavery.” [**The Anarchist Revolution**, p. 113]

As does Kropotkin:

“the only guarantee not to be robbed of the fruits of your labour is to possess the instruments of labour. . . man really produces most when he works in freedom, when he has a certain choice in his occupations, when he has no overseer to impede him, and lastly, when he sees his work bringing profit to him and to others who work like him, but bringing in little to idlers.” [**The Conquest of Bread**, p. 145]

Perhaps this makes these three well known anarcho-communists “really” proto-“anarcho”-capitalists as well? Obviously not. Instead of wondering if his ideas on what socialism is are wrong, he tries to rewrite history to fit the anarchist movement into his capitalist ideas of what anarchism, socialism and whatever are actually like.

In addition, we must point out that Proudhon’s “*emphasis on the genuine antagonism between state power and property rights*” came from his later writings, in which he argued that property rights were required to control state power. In other words, this “*heterodoxy*” came from a period in which Proudhon did not think that state could be abolished and so “*property is the only power that can act as a counterweight to the State.*” [**Selected Writings of Pierre-Joseph Proudhon**, p. 140] Of course, this “later” Proudhon also acknowledged that property was “*an absolutism within an absolutism,*” “*by nature autocratic*” and that its “*politics could be summed up in a single word,*” namely “*exploitation.*” [p. 141, p. 140, p. 134]

Moreover, Proudhon argues that “*spread[ing] it more equally and establish[ing] it more firmly in society*” is the means by which “*property*” “*becomes a guarantee of liberty and keeps the State on an even keel.*” [p. 133, p. 140] In other words, rather than “property” **as such** limiting the state, it is “property” divided equally through society which is the key, without concentrations of economic power and inequality which would result in exploitation and oppression. Therefore, “*[s]imple justice. . . requires that equal division of land shall not only operate at the outset. If there is to be no abuse, it must be maintained from generation to generation.*” [**Op. Cit.**, p. 141, p. 133, p. 130].

Interestingly, one of Proudhon’s “*other heterodoxies*” Caplan does not mention is his belief that “property” was required not only to defend people against the state, but also capitalism. He saw society dividing into “*two classes, one*

of employed workers, the other of property-owners, capitalists, entrepreneurs.” He thus recognised that capitalism was just as oppressive as the state and that it assured “the victory of the strong over the weak, of those who property over those who own nothing.” [as quoted by Alan Ritter, **The Political Thought of Pierre-Joseph Proudhon**, p. 121] Thus Proudhon’s argument that “property is liberty” is directed not only against the state, but also against social inequality and concentrations of economic power and wealth.

Indeed, he considered that “companies of capitalists” were the “exploiters of the bodies and souls of their wage earners” and an outrage on “human dignity and personality.” Instead of wage labour he thought that the “industry to be operated, the work to be done, are the common and indivisible property of all the participant workers.” In other words, self-management and workers’ control. In this way there would be “no more government of man by man, by means of accumulation of capital” and the “social republic” established. Hence his support for co-operatives:

“The importance of their work lies not in their petty union interests, but in their denial of the rule of capitalists, usurers, and governments, which the first [French] revolution left undisturbed. Afterwards, when they have conquered the political lie. . . the groups of workers should take over the great departments of industry which are their natural inheritance.” [cited in **Pierre-Joseph Proudhon**, E. Hymans, pp. 190–1, and **Anarchism**, George Woodcock, p. 110, 112]

In other words, a **socialist** society as workers would no longer be separated from the means of production and they would control their own work (the “abolition of the proletariat,” to use Proudhon’s expression). This would mean recognising that “the right to products is exclusive — *jus in re*; the right to means is common — *jus ad rem*” [cited by Woodcock, **Anarchism**, p. 96] which would lead to self-management:

“In democratising us, revolution has launched us on the path of industrial democracy.” [**Selected Writings of Pierre-Joseph Proudhon**, p. 63]

As Woodcock points out, in Proudhon’s “picture of the ideal society of the ideal society it is this predominance of the small proprietor, the peasant or artisan, that immediately impresses one” with “the creation of co-operative associations for the running of factories and railways.” [“On Proudhon’s ‘What is Property?’”, **Op. Cit.**, p. 209, p. 210]

All of which hardly supports Caplan’s attempts to portray Proudhon as “really” a capitalist all along. Indeed, the “later” Proudhon’s support for protectionism [**Selected Writings of Pierre-Joseph Proudhon**, p. 187], the “fixing after amicable discussion of a **maximum** and **minimum** profit margin,” “the organising of regulating societies” and that mutualism would “regulate the market” [**Op. Cit.**, p. 70] and his obvious awareness of economic power and that capitalism exploited and oppressed the wage-worker suggests that rather than leading some to exclude Proudhon from the “leftist camp” altogether, it is a case of excluding him utterly from the “rightist camp” (i.e. “anarcho”-capitalism). Therefore Caplan’s attempt to claim (co-opt would be

better) Proudhon for “anarcho”-capitalism indicates how far Caplan will twist (or ignore) the evidence. As would quickly become obvious when reading his work, Proudhon would (to use Caplan’s words) “*normally classify government, property, hierarchical organisations . . . as ‘rulership.’*”

To summarise, Proudhon was a socialist and Caplan’s attempts to rewrite anarchist and socialist history fails. Proudhon was the fountainhead for both wings of the anarchist movement and **What is Property?** “*embraces the core of nineteenth century anarchism. . . [bar support for revolution] all the rest of later anarchism is there, spoken or implied: the conception of a free society united by association, of workers controlling the means of production. . . [this book] remains the foundation on which the whole edifice of nineteenth century anarchist theory was to be constructed.*” [Op. Cit., p. 210]

Little wonder Bakunin stated that his ideas were Proudhonism “*widely developed and pushed to these, its final consequences.*” [Michael Bakunin: **Selected Writings**, p. 198]

4. Tucker on Property, Communism and Socialism.

That Tucker called himself a socialist is quickly seen from **Instead of A Book** or any of the books written about Tucker and his ideas. That Caplan seeks to deny this means that either Caplan has not looked at either **Instead of a Book** or the secondary literature (with obvious implications for the accuracy of his FAQ) or he decided to ignore these facts in favour of his own ideologically tainted version of history (again with obvious implications for the accuracy and objectivity of his FAQ).

Caplan, in an attempt to deny the obvious, quotes Tucker from 1887 as follows in section 14 (What are the major debates between anarchists? What are the recurring arguments?):

“It will probably surprise many who know nothing of Proudhon save his declaration that ‘property is robbery’ to learn that he was perhaps the most vigorous hater of Communism that ever lived on this planet. But the apparent inconsistency vanishes when you read his book and find that by property he means simply legally privileged wealth or the power of usury, and not at all the possession by the labourer of his products.”

You will instantly notice that Proudhon does not mean by property “*the possession of the labourer of his products.*” However, Proudhon did include in his definition of “property” the possession of the capital to steal profits from the work of the labourers. As is clear from the quote, Tucker and Proudhon was opposed to capitalist property (“*the power of usury*”). From Caplan’s own evidence he proves that Tucker was not a capitalist!

But lets quote Tucker on what he meant by “*usury*”:

“There are three forms of usury, interest on money, rent on land and houses, and profit in exchange. Whoever is in receipt of any of these is a usurer.” [cited in **Men against the State** by James J. Martin, p. 208]

Which can hardly be claimed as being the words of a person who supports capitalism!

And we should note that Tucker considered both government and capital oppressive. He argued that anarchism meant “*the restriction of power to self and the abolition of power over others. Government makes itself felt alike in country and in city, capital has its usurious grip on the farm as surely as on the workshop and the oppressions and exactions of neither government nor capital can be avoided by migration.*” [**Instead of a Book**, p. 114]

And, we may add, since when was socialism identical to communism? Perhaps Caplan should actually read Proudhon and the anarchist critique of private property before writing such nonsense? We have indicated Proudhon’s ideas above and will not repeat ourselves. However, it is interesting that this passes as “evidence” of “anti-socialism” for Caplan, indicating that he does not know what socialism or anarchism actually is. To state the obvious, you can be a hater of “communism” and still be a socialist!

So this, his one attempt to prove that Tucker, Spooner and even Proudhon were really capitalists by quoting the actual people involved is a failure.

He asserts that for any claim that “anarcho”-capitalism is not anarchist is wrong because “*the factual supporting arguments are often incorrect. For example, despite a popular claim that socialism and anarchism have been inextricably linked since the inception of the anarchist movement, many 19th-century anarchists, not only Americans such as Tucker and Spooner, but even Europeans like Proudhon, were ardently in favour of private property (merely believing that some existing sorts of property were illegitimate, without opposing private property as such).*”

The facts supporting the claim of anarchists being socialists, however, are not “incorrect.” It is Caplan’s assumption that socialism is against all forms of “property” which is wrong. To state the obvious, socialism does not equal communism (and anarcho-communists support the rights of workers to own their own means of production if they do not wish to join communist communes — see above). Thus Proudhon was renown as the leading French Socialist theorist when he was alive. His ideas were widely known in the socialist movement and in many ways his economic theories were similar to the ideas of such well known early socialists as Robert Owen and William Thompson. As Kropotkin notes:

“It is worth noticing that French mutualism had its precursor in England, in William Thompson, who began by mutualism before he became a communist, and in his followers John Gray (A Lecture on Human Happiness, 1825; The Social System, 1831) and J. F. Bray (Labour’s Wrongs and Labour’s Remedy, 1839).” [**Kropotkin’s Revolutionary Pamphlets**, p. 291]

Perhaps Caplan will now claim Robert Owen and William Thompson as capitalists?

Tucker called himself a socialist on many different occasions and stated that there were “*two schools of Socialistic thought ... State Socialism and Anarchism.*” And stated in very clear terms that:

“liberty insists on Socialism. . . — true Socialism, Anarchistic Socialism: the prevalence on earth of Liberty, Equality, and Solidarity.”
[**Instead of a Book**, p. 363]

And like all socialists, he opposed capitalism (i.e. usury and wage slavery) and wished that “*there should be no more proletaires.*” [see the essay “*State Socialism and Anarchism*” in **Instead of a Book**, p. 17]

Caplan, of course, is well aware of Tucker’s opinions on the subject of capitalism and private property. In section 13 (What moral justifications have been offered for anarchism?) he writes:

“Still other anarchists, such as Lysander Spooner and Benjamin Tucker as well as Proudhon, have argued that anarchism would abolish the exploitation inherent in interest and rent simply by means of free competition. In their view, only labour income is legitimate, and an important piece of the case for anarchism is that without government-imposed monopolies, non-labour income would be driven to zero by market forces. It is unclear, however, if they regard this as merely a desirable side effect, or if they would reject anarchism if they learned that the predicted economic effect thereof would not actually occur.”

Firstly, we must point that Proudhon, Tucker and Spooner considered **profits** to be exploitative as well as interest and rent. Hence we find Tucker arguing that a “*just distribution of the products of labour is to be obtained by destroying all sources of income except labour. These sources may be summed up in one word, — usury; and the three principle forms of usury are interest, rent and profit.*” [**Instead of a Book**, p. 474] To ignore the fact that Tucker also considered profit as exploitative seems strange, to say the least, when presenting an account of his ideas.

Secondly, rather than it being “*unclear*” whether the end of usury was “*merely a desirable side effect*” of anarchism, the opposite is the case. Anyone reading Tucker (or Proudhon) would quickly see that their politics were formulated with the express aim of ending usury. Just one example from hundreds:

“Liberty will abolish interest; it will abolish profit; it will abolish monopolistic rent; it will abolish taxation; it will abolish the exploitation of labour; it will abolish all means whereby any labourer can be deprived of any of his product.” [**Instead of a Book**, p. 347]

While it is fair to wonder whether these economic effects would result from the application of Tucker’s ideas, it **is** distinctly incorrect to claim that the end of usury was considered in any way as a “*desirable side effect*” of them. Rather, in **their** eyes, the end of usury was one of **the** aims of Individualist Anarchism, as can be clearly seen. As Wm. Gary Kline points out in his excellent account of Individualist Anarchism:

“the American anarchists exposed the tension existing in liberal thought between private property and the ideal of equal access. The Individualist Anarchists were, at least, aware that existing conditions were far from ideal, that the system itself worked against the majority of individuals in their efforts to attain its promises. Lack of capital, the means to creation and accumulation of wealth, usually doomed a labourer to a life of exploitation. This the anarchists knew and they abhorred such a system.” [**The Individualist Anarchists**, p. 102]

This is part of the reason why they considered themselves socialists and, equally as important, they were considered socialists by **other** socialists such as Kropotkin and Rocker. The Individualist Anarchists, as can be seen, fit very easily into Kropotkin's comments that "*the anarchists, in common with all socialists. . . maintain that the now prevailing system of private ownership in land, and our capitalist production for the sake of profits, represent a monopoly which runs against both the principles of justice and the dictates of utility.*" [Kropotkin's **Revolutionary Pamphlets**, p. 285] Given that they considered profits as usury and proposed "*occupancy and use*" in place of the prevailing land ownership rights they are obviously socialists.

That the end of usury was considered a clear aim of his politics explains Tucker's 1911 postscript to his famous essay "*State Socialism and Anarchism*" in which he argues that "*concentrated capital*" **itself** was a barrier towards anarchy. He argued that the "*trust is now a monster which. . . even the freest competition, could it be instituted, would be unable to destroy.*" While, in an earlier period, big business "*needed the money monopoly for its sustenance and its growth*" its size now ensured that it "*sees in the money monopoly a convenience, to be sure, but no longer a necessity. It can do without it.*" This meant that the way was now "*not so clear.*" Indeed, he argued that the problem of the trusts "*must be grappled with for a time solely by forces political or revolutionary*" as the trust had moved beyond the reach of "*economic forces*" simply due to the concentration of resources in its hands. ["*Postscript*" to **State Socialism and Anarchism**]

If the end of "*usury*" **was** considered a "*side-effect*" rather than an objective, then the problems of the trusts and economic inequality/power ("*enormous concentration of wealth*") would not have been an issue. That the fact of economic power **was** obviously considered a hindrance to anarchy suggests the end of usury was a key aim, an aim which "free competition" in the abstract could not achieve. Rather than take the "anarcho"-capitalist position that massive inequality did not affect "free competition" or individual liberty, Tucker obviously thought it did and, therefore, "free competition" (and so the abolition of the public state) in conditions of massive inequality would not create an anarchist society.

By trying to relegate an aim to a "*side-effect*," Caplan distorts the ideas of Tucker. Indeed, his comments on trusts, "*concentrated capital*" and the "*enormous concentration of wealth*" indicates how far Individualist Anarchism is from "anarcho"-capitalism (which dismisses the question of economic power Tucker raises out of hand). It also indicates the unity of political and economic ideas, with Tucker being aware that without a suitable economic basis individual freedom was meaningless. That an economy (like capitalism) with massive inequalities in wealth and so power was not such a basis is obvious from Tucker's comments.

Thirdly, what did Tucker consider as a government-imposed monopoly? Private property, particularly in land! As he states "*Anarchism undertakes to protect no titles except such as are based upon actual occupancy and use*" and that anarchism "*means the abolition of landlordism and the annihilation of rent.*" [**Instead of a Book**, p. 61, p. 300] This, to state the obvious, is a restriction on "private property" (in the capitalist sense), which, if we use Caplan's definition of socialism, means that Tucker was obviously part of the "Leftist camp" (i.e. socialist camp). In other words, Tucker considered capitalism as the prod-

uct of statism while socialism (libertarian of course) would be the product of anarchy.

So, Caplan's historical argument to support his notion that anarchism is simply anti-government fails. Anarchism, in all its many forms, have distinct economic as well as political ideas and these cannot be parted without losing what makes anarchism unique. In particular, Caplan's attempt to portray Proudhon as an example of a "pure" anti-government anarchism also fails, and so his attempt to co-opt Tucker and Spooner also fails (as noted, Tucker cannot be classed as a "pure" anti-government anarchist either). If Proudhon was a socialist, then it follows that his self-proclaimed followers will also be socialists — and, unsurprisingly, Tucker called himself a socialist and considered anarchism as part of the wider socialist movement.

“Like Proudhon, Tucker was an ‘un-marxian socialist’” [William O. Reichart, **Partisans of Freedom: A Study in American Anarchism**, p. 157]

5. Anarchism and “anarcho”-capitalism

Caplan tries to build upon the non-existent foundation of Tucker's and Proudhon's “capitalism” by stating that:

*“Nor did an ardent anarcho-communist like Kropotkin deny Proudhon or even Tucker the title of ‘anarchist.’ In his *Modern Science and Anarchism*, Kropotkin discusses not only Proudhon but ‘the American anarchist individualists who were represented in the fifties by S.P. Andrews and W. Greene, later on by Lysander Spooner, and now are represented by Benjamin Tucker, the well-known editor of the *New York Liberty*.’ Similarly in his article on anarchism for the 1910 edition of the *Encyclopedia Britannica*, Kropotkin again freely mentions the American individualist anarchists, including ‘Benjamin Tucker, whose journal *Liberty* was started in 1881 and whose conceptions are a combination of those of Proudhon with those of Herbert Spencer.’”*

There is a nice historical irony in Caplan's attempts to use Kropotkin to prove the historical validity of “anarcho”-capitalism. This is because while Kropotkin was happy to include Tucker into the anarchist movement, Tucker often claimed that an anarchist could not be a communist! In **State Socialism and Anarchism** he stated that anarchism was “*an ideal utterly inconsistent with that of those Communists who falsely call themselves Anarchists while at the same time advocating a regime of Archism fully as despotic as that of the State Socialists themselves.*” [“*State Socialism and Anarchism*”, **Instead of a Book**, pp. 15–16]

While modern social anarchists follow Kropotkin in not denying Proudhon or Tucker as anarchists, we do deny the anarchist title to supporters of capitalism. Why? Simply because anarchism as a **political** movement (as opposed to a dictionary definition) has always been anti-capitalist and against capitalist wage slavery, exploitation and oppression. In other words, anarchism (in all its forms) has always been associated with specific political **and** economic ideas. Both

Tucker and Kropotkin defined their anarchism as an opposition to both state and capitalism. To quote Tucker on the subject:

“Liberty insists... [on] the abolition of the State and the abolition of usury; on no more government of man by man, and no more exploitation of man by man.” [cited in **Native American Anarchism — A Study of Left-Wing American Individualism** by Eunice Schuster, p. 140]

Kropotkin defined anarchism as *“the no-government system of socialism.”* [**Kropotkin’s Revolutionary Pamphlets**, p. 46] Malatesta argued that *“when [people] sought to overthrow both State and property — then it was anarchy was born”* and, like Tucker, aimed for *“the complete destruction of the domination and exploitation of man by man.”* [**Life and Ideas**, p. 19, pp. 22–28] Indeed **every** leading anarchist theorist defined anarchism as opposition to government **and** exploitation. Thus Brian Morris’ excellent summary:

“Another criticism of anarchism is that it has a narrow view of politics: that it sees the state as the fount of all evil, ignoring other aspects of social and economic life. This is a misrepresentation of anarchism. It partly derives from the way anarchism has been defined [in dictionaries, for example], and partly because Marxist historians have tried to exclude anarchism from the broader socialist movement. But when one examines the writings of classical anarchists... as well as the character of anarchist movements... it is clearly evident that it has never had this limited vision. It has always challenged all forms of authority and exploitation, and has been equally critical of capitalism and religion as it has been of the state.” [*“Anthropology and Anarchism,”* **Anarchy: A Journal of Desire Armed** no. 45, p. 40]

Therefore anarchism was never purely a political concept, but always combined an opposition to oppression with an opposition to exploitation. Little wonder, then, that both strands of anarchism have declared themselves “socialist” and so it is *“conceptually and historically misleading”* to *“create a dichotomy between socialism and anarchism.”* [Brian Morris, **Op. Cit.**, p. 39] Needless to say, anarchists oppose **state** socialism just as much as they oppose capitalism. All of which means that anarchism and capitalism are two **different** political ideas with specific (and opposed) meanings — to deny these meanings by uniting the two terms creates an oxymoron, one that denies the history and the development of ideas as well as the whole history of the anarchist movement itself.

As Kropotkin knew Proudhon to be an anti-capitalist, a socialist (but not a communist) it is hardly surprising that he mentions him. Again, Caplan’s attempt to provide historical evidence for a “right-wing” anarchism fails. Funny that the followers of Kropotkin are now defending individualist anarchism from the attempted “adoption” by supporters of capitalism! That in itself should be enough to indicate Caplan’s attempt to use Kropotkin to give credence to “anarcho”-capitalist co-option of Proudhon, Tucker and Spooner fails.

Interestingly, Caplan admits that “anarcho”-capitalism has recent origins. In section 8 (Who are the major anarchist thinkers?) he states:

“Anarcho-capitalism has a much more recent origin in the latter half of the 20th century. The two most famous advocates of anarcho-capitalism are probably Murray Rothbard and David Friedman. There were however some interesting earlier precursors, notably the Belgian economist Gustave de Molinari. Two other 19th-century anarchists who have been adopted by modern anarcho-capitalists with a few caveats are Benjamin Tucker and Lysander Spooner. (Some left-anarchists contest the adoption, but overall Tucker and Spooner probably have much more in common with anarcho-capitalists than with left-anarchists.)”

Firstly, as he states, Tucker and Spooner have been “*adopted*” by the “anarcho”-capitalist school. Being dead they have little chance to protest such an adoption, but it is clear that they considered themselves as socialists, against capitalism (it may be claimed that Spooner never called himself a socialist, but then again he never called himself an anarchist either; it is his strong opposition to wage labour that places him in the socialist camp). Secondly, Caplan lets the cat out the bag by noting that this “adoption” involved a few warnings — more specifically, the attempt to rubbish or ignore the underlying socio-economic ideas of Tucker and Spooner and the obvious anti-capitalist nature of their vision of a free society.

Individualist anarchists are, indeed, more similar to classical liberals than social anarchists. Similarly, social anarchists are more similar to Marxists than Individualist anarchists. But neither statement means that Individualist anarchists are capitalists, or social anarchists are state socialists. It just means some of their ideas overlap — and we must point out that Individualist anarchist ideas overlap with Marxist ones, and social anarchist ones with liberal ones (indeed, one interesting overlap between Marxism and Individualist Anarchism can be seen from Marx’s comment that abolishing interest and interest-bearing capital “*means the abolition of capital and of capitalist production itself.*” [**Theories of Surplus Value**, vol. 3, p. 472] Given that Individualist Anarchism aimed to abolish interest (along with rent and profit) it would suggest, from a Marxist position, that it is a socialist theory).

So, if we accept Kropotkin’s summary that Individualist Anarchism ideas are “*partly those of Proudhon, but partly those of Herbert Spencer*” [**Kropotkin’s Revolutionary Pamphlets**, p. 173], what the “anarcho”-capitalist school is trying to is to ignore the Proudhonian (i.e. socialist) aspect of their theories. However, that just leaves Spencer and Spencer was not an anarchist, but a right-wing Libertarian, a supporter of capitalism (a “*champion of the capitalistic class*” as Tucker put it). In other words, to ignore the socialist aspect of Individualist Anarchism (or anarchism in general) is to reduce it to liberalism, an extreme version of liberalism, but liberalism nevertheless — and liberalism is not anarchism. To reduce anarchism so is to destroy what makes anarchism a unique political theory and movement:

“anarchism does derive from liberalism and socialism both historically and ideologically . . . In a sense, anarchists always remain liberals and socialists, and whenever they reject what is good in either they betray anarchism itself . . . We are liberals but more so, and socialists but more so.” [Nicholas Walter, **Reinventing Anarchy**, p. 44]

In other words, “anarcho”-capitalism is a development of ideas which have little in common with anarchism. Jeremy Jennings, in his overview of anarchist theory and history, agrees:

“It is hard not to conclude that these ideas [“anarcho”-capitalism] — with roots deep in classical liberalism — are described as anarchist only on the basis of a misunderstanding of what anarchism is.” [**Contemporary Political Ideologies**, Roger Eatwell and Anthony Wright (eds.), p. 142]

Barbara Goodwin also agrees that the “anarcho”-capitalists’ “*true place is in the group of right-wing libertarians*” not in anarchism [**Using Political Ideas**, p. 148]. Indeed, that “anarcho”-capitalism is an off-shoot of classical liberalism is a position Murray Rothbard would agree with, as he states that right-wing Libertarians constitute “*the vanguard of classical liberalism.*” [quoted by Ulrike Heider, **Anarchism: Left, Right and Green**, p. 95] Unfortunately for this perspective anarchism is not liberalism and liberalism is not anarchism. And equally as unfortunate (this time for the anarchist movement!) “anarcho”-capitalism “*is judged to be anarchism largely because some anarcho-capitalists say they are ‘anarchists’ and because they criticise the State.*” [Peter Sabatini, **Social Anarchism**, no. 23, p. 100] However, being opposed to the state is a necessary but not sufficient condition for being an anarchist (as can be seen from the history of the anarchist movement). Brian Morris puts it well when he writes:

“The term anarchy comes from the Greek, and essentially means ‘no ruler.’ Anarchists are people who reject all forms of government or coercive authority, all forms of hierarchy and domination. They are therefore opposed to what the Mexican anarchist Flores Magon called the ‘sombre trinity’ — state, capital and the church. Anarchists are thus opposed to both capitalism and to the state, as well as to all forms of religious authority. But anarchists also seek to establish or bring about by varying means, a condition of anarchy, that is, a decentralised society without coercive institutions, a society organised through a federation of voluntary associations. Contemporary ‘right-wing’ libertarians . . . who are often described as ‘anarchocapitalists’ and who fervently defend capitalism, are not in any real sense anarchists.” [**Op. Cit.**, p. 38]

Rather than call themselves by a name which reflects their origins in liberalism (and **not** anarchism), the “anarcho”-capitalists have instead seen fit to try and appropriate the name of anarchism and, in order to do so, ignore key aspects of anarchist theory in the process. Little wonder, then, they try and prove their anarchist credentials via dictionary definitions rather than from the anarchist movement itself (see next section).

Caplan’s attempt in his FAQ is an example to ignore individualist anarchist theory and history. Ignored is any attempt to understand their ideas on property and instead Caplan just concentrates on the fact they use the word. Caplan also ignores:

- their many statements on being socialists and part of the wider socialist movement.

- their opposition to capitalist property-rights in land and other scarce resources.
- their recognition that capitalism was based on usury and that it was exploitation.
- their attacks on government **and** capital, rather than just government.
- their support for strikes and other forms of direct action by workers to secure the full product of their labour.

In fact, the only things considered useful seems to be the individualist anarchist's support for free agreement (something Kropotkin also agreed with) and their use of the word "property." But even a cursory investigation indicates the non-capitalist nature of their ideas on property and the socialistic nature of their theories.

Perhaps Caplan should ponder these words of Kropotkin supporters of the "*individualist anarchism of the American Proudhonians . . . soon realise that the individualisation they so highly praise is not attainable by individual efforts, and . . . abandon the ranks of the anarchists, and are driven into the liberal individualism of the classical economist.*" [Kropotkin's **Revolutionary Pamphlets**, p. 297]

Caplan seems to confuse the end of the ending place of ex-anarchists with their starting point. As can be seen from his attempt to co-opt Proudhon, Spooner and Tucker he has to ignore their ideas and rewrite history.

6. Appendix: Defining Anarchism

In his Appendix "*Defining Anarchism*" we find that Caplan attempts to defend his dictionary definition of anarchism. He does this by attempting to refute two arguments, The Philological Argument and the Historical Argument.

Taking each in turn we find:

Caplan's definition of "*The Philological Argument*" is as follows:

"Several critics have noted the origin of the term 'anarchy,' which derives from the Greek 'arkhos,' meaning 'ruler,' and the prefix 'an-,' meaning 'without.' It is therefore suggested that in my definition the word 'government' should be replaced with the word 'domination' or 'rulership'; thus re-written, it would then read: 'The theory or doctrine that all forms of rulership are unnecessary, oppressive, and undesirable and should be abolished.'"

Caplan replies by stating that:

"This is all good and well, so long as we realise that various groups of anarchists will radically disagree about what is or is not an instance of 'rulership.'"

However, in order to refute this argument by this method, he has to ignore his own methodology. A dictionary definition of ruler is "*a person who rules by authority.*" and "*rule*" is defined as "*to have authoritative control over people*"

or “to keep (a person or feeling etc.) under control, to dominate” [The Oxford Study Dictionary]

Hierarchy by its very nature is a form of rulership (hier-*archy*) and is so opposed by anarchists. Capitalism is based upon wage labour, in which a worker follows the rules of their boss. This is obviously a form of hierarchy, of domination. Almost all people (excluding die-hard supporters of capitalism) would agree that being told what to do, when to do and how to do by a boss is a form of rulership. Anarchists, therefore, argue that “*economic exploitation and political domination . . . [are] two continually interacting aspects of the same thing — the subjection of man by man.*” [Errico Malatesta, **Life and Ideas**, p. 147] Rocker made the same point, arguing that the “*exploitation of man by man and the domination of man over man are inseparable, and each is the condition of the other.*” [**Anarcho-Syndicalism**, p. 18]

Thus Caplan is ignoring the meaning of words to state that “*on its own terms this argument fails to exclude anarcho-capitalists*” because they define rulership to exclude most forms of archy! Hardly convincing.

Strangely enough, “anarcho”-capitalist icon Murray Rothbard actually provides evidence that the anarchist position is correct. He argues that the state “*arrogates to itself a monopoly of force, of ultimate decision-making power, over a given area territorial area.*” [**The Ethics of Liberty**, p. 170] This is obviously a form of rulership. However, he also argues that “[o]bviously, in a free society, Smith has the ultimate decision-making power over his own just property, Jones over his, etc.” [**Op. Cit.**, p. 173] Which, to state the obvious, means that **both** the state and property is marked by an “*ultimate decision-making power*” over a given territory. The only “difference” is that Rothbard claims the former is “just” (i.e. “justly” acquired) and the latter is “unjust” (i.e. acquired by force). In reality of course, the modern distribution of property is just as much a product of past force as is the modern state. In other words, the current property owners have acquired their property in the same unjust fashion as the state has its. If one is valid, so is the other. Rothbard (and “anarcho”-capitalists in general) are trying to have it both ways.

Rothbard goes on to show why statism and private property are essentially the same thing:

“If the State may be said too properly own its territory, then it is proper for it to make rules for everyone who presumes to live in that area. It can legitimately seize or control private property because there is no private property in its area, because it really owns the entire land surface. So long as the State permits its subjects to leave its territory, then, it can be said to act as does any other owner who sets down rules for people living on his property.” [**Op. Cit.**, p. 170]

Of course Rothbard does not draw the obvious conclusion. He wants to maintain that the state is bad and property is good while drawing attention to their obvious similarities! Ultimately Rothbard is exposing the bankruptcy of his own politics and analysis. According to Rothbard, something can look like a state (i.e. have the “*ultimate decision-making power*” over an area) and act like a state (i.e. “*make rules for everyone*” who lives in an area, i.e. govern them) but not be a state. This not a viable position for obvious reasons.

Thus to claim, as Caplan does, that property does not generate “rulership” is obviously nonsense. Not only does it ignore the dictionary definition of rulership (which, let us not forget, is Caplan’s **own** methodology) as well as commonsense, it obviously ignores what the two institutions have in common. **If** the state is to be condemned as “rulership” then so must property — for reasons, ironically enough, Rothbard makes clear!

Caplan’s critique of the “*Philological Argument*” fails because he tries to deny that the social relationship between worker and capitalist and tenant and landlord is based upon **archy**, when it obviously is. To quote Proudhon, considered by Tucker as “*the Anarchist par excellence*,” the employee “*is subordinated, exploited: his permanent condition is one of obedience*.” Without “*association*” (i.e. co-operative workplaces, workers’ self-management) there would be “*two industrial castes of masters and wage-workers which is repugnant to a free and democratic society*,” castes “*related as subordinates and superiors*.” [**The General Idea of the Revolution**, p. 216]

Moving on, Caplan defines the Historical Argument as:

“A second popular argument states that historically, the term ‘anarchism’ has been clearly linked with anarcho-socialists, anarcho-communists, anarcho-syndicalists, and other enemies of the capitalist system. Hence, the term ‘anarcho-capitalism’ is a strange oxymoron which only demonstrates ignorance of the anarchist tradition.”

He argues that “*even if we were to accept the premise of this argument — to wit, that the meaning of a word is somehow determined by its historical usage — the conclusion would not follow because the minor premise is wrong. It is simply not true that from its earliest history, all anarchists were opponents of private property, free markets, and so on.*”

Firstly, anarchism is not just a word, but a political idea and movement and so the word used in a political context is associated with a given body of ideas. You cannot use the word to describe something which has little or nothing in common with that body of ideas. You cannot call Marxism “anarchism” simply because they share the anarchist opposition to capitalist exploitation and aim for a stateless society, for example.

Secondly, it is true that anarchists like Tucker were not against the free market, but they did not consider capitalism to be defined by the free market but by exploitation and wage labour (as do all socialists). In this they share a common ground with Market Socialists who, like Tucker and Proudhon, do not equate socialism with opposition to the market or capitalism with the “free market.” The idea that socialists oppose “*private property, free markets, and so on*” is just an assumption by Caplan. Proudhon, for example, was not opposed to competition, “property” (in the sense of possession) and markets but during his lifetime and up to the present date he is acknowledged as a socialist, indeed one of the greatest in French (if not European) history. Similarly we find Rudolf Rocker writing that the Individualist Anarchists “*all agree on the point that man be given the full reward of his labour and recognised in this right the economic basis of all personal liberty. They regard free competition . . . as something inherent in human nature . . . They answered the **socialists of other schools** [emphasis added] who saw in **free competition** one of the destructive*

elements of capitalistic society that the evil lies in the fact that today we have too little rather than too much competition.” [quoted by Herbert Read, **A One-Man Manifesto**, p. 147] Rucker obviously considered support for free markets as compatible with socialism. In other words, Caplan’s assumption that all socialists oppose free markets, competition and so on is simply false — as can be seen from the history of the socialist movement. What socialists **do** oppose is capitalist exploitation — socialism “*in its wide, generic, and true sense*” was an “*effort to **abolish** the exploitation of labour by capital.*” [Peter Kropotkin, **Kropotkin’s Revolutionary Pamphlets**, p. 169] In this sense the Individualist Anarchists are obviously socialists, as Tucker and Labadie constantly pointed out.

In addition, as we have proved elsewhere, Tucker was opposed to capitalist private property just as much as Kropotkin was. Moreover, it is clear from Tucker’s works that he considered himself an enemy of the capitalist system and called himself a socialist. Thus Caplan’s attempt to judge the historical argument on its own merits fails because he has to rewrite history to do so.

Caplan is right to state that the meaning of words change over time, but this does not mean we should run to use dictionary definitions. Dictionaries rarely express political ideas well — for example, most dictionaries define the word “anarchy” as “chaos” and “disorder.” Does that mean anarchists aim to create chaos? Of course not. Therefore, Caplan’s attempt to use dictionary definitions is selective and ultimately useless — anarchism as a political movement cannot be expressed by dictionary definitions and any attempt to do so means to ignore history.

The problems in using dictionary definitions to describe political ideas can best be seen from the definition of the word “Socialism.” According to the **Oxford Study Dictionary** Socialism is “*a political and economic theory advocating that land, resources, and the chief industries should be owned and managed by the State.*” The **Webster’s Ninth New Collegiate Dictionary**, conversely, defines socialism as “*any of various economic and political theories advocating collective or government ownership and administration of the means of production and distribution of goods.*”

Clearly the latter source has a more accurate definition of socialism than the former, by allowing for “collective” versus solely “State” control of productive means. Which definition would be better? It depends on the person involved. A Marxist, for example, could prefer the first one simply to exclude anarchism from the socialist movement, something they have continually tried to do. A right-libertarian could, again, prefer the first, for obvious reasons. Anarchists would prefer the second, again for obvious reasons. However neither definition does justice to the wide range of ideas that have described themselves as socialist.

Using dictionaries as the basis of defining political movements ensures that one’s views depend on **which** dictionary one uses, and **when** it was written, and so on. This is why they are not the best means of resolving disputes — if resolution of disputes is, in fact, your goal.

Both Kropotkin and Tucker stated that they were socialists and that anarchism was socialistic. If we take the common modern meaning of the word as state ownership as the valid one then Tucker and Kropotkin are **not** socialists and no form of anarchism is socialist. This is obviously nonsense and it shows the limitations of using dictionary definitions on political theories.

Therefore Caplan’s attempt to justify using the dictionary definition fails.

Firstly, because the definitions used would depend which dictionary you use. Secondly, dictionary definitions cannot capture the ins and outs of a **political** theory or its ideas on wider subjects.

Ironically enough, Caplan is repeating an attempt made by State Socialists to deny Individualist Anarchism its socialist title (see “*Socialism and the Lexicographers*” in **Instead of a Book**). In reply to this attempt, Tucker noted that:

“The makers of dictionaries are dependent upon specialists for their definitions. A specialist’s definition may be true or it may be erroneous. But its truth cannot be increased or its error diminished by its acceptance by the lexicographer. Each definition must stand on its own merits.” [**Instead of a Book**, p. 369]

And Tucker provided many quotes from **other** dictionaries to refute the attempt by the State Socialists to define Individualist Anarchism outside the Socialist movement. He also notes that any person trying such a method will “*find that the Anarchistic Socialists are not to be stripped of one half of their title by the mere dictum of the last lexicographer.*” [**Op. Cit.**, p. 365]

Caplan should take note. His technique been tried before and it failed then and it will fail again for the same reasons.

As far as his case against the Historical Argument goes, this is equally as flawed. Caplan states that:

“Before the Protestant Reformation, the word ‘Christian,’ had referred almost entirely to Catholics (as well as adherents of the Orthodox Church) for about one thousand years. Does this reveal any linguistic confusion on the part of Lutherans, Calvinists, and so on, when they called themselves ‘Christians’? Of course not. It merely reveals that a word’s historical usage does not determine its meaning.”

However, as analogies go this is pretty pathetic. Both the Protestants and Catholics followed the teachings of Christ but had different interpretations of it. As such they could both be considered Christians — followers of the Bible. In the case of anarchism, there are two main groupings — individualist and social. Both Tucker and Bakunin claimed to follow, apply and develop Proudhon’s ideas (and share his opposition to both state and capitalism) and so are part of the anarchist tradition.

The anarchist movement was based upon applying the core ideas of Proudhon (his anti-statism and socialism) and developing them in the same spirit, and these ideas find their roots in **socialist** history and theory. For example, William Godwin was claimed as an anarchist after his death by the movement because of his opposition to both state and private property, something all anarchists oppose. Similarly, Max Stirner’s opposition to both state and capitalist property places him within the anarchist tradition.

Given that we find fascists and Nazis calling themselves “republicans,” “democrats,” even “liberals” it is worthwhile remembering that the names of political theories are defined not by who use them, but by the ideas associated with the name. In other words, a fascist cannot call themselves a “liberal” any more than a capitalist can call themselves an “anarchist.” To state, as Caplan does, that

the historical usage of a word does not determine its meaning results in utter confusion and the end of meaningful political debate. If the historical usage of a name is meaningless will we soon see fascists as well as capitalists calling themselves anarchists? In other words, the label “anarcho-capitalism” is a misnomer, pure and simple, as **all** anarchists have opposed capitalism as an authoritarian system based upon exploitation and wage slavery.

To ignore the historical usage of a word means to ignore what the movement that used that word stood for. Thus, if Caplan is correct, an organisation calling itself the “Libertarian National Socialist Party,” for example, can rightly call itself libertarian for “*a word’s historical usage does not determine its meaning.*” Given that right-libertarians in the USA have tried to steal the name “libertarian” from anarchists and anarchist influenced socialists, such a perspective on Caplan’s part makes perfect sense. How ironic that a movement that defends private property so strongly continually tries to steal names from other political tendencies.

Perhaps a better analogy for the conflict between anarchism and “anarcho”-capitalism would be between Satanists and Christians. Would we consider as Christian a Satanist grouping claiming to be Christian? A grouping that rejects everything that Christians believe but who like the name? Of course not. Neither would we consider as a right-libertarian someone who is against the free market or someone as a Marxist who supports capitalism. However, that is what Caplan and other “anarcho”-capitalists want us to do with anarchism.

Both social and individualist anarchists defined their ideas in terms of both political (abolition of the state) **and** economic (abolition of exploitation) ideas. Kropotkin defined anarchism as “*the no-government form of socialism*” while Tucker insisted that anarchism was “*the abolition of the State and the abolition of usury.*” In this they followed Proudhon who stated that “[*w*]e do not admit the government of man by man any more than the exploitation of man by man.” [quoted by Peter Marshall, **Demanding the Impossible**, p. 245]

In other words, a political movement’s economic ideas are just as much a part of its theories as their political ideas. Any attempt to consider one in isolation from the other kills what defines the theory and makes it unique. And, ultimately, any such attempt, is a lie:

“[classical liberalism] is in theory a kind of anarchy without socialism, and therefore simply a lie, for freedom is impossible without equality, and real anarchy cannot exist without solidarity, without socialism.” [Errico Malatesta, **Anarchy**, p. 46]

Therefore Caplan’s case against the Historical Argument also fails — “anarcho-capitalism” is a misnomer because anarchism has always, in all its forms, opposed capitalism. Denying and re-writing history is hardly a means of refuting the historical argument.

Caplan ends by stating:

“Let us designate anarchism (1) anarchism as you define it. Let us designate anarchism (2) anarchism as I and the American Heritage College Dictionary define it. This is a FAQ about anarchism (2).”

Note that here we see again how the dictionary is a very poor foundation upon to base an argument. Again using **Webster’s Ninth New Collegiate**

Dictionary, we find under “anarchist” — “*one who rebels against any authority, established order, or ruling power.*” This definition is very close to that which “traditional” anarchists have — which is the basis for our own opposition to the notion that anarchism is merely rebellion against **State** authority.

Clearly this definition is at odds with Caplan’s own view; is Webster’s then wrong, and Caplan’s view right? Which view is backed by the theory and history of the movement? Surely that should be the basis of who is part of the anarchist tradition and movement and who is not? Rather than do this, Caplan and other “anarcho”-capitalists rush to the dictionary (well, those that do not define anarchy as “disorder”). This is for a reason as anarchism as a political movement as always been explicitly anti-capitalist and so the term “anarcho”-capitalism is an oxymoron.

What Caplan fails to even comprehend is that his choices are false. Anarchism can be designated in two ways:

1. Anarchism as you define it
2. Anarchism as the anarchist movement defines it and finds expression in the theories developed by that movement.

Caplan chooses anarchism (1) and so denies the whole history of the anarchist movement. Anarchism is not a word, it is a political theory with a long history which dictionaries cannot cover. Therefore any attempt to define anarchism by such means is deeply flawed and ultimately fails.

That Caplan’s position is ultimately false can be seen from the “anarcho”-capitalists themselves. In many dictionaries anarchy is defined as “*disorder,*” “*a state of lawlessness*” and so on. Strangely enough, no “anarcho”-capitalist ever uses **these** dictionary definitions of “anarchy”! Thus appeals to dictionaries are just as much a case of defining anarchism as you desire as not using dictionaries. Far better to look at the history and traditions of the anarchist movement itself, seek out its common features and apply **those** as criteria to those seeking to include themselves in the movement. As can be seen, “anarcho”-capitalism fails this test and, therefore, are not part of the anarchist movement. Far better for us all if they pick a new label to call themselves rather than steal our name.

Although most anarchists disagree on many things, the denial of our history is not one of them.

Replies to Some Errors and Distortions in Bryan Caplan's "Anarchist Theory FAQ" version 4.1.1.

There have been a few "anarchist" FAQ's produced before. Bryan Caplan's anarchism FAQ is one of the more recent. While appearing to be a "neutral" statement of anarchist ideas, it is actually in large part an "anarcho"-capitalist FAQ. This can be seen by the fact that anarchist ideas (which he calls "left-anarchist") are given less than half the available space while "anarcho"-capitalist dogma makes up the majority of it. Considering that anarchism has been around far longer than "anarcho"-capitalism and is the bigger and better established movement, this is surprising. Even his use of the term "left anarchist" is strange as it is never used by anarchists and ignores the fact that Individualist Anarchists like Tucker called themselves "socialists" and considered themselves part of the wider socialist movement. For anarchists, the expression "left anarchist" is meaningless as all anarchists are anti-capitalist. Thus the terms used to describe each "school" in his FAQ are biased (those whom Caplan calls "Left anarchists" do not use that term, usually preferring "social anarchist" to distinguish themselves from individualist anarchists like Tucker).

Caplan also frames the debate only around issues which he is comfortable with. For example, when discussing "left anarchist" ideas he states that "*A key value in this line of anarchist thought is egalitarianism, the view that inequalities, especially of wealth and power, are undesirable, immoral, and socially contingent.*" This, however, is **not** why anarchists are egalitarians. Anarchists oppose inequalities because they undermine and restrict individual and social freedom.

Taking another example, under the question, "*How would left-anarchy work?*", Caplan fails to spell out some of the really obvious forms of anarchist thought. For example, the works of Bookchin, Kropotkin, Bakunin and Proudhon are not discussed in any detail. His vague and confusing prose would seem to reflect the amount of thought that he has put into it. Being an "anarcho"-capitalist, Caplan concentrates on the economic aspect of anarchism and ignores its communal side. The economic aspect of anarchism he discusses is anarcho-syndicalism and tries to contrast the confederated economic system explained by one anarcho-syndicalist with Bakunin's opposition to Marxism. Unfortunately for Caplan,

Bakunin is the source of anarcho-syndicalism's ideas on a confederation of self-managed workplaces running the economy. Therefore, to state that “many” anarchists “*have been very sceptical of setting up any overall political structure, even a democratic one, and focused instead on direct worker control at the factory level*” is simply **false**. The idea of direct local control within a confederated whole is a common thread through anarchist theory and activity, as any anarchist could tell you.

Lastly, we must note that after Caplan posted his FAQ to the “anarchy-list,” many of the anarchists on that list presented numerous critiques of the “anarcho”-capitalist theories and of the ideas (falsely) attributed to social anarchists in the FAQ, which he chose to ignore (that he was aware of these postings is asserted by the fact he e-mailed one of the authors of this FAQ on the issue that anarchists never used or use the term “left-anarchist” to describe social anarchism. He replied by arguing that the term “left-anarchist” had been used by Michel Foucault, who never claimed to be an anarchist, in one of his private letters! Strangely, he never posted his FAQ to the list again).

Therefore, as can be seen from these few examples, Caplan's “FAQ” is blatantly biased towards “anarcho-capitalism” and based on the mis-characterisations and the dis-emphasis on some of the most important issues between “anarcho-capitalists” and anarchists. It is clear that his viewpoint is anything but impartial.

This section will highlight some of the many errors and distortions in that FAQ. Numbers in square brackets refer to the corresponding sections Caplan's FAQ.

1 Is anarchism purely negative?

[1.] Caplan, consulting his **American Heritage Dictionary**, claims: “*Anarchism is a negative; it holds that one thing, namely government, is bad and should be abolished. Aside from this defining tenet, it would be difficult to list any belief that all anarchists hold.*”

The last sentence is ridiculous. If we look at the works of Tucker, Kropotkin, Proudhon and Bakunin (for example) we discover that we can, indeed list one more “*belief that all anarchists hold.*” This is opposition to exploitation, to usury (i.e. profits, interest and rent). For example, Tucker argued that “*Liberty insists. . . [on] the abolition of the State and the abolition of usury; on no more government of man by man, and no more exploitation of man by man.*” [cited in **Native American Anarchism — A Study of Left-Wing American Individualism** by Eunice Schuster, p. 140] Such a position is one that Proudhon, Bakunin and Kropotkin would agree with.

In other words, anarchists hold two beliefs — opposition to government **and** opposition to exploitation. Any person which rejects either of these positions cannot be part of the anarchist movement. In other words, an anarchist must be against capitalism in order to be a true anarchist.

Moreover it is not at all difficult to find a more fundamental “*defining tenet*” of anarchism. We can do so merely by analysing the term “*an-archy*,” which is composed of the Greek words **an**, meaning “*no*” or “*without*,” and **arche**, meaning literally “*a ruler*,” but more generally referring to the **principle** of rulership, i.e. hierarchical authority. Hence an anarchist is someone who advo-

cates abolishing the principle of hierarchical authority — not just in government but in all institutions and social relations.

Anarchists oppose the principle of hierarchical authority because it is the basis of domination, which is not only degrading in itself but generally leads to exploitation and all the social evils which follow from exploitation, from poverty, hunger and homelessness to class struggle and armed conflict.

Because anarchists oppose hierarchical authority, domination, and exploitation, they naturally seek to eliminate all hierarchies, as the very purpose of hierarchy is to facilitate the domination and (usually) exploitation of subordinates.

The reason anarchists oppose government, then, is because government is **one manifestation** of the evils of hierarchical authority, domination, and exploitation. But the capitalist workplace is another. In fact, the capitalist workplace is where most people have their most frequent and unpleasant encounters with these evils. Hence workers' control — the elimination of the hierarchical workplace through democratic self-management — has been central to the agenda of classical and contemporary anarchism from the 19th century to the present. Indeed, anarchism was born out of the struggle of workers against capitalist exploitation.

To accept Caplan's definition of anarchism, however, would mean that anarchists' historical struggle for workers' self-management has never been a "genuine" anarchist activity. This is clearly a **reductio ad absurdum** of that definition.

Caplan has confused a necessary condition with a sufficient condition. Opposition to government is a necessary condition of anarchism, but not a sufficient one. To put it differently, all anarchists oppose government, but opposition to government does not automatically make one an anarchist. To be an anarchist one must oppose government for anarchist reasons and be opposed to all other forms of hierarchical structure.

To understand why let use look to capitalist property. Murray Rothbard argues that "[o]bviously, in a free society, Smith has the ultimate decision-making power over his own just property, Jones over his, etc." [**The Ethics of Liberty**, p. 173] Defence firms would be employed to enforce those decisions (i.e. laws and rules). No real disagreement there. What is illuminating is Rothbard's comments that the state "arrogates to itself a monopoly of force, of ultimate decision-making power, over a given area territorial area" [**Op. Cit.** , p. 170] Which, to state the obvious, means that both the state and property is marked by an "ultimate decision-making power" over their territory. The only "difference" is that Rothbard claims the former is "just" (i.e. "justly" acquired) and the latter is "unjust" (i.e. acquired by force). In reality of course, the modern distribution of property is just as much a product of past force as is the modern state. In other words, the current property owners have acquired their property in the same unjust fashion as the state has its. If one is valid, so is the other. Rothbard (and "anarcho"-capitalists in general) are trying to have it both ways.

Rothbard goes on to show why statism and private property are essentially the same thing:

"If the State may be said too properly own its territory, then it is proper for it to make rules for everyone who presumes to live in that area. It can legitimately seize or control private property because

there is no private property in its area, because it really owns the entire land surface. So long as the State permits its subjects to leave its territory, then, it can be said to act as does any other owner who sets down rules for people living on his property. [Op. Cit., p. 170]

Of course Rothbard does not draw the obvious conclusion. He wants to maintain that the state is bad and property is good while drawing attention to their obvious similarities! Ultimately Rothbard is exposing the bankruptcy of his own politics and analysis. According to Rothbard, something can look like a state (i.e. have the “ultimate decision-making power” over an area) and act like a state (i.e. “make rules for everyone” who lives in an area, i.e. govern them) but not be a state. This not a viable position for obvious reasons.

In capitalism, property and possession are opposites — as Proudhon argued in **What is Property?**. Under possession, the “property” owner exercises “ultimate decision-making power” over themselves as no-one else uses the resource in question. This is non-hierarchical. Under capitalism, however, use and ownership are divided. Landlords and capitalists give others access to their property while retaining power over it and so the people who use it. This is by nature hierarchical. Little wonder Noam Chomsky argued that a “consistent anarchist must oppose private ownership of the means of production and the wage slavery which is a component of this system as incompatible with the principle that labour must be freely undertaken and under the control of the producer.” [“Notes on Anarchism”, **For Reasons of State**, p. 158]

Thus a true anarchist must oppose both state and capitalism as they generate the same hierarchical social relationships (as recognised by Rothbard but apparently subjected to “doublethink”). As “anarcho”-capitalists do not oppose capitalist property they cannot be anarchists — they support a very specific form of **archy**, that of the capitalist/landlord over working class people.

Self-styled “anarcho”-capitalists do not oppose government for anarchist reasons. That is, they oppose it not because it is a manifestation of hierarchical authority, but because government authority often **conflicts** with capitalists’ authority over the enterprises they control. By getting rid of government with its minimum wage laws, health and safety requirements, union rights laws, environmental standards, child labour laws, and other inconveniences, capitalists would have even more power to exploit workers than they already do. These consequences of “anarcho”-capitalism are diametrically opposed to the historically central objective of the anarchist movement, which is to eliminate capitalist exploitation.

We must conclude, then, that “anarcho”-capitalists are not anarchists at all. In reality they are capitalists **posing** as anarchists in order to attract support for their laissez-faire economic project from those who are angry at government. This scam is only possible on the basis of the misunderstanding perpetrated by Caplan: that anarchism means nothing more than opposition to government.

Better definitions of anarchism can be found in other reference works. For example, in **Grolier’s Online Encyclopedia** we read: “Anarchism rejects all forms of hierarchical authority, social and economic as well as political.” According to this more historically and etymologically accurate definition, “anarcho”-capitalism is not a form of anarchism, since it does not reject hierarchical authority in the economic sphere (which has been the area of prime concern to

anarchists since day one). Hence it is **bogus** anarchism.

2 Anarchism and Equality

[5.] On the question “What major subdivisions may be made among anarchists?” Caplan writes:

“Unlike the left-anarchists, anarcho-capitalists generally place little or no value on equality, believing that inequalities along all dimensions — including income and wealth — are not only perfectly legitimate so long as they ‘come about in the right way,’ but are the natural consequence of human freedom.”

This statement is not inaccurate as a characterisation of “anarcho”-capitalist ideas, but its implications need to be made clear. “Anarcho”-capitalists generally place little or no value on equality — particularly economic equality — because they know that under their system, where capitalists would be completely free to exploit workers to the hilt, wealth and income inequalities would become even greater than they are now. Thus their references to “human freedom” as the way in which such inequalities would allegedly come about means “freedom of capitalists to exploit workers;” it does not mean “freedom of workers **from** capitalist exploitation.”

But “freedom to exploit workers” has historically been the objective only of capitalists, not anarchists. Therefore, “anarcho”-capitalism again shows itself to be nothing more than capitalism attempting to pass itself off as part of the anarchist movement — a movement that has been dedicated since its inception to the destruction of capitalism! One would have to look hard to find a more audacious fraud.

As we argue in section 2.1 of the appendix “Is ‘anarcho’-capitalism a type of anarchism?” the claim that inequalities are irrelevant if they “*come about the right way*” ignores the reality of freedom and what is required to be free. To see way we have to repeat part of our argument from that section and look at Murray Rothbard’s (a leading “anarcho”-capitalist icon) analysis of the situation after the abolition of serfdom in Russia and slavery in America. He writes:

*“The **bodies** of the oppressed were freed, but the property which they had worked and eminently deserved to own, remained in the hands of their former oppressors. With economic power thus remaining in their hands, the former lords soon found themselves virtual masters once more of what were now free tenants or farm labourers. The serfs and slaves had tasted freedom, but had been cruelly deprived of its fruits.”* [**The Ethics of Liberty**, p. 74]

However, contrast this with Rothbard’s (and Caplan’s) claims that if market forces (“voluntary exchanges”) result in the creation of free tenants or wage-labourers then these labourers and tenants are free (see, for example, **The Ethics of Liberty**, pp. 221–2 on why “economic power” within capitalism does not, in fact, exist). But the labourers dispossessed by market forces are in **exactly** the same situation as the former serfs and slaves. Rothbard sees the obvious “economic power” in the later case, but denies it in the former. But the

conditions of the people in question are identical and it is these conditions that horrify us and create social relationships because on subordination, authority and oppression rather than freedom. It is only ideology that stops Rothbard and Caplan drawing the obvious conclusion — identical conditions produce identical social relationships and so if the formally “free” ex-serfs are subject to “economic power” and “masters” then so are the formally “free” labourers within capitalism! Both sets of workers may be formally free, but their circumstances are such that they are “free” to “consent” to sell their freedom to others (i.e. economic power produces relationships of domination and unfreedom between formally free individuals).

Thus inequalities that “*come about in the right way*” restrict freedom just as much as inequalities that do not. If the latter restricts liberty and generate oppressive and exploitative social relationships then so do the former. Thus, if we are serious about individuality liberty (rather than property) we must look at inequalities and what generate them.

One last thing. Caplan states that inequalities in capitalism are “*the natural consequence of human freedom.*” They are not, unless you subscribe to the idea that capitalist property rights are the basis of human freedom. However, the assumption that capitalist property rights are the best means to defend individual liberty can be easily seen to be flawed just from the example of the ex-slaves and ex-serfs we have just described. Inequalities resulting from “voluntary exchanges” in the capitalist market can and do result in the denial of freedom, thus suggesting that “property” and liberty are not natural consequences of each other.

To state the obvious, private property (rather than possession) means that the non-property owner can gain access to the resource in question only when they agree to submit to the property owner’s authority (and pay tribute for the privilege of being bossed about). This aspect of property (rightly called “*despotism*” by Proudhon) is one which right-libertarians continually fail to highlight when they defend it as the paradigm of liberty.

3 Is anarchism the same thing as socialism?

[7.] In this section (“Is anarchism the same thing as socialism?”) Caplan writes:

“Outside of the Anglo-American political culture, there has been a long and close historical relationship between the more orthodox socialists who advocate a socialist government, and the anarchist socialists who desire some sort of decentralised, voluntary socialism. The two groups both want to severely limit or abolish private property. . . .”

For Caplan to claim that anarchism is not the same thing as socialism, he has to ignore anarchist history. For example, the Individualist anarchists called themselves “*socialists,*” as did social anarchists. Indeed, Individualist Anarchists like Joseph Labadie stated that “*Anarchism is voluntary socialism*” [**Anarchism: What it is and What it is Not**) and wanted to limit private property in many ways (for example, “*the resources of nature — land, mines, and so forth — should not be held as private property and subject to being held by the individual for speculative purposes, that use of these things shall*

be the only valid title, and that each person has an equal right to the use of all these things.” [What is Socialism?]). Therefore, **within** the “Anglo-American political culture,” **all** types of anarchists considered themselves part of the socialist movement. This can be seen not only from Kropotkin’s or Bakunin’s work, but also in Tucker’s (see **Instead of a Book**). So to claim that the “Anglo-American” anarchists did not have “a long and close historical relationship” with the wider socialist movement is simply **false**.

The statement that anarchists want to severely limit or abolish “private property” is misleading if it is not further explained. For the way it stands, it sounds like anarchism is just another form of coercive “state” (i.e. a political entity that forcibly prevents people from owning private property), whereas this is far from the case.

Firstly, anarchists are **not** against “private property” in the sense personal belongings. “Anarchists,” points out Nicholas Walter, “are in favour of the private property which cannot be used by one person to exploit another — those personal possessions which we accumulate from childhood and which become part of ours.” [“About Anarchism”, in **Reinventing Anarchy**, p. 49] Kropotkin makes the anarchist position clear when he wrote that we “do not want to rob any one of his coat” but expropriation “must apply to everything that enables any man [or woman] — by he financier, mill owner, or landlord — to appropriate the product of others’ toil.” [**The Conquest of Bread**, p. 61]

In effect, Caplan is confusing two very different kinds of “private property”, of which one rests on usefulness to an individual, the other on the employment (and so exploitation) of the labour of others. The latter produces social relations of domination between individuals, while the former is a relationship between people and things. As Proudhon argued, possession becomes property only when it also serves as means of exploitation and subjection of other people. But failing to distinguish these radically different forms of “private property” Caplan distorts the anarchist position.

Secondly, it is not that anarchists want to pass laws making private property (in the second, exploitative, sense) illegal. Rather they want to restructure society in such a way that the means of production are freely available for workers to use. This does not mean “anarchist police” standing around with guns to prohibit people from owning private property. Rather, it means dismantling the coercive state agencies that make private property possible, i.e., the departments of real police who now stand around with guns protecting private property.

Once that occurs, anarchists maintain that capitalism would be impossible, since capitalism is essentially a monopoly of the means of production, which can only be maintained by organised coercion. For suppose that in an anarchist society someone (call him Bob) somehow acquires certain machinery needed to produce widgets (a doubtful supposition if widget-making machines are very expensive, as there will be little wealth disparity in an anarchist society). And suppose Bob offers to let workers with widget-making skills use his machines if they will pay him “rent,” i.e. allow him to appropriate a certain amount of the value embodied in the widgets they produce. The workers will simply refuse, choosing instead to join a widget-making collective where they have free access to widget-making machinery, thus preventing Bob from living parasitically on their labour. Thus Kropotkin:

“Everywhere you will find that the wealth of the wealthy springs from the poverty of the poor. That is why an anarchist society need not fear the advent of a Rothschild [or any other millionaire] who would settle in its midst. If every member of the community knows that after a few hours of productive toil he [or she] will have a right to all the pleasures that civilisation procures, and to those deeper sources of enjoyment which art and science offer to all who seek them, he [or she] will not sell his strength. . . No one will volunteer to work for the enrichment of your Rothschild.” [Op. Cit., p. 61]

In this scenario, private property was “abolished,” but not through coercion. Indeed, it was precisely the abolition of organised coercion that allowed private property to be abolished.

4 Anarchism and dissidents

[9.] On the question “How would left-anarchy work?” Caplan writes:

“Some other crucial features of the left-anarchist society are quite unclear. Whether dissidents who despised all forms of communal living would be permitted to set up their own inegalitarian separatist societies is rarely touched upon. Occasionally left-anarchists have insisted that small farmers and the like would not be forcibly collectivised, but the limits of the right to refuse to adopt an egalitarian way of life are rarely specified.”

This is a straw man. “Left” (i.e. real) anarchist theory clearly implies and **explicitly states** the answer to these questions.

Firstly, on the issue of “separatist” societies. Anarchist thinkers have always acknowledged that there would be multitude of different communities after a revolution (and not just Caplan’s “inegalitarian” ones). Marx, for example, mocked Bakunin for arguing that only revolutionary communes would federate together and that this would not claim any right to govern others (see Bakunin’s “Letter to Albert Richards”, **Michael Bakunin: Selected Writings**, p. 179] Kropotkin stated that “the point attained in the socialisation of wealth will not be everywhere the same” and “[s]ide by side with the revolutionised communes . . . places would remain in an expectant attitude, and would go on living on the Individualist system.” [**The Conquest of Bread**, p. 81] While he was hopeful that “everywhere [would be] more or less Socialism” he recognised that the revolution would not conform to “any particular rule” and would differ in different areas — “in one country State Socialist, in another Federation” and so on. [**Op. Cit.**, p. 82] Malatesta made the same point, arguing that “after the revolution” there would be “relations between anarchist groupings and those living under some kind of authority, between communist collectives and those living in an individualistic way.” This is because anarchism “cannot be imposed”. [**Life and Ideas**, p. 173, p. 21]

Needless to say, these “separatist societies” (which may or may not be “inegalitarian”) would not be anarchist societies. If a group of people wanted to set up a capitalist, Marxist, Georgist or whatever kind of community then their right would be respected (although, of course, anarchists would seek to convince those

who live in such a regime of the benefits of anarchism!). As Malatesta pointed out, “free and voluntary communism is ironical if one has not the right and the possibility to live in a different regime, collectivist, mutualist, individualist — as one wishes, always on condition that there is no oppression or exploitation of other” as “it is clear that all, and only, those ways of life which respect freedom, and recognise that each individual has an equal right to the means of production and to the full enjoyment of the product of his own labour, have anything in common with anarchism.” [Op. Cit., p. 103 and p. 33]

Ultimately, “it is not a question of right and wrong; it is a question of freedom for everybody. . . None can judge with certainty who is right and who is wrong, who is nearest to the truth, or which is the best way to achieve the greatest good for each and everyone. Freedom coupled with experience, is the only way of discovering the truth and what is best; and there can be no freedom if there is the denial of the freedom to err.” [Op. Cit., p. 49]

Secondly, regarding “dissidents” who wanted to set up their own “inegalitarian separatist societies,” if the term “inegalitarian” implies economic inequalities due to private property, the answer is that private property requires some kind of state, if not a public state then private security forces (“private-state capitalism”), as advocated by “anarcho”-capitalists, in order to protect private property. Therefore, “anarcho”-capitalists are asking if an anarchist society will allow the existence of states. Of course, in the territory that used to be claimed by a nation state a whole host of communities and societies will spring up — but that does not make the non-anarchist ones anarchist!

Thus suppose that in a hypothetical libertarian socialist society, Bob tries to set up private security forces to protect certain means of production, e.g. farmland. By the hypothesis, if Bob merely wanted to work the land himself, there would be no reason for him to go to the trouble of creating a private state to guard it, because use-rights guarantee that he has free access to the productive assets he needs to make a living. Thus, the only plausible reason Bob could have for claiming and guarding more farmland than he could use himself would be a desire to create a monopoly of land in order to exact tribute from others for the privilege of using it. But this would be an attempt to set up a system of feudal exploitation in the midst of a free community. Thus the community is justified in disarming this would-be parasite and ignoring his claims to “own” more land than he can use himself.

In other words, there is no “right” to adopt an “inegalitarian way of life” within a libertarian community, since such a right would have to be enforced by the creation of a coercive system of enslavement, which would mean the end of the “libertarian” community. To the contrary, the members of such a community have a right, guaranteed by “the people in arms,” to resist such attempts to enslave them.

The statement that “left” anarchists have “occasionally” insisted that small farmers and the like would not be forcibly collectivised is a distortion of the facts. No responsible left libertarian advocates forced collectivisation, i.e. compelling others to join collectives. Self-employment is always an option. This can be seen from Bakunin’s works [Bakunin on Anarchism, p. 200], Kropotkin’s [The Conquest of Bread, p. 61 and Act for Yourselves, pp. 104–5] and Malatesta’s [Life and Ideas, p. 99, p. 103]. So the anarchist opposition to forced collectivisation has always existed and, for anyone familiar with the ideas of social anarchism, very well know. Thus during the Spanish Revolution,

small farmers who did not wish to join collective farms were allowed to keep as much land as they could work themselves. After perceiving the advantages of collectives, however, many joined them voluntarily (see Sam Dolgoff, ed., **The Anarchist Collectives**).

To claim that social anarchists “*occasionally*” oppose forced collectivisation is a smear, pure and simple, with little basis in anarchist activity and even less in anarchist theory. Anyone remotely familiar with the literature could not make such a mistake.

Finally, we should point out that under “anarcho”-capitalism there would be, according to Murray Rothbard, a “*basic libertarian law code.*” Which means that under “anarcho”-capitalism, “egalitarian” communities could only come about within a “inegalitarian” legal framework! Thus, given that everything would be privatised, dissenters could only experiment if they could afford it **and** accepted the legal system based on capitalist property rights (and, of course, survive the competition of capitalist companies within the capitalist framework). As we have argued in sections B.4 and F.3

5 How would anarcho-capitalism work?

[10.] This section (How would anarcho-capitalism work?) contains Caplan’s summary of arguments for “anarcho”-capitalism, which he describes as an offshoot of Libertarianism. Thus:

“So-called ‘minarchist’ libertarians such as Nozick have argued that the largest justified government was one which was limited to the protection of individuals and their private property against physical invasion; accordingly, they favour a government limited to supplying police, courts, a legal code, and national defence.”

The first thing to note about this argument is that it is stated in such a way as to prejudice the reader against the left-libertarian critique of private property. The minarchist right-“libertarian,” it is said, only wants to protect individuals and their private property against “physical invasion.” But, because of the loose way in which the term “property” is generally used, the “private property” of most “individuals” is commonly thought of as **personal possessions**, i.e. cars, houses, clothing, etc. (For the left-libertarian distinction between private property and possessions, see section B.3.1.) Therefore the argument makes it appear that right libertarians are in favour of protecting personal possessions whereas left-libertarians are not, thus conjuring up a world where, for example, there would be no protection against one’s house being “physically invaded” by an intruder or a stranger stealing the shirt off one’s back!

By lumping the protection of “individuals” together with the protection of their “private property,” the argument implies that right libertarians are concerned with the welfare of the vast majority of the population, whereas in reality, the vast majority of “individuals” **do not own** any private property (i.e. means of production) — only a handful of capitalists do. Moreover, these capitalists use their private property to exploit the working class, leading to impoverishment, alienation, etc., and thus **damaging** most individuals rather than “protecting” them.

Caplan goes on:

“This normative theory is closely linked to laissez-faire economic theory, according to which private property and unregulated competition generally lead to both an efficient allocation of resources and (more importantly) a high rate of economic progress.”

Caplan does not mention the obvious problems with this “theory,” e.g. that during the heyday of laissez-faire capitalism in the US there was vast wealth disparity, with an enormous mass of impoverished people living in slums in the major cities — hardly an “efficient” allocation of resources or an example of “progress.” Of course, if one defines “efficiency” as “the most effective means of exploiting the working class” and “progress” as “a high rate of profit for investors,” then the conclusion of the “theory” does indeed follow.

And let us not forget that it is general equilibrium theory which predicts that unregulated competition will produce an efficient allocation of resources. However, as we noted in section C.1, such a model has little to do with any real economy. This means that there is no real reason to assume an efficient outcome of capitalist economies. Concentrations of economic power and wealth can easily skew outcomes to favour the haves over the have-nots (as history again and again shows).

Moreover, the capitalism can easily lead to resources being allocated to the most profitable uses rather than those which are most needed by individuals. A classic example is in the case of famines. Amartya Sen (who won the 1998 Nobel Prize for economics) developed an “*entitlement*” approach to the study of famine. This approach starts with the insight that having food available in a country or region does not mean everyone living there is “entitled” to it. In market economies, people are entitled to food according to their ability to produce it for themselves or to pay or swap for it. In capitalist economies, most people are entitled to food only if they can sell their labour/liberty to those who own the means of life (which increases the economic insecurity of wage workers).

If some group loses its entitlement to food, whether there is a decline in the available supply or not, a famine can occur. This may seem obvious, yet before — and after — Sen, famine studies have remained fixated on the drop in food available instead of whether specific social groups are entitled to it. Thus even a relatively success economy can price workers out of the food market (a depressed economy brings the contradiction between need and profit — use value and exchange value — even more to the forefront). This “*pricing out*” can occur especially if food can get higher prices (and so profits) elsewhere — for example the Irish famine of 1848 and sub-Saharan famines of the 1980s saw food being exported from famine areas to areas where it could fetch a higher price. In other words, market forces can skew resource allocation away from where it is most needed to where it can generate a profit. As anarchist George Barret noted decades before Sen:

“Today the scramble is to compete for the greatest profits. If there is more profit to be made in satisfying my lady’s passing whim than there is in feeding hungry children, then competition brings us in feverish haste to supply the former, whilst cold charity or the poor law can supply the latter, or leave it unsupplied, just as it feels disposed. That is how it works out.” [Objectives to Anarchism]

In other words, inequality skews resource allocation towards the wealthy. While such a situation may be “*efficient allocation of resources*” from the perspective of the capitalist, it is hardly so from a social perspective (i.e. one that considers **all** individual needs rather than “effective demand”).

Furthermore, if we look at the stock market (a key aspect of any capitalist system) we discover a strong tendencies **against** the efficient allocation of resources. The stock market often experiences “bubbles” and becomes significantly over-valued. An inflated stock market badly distorts investment decisions. For example, if Internet companies are wildly over-valued then the sale of shares of new Internet companies or the providing of start-up capital will drain away savings that could be more productively used elsewhere. The real economy will pay a heavy price from such misdirected investment and, more importantly, resources are **not** efficiency allocated as the stock market skews resources into the apparently more profitable areas and away from where they could be used to satisfy other needs.

The stock market is also a source of other inefficiencies. Supporters of “free-market” capitalism always argued that the Stalinist system of central planning created a perverse set of incentives to managers. In effect, the system penalised honest managers and encouraged the flow of **dis**-information. This led to information being distorted and resources inefficiently allocated and wasted. Unfortunately the stock market also creates its own set of perverse responses and mis-information. Doug Henwood argues that “*something like a prisoners’ dilemma prevails in relations between managers and the stock market. Even if participants are aware of an upward bias to earnings estimates, and even if they correct for it, managers still have an incentive to try and fool the market. If you tell the truth, your accurate estimates will be marked down by a sceptical market. So its entirely rational for managers to boost profits in the short term, either through accounting gimmickry or by making only investments with quick paybacks.*” He goes on to note that “[i]f the markets see high costs as bad, and low costs as good, then firms may shun expensive investments because they will be taken as signs of managerial incompetence. Throughout the late 1980s and early 1990s, the stock market rewarded firms announcing write-offs and mass firings — a bulimic strategy of management — since the cost cutting was seen as contributing rather quickly to profits. Firms and economies can’t get richer by starving themselves, but stock market investors can get richer when the companies they own go hungry. As for the long term, well, that’s someone else’s problem.” [Wall Street, p. 171]

This means that resources are allocated to short term projects, those that enrich the investors now rather than produce long term growth and benefits later. This results in slower and more unstable investment than less market centred economies, as well as greater instability over the business cycle [Op. Cit., pp. 174–5] Thus the claim that capitalism results in the “efficient” allocation of resources is only true if we assume “efficient” equals highest profits for capitalists. As Henwood summarises, “*the US financial system performs dismally at its advertised task, that of efficiently directing society’s savings towards their optimal investment pursuits. The system is stupefyingly expensive, gives terrible signals, and has surprisingly little to do with real investment.*” [Op. Cit., p. 3]

Moreover, the claim that laissez-faire economies produce a high rate of economic progress can be questioned on the empirical evidence available. For exam-

ple, from the 1970s onwards there has been a strong tendency towards economic deregulation. However, this tendency has been associated with a **slow down** of economic growth. For example, “[g]rowth rates, investment rates and productivity rates are all lower now than in the [Keynesian post-war] Golden Age, and there is evidence that the trend rate of growth — the underlying growth rate — has also decreased.” Before the Thatcher pro-market reforms, the British economy grew by 2.4% in the 1970s. After Thatcher’s election in 1979, growth decreased to 2% in the 1980s and to 1.2% in the 1990s. In the USA, we find a similar pattern. Growth was 4.4% in the 1960s, 3.2% in the 1970s, 2.8% in the 1980s and 1.9% in the first half of the 1990s [Larry Elliot and Dan Atkinson, **The Age of Insecurity**, p. 236]. Moreover, in terms of inflation-adjusted GDP per capita and productivity, the US had the worse performance out of the US, UK, Japan, Italy, France, Canada and Australia between 1970 and 1995 [Marc-Anfre Pigeon and L. Randall Wray, **Demand Constraints and Economic Growth**]. Given that the US is usually considered the most laissez-faire out of these 7 countries, Caplan’s claim of high progress for deregulated systems seems at odds with this evidence.

As far as technological innovation goes, it is also not clear that deregulation has aided that process. Much of our modern technology owns its origins to the US Pentagon system, in which public money is provided to companies for military R&D purposes. Once the technology has been proven viable, the companies involved can sell their public subsidised products for private profit. The computer industry (as we point out in section J.4.7) is a classic example of this — indeed it is unlikely whether we would have computers or the internet if we had waited for capitalists to develop them. So whether a totally deregulated capitalism would have as high a rate of technological progress is a moot point.

So, it seems likely that it is only the **assumption** that the free capitalist market will generate “an efficient allocation of resources and (more importantly) a high rate of economic progress.” Empirical evidence points the other way — namely, that state aided capitalism provides an approximation of these claims. Indeed, if we look at the example of the British Empire (which pursued a strong free trade and laissez-faire policy over the areas it had invaded) we can suggest that the opposite may be true. After 25 prosperous years of fast growth (3.5 per cent), after 1873 Britain had 40 years of slow growth (1.5 per cent), the last 14 years of which were the worse — with productivity declining, GDP stagnant and home investment halved. [Nicholas Kaldor, **Further Essays on Applied Economics**, p. 239] In comparison, those countries which embraced protectionism (such as Germany and the USA) industrialised successfully and become competitors with the UK. Indeed, these new competitors grew in time to be efficient competitors of Britain not only in foreign markets but also in Britain’s home market. The result was that “for fifty years Britain’s GDP grew very slowly relative to the more successful of the newer industrialised countries, who overtook her, one after another, in the volume of manufacturing production and in exports and finally in real income per head.” [Op. Cit., p. xxvi] Indeed, “America’s growth and productivity rates were higher when tariffs were steep than when they came down.” [Larry Elliot and Dan Atkinson, **Op. Cit.**, p. 277]

It is possible to explain almost everything that has ever happened in the world economy as evidence not of the failure of markets but rather of what

happens when markets are not able to operate freely. Indeed, this is the right-libertarian position in a nut shell. However, it does seem strange that movements towards increased freedom for markets produce worse results than the old, more regulated, way. Similarly it seems strange that the country that embraced laissez-faire and free trade (Britain) did **worse** than those which embraced protectionism (USA, Germany, etc.).

It could always be argued that the protectionist countries had embraced free trade their economies would have done even better. This is, of course, a possibility — if somewhat unlikely. After all, the argument for laissez-faire and free trade is that it benefits all parties, even if it is embraced unilaterally. That Britain obviously did not benefit suggests a flaw in the theory (and that no country **has** industrialised without protectionism suggests likewise). Unfortunately, free-market capitalist economics lends itself to a mind frame that ensures that nothing could happen in the real world that would could ever change its supporters minds about anything.

Free trade, it could be argued, benefits only those who have established themselves in the market — that is, have market power. Thus Britain could initially benefit from free trade as it was the only industrialised nation (and even **its** early industrialisation cannot be divorced from its initial mercantilist policies). This position of strength allowed them to dominate and destroy possible competitors (as Kaldor points out, “[w]here the British succeeded in gaining free entry for its goods. . . it had disastrous effects on local manufactures and employment.” [Op. Cit., p. xxvi]). This would revert the other country back towards agriculture, an industry with diminishing returns to scale (manufacturing, in contrast, has increasing returns) and ensure Britain’s position of power.

The use of protection, however, sheltered the home industries of other countries and gave them the foothold required to compete with Britain. In addition, Britains continual adherence to free trade meant that a lot of **new** industries (such as chemical and electrical ones) could not be properly established. This combination contributed to free trade leading to stunted growth, in stark contrast to the arguments of neo-classical economics.

Of course, we will be accused of supporting protectionism by recounting these facts. That is not the case, as protectionism is used as a means of “proletarianising” a nation (as we discuss in section F.8). Rather we are presenting evidence to refute a claim that deregulated capitalism will lead to higher growth. Thus, we suggest, the history of “actually existing” capitalism indicates that Caplan’s claim that deregulated capitalism will result “a high rate of economic progress” may be little more than an assumption. True, it is an assumption of neo-classical economics, but empirical evidence suggests that assumption is as unfounded as the rest of that theory.

Next we get to the meat of the defence of “anarcho”-capitalism:

“Now the anarcho-capitalist essentially turns the minarchist’s own logic against him, and asks why the remaining functions of the state could not be turned over to the free market. And so, the anarcho-capitalist imagines that police services could be sold by freely competitive firms; that a court system would emerge to peacefully arbitrate disputes between firms; and that a sensible legal code could be developed through custom, precedent, and contract.”

Indeed, the functions in question could certainly be turned over to the “free” market, as was done in certain areas of the US during the 19th century, e.g. the coal towns that were virtually owned by private coal companies. We have already discussed the negative impact of that experiment on the working class in section F.6.2. Our objection is not that such privatisation cannot be done, but that it is an error to call it a form of anarchism. In reality it is an extreme form of laissez-faire capitalism, which is the exact opposite of anarchism. The defence of private power by private police is hardly a move towards the end of authority, nor are collections of private states an example of anarchism.

Indeed, that “anarcho”-capitalism does not desire the end of the state, just a change in its form, can be seen from Caplan’s own arguments. He states that “*the remaining functions of the state*” should be “*turned over to the free market.*” Thus the state (and its functions, primarily the defence of capitalist property rights) is **privatised** and not, in fact, abolished. In effect, the “anarcho”-capitalist seeks to abolish the state by calling it something else.

Caplan:

“The anarcho-capitalist typically hails modern society’s increasing reliance on private security guards, gated communities, arbitration and mediation, and other demonstrations of the free market’s ability to supply the defensive and legal services normally assumed to be of necessity a government monopoly.”

It is questionable that “*modern society*” **as such** has increased its reliance on “*private security guards, gated communities*” and so on. Rather, it is the **wealthy** who have increased their reliance on these forms of private defence. Indeed it is strange to hear a right-libertarian even use the term “society” as, according to that ideology, society does not exist! Perhaps the term “society” is used to hide the class nature of these developments? As for “gated communities” it is clear that their inhabitants would object if the rest of society gated themselves from them! But such is the logic of such developments — but the gated communities want it both ways. They seek to exclude the rest of society from their communities while expected to be given access to that society. Needless to say, Caplan fails to see that liberty for the rich can mean oppression for the working class — “*we who belong to the proletarian class, property excommunicates us!*” [Proudhon, **What is Property?**, p. 105]

That the law code of the state is being defended by private companies is hardly a step towards anarchy. This indicates exactly why an “anarcho”-capitalist system will be a collection of private states united around a common, capitalistic, and hierarchical law code. In addition, this system does not abolish the monopoly of government over society represented by the “*general libertarian law code,*” nor the monopoly of power that owners have over their property and those who use it. The difference between public and private statism is that the boss can select which law enforcement agents will enforce his or her power.

The threat to freedom and justice for the working class is clear. The thug-like nature of many private security guards enforcing private power is well documented. For example, the beating of protesters by “private cops” is a common sight in anti-motorway campaigns or when animal right activists attempt to disrupt fox hunts. The shooting of strikers during strikes occurred during the peak period of American laissez-faire capitalism. However, as most forms of

protest involve the violation of “absolute” property rights, the “justice” system under “anarcho”-capitalism would undoubtedly fine the victims of such attacks by private cops.

It is also interesting that the “anarcho”-capitalist “hails” what are actually symptoms of social breakdown under capitalism. With increasing wealth disparity, poverty, and chronic high unemployment, society is becoming polarised into those who can afford to live in secure, gated communities and those who cannot. The latter are increasingly marginalised in ghettos and poor neighbourhoods where drug-dealing, prostitution, and theft become main forms of livelihood, with gangs offering a feudalistic type of “protection” to those who join or pay tribute to them. Under “anarcho”-capitalism, the only change would be that drug-dealing and prostitution would be legalised and gangs could start calling themselves “defence companies.”

Caplan:

*“In his ideal society, these market alternatives to government services would take over **all** legitimate security services. One plausible market structure would involve individuals subscribing to one of a large number of competing police services; these police services would then set up contracts or networks for peacefully handling disputes between members of each others’ agencies. Alternately, police services might be ‘bundled’ with housing services, just as landlords often bundle water and power with rental housing, and gardening and security are today provided to residents in gated communities and apartment complexes.”*

This is a scenario designed with the upper classes in mind and a few working class people, i.e. those with **some** property (for example, a house) — sometimes labelled the “middle class”. But under capitalism, the tendency toward capital concentration leads to increasing wealth polarisation, which means a shrinking “middle class” (i.e. working class with decent jobs and their own homes) and a growing “underclass” (i.e. working class people without a decent job). Ironically enough, America (with one of the most laissez-faire capitalist systems) is also the Western nation with the **smallest** “middle class” and wealth concentration has steadily increased since the 1970s. Thus the number of people who could afford to buy protection and “justice” from the best companies would continually decrease. For this reason there would be a growing number of people at the mercy of the rich and powerful, particularly when it comes to matters concerning employment, which is the main way in which the poor would be victimised by the rich and powerful (as is indeed the case now).

Of course, if landlords **do** “bundle” police services in their contracts this means that they are determining the monopoly of force over the property in question. Tenants would “consent” to the police force and the laws of the landlord in exactly the same way emigrants “consent” to the laws and government of, say, the USA when they move there. Rather than show the difference between statism and capitalism, Caplan has indicated their essential commonality. For the proletarian, property is but another form of state. For this reason anarchists would agree with Rousseau when he wrote that:

“That a rich and powerful man, having acquired immense possessions in lands, should impose laws on those who want to establish

themselves there, and that he should only allow them to do so on condition that they accept his supreme authority and obey all his wishes; that, I can still conceive. But how can I conceive such a treaty, which presupposes anterior rights, could be the first foundation of law? Would not this tyrannical act contain a double usurpation: that on the ownership of the land and that on the liberty of the inhabitants?" [The Social Contract and Discourses, p. 316]

Caplan:

"The underlying idea is that contrary to popular belief, private police would have strong incentives to be peaceful and respect individual rights. For first of all, failure to peacefully arbitrate will yield to jointly destructive warfare, which will be bad for profits. Second, firms will want to develop long-term business relationships, and hence be willing to negotiate in good faith to insure their long-term profitability. And third, aggressive firms would be likely to attract only high-risk clients and thus suffer from extraordinarily high costs (a problem parallel to the well-known 'adverse selection problem' in e.g. medical insurance — the problem being that high-risk people are especially likely to seek insurance, which drives up the price when riskiness is hard for the insurer to discern or if regulation requires a uniform price regardless of risk)."

The theory that *"failure to peacefully arbitrate will yield to jointly destructive warfare, which will be bad for profits"* can be faulted in two ways. Firstly, if warfare would be bad for profits, what is to stop a large "defence association" from ignoring a smaller one's claim? If warfare were "bad for business," it would be even worse for a small company without the capital to survive a conflict, which could give big "defence associations" the leverage to force compliance with their business interests. Price wars are often bad for business, but companies sometimes start them if they think they can win. Needless to say, demand would exist for such a service (unless you assume a transformation in the "human nature" generated by capitalism — an unlikely situation and one "anarcho"-capitalists usually deny is required for their system to work). Secondly — and this is equally, if not more, likely — a "balance of power" method to stop warfare has little to recommend it from history. This can be seen from the First World War and feudal society.

What the "anarcho"-capitalist is describing is essentially a system of "industrial feudalism" wherein people contract for "protection" with armed gangs of their choice. Feudal societies have never been known to be peaceful, even though war is always "unprofitable" for one side or the other or both. The argument fails to consider that "defence companies," whether they be called police forces, paramilitaries or full-blown armies, tend to attract the "martial" type of authoritarian personality, and that this type of "macho" personality thrives on and finds its reason for existence in armed conflict and other forms of interpersonal violence and intimidation. Hence feudal society is continually wracked by battles between the forces of opposing warlords, because such conflicts allow the combatants a chance to "prove their manhood," vent their aggression, obtain honours and titles, advance in the ranks, obtain spoils, etc. The "anarcho" capitalist has given no reason why warfare among legalised gangs would not

continue under industrial feudalism, except the extremely lame reason that it would not be profitable — a reason that has never prevented war in any known feudal society.

It should be noted that the above is not an argument from “original sin.” Feudal societies are characterised by conflict between opposing “protection agencies” not because of the innate depravity of human beings but because of a social structure based on private property and hierarchy, which brings out the latent capacities for violence, domination, greed, etc. that humans have by creating a financial incentive to be so. But this is not to say that a different social structure would not bring out latent capacities for much different qualities like sharing, peaceableness, and co-operation, which human beings also have. In fact, as Kropotkin argued in **Mutual Aid** and as recent anthropologists have confirmed in greater detail, ancient societies based on communal ownership of productive assets and little social hierarchy were basically peaceful, with no signs of warfare for thousands of years.

However, let us assume that such a competitive system does actually work as described. Caplan, in effect, argues that competition will generate co-operation. This is due to the nature of the market in question — defence (and so peace) is dependent on firms working together as the commodity “peace” cannot be supplied by one firm. However, this co-operation does not, for some reason, become **collusion** between the firms in question. According to “anarcho”-capitalists this competitive system not only produces co-operation, it excludes “defence” firms making agreements to fix monopoly profits (i.e. co-operation that benefits the firms in question). Why does the market produce beneficial co-operation to everyone but not collusion for the firms in question? Collusion is when firms have “business relationships” and “negotiate in good faith” to insure their profitability by agreeing not to compete aggressively against each other in order to exploit the market. Obviously in “anarcho”-capitalism the firms in question only use their powers for good!

Needless to say, the “anarcho”-capitalist will object and argue that competition will ensure that collusion will not occur. However, given that co-operation is required between all firms in order to provide the commodity “peace” this places the “anarcho”-capitalist in a bind. As Caplan notes, “aggressive” firms are *“likely to attract only high-risk clients and thus suffer from extraordinarily high costs.”* From the perspective of the colluding firms, a new entry into their market is, by definition, aggressive. If the colluding firms do not co-operate with the new competitor, then it will suffer from *“extraordinarily high costs”* and either go out of business or join the co-operators. If the new entry could survive in the face of the colluding firms hostility then so could “bad” defence firms, ones that ignored the market standards.

So the “anarcho”-capitalist faces two options. Either an “aggressive” firm cannot survive or it can. If it cannot then the very reason why it cannot ensures that collusion is built into the market and while the system is peaceful it is based on an effective monopoly of colluding firms who charge monopoly profits. This, in effect, is a state under the “anarcho”-capitalist’s definition as a property owner cannot freely select their own “protection” — they are limited to the firms (and laws) provided by the co-operating firms. Or an “aggressive” firm can survive, violence is commonplace and chaos ensues.

Caplan’s passing reference to the *“adverse selection problem”* in medical insurance suggests another problem with “anarcho”-capitalism. The problem is

that high-risk people are especially likely to seek protection, which drives up the price for, as “anarcho”-capitalists themselves note, areas with high crime levels “will be bad for profits,” as hardware and personnel costs will be correspondingly higher. This means that the price for “protection” in areas which need it most will be far higher than for areas which do not need it. As poor areas are generally more crime afflicted than rich areas, “anarcho”-capitalism may see vast sections of the population not able to afford “protection” (just as they may not be about to afford health care and other essential services). Indeed, “protection services” which try to provide cheap services to “high-risk” areas will be at a competitive disadvantage in relation to those who do not, as the “high-risk” areas will hurt profits and companies without “high-risk” “customers” could undercut those that have.

Caplan:

“Anarcho-capitalists generally give little credence to the view that their ‘private police agencies’ would be equivalent to today’s Mafia — the cost advantages of open, legitimate business would make ‘criminal police’ uncompetitive. (Moreover, they argue, the Mafia can only thrive in the artificial market niche created by the prohibition of alcohol, drugs, prostitution, gambling, and other victimless crimes. Mafia gangs might kill each other over turf, but liquor-store owners generally do not.)”

As we have pointed out in section F.6, the “Mafia” objection to “anarcho”-capitalist defence companies is a red herring. The biggest problem would not be “criminal police” but the fact that working people and tenants would subject to the rules, power and laws of the property owners, the rich would be able to buy better police protection and “justice” than the poor and that the “general” law code these companies would defend would be slanted towards the interests and power of the capitalist class (defending capitalist property rights and the proprietors power). And as we also noted, such a system has already been tried in 19th-century and early 20th America, with the result that the rich reduced the working class to a serf-like existence, capitalist production undermined independent producers (to the annoyance of individualist anarchists at the time), and the result was the emergence of the corporate America that “anarcho”-capitalists say they oppose.

Caplan argues that “liquor-store owners” do not generally kill each other over turf. This is true (but then again they do not have access to their own private cops currently so perhaps this could change). But the company owners who created their own private police forces and armies in America’s past **did** allow their goons to attack and murder union organisers and strikers. Let us look at Henry Ford’s Service Department (private police force) in action:

“In 1932 a hunger march of the unemployed was planned to march up to the gates of the Ford plant at Dearborn. . . The machine guns of the Dearborn police and the Ford Motor Company’s Service Department killed [four] and wounded over a score of others. . . Ford was fundamentally and entirely opposed to trade unions. The idea of working men questioning his prerogatives as an owner was outrageous. . . [T]he River Rouge plant. . . was dominated by the autocratic regime of Bennett’s service men. Bennett . . . organise[d] and

train[ed] the three and a half thousand private policemen employed by Ford. His task was to maintain discipline amongst the work force, protect Ford's property [and power], and prevent unionisation. . . Frank Murphy, the mayor of Detroit, claimed that 'Henry Ford employs some of the worst gangsters in our city.' The claim was well based. Ford's Service Department policed the gates of his plants, infiltrated emergent groups of union activists, posed as workers to spy on men on the line. . . Under this tyranny the Ford worker had no security, no rights. So much so that any information about the state of things within the plant could only be freely obtained from ex-Ford workers." [Huw Beynon, **Working for Ford**, pp. 29–30]

The private police attacked women workers handing out pro-union handbills and gave them “a serve beating.” At Kansas and Dallas “*similar beatings were handed out to the union men.*” [Op. Cit., p. 34] This use of private police to control the work force was not unique. General Motors “*spent one million dollars on espionage, employing fourteen detective agencies and two hundred spies at one time [between 1933 and 1936]. The Pinkerton Detective Agency found anti-unionism its most lucrative activity.*” [Op. Cit., p. 32] We must also note that the Pinkerton's had been selling their private police services for decades before the 1930s. In the 1870s, they had infiltrated and destroyed the Molly Maguires (a secret organisation Irish miners had developed to fight the coal bosses). For over 60 years the Pinkerton Detective Agency had “*specialised in providing spies, agent provocateurs, and private armed forces for employers combating labour organisations.*” By 1892 it “*had provided its services for management in seventy major labour disputes, and its 2 000 active agents and 30 000 reserves totalled more than the standing army of the nation.*” [Jeremy Brecher, **Strike!**, p. 9 and p. 55] With this force available, little wonder unions found it so hard to survive in the USA. Given that unions could be considered as “defence” agencies for workers, this suggests a picture of how “anarcho”-capitalism may work in practice.

It could be argued that, in the end, the union was recognised by the Ford company. However, this occurred after the New Deal was in place (which helped the process), after years of illegal activity (by definition union activism on Ford property was an illegal act) and extremely militant strikes. Given that the union agreement occurred nearly 40 years after Ford was formed **and** in a legal situation violently at odds with “anarcho”-capitalism (or even minimal statist capitalism), we would be justified in wondering if unionisation would ever have occurred at Ford and if Ford's private police state would ever have been reformed.

Of course, from an “anarcho”-capitalist perspective the only limitation in the Ford workers' liberty was the fact they had to pay taxes to the US government. The regime at Ford could **not** restrict their liberty as no one forced them to work for the company. Needless to say, an “anarcho”-capitalist would reject out of hand the argument that no-one forced the citizen to entry or remain in the USA and so they consented to taxation, the government's laws and so on.

This is more than a history lesson. Such private police forces are on the rise again (see “*Armed and Dangerous: Private Police on the March*” by Mike Zielinski, **Covert Action Quarterly**, no. 54, Fall, 1995 for example). This system of private police (as demonstrated by Ford) is just one of the hidden aspects

of Caplan's comment that the "anarcho"-capitalist *"typically hails modern society's increasing reliance on private security guards. . . and other demonstrations of the free market's ability to supply the defensive and legal services normally assumed to be of necessity a government monopoly."*

Needless to say, private police states are not a step forward in anarchist eyes. Caplan:

"Unlike some left-anarchists, the anarcho-capitalist has no objection to punishing criminals; and he finds the former's claim that punishment does not deter crime to be the height of naivete. Traditional punishment might be meted out after a conviction by a neutral arbitrator; or a system of monetary restitution (probably in conjunction with a prison factory system) might exist instead."

Let us note first that in disputes between the capitalist class and the working class, there would be no *"neutral arbitrator,"* because the rich would either own the arbitration company or influence/control it through the power of the purse (see section F.6). In addition, "successful" arbitrators would also be wealthy, therefore making neutrality even more unlikely. Moreover, given that the laws the "neutral arbitrator" would be using are based on capitalist property rights, the powers and privileges of the owner are built into the system from the start.

Second, the left-libertarian critique of punishment does not rest, as "anarcho"-capitalists claim, on the naive view that intimidation and coercion aren't effective in controlling behaviour. Rather, it rests on the premise that capitalist societies produce large numbers of criminals, whereas societies based on equality and community ownership of productive assets do not.

The argument for this is that societies based on private property and hierarchy inevitably lead to a huge gap between the haves and the have-nots, with the latter sunk in poverty, alienation, resentment, anger, and hopelessness, while at the same time such societies promote greed, ambition, ruthlessness, deceit, and other aspects of competitive individualism that destroy communal values like sharing, co-operation, and mutual aid. Thus in capitalist societies, the vast majority of "crime" turns out to be so-called "crimes against property," which can be traced to poverty and the grossly unfair distribution of wealth. Where the top one percent of the population controls more wealth than the bottom 90 percent combined, it is no wonder that a considerable number of those on the bottom should try to recoup illegally some of the mal-distributed wealth they cannot obtain legally. (In this they are encouraged by the bad example of the ruling class, whose parasitic ways of making a living would be classified as criminal if the mechanisms for defining "criminal behaviour" were not controlled by the ruling class itself.) And most of the remaining "crimes against persons" can be traced to the alienation, dehumanisation, frustration, rage, and other negative emotions produced by the inhumane and unjust economic system.

Thus it is only in our societies like ours, with their wholesale manufacture of many different kinds of criminals, that punishment appears to be the only possible way to discourage "crime." From the left-libertarian perspective, however, the punitive approach is a band-aid measure that does not get to the real root of the problem — a problem that lies in the structure of the system itself. The real solution is the creation of a non-hierarchical society based on communal ownership of productive assets, which, by eliminating poverty and the other

negative effects of capitalism, would greatly reduce the incidence of criminal behaviour and so the need for punitive countermeasures.

Finally, two more points on private prisons. Firstly, as to the desirability of a “prison factory system,” we will merely note that, given the capitalist principle of “grow-or-die,” if punishing crime becomes a business, one can be sure that those who profit from it will find ways to ensure that the “criminal” population keeps expanding at a rate sufficient to maintain a high rate of profit and growth. After all, the logic of a “prison factory system” is self-defeating. If the aim of prison is to deter crime (as some claim) and if a private prison system will meet that aim, then a successful private prison system will stop crime, which, in turn, will put them out of business! Thus a “prison factory system” cannot aim to be efficient (i.e. stop crime).

Secondly, Caplan does not mention the effect of prison labour on the wages, job conditions and market position of workers. Having a sizeable proportion of the working population labouring in prison would have a serious impact on the bargaining power of workers. How could workers outside of prison compete with such a regime of labour discipline without submitting to prison-like conditions themselves? Unsurprisingly, US history again presents some insight into this. As Noam Chomsky notes, the “*rapid industrial development in the southeastern region [of America] a century ago was based on (Black) convict labour, leased to the highest bidder.*” Chomsky quotes expert Alex Lichtenstein comments that Southern Industrialists pointed out that convict labour was “*more reliable and productive than free labour*” and that it overcomes the problem of labour turnover and instability. It also “*remove[d] all danger and cost of strikes*” and that it lowers wages for “*free labour*” (i.e. wage labour). The US Bureau of Labor reported that “*mine owners [in Alabama] say they could not work at a profit without the lowering effect in wages of convict-labour competition.*” [**The Umbrella of US Power**, p. 32]

Needless to say, Caplan fails to mention this aspect of “anarcho”-capitalism (just as he fails to mention the example of Ford’s private police state). Perhaps an “anarcho”-capitalist will say that prison labour will be less productive than wage labour and so workers have little to fear, but this makes little sense. If wage labour is more productive than prison labour will not find a market (and then what for the prisoners? Will profit-maximising companies **really** invest in an industry with such high over-heads as maintaining prisoners for free?). Thus it seems more than likely that any “prison-factory system” will be as productive as the surrounding wage-labour ones, thus forcing down their wages and the conditions of labour. For capitalists this would be ideal, however for the vast majority a different conclusion must be drawn.

Caplan:

“Probably the main division between the anarcho-capitalists stems from the apparent differences between Rothbard’s natural-law anarchism, and David Friedman’s more economic approach. Rothbard puts more emphasis on the need for a generally recognised libertarian legal code (which he thinks could be developed fairly easily by purification of the Anglo-American common law), whereas Friedman focuses more intently on the possibility of plural legal systems co-existing and responding to the consumer demands of different elements of the population. The difference, however, is probably overstated. Rothbard

believes that it is legitimate for consumer demand to determine the philosophically neutral content of the law, such as legal procedure, as well as technical issues of property right definition such as water law, mining law, etc. And Friedman admits that 'focal points' including prevalent norms are likely to circumscribe and somewhat standardise the menu of available legal codes."

The argument that "consumer demand" would determine a "philosophically neutral" content of the law cannot be sustained. Any law code will reflect the philosophy of those who create it. Under "anarcho"-capitalism, as we have noted (see section F.6), the values of the capitalist rich will be dominant and will shape the law code and justice system, as they do now, only more so. The law code will therefore continue to give priority to the protection of private property over human values; those who have the most money will continue being able to hire the best lawyers; and the best (i.e. most highly paid) judges will be inclined to side with the wealthy and to rule in their interests, out of class loyalty (and personal interests).

Moreover, given that the law code exists to protect capitalist property rights, how can it be "philosophically neutral" with that basis? How would "competing" property frameworks co-exist? If a defence agency allowed squatting and another (hired by the property owner) did not, there is no way (bar force) a conflict could be resolved. Then the firm with the most resources would win. "Anarcho"-capitalism, in effect, smuggles into the foundation of their system a distinctly **non**-neutral philosophy, namely capitalism. Those who reject such a basis may end up sharing the fate of tribal peoples who rejected that system of property rights, for example, the Native Americans.

In other words, in terms of outcome the whole system would favour **capitalist** values and so not be "philosophically neutral." The law would be favourable to employers rather than workers, manufacturers rather than consumers, and landlords rather than tenants. Indeed, from the "anarcho"-capitalist perspective the rules that benefit employers, landlords and manufacturers (as passed by progressive legislatures or enforced by direct action) simply define liberty and property rights whereas the rules that benefit workers, tenants and consumers are simply an interference with liberty. The rules one likes, in other words, are the foundations of sacred property rights (and so "liberty," as least for the capitalist and landlord), those one does not like are meddlesome regulation. This is a very handy trick and would not be worth mentioning if it was not so commonplace in right-libertarian theory.

We should leave aside the fantasy that the law under "anarcho"-capitalism is a politically neutral set of universal rules deduced from particular cases and free from a particular instrumental or class agenda.

Caplan:

"Critics of anarcho-capitalism sometimes assume that communal or worker-owned firms would be penalised or prohibited in an anarcho-capitalist society. It would be more accurate to state that while individuals would be free to voluntarily form communitarian organisations, the anarcho-capitalist simply doubts that they would be widespread or prevalent."

There is good reason for this doubt. Worker co-operatives would not be widespread or prevalent in an “anarcho”-capitalist society for the same reason that they are not widespread or prevalent now: namely, that the socio-economic, legal, and political systems would be structured in such a way as to automatically discourage their growth (in addition, capitalist firms and the rich would also have an advantage in that they would still own and control the wealth they currently have which are a result of previous “initiations of force”. This would give them an obvious advantage on the “free-market” — an advantage which would be insurmountable).

As we explain in more detail in section J.5.11, the reason why there are not more producer co-operatives is partly structural, based on the fact that co-operatives have a tendency to grow at a slower rate than capitalist firms. This is a good thing if one’s primary concern is, say, protecting the environment, but fatal if one is trying to survive in a competitive capitalist environment.

Under capitalism, successful competition for profits is the fundamental fact of economic survival. This means that banks and private investors seeking the highest returns on their investments will favour those companies that grow the fastest. Moreover, in co-operatives returns to capital are less than in capitalist firms. Under such conditions, capitalist firms will attract more investment capital, allowing them to buy more productivity-enhancing technology and thus to sell their products more cheaply than co-operatives. Even though co-operatives are at least as efficient (usually more so) than their equivalent capitalist firms, the effect of market forces (particularly those associated with capital markets) will select against them. This bias against co-operatives under capitalism is enough to ensure that, despite their often higher efficiency, they cannot prosper under capitalism (i.e. capitalism selects the **least efficient** way of producing). Hence Caplan’s comments hide how the effect of inequalities in wealth and power under capitalism determine which alternatives are “widespread” in the “free market”

Moreover, co-operatives within capitalism have a tendency to adapt to the dominant market conditions rather than undermining them. There will be pressure on the co-operatives to compete more effectively by adopting the same cost-cutting and profit-enhancing measures as capitalist firms. Such measures will include the deskilling of workers; squeezing as much “productivity” as is humanly possible from them; and a system of pay differentials in which the majority of workers receive low wages while the bulk of profits are reinvested in technology upgrades and other capital expansion that keeps pace with capitalist firms. But this means that in a capitalist environment, there tend to be few practical advantages for workers in collective ownership of the firms in which they work.

This problem can only be solved by eliminating private property and the coercive statist mechanisms required to protect it (including private states masquerading as “protection companies”), because this is the only way to eliminate competition for profits as the driving force of economic activity. In a libertarian socialist environment, federated associations of workers in co-operative enterprises would co-ordinate production for **use** rather than profit, thus eliminating the competitive basis of the economy and so also the “grow-or-die” principle which now puts co-operatives at a fatal economic disadvantage. (For more on how such an economy would be organised and operated, as well as answers to objections, see section I.)

And let us not forget what is implied by Caplan's statement that the "anarcho"-capitalist does not think that co-operative holding of "property" "would be widespread or prevalent." It means that the vast majority would be subject to the power, authority and laws of the property owner and so would not govern themselves. In other words, it would be a system of private statism rather than anarchy.

Caplan:

"However, in theory an 'anarcho-capitalist' society might be filled with nothing but communes or worker-owned firms, so long as these associations were formed voluntarily (i.e., individuals joined voluntarily and capital was obtained with the consent of the owners) and individuals retained the right to exit and set up corporations or other profit-making, individualistic firms."

It's interesting that the "anarcho"-capitalists are willing to allow workers to set up "voluntary" co-operatives so long as the conditions are retained which ensure that such co-operatives will have difficulty surviving (i.e. private property and private states), but they are unwilling to allow workers to set up co-operatives under conditions that would ensure their success (i.e. the absence of private property and private states). This reflects the usual vacuousness of the right-libertarian concepts of "freedom" and "voluntarism."

In other words, these worker-owned firms would exist in and be subject to the same capitalist "*general libertarian law code*" and work in the same capitalist market as the rest of society. So, not only are these co-operatives subject to capitalist market forces, they exist and operate in a society defined by capitalist laws. As discussed in section F.2, such disregard for the social context of human action shows up the "anarcho" capitalist's disregard for meaningful liberty.

All Caplan is arguing here is that as long as people remain within the (capitalist) "law code," they can do whatever they like. However, what determines the amount of coercion required in a society is the extent to which people are willing to accept the rules imposed on them. This is as true of an "anarcho"-capitalist society as it is of any other. In other words, if more and more people reject the basic assumptions of capitalism, the more coercion against anarchistic tendencies will be required. Saying that people would be free to experiment under "anarcho"-capitalist law (if they can afford it, of course) does not address the issue of changes in social awareness (caused, by example, by class struggle) which can make such "laws" redundant. So, when all is said and done, "anarcho"-capitalism just states that as long as you accept their rules, you are free to do what you like.

How generous of them!

Thus, while we would be allowed to be collective capitalists or property owners under "anarcho"-capitalists we would have no choice about living under laws based on the most rigid and extreme interpretation of property rights available. In other words, "anarcho"-capitalists recognise (at least implicitly) that there exists one collective need that needs collective support — a law system to define and protect people's rights. Ultimately, as C.B. Macpherson argues, "Individualism" implies "collectivism" for the "*notion that individualism and 'collectivism' are the opposite ends of a scale along which states and theories of the state can be arranged . . . is superficial and misleading. . . [I]ndividualism . . . does*

not exclude but on the contrary demands the supremacy of the state [or law] over the individual. It is not a question of the more individualism, the less collectivism; rather, the more through-going the individualism, the more complete the collectivism. Of this the supreme illustration is Hobbes's theory." [**The Political Theory of Possessive Individualism**, p.256] Under "anarcho"-capitalism the individual is subject to the laws regarding private property, laws decided in advance by a small group of ideological leaders. Then real individuals are expected to live with the consequences as best they can, with the law being placed ahead of these consequences for flesh and blood people. The abstraction of the law dominates and devours real individuals, who are considered below it and incapable of changing it (except for the worse). This, from one angle, shares a lot with theocracy and very little with liberty.

Needless to say, Caplan like most (if not all) "anarcho"-capitalists assume that the current property owners are entitled to their property. However, as John Stuart Mill pointed out over 100 years ago, the "social arrangements" existing today "commenced from a distribution of property which was the result, not of a just partition, or acquisition by industry, but of conquest and violence ... [and] the system still retains many and large traces of its origin." [**Principles of Political Economy**, p. 15] Given that (as we point out in section F.1) Murray Rothbard argues that the state cannot be claimed to own its territory simply because it did not acquire its property in a "just" manner, this suggests that "anarcho"-capitalism cannot actually argue against the state. After all, property owners today cannot be said to have received their property "justly" and **if** they are entitled to it so is the state to **its** "property"!

But as is so often the case, property owners are exempt from the analysis the state is subjected to by "anarcho"-capitalists. The state and property owners may do the same thing (such as ban freedom of speech and association or regulate individual behaviour) but only the state is condemned by "anarcho"-capitalism.

Caplan:

"On other issues, the anarcho-capitalist differs little if at all from the more moderate libertarian. Services should be privatised and opened to free competition; regulation of personal AND economic behaviour should be done away with."

The "anarcho"-capitalist's professed desire to "do away" with the "regulation" of economic behaviour is entirely disingenuous. For, by giving capitalists the ability to protect their exploitative monopolies of social capital by the use of coercive private states, one is thereby "regulating" the economy in the strongest possible way, i.e. ensuring that it will be channelled in certain directions rather than others. For example, one is guaranteeing that production will be for profit rather than use; that there will consequently be runaway growth and an endless devouring of nature based on the principle of "grow or die;" and that the alienation and deskilling of the workforce will continue. What the "anarcho"-capitalist really means by "doing away with the regulation of economic behaviour" is that ordinary people will have even less opportunity than now to democratically control the rapacious behaviour of capitalists. Needless to say, the "regulation of personal" behaviour would **not** be done away with in the workplace, where the authority of the bosses would still exist and you would have follow their petty rules and regulations.

Moreover, regardless of “anarcho”-capitalist claims, they do not, in fact, support civil liberties or oppose “regulation” of personal behaviour as such. Rather, they **support** property owners suppressing civil liberties on their property and the regulation of personal behaviour by employers and landlords. This they argue is a valid expression of property rights. Indeed, any attempts to allow workers civil liberties or restrict employers demands on workers by state or union action is denounced as a violation of “liberty” (i.e. the power of the property owner). Those subject to the denial of civil liberties or the regulation of their personal behaviour by landlords or employees can “love it or leave it.” Of course, the same can be said to any objector to state oppression — and frequently is. This is an artificial double standard, which labels a restraint by one group or person in a completely different way than the same restraint by others simply because one is called “the government” and the other is not.

This denial of civil liberties can be seen from these words by Murray Rothbard:

“[I]n the profoundest sense there are no rights but property rights . . . Freedom of speech is supposed to mean the right of everyone to say whatever he likes. But the neglected question is: Where? Where does a man have this right? He certainly does not have it on property on which he is trespassing. In short, he has this right only either on his own property or on the property of someone who has agreed, as a gift or in a rental contract, to allow him in the premises. In fact, then, there is no such thing as a separate ‘right to free speech’; there is only a man’s property right: the right to do as he wills with his own or to make voluntary agreements with other property owners.”

[Murray Rothbard, **Power and Market**, p. 176]

Of course, Rothbard fails to see that for the property-less such a regime implies **no** rights whatsoever. It also means the effective end of free speech and free association as the property owner can censor those on their property (such as workers or tenants) and ban their organisations (such as unions). Of course, in his example Rothbard looks at the “trespasser,” **not** the wage worker or the tenant (two far more common examples in any modern society). Rothbard is proposing the dictatorship of the property owner and the end of civil liberties and equal rights (as property is unequally distributed). He gives this utter denial of liberty an Orwellian twist by proclaiming the end of civil liberties by property rights as “a new liberty.” Perhaps for the property-owner, but not the wage worker — “*We who belong to the proletarian class, property excommunicates us!*” [Proudhon, **What is Property?**, p. 137]

In effect, right-Libertarians do not care how many restrictions are placed on you as long as it is not the government doing it. Of course it will be claimed that workers and tenants “consent” to these controls (although they reject the notion that citizens “consent” to government controls by not leaving their state). Here the libertarian case is so disingenuous as to be offensive. There is no symmetry in the situations facing workers and firms. To the worker, the loss of a job is often far more of a threat than the loss of one worker is to the firm. The reality of economic power leads people to contract into situations that, although they are indeed the “best” arrangements of those available, are nonetheless miserable. In any real economy — and, remember, the right-libertarian economy lacks any

social safety net, making workers' positions more insecure than now — the right-libertarian denial of economic power is a delusion.

Unlike anarchist theory, right-libertarian theory provides **no** rationale to protest private power (or even state power if we accept the notion that the state owns its territory). Relations of domination and subjection are valid expressions of liberty in their system and, perversely, attempts to resist authority (by strikes, unions, resistance) are deemed “initiations of force” upon the oppressor! In contrast, anarchist theory provides a strong rationale for resisting private and public domination. Such domination violates freedom and any free association which dominates any within it violates the basis of that association in self-assumed obligation (see section A.2.11). Thus Proudhon:

“The social contract should increase the well-being and liberty of every citizen. — If any one-sided conditions should slip in; if one part of the citizens should find themselves, by the contract, subordinated and exploited by others, it would no longer be a contract; it would be a fraud, against which annulment might at any time be invoked justly.” [The General Idea of the Revolution, p. 114]

Caplan's claim that right libertarians oppose regulation of individual behaviour is simply not true. They just oppose state regulation while supporting private regulation wholeheartedly. Anarchists, in contrast, reject both public and private domination.

Caplan:

“Poverty would be handled by work and responsibility for those able to care for themselves, and voluntary charity for those who cannot. (Libertarians hasten to add that a deregulated economy would greatly increase the economic opportunities of the poor, and elimination of taxation would lead to a large increase in charitable giving.)”

Notice the implication that poverty is now caused by laziness and irresponsibility rather than by the inevitable workings of an economic system that **requires** a large “reserve army of the unemployed” as a condition of profitability. The continuous “boom” economy of “anarcho”-capitalist fantasies is simply incompatible with the fundamental principles of capitalism. To re-quote Michael Kalecki (from section B.4.4), “[l]asting full employment is not at all to [the] liking [of business leaders]. The workers would ‘get out of hand’ and the ‘captains of industry’ would be anxious ‘to teach them a lesson’ as “‘discipline in the factories’ and ‘political stability’ are more appreciated by business leaders than profits. Their class interest tells them that lasting full employment is unsound from their point of view and that unemployment is an integral part of the ‘normal’ capitalist system.”. See section C.7 (“What causes the capitalist business cycle?”) for a fuller discussion of this point.

In addition, the claims that a “deregulated economy” would benefit the poor do not have much empirical evidence to back them up. If we look at the last quarter of the twentieth century we discover that a more deregulated economy has led to massive increases in inequality and poverty. If a movement towards a deregulated economy has had the opposite effect than that predicted by Caplan, why should a totally deregulated economy have the opposite effect. It is a bit

like claiming that while adding black paint to grey makes it more black, adding the whole tin will make it white!

The reason for increased inequality and poverty as a result of increased deregulation is simple. A “free exchange” between two people will benefit the stronger party. This is obvious as the economy is marked by power, regardless of “anarcho”-capitalist claims, and any “free exchange” will reflect difference in power. Moreover, a series of such exchanges will have an accumulative effect, with the results of previous exchanges bolstering the position of the stronger party in the current exchange.

Moreover, the claim that removing taxation will **increase** donations to charity is someone strange. We doubt that the rich who object to money being taken from them to pay for welfare will **increase** the amount of money they give to others if taxation **was** abolished. As Peter Sabatini points out, “anarcho”-capitalists “*constantly rant and shriek about how the government, or the rabble, hinders their Lockean right to amass capital.*” [**Social Anarchism**, no. 23, p.101] Caplan seems to expect them to turn over a new leaf and give **more** to that same rabble!

Is “anarcho”-capitalism a type of anarchism?

Anyone who has followed political discussion on the net has probably come across people calling themselves libertarians but arguing from a right-wing, pro-capitalist perspective. For most Europeans this is weird, as in Europe the term “*libertarian*” is almost always used in conjunction with “*socialist*” or “*communist*.” In the US, though, the Right has partially succeeded in appropriating this term for itself. Even stranger, however, is that a few of these right-wingers have started calling themselves “anarchists” in what must be one of the finest examples of an oxymoron in the English language: ‘Anarcho-capitalist’!!

Arguing with fools is seldom rewarded, but to allow their foolishness to go unchallenged risks allowing them to deceive those who are new to anarchism. That’s what this section of the anarchist FAQ is for, to show why the claims of these “anarchist” capitalists are false. Anarchism has always been anti-capitalist and any “anarchism” that claims otherwise cannot be part of the anarchist tradition. So this section of the FAQ does not reflect some kind of debate within anarchism, as many of these types like to pretend, but a debate between anarchism and its old enemy, capitalism. In many ways this debate mirrors the one between Peter Kropotkin and Herbert Spencer, an English pro-capitalist, minimal statist, at the turn the 19th century and, as such, it is hardly new.

The “anarcho”-capitalist argument hinges on using the dictionary definition of “anarchism” and/or “anarchy” — they try to define anarchism as being “opposition to government,” and nothing else. However, dictionaries are hardly politically sophisticated and their definitions rarely reflect the wide range of ideas associated with political theories and their history. Thus the dictionary “definition” is anarchism will tend to ignore its consistent views on authority, exploitation, property and capitalism (ideas easily discovered if actual anarchist texts are read). And, of course, many dictionaries “define” anarchy as “chaos” or “disorder” but we never see “anarcho”-capitalists use that particular definition!

And for this strategy to work, a lot of “inconvenient” history and ideas from all branches of anarchism must be ignored. From individualists like Spooner and Tucker to communists like Kropotkin and Malatesta, anarchists have always been anti-capitalist (see section G for more on the anti-capitalist nature of individualist anarchism). Therefore “anarcho”-capitalists are not anarchists in the same sense that rain is not dry.

Of course, we cannot stop the “anarcho”-capitalists using the words “anarcho”, “anarchism” and “anarchy” to describe their ideas. The democracies of the west could not stop the Chinese Stalinist state calling itself the People’s Repub-

lic of China. Nor could the social democrats stop the fascists in Germany calling themselves “National Socialists”. Nor could the Italian anarcho-syndicalists stop the fascists using the expression “National Syndicalism”. This does not mean that any of these movements actual name reflected their content — China is a dictatorship, not a democracy, the Nazi’s were not socialists (capitalists made fortunes in Nazi Germany because it crushed the labour movement), and the Italian fascist state had nothing in common with anarcho-syndicalists ideas of decentralised, “from the bottom up” unions and the abolition of the state and capitalism.

Therefore, just because someone uses a label it does not mean that they support the ideas associated with that label. And this is the case with “anarcho”-capitalism — its ideas are at odds with the key ideas associated with all forms of traditional anarchism (even individualist anarchism which is often claimed as being a forefather of the ideology).

All we can do is indicate **why** “anarcho”-capitalism is not part of the anarchist tradition and so has falsely appropriated the name. This section of the FAQ aims to do just that — present the case why “anarcho”-capitalists are not anarchists. We do this, in part, by indicating where they differ from genuine anarchists (on such essential issues as private property, equality, exploitation and opposition to hierarchy) In addition, we take the opportunity to present a general critique of right-libertarian claims from an anarchist perspective. In this way we show up why anarchists reject that theory as being opposed to liberty and anarchist ideals.

We are covering this topic in an anarchist FAQ for three reasons. Firstly, the number of “libertarian” and “anarcho”-capitalists on the net means that those seeking to find out about anarchism may conclude that they are “anarchists” as well. Secondly, unfortunately, some academics and writers have taken their claims of being anarchists at face value and have included their ideology into general accounts of anarchism. These two reasons are obviously related and hence the need to show the facts of the matter. As we have extensively documented in earlier sections, anarchist theory has always been anti-capitalist. There is no relationship between anarchism and capitalism, in any form. Therefore, there is a need for this section in order to indicate exactly why “anarcho”-capitalism is not anarchist. As will be quickly seen from our discussion, almost all anarchists who become aware of “anarcho”-capitalism quickly reject it as a form of anarchism (the better academic accounts do note that anarchists generally reject the claim, though). The last reason is to provide other anarchists with arguments and evidence to use against “anarcho”-capitalism and its claims of being a new form of “anarchism.”

So this section of the FAQ does not, as we noted above, represent some kind of “debate” within anarchism. It reflects the attempt by anarchists to reclaim the history and meaning of anarchism from those who are attempting to steal its name (just as right-wingers in America have attempted to appropriate the name “libertarian” for their pro-capitalist views, and by so doing ignore over 100 years of anti-capitalist usage). However, this section also serves two other purposes. Firstly, critiquing right-libertarian and “anarcho”-capitalist theories allows us to explain anarchist ones at the same time and indicate why they are better. Secondly, and more importantly, the “ideas” and “ideals” that underlie “anarcho”-capitalism are usually identical (or, at the very least, similar) to those of neo-liberalism. This was noted by Bob Black in the early 1980s,

when a “wing of the Reaganist Right has obviously appropriated, with suspect selectivity, such libertarian themes as deregulation and voluntarism. Ideologues indignant that Reagan has travestied their principles. Tough shit! I notice that it’s their principles, not mine, that he found suitable to travesty.” [The Libertarian As Conservative] This was echoed by Noam Chomsky two decades later when while “nobody takes [right-wing libertarianism] seriously” as “everybody knows that a society that worked by . . . [its] principles would self-destruct in three seconds” the “only reason” why some people “pretend to take it seriously is because you can use it as a weapon.” [Understanding Power, p. 200] As neo-liberalism is being used as the ideological basis of the current attack on the working class, critiquing “anarcho”-capitalism and right-libertarianism also allows use to build theoretical weapons to use to resist this attack and aid the class struggle.

A few more points before beginning. When debating with “libertarian” or “anarchist” capitalists it’s necessary to remember that while they claim “real capitalism” does not exist (because all existing forms of capitalism are statist), they will claim that all the good things we have — advanced medical technology, consumer choice of products, etc. — are nevertheless due to “capitalism.” Yet if you point out any problems in modern life, these will be blamed on “statism.” Since there has never been and never will be a capitalist system without some sort of state, it’s hard to argue against this “logic.” Many actually use the example of the Internet as proof of the power of “capitalism,” ignoring the fact that the state paid for its development before turning it over to companies to make a profit from it. Similar points can be made about numerous other products of “capitalism” and the world we live in. To artificially separate one aspect of a complex evolution fails to understand the nature and history of the capitalist system.

In addition to this ability to be selective about the history and results of capitalism, their theory has a great “escape clause.” If wealthy employers abuse their power or the rights of the working class (as they have always done), then they have (according to “libertarian” ideology) ceased to be capitalists! This is based upon the misperception that an economic system that relies on force **cannot** be capitalistic. This is **very** handy as it can absolve the ideology from blame for any (excessive) oppression which results from its practice. Thus individuals are always to blame, **not** the system that generated the opportunities for abuse they freely used.

Anarchism has always been aware of the existence of “free market” capitalism, particularly its extreme (minimal state) wing, and has always rejected it. As we discuss in section 7, anarchists from Proudhon onwards have rejected the idea of any similar aims and goals (and, significantly, vice versa). As academic Alan Carter notes, anarchist concern for equality as a necessary precondition for genuine freedom means “that is one very good reason for not confusing anarchists with liberals or economic ‘libertarians’ — in other words, for not lumping together everyone who is in some way or another critical of the state. It is why calling the likes of Nozick ‘anarchists’ is highly misleading.” [“Some notes on ‘Anarchism’”, pp. 141–5, **Anarchist Studies**, vol. 1, no. 2, p. 143] So anarchists have evaluated “free market” capitalism and rejected it as non-anarchist for over 150 years. Attempts by “anarcho”-capitalism to say that their system is “anarchist” flies in the face of this long history of anarchist analysis. That some academics fall for their attempts to appropriate the anarchist label for their

ideology is down to a false premise: it *“is judged to be anarchism largely because some anarcho-capitalists **say** they are ‘anarchists’ and because they criticise the State.”* [Peter Sabatini, **Social Anarchism**, no. 23, p. 100]

More generally, we must stress that most (if not all) anarchists do not want to live in a society **just like this one** but without state coercion and (the initiation of) force. Anarchists do not confuse “freedom” with the “right” to govern and exploit others nor with being able to change masters. It is not enough to say we can start our own (co-operative) business in such a society. We want the abolition of the capitalist system of authoritarian relationships, not just a change of bosses or the possibility of little islands of liberty within a sea of capitalism (islands which are always in danger of being flooded and our activity destroyed). Thus, in this section of the FAQ, we analysis many “anarcho”-capitalist claims on their own terms (for example, the importance of equality in the market or why capitalism cannot be reformed away by exchanges on the capitalist market) but that does not mean we desire a society nearly identical to the current one. Far from it, we want to transform this society into one more suited for developing and enriching individuality and freedom. But before we can achieve that we must critically evaluate the current society and point out its basic limitations.

Finally, we dedicate this section of the FAQ to those who have seen the real face of “free market” capitalism at work: the working men and women (anarchist or not) murdered in the jails and concentration camps or on the streets by the hired assassins of capitalism.

1 Are “anarcho”-capitalists really anarchists?

In a word, no. While “anarcho”-capitalists obviously try to associate themselves with the anarchist tradition by using the word “anarcho” or by calling themselves “anarchists”, their ideas are distinctly at odds with those associated with anarchism. As a result, any claims that their ideas are anarchist or that they are part of the anarchist tradition or movement are false.

“Anarcho”-capitalists claim to be anarchists because they say that they oppose government. As such, as noted in the last section, they use a dictionary definition of anarchism. However, this fails to appreciate that anarchism is a **political theory**, not a dictionary definition. As dictionaries are rarely politically sophisticated things, this means that they fail to recognise that anarchism is more than just opposition to government, it is also marked a opposition to capitalism (i.e. exploitation and private property). Thus, opposition to government is a necessary but not sufficient condition for being an anarchist — you also need to be opposed to exploitation and capitalist private property. As “anarcho”-capitalists do not consider interest, rent and profits (i.e. capitalism) to be exploitative nor oppose capitalist property rights, they are not anarchists.

Moreover, “anarcho”-capitalism is inherently self-refuting. This can be seen from leading “anarcho”-capitalist Murray Rothbard. he thundered against the evil of the state, arguing that it *“arrogates to itself a monopoly of force, of ultimate decision-making power, over a given area territorial area.”* In and of itself, this definition is unremarkable. That a few people (an elite of rulers) claim the right to rule others must be part of any sensible definition of the state or government. However, the problems begin for Rothbard when he notes that

“[o]bviously, in a free society, Smith has the ultimate decision-making power over his own just property, Jones over his, etc.” [The Ethics of Liberty, p. 170 and p. 173] The logical contradiction in this position should be obvious, but not to Rothbard. It shows the power of ideology, the ability of means words (the expression “private property”) to turn the bad (“ultimate decision-making power over a given area”) into the good (“ultimate decision-making power over a given area”).

Now, this contradiction can be solved in only **one** way — the owners of the “given area” are also its users. In other words, a system of possession (or “occupancy and use”) as favoured by anarchists. However, Rothbard is a capitalist and supports private property. In other words, wage labour and landlords. This means that he supports a divergence between ownership and use and this means that this “ultimate decision-making power” extends to those who **use**, but do not own, such property (i.e. tenants and workers). The statist nature of private property is clearly indicated by Rothbard’s words — the property owner in an “anarcho”-capitalist society possesses the “ultimate decision-making power” over a given area, which is also what the state has currently. Rothbard has, ironically, proved by his own definition that “anarcho”-capitalism is not anarchist.

Rothbard does try to solve this obvious contradiction, but utterly fails. He simply ignores the crux of the matter, that capitalism is based on hierarchy and, therefore, cannot be anarchist. He does this by arguing that the hierarchy associated with capitalism is fine as long as the private property that produced it was acquired in a “just” manner. In so doing he yet again draws attention to the identical authority structures and social relationships of the state and property. As he puts it:

*“If the State may be said too properly **own** its territory, then it is proper for it to make rules for everyone who presumes to live in that area. It can legitimately seize or control private property because there **is** no private property in its area, because it really owns the entire land surface. **So long** as the State permits its subjects to leave its territory, then, it can be said to act as does any other owner who sets down rules for people living on his property.”* [Op. Cit., p. 170]

Obviously Rothbard argues that the state does not “justly” own its territory — but given that the current distribution of property is just as much the result of violence and coercion as the state, his argument is seriously flawed. It amounts, as we note in section 4, to little more than an “*immaculate conception of property*” unrelated to reality. Even assuming that private property was produced by the means Rothbard assumes, it does not justify the hierarchy associated with it as the current and future generations of humanity have, effectively, been excommunicated from liberty by previous ones. If, as Rothbard argues, property is a natural right and the basis of liberty then why should the many be excluded from their birthright by a minority? In other words, Rothbard denies that liberty should be universal. He chooses property over liberty while anarchists choose liberty over property.

Even worse, the possibility that private property can result in **worse** violations of individual freedom (at least of workers) than the state of its citizens

was implicitly acknowledged by Rothbard. He uses as a hypothetical example a country whose King is threatened by a rising “libertarian” movement. The King responds by “employ[ing] a cunning stratagem,” namely he “proclaims his government to be dissolved, but just before doing so he arbitrarily parcels out the entire land area of his kingdom to the ‘ownership’ of himself and his relatives.” Rather than taxes, his subjects now pay rent and he can “regulate to regulate the lives of all the people who presume to live on” his property as he sees fit. Rothbard then asks:

*“Now what should be the reply of the libertarian rebels to this pert challenge? If they are consistent utilitarians, they must bow to this subterfuge, and resign themselves to living under a regime no less despotic than the one they had been battling for so long. Perhaps, indeed, **more** despotic, for now the king and his relatives can claim for themselves the libertarians’ very principle of the absolute right of private property, an absoluteness which they might not have dared to claim before.”* [Op. Cit., pp. 54–5]

So not only does the property owner have the same monopoly of power over a given area as the state, it is **more** despotic as it is based on the “absolute right of private property”! And remember, Rothbard is arguing **in favour** of “anarcho”-capitalism. And remember, Rothbard is arguing **in favour** of “anarcho”-capitalism (“if you have unbridled capitalism, you will have all kinds of authority: you will have **extreme** authority.” [Chomsky, **Understanding Power**, p. 200]). So in practice, private property is a major source of oppression and authoritarianism within society — there is little or no freedom within capitalist production (as Bakunin noted, “the worker sells his person and his liberty for a given time”). So, in stark contrast to anarchists, “anarcho”-capitalists have no problem with factory fascism (i.e. wage labour), a position which seems highly illogical for a theory calling itself libertarian. If it were truly libertarian, it would oppose all forms of domination, not just statism. This position flows from the “anarcho”-capitalist definition of freedom as the absence of coercion and will be discussed in section 2 in more detail.

Of course, Rothbard has yet another means to escape the obvious, namely that the market will limit the abuses of the property owners. If workers do not like their ruler then they can seek another. However, this reply completely ignores the reality of economic and social power. Thus the “consent” argument fails because it ignores the social circumstances of capitalism which limit the choice of the many. Anarchists have long argued that, as a class, workers have little choice but to “consent” to capitalist hierarchy. The alternative is either dire poverty or starvation.

“Anarcho”-capitalists dismiss such claims by denying that there is such a thing as economic power. Rather, it is simply freedom of contract. Anarchists consider such claims as a joke. To show why, we need only quote (yet again) Rothbard on the abolition of slavery and serfdom in the 19th century. He argued, correctly, that the “**bodies** of the oppressed were freed, but the property which they had worked and eminently deserved to own, remained in the hands of their former oppressors. With economic power thus remaining in their hands, the former lords soon found themselves virtual masters once more of what were now free tenants or farm labourers. The serfs and slaves had tasted freedom, but had been cruelly deprived of its fruits.” [Op. Cit., p. 74]

To say the least, anarchists fail to see the logic in this position. Contrast this with the standard “anarcho”-capitalist claim that if market forces (“voluntary exchanges”) result in the creation of “*free tenants or farm labourers*” then they are free. Yet labourers dispossessed by market forces are in exactly the same social and economic situation as the ex-serfs and ex-slaves. If the latter do not have the fruits of freedom, neither do the former. Rothbard sees the obvious “*economic power*” in the latter case, but denies it in the former. It is only Rothbard’s ideology that stops him from drawing the obvious conclusion — identical economic conditions produce identical social relationships and so capitalism is marked by “*economic power*” and “*virtual masters*.” The only solution is for “anarcho”-capitalists to simply say the ex-serfs and ex-slaves were actually free to choose and, consequently, Rothbard was wrong. It might be inhuman, but at least it would be consistent!

Rothbard’s perspective is alien to anarchism. For example, as individualist anarchist William Bailie noted, under capitalism there is a class system marked by “*a dependent industrial class of wage-workers*” and “*a privileged class of wealth-monopolisers, each becoming more and more distinct from the other as capitalism advances*.” This has turned property into “*a social power, an economic force destructive of rights, a fertile source of injustice, a means of enslaving the dispossessed*.” He concludes: “*Under this system equal liberty cannot obtain*.” Bailie notes that the modern “*industrial world under capitalistic conditions*” have “*arisen under the regime of status*” (and so “*law-made privileges*”) however, it seems unlikely that he would have concluded that such a class system would be fine if it had developed naturally or the current state was abolished while leaving the class structure intact (as we note in section G.4, Tucker recognised that even the “*freest competition*” was powerless against the “*enormous concentration of wealth*” associated with modern capitalism). [**The Individualist Anarchists**, p. 121]

Therefore anarchists recognise that “free exchange” or “consent” in unequal circumstances will reduce freedom as well as increasing inequality between individuals and classes. In other words, as we discuss in section 3, inequality will produce social relationships which are based on hierarchy and domination, **not** freedom. As Noam Chomsky put it:

“Anarcho-capitalism, in my opinion, is a doctrinal system which, if ever implemented, would lead to forms of tyranny and oppression that have few counterparts in human history. There isn’t the slightest possibility that its (in my view, horrendous) ideas would be implemented, because they would quickly destroy any society that made this colossal error. The idea of ‘free contract’ between the potentate and his starving subject is a sick joke, perhaps worth some moments in an academic seminar exploring the consequences of (in my view, absurd) ideas, but nowhere else.” [**Noam Chomsky on Anarchism**, interview with Tom Lane, December 23, 1996]

Clearly, then, by its own arguments “anarcho”-capitalism is not anarchist. This should come as no surprise to anarchists. Anarchism, as a political theory, was born when Proudhon wrote **What is Property?** specifically to refute the notion that workers are free when capitalist property forces them to seek employment by landlords and capitalists. He was well aware that in such circumstances property “*violates equality by the rights of exclusion and increase*,

and freedom by despotism ... [and has] perfect identity with robbery." He, unsurprisingly, talks of the "proprietor, to whom [the worker] has sold and surrendered his liberty." For Proudhon, anarchy was "the absence of a master, of a sovereign" while "proprietor" was "synonymous" with "sovereign" for he "imposes his will as law, and suffers neither contradiction nor control." This meant that "property engenders despotism," as "each proprietor is sovereign lord within the sphere of his property." [What is Property, p. 251, p. 130, p. 264 and pp. 266–7] It must also be stressed that Proudhon's classic work is a lengthy critique of the kind of apologetics for private property Rothbard espouses to salvage his ideology from its obvious contradictions.

Ironically, Rothbard repeats the same analysis as Proudhon but draws the **opposite** conclusions and expects to be considered an anarchist! Moreover, it seems equally ironic that "anarcho"-capitalism calls itself "anarchist" while basing itself on the arguments that anarchism was created in opposition to. As shown, "anarcho"-capitalism makes as much sense as "anarcho-statism" — an oxymoron, a contradiction in terms. The idea that "anarcho"-capitalism warrants the name "anarchist" is simply false. Only someone ignorant of anarchism could maintain such a thing. While you expect anarchist theory to show this to be the case, the wonderful thing is that "anarcho"-capitalism itself does the same.

Little wonder Bob Black argues that "[t]o demonise state authoritarianism while ignoring identical albeit contract-consecrated subservient arrangements in the large-scale corporations which control the world economy is fetishism at its worst." [Libertarian as Conservative] The similarities between capitalism and statism are clear — and so why "anarcho"-capitalism cannot be anarchist. To reject the authority (the "ultimate decision-making power") of the state and embrace that of the property owner indicates not only a highly illogical stance but one at odds with the basic principles of anarchism. This wholehearted support for wage labour and capitalist property rights indicates that "anarcho"-capitalists are not anarchists because they do not reject all forms of **archy**. They obviously support the hierarchy between boss and worker (wage labour) and landlord and tenant. Anarchism, by definition, is against all forms of archy, including the hierarchy generated by capitalist property. To ignore the obvious archy associated with capitalist property is highly illogical.

In addition, we must note that such inequalities in power and wealth will need "defending" from those subject to them ("anarcho"-capitalists recognise the need for private police and courts to defend property from theft — and, anarchists add, to defend the theft and despotism associated with property!). Due to its support of private property (and thus authority), "anarcho"-capitalism ends up retaining a state in its "anarchy"; namely a **private** state whose existence its proponents attempt to deny simply by refusing to call it a state, like an ostrich hiding its head in the sand (see section 6 for more on this and why "anarcho"-capitalism is better described as "private state" capitalism). As Albert Meltzer put it:

"Common-sense shows that any capitalist society might dispense with a 'State' ... but it could not dispense with organised government, or a privatised form of it, if there were people amassing money and others working to amass it for them. The philosophy of 'anarcho-capitalism' dreamed up by the 'libertarian' New Right, has nothing

to do with Anarchism as known by the Anarchist movement proper. It is a lie . . . Patently unbridled capitalism . . . needs some force at its disposal to maintain class privileges, either from the State itself or from private armies. What they believe in is in fact a limited State — that is, one in which the State has one function, to protect the ruling class, does not interfere with exploitation, and comes as cheap as possible for the ruling class. The idea also serves another purpose . . . a moral justification for bourgeois consciences in avoiding taxes without feeling guilty about it.” [Anarchism: Arguments For and Against, p. 50]

For anarchists, this need of capitalism for some kind of state is unsurprising. For “Anarchy without socialism seems equally as impossible to us [as socialism without anarchy], for in such a case it could not be other than the domination of the strongest, and would therefore set in motion right away the organisation and consolidation of this domination; that is to the constitution of government.” [Errico Malatesta, **Life and Ideas**, p. 148] Because of this, the “anarcho”-capitalist rejection of anarchist ideas on capitalist property economics and the need for equality, they cannot be considered anarchists or part of the anarchist tradition.

Thus anarchism is far more than the common dictionary definition of “no government” — it also entails being against all forms of **archy**, including those generated by capitalist property. This is clear from the roots of the word “anarchy.” As we noted in section A.1, the word anarchy means “no rulers” or “contrary to authority.” As Rothbard himself acknowledges, the property owner is the ruler of their property and, therefore, those who use it. For this reason “anarcho”-capitalism cannot be considered as a form of anarchism — a real anarchist must logically oppose the authority of the property owner along with that of the state. As “anarcho”-capitalism does not explicitly (or implicitly, for that matter) call for economic arrangements that will end wage labour and usury it cannot be considered anarchist or part of the anarchist tradition.

Political theories should be identified by their actual features and history rather than labels. Once we recognise that, we soon find out that “anarcho”-capitalism is an oxymoron. Anarchists and “anarcho”-capitalists are not part of the same movement or tradition. Their ideas and aims are in direct opposition to those of all kinds of anarchists.

While anarchists have always opposed capitalism, “anarcho”-capitalists have embraced it. And due to this embrace their “anarchy” will be marked by extensive differences in wealth and power, differences that will show themselves up in relationships based upon subordination and hierarchy (such as wage labour), **not** freedom (little wonder that Proudhon argued that “*property is despotism*” — it creates authoritarian and hierarchical relationships between people in a similar way to statism).

Their support for “free market” capitalism ignores the impact of wealth and power on the nature and outcome of individual decisions within the market (see sections 2 and 3 for further discussion). For example, as we indicate in sections J.5.10, J.5.11 and J.5.12, wage labour is less efficient than self-management in production but due to the structure and dynamics of the capitalist market, “market forces” will actively discourage self-management due to its empowering nature for workers. In other words, a developed capitalist market will promote

hierarchy and unfreedom in production in spite of its effects on individual workers and their wants (see also section 10.2). Thus “free market” capitalism tends to re-enforce inequalities of wealth and power, **not** eliminate them.

Furthermore, any such system of (economic and social) power will require extensive force to maintain it and the “anarcho”-capitalist system of competing “defence firms” will simply be a new state, enforcing capitalist power, property rights and law.

Overall, the lack of concern for meaningful freedom within production and the effects of vast differences in power and wealth within society as a whole makes “anarcho”-capitalism little better than “anarchism for the rich.” Emma Goldman recognised this when she argued that “*‘Rugged individualism’ has meant all the ‘individualism’ for the masters . . . in whose name political tyranny and social oppression are defended and held up as virtues while every aspiration and attempt of man to gain freedom . . . is denounced as . . . evil in the name of that same individualism.*” [Red Emma Speaks, p. 112] And, as such, is no anarchism at all.

So, unlike anarchists, “anarcho”-capitalists do not seek the “*abolition of the proletariat*” (to use Proudhon’s expression) via changing capitalist property rights and institutions. Thus the “anarcho”-capitalist and the anarchist have different starting positions and opposite ends in mind and so they cannot be considered part of the same (anarchist) tradition. As we discuss further in later sections, the “anarcho”-capitalist claims to being anarchists are bogus simply because they reject so much of the anarchist tradition as to make what they do accept non-anarchist in theory and practice. Little wonder Peter Marshall said that “*few anarchists would accept the ‘anarcho-capitalists’ into the anarchist camp since they do not share a concern for economic equality and social justice.*” [Demanding the Impossible, p. 565]

1.1 Why is the failure to renounce hierarchy the Achilles Heel of right-wing libertarianism

Any capitalist system will produce vast differences in economic (and social) wealth and power. As we argue in section 3.1, such differences will reflect themselves in the market and any “free” contracts agreed there will create hierarchical relationships. Thus capitalism is marked by hierarchy (see section B.1.2) and, unsurprisingly, right-libertarians and “anarcho”-capitalists fail to oppose such “free market” generated hierarchy.

Both groups approve of it in the capitalist workplace or rented accommodation and the right-Libertarians also approve of it in a ‘minimal’ state to protect private property (“anarcho”-capitalists, in contrast, approve of the use of private defence firms to protect property). But the failure of these two movements to renounce hierarchy is their weakest point. For anti-authoritarianism has sunk deep roots into the modern psyche, as a legacy of the sixties.

Many people who do not even know what anarchism is have been profoundly affected by the personal liberation and counterculture movements of the past thirty years, epitomised by the popular bumper sticker, “*Question Authority.*” As a result, society now tolerates much more choice than ever before in matters of religion, sexuality, art, music, clothing, and other components of lifestyle. We need only recall the conservatism that reigned in such areas during the fifties to see that the idea of liberty has made tremendous advances in just a few decades.

Although this liberatory impulse has so far been confined almost entirely to the personal and cultural realms, it may yet be capable of spilling over and affecting economic and political institutions, provided it continues to grow. The Right is well aware of this, as seen in its ongoing campaigns for “family values,” school prayer, suppression of women’s rights, fundamentalist Christianity, sexual abstinence before marriage, and other attempts to revive the Ozzie-and-Harriet mindset of the Good Old Days. This is where the efforts of “cultural anarchists” — artists, musicians, poets, and others — are important in keeping alive the ideal of personal freedom and resistance to authority as a necessary foundation for economic and political restructuring.

Indeed, the libertarian right (as a whole) support restrictions on freedom **as long as its not the state that is doing it!** Their support for capitalism means that they have no problem with bosses dictating what workers do during working hours (nor outside working hours, if the job requires employees to take drug tests or not be gay in order to keep it). If a private landlord or company decrees a mandatory rule or mode of living, workers/tenets must “love it or leave it!” Of course, that the same argument also applies to state laws is one hotly denied by right-Libertarians — a definite case of not seeing the wood for the trees (see section 2.3).

Of course, the “anarcho”-capitalist will argue, workers and tenants can find a more liberal boss or landlord. This, however, ignores two key facts. Firstly, being able to move to a more liberal state hardly makes state laws less offensive (as they themselves will be the first to point out). Secondly, looking for a new job or home is not that easy. Just a moving to a new state can involve drastic upheavals, so change changing jobs and homes. Moreover, the job market is usually a buyers market (it has to be in capitalism, otherwise profits are squeezed — see sections C.7 and 10.2) and this means that workers are not usually in a position (unless they organise) to demand increased liberties at work.

It seems somewhat ironic, to say the least, that right-libertarians place rights of property over the rights of self-ownership, even though (according to their ideology) self-ownership is the foundational right from which property rights are derived. Thus in right-libertarianism the rights of property owners to discriminate and govern the property-less are more important than the freedom from discrimination (i.e. to be yourself) or the freedom to govern oneself at all times.

So, when it boils down to it, right-libertarians are not really bothered about restrictions on liberty and, indeed, they will defend private restrictions on liberty with all their might. This may seem a strange position for self-proclaimed “libertarians” to take, but it flows naturally from their definition of freedom (see section 2 for a full discussion of this). but by not attacking hierarchy beyond certain forms of statism, the ‘libertarian’ right fundamentally undermines its claim to be libertarian. Freedom cannot be compartmentalised, but is holistic. The denial of liberty in, say, the workplace, quickly results in its being denied elsewhere in society (due to the impact of the inequalities it would produce) , just as the degrading effects of wage labour and the hierarchies with which it bound up are felt by the worker outside work.

Neither the Libertarian Party nor so-called “anarcho”-capitalism is **genuinely** anti-authoritarian, as those who are truly dedicated to liberty must be.

1.2 How libertarian is right-Libertarian theory?

The short answer is, not very. Liberty not only implies but also requires independent, critical thought (indeed, anarchists would argue that critical thought requires free development and evolution and that it is precisely **this** which capitalist hierarchy crushes). For anarchists a libertarian theory, if it is to be worthy of the name, must be based upon critical thought and reflect the key aspect that characterises life — change and the ability to evolve. To hold up dogma and base “theory” upon assumptions (as opposed to facts) is the opposite of a libertarian frame of mind. A libertarian theory must be based upon reality and recognise the need for change and the existence of change. Unfortunately, right-Libertarianism is marked more by ideology than critical analysis.

Right-Libertarianism is characterised by a strong tendency of creating theories based upon assumptions and deductions from these axioms (for a discussion on the pre-scientific nature of this methodology and of its dangers, see the next section). Robert Nozick, for example, in **Anarchy, State, and Utopia** makes no attempt to provide a justification of the property rights his whole theory is based upon. His main assumption is that “[i]ndividuals have rights, and there are certain things no person or group may do to them (without violating their rights).” [**Anarchy, State and Utopia**, p. ix] While this does have its intuitive appeal, it is not much to base a political ideology upon. After all, what rights people consider as valid can be pretty subjective and have constantly evolved during history. To say that “individuals have rights” is to open up the question “what rights?” Indeed, as we argue in greater length in section 2, such a rights based system as Nozick desires can and does lead to situations developing in which people “consent” to be exploited and oppressed and that, intuitively, many people consider supporting the “violation” of these “certain rights” (by creating other ones) simply because of their evil consequences.

In other words, starting from the assumption “people have [certain] rights” Nozick constructs a theory which, when faced with the reality of unfreedom and domination it would create for the many, justifies this unfreedom as an expression of liberty. In other words, regardless of the outcome, the initial assumptions are what matter. Nozick’s intuitive rights system can lead to some very non-intuitive outcomes.

And does Nozick prove the theory of property rights he assumes? He states that “*we shall not formulate [it] here.*” [**Op. Cit.**, p. 150] Moreover, it is not formulated anywhere else in his book. And if it is not formulated, what is there to defend? Surely this means that his Libertarianism is without foundations? As Jonathan Wolff notes, Nozick’s “*Libertarian property rights remain substantially undefended.*” [**Robert Nozick: Property, Justice and the Minimal State**, p. 117] Given that the right to acquire property is critical to his whole theory you would think it important enough to go into in some detail (or at least document). After all, unless he provides us with a firm basis for property rights then his entitlement theory is nonsense as no one has the right to (private) property.

It could be argued that Nozick **does** present enough information to allow us to piece together a possible argument in favour of property rights based on his modification of the “*Lockean Proviso*” (although he does not point us to these arguments). However, assuming this is the case, such a defence actually fails (see section B.3.4 for more on this). If individuals **do** have rights, these rights

do not include property rights in the form Nozick assumes (but does not prove). Nozick appears initially convincing because what he assumes with regards to property is a normal feature of the society we are in (we would be forgiven when we note here that feeble arguments pass for convincing when they are on the same side as the prevailing sentiment).

Similarly, both Murray Rothbard and Ayn Rand (who is infamous for repeating “*A is A*” ad infinitum) do the same — base their ideologies on assumptions (see section 11 for more on this).

Therefore, we see that most of the leading right-Libertarian ideologues base themselves on assumptions about what “Man” is or the rights they should have (usually in the form that people have (certain) rights because they are people). From these theorems and assumptions they build their respective ideologies, using logic to deduce the conclusions that their assumptions imply. Such a methodology is unscientific and, indeed, a relic of religious (pre-scientific) society (see next section) but, more importantly, can have negative effects on maximising liberty. This is because this “methodology” has distinct problems. Murray Bookchin argues:

*“Conventional reason rests on identity, not change; its fundamental principle is that **A equals A**, the famous ‘principle of identity,’ which means that any given phenomenon can be only itself and cannot be other than what we immediately perceive it to be at a given moment in time. It does not address the problem of change. A human being is an infant at one time, a child at another, an adolescent at still another, and finally a youth and an adult. When we analyse an infant by means of conventional reason, we are not exploring what it is **becoming** in the process of developing into a child.”* [“*A Philosophical Naturalism*”, **Society and Nature** No.2, p. 64]

In other words, right-Libertarian theory is based upon ignoring the fundamental aspect of life — namely **change** and **evolution**. Perhaps it will be argued that identity also accounts for change by including potentiality — which means, that we have the strange situation that A can **potentially** be A! If A is not actually A, but only has the potential to be A, then A is not A. Thus to include change is to acknowledge that A does not equal A — that individuals and humanity evolves and so what constitutes A also changes. To maintain identity and then to deny it seems strange.

That change is far from the “A is A” mentality can be seen from Murray Rothbard who goes so far as to state that “*one of the notable attributes of natural law*” is “*its applicability to all men [sic!], regardless of time or place. Thus ethical law takes its place alongside physical or ‘scientific’ natural laws.*” [**The Ethics of Liberty**, p. 42] Apparently the “nature of man” is the only living thing in nature that does not evolve or change! Of course, it could be argued that by “natural law” Rothbard is only referring to his method of deducing his (and, we stress, they are just his — not natural) “ethical laws” — but his methodology starts by assuming certain things about “man.” Whether these assumptions seem far or not is besides the point, by using the term “natural law” Rothbard is arguing that any actions that violate **his** ethical laws are somehow “against nature” (but if they were against nature, they could not occur — see section 11 for more on this). Deductions from assumptions is a Procrustean bed for humanity (as Rothbard’s ideology shows).

So, as can be seen, many leading right-Libertarians place great store by the axiom “A is A” or that “man” has certain rights simply because “he” is a “man”. And as Bookchin points out, such conventional reason “*doubtless plays an indispensable role in mathematical thinking and mathematical sciences . . . and in the nuts-and-bolts of dealing with everyday life*” and so is essential to “*understand or design mechanical entities.*” [Ibid., p.67] But the question arises, is such reason useful when considering people and other forms of life?

Mechanical entities are but one (small) aspect of human life. Unfortunately for right-Libertarians (and fortunately for the rest of humanity), human beings are **not** mechanical entities but instead are living, breathing, feeling, hoping, dreaming, **changing** living organisms. They are not mechanical entities and any theory that uses reason based on such (non-living) entities will flounder when faced with living ones. In other words, right-Libertarian theory treats people as the capitalist system tries to — namely as commodities, as things. Instead of human beings, whose ideas, ideals and ethics change, develop and grow, capitalism and capitalist ideologues try to reduce human life to the level of corn or iron (by emphasising the unchanging “nature” of man and their starting assumptions/rights).

This can be seen from their support for wage labour, the reduction of human activity to a commodity on the market. While paying lip service to liberty and life, right-libertarianism justifies the commodification of labour and life, which within a system of capitalist property rights can result in the treating of people as means to an end as opposed to an end in themselves (see sections 2 and 3.1).

And as Bookchin points out, “*in an age of sharply conflicting values and emotionally charged ideals, such a way of reasoning is often repellent. Dogmatism, authoritarianism, and fear seem all-pervasive.*” [Ibid., p. 68] Right-Libertarianism provides more than enough evidence for Bookchin’s summary with its support for authoritarian social relationships, hierarchy and even slavery (see section 2).

This mechanical viewpoint is also reflected in their lack of appreciation that social institutions and relationships evolve over time and, sometimes, fundamentally change. This can best be seen from property. Right-libertarians fail to see that over time (in the words of Proudhon) property “*changed its nature.*” Originally, “*the word **property** was synonymous with . . . **individual possession***” but it became more “*complex*” and turned into **private property** — “*the right to use it by his neighbour’s labour.*” The changing of use-rights to (capitalist) property rights created relations of domination and exploitation between people absent before. For the right-Libertarian, both the tools of the self-employed artisan and the capital of a transnational corporation are both forms of “property” and (so) basically identical. In practice, of course, the social relations they create and the impact they have on society are totally different. Thus the mechanical mind-set of right-Libertarianism fails to understand how institutions, like property, evolve and come to replace whatever freedom enhancing features they had with oppression (indeed, von Mises argued that “*[t]here may possibly be a difference of opinion about whether a particular institution is socially beneficial or harmful. But once it has been judged [by whom, we ask] beneficial, one can no longer contend that, for some inexplicable reason, it must be condemned as immoral*” [Liberalism, p. 34] So much for evolution and change!).

Anarchism, in contrast, is based upon the importance of critical thought informed by an awareness that life is in a constant process of change. This means

that our ideas on human society must be informed by the facts, not by what we wish was true. For Bookchin, an evaluation of conventional wisdom (as expressed in “*the law of identity*”) is essential and its conclusions have “*enormous importance for how we behave as ethical beings, the nature of nature, and our place in the natural world. Moreover... these issues directly affect the kind of society, sensibility, and lifeways we wish to foster.*” [Bookchin, **Op. Cit.**, p. 69–70]

Bookchin is correct. While anarchists oppose hierarchy in the name of liberty, right-libertarians support authority and hierarchy, all of which deny freedom and restrict individual development. This is unsurprising because the right-libertarian ideology rejects change and critical thought based upon the scientific method and so is fundamentally **anti-life** in its assumptions and **anti-human** in its method. Far from being a libertarian set of ideas, right-Libertarianism is a mechanical set of dogmas that deny the fundamental nature of life (namely change) and of individuality (namely critical thought and freedom). Moreover, in practice their system of (capitalist) rights would soon result in extensive restrictions on liberty and authoritarian social relationships (see sections 2 and 3) — a strange result of a theory proclaiming itself “libertarian” but one consistent with its methodology.

From a wider viewpoint, such a rejection of liberty by right-libertarians is unsurprising. They do, after all, support capitalism. Capitalism produces an inverted set of ethics, one in which capital (dead labour) is more important than people (living labour). After all, workers are usually easier to replace than investments in capital and the person who owns capital commands the person who “only” owns his life and productive abilities. And as Oscar Wilde once noted, crimes against property “*are the crimes that the English law, valuing what a man has more than what a man is, punishes with the harshest and most horrible severity.*” [**The Soul of Man Under Socialism**]

This mentality is reflected in right-libertarianism when it claims that stealing food is a crime while starving to death (due to the action of market forces/power and property rights) is no infringement of your rights (see section 4.2 for a similar argument with regards to water). It can also be seen when right-libertarian’s claim that the taxation “*of earnings from labour*” (e.g. of one dollar from a millionaire) is “*on a par with forced labour*” [Nozick, **Op. Cit.**, p. 169] while working in a sweatshop for 14 hours a day (enriching said millionaire) does not affect your liberty as you “consent” to it due to market forces (although, of course, many rich people have earned their money **without** labouring themselves — their earnings derive from the wage labour of others so would taxing those, non-labour, earnings be “forced labour”?) Interestingly, the Individualist Anarchist Ben Tucker argued that an income tax was “*a recognition of the fact that industrial freedom and equality of opportunity no longer exist here [in the USA in the 1890s] even in the imperfect state in which they once did exist*” [quoted by James Martin, **Men Against the State**, p. 263] which suggests a somewhat different viewpoint on this matter than Nozick or Rothbard.

That capitalism produces an inverted set of ethics can be seen when the Ford produced the Pinto. The Pinto had a flaw in it which meant that if it was hit in a certain way in a crash the fuel tank exploded. The Ford company decided it was more “economically viable” to produce that car and pay damages to those who were injured or the relatives of those who died than pay to change the invested capital. The needs for the owners of capital to make a profit came before the

needs of the living. Similarly, bosses often hire people to perform unsafe work in dangerous conditions and fire them if they protest. Right-libertarian ideology is the philosophical equivalent. Its dogma is “capital” and it comes before life (i.e. “labour”).

As Bakunin once put it, “*you will always find the idealists in the very act of practical materialism, while you will see the materialists pursuing and realising the most grandly ideal aspirations and thoughts.*” [God and the State, p. 49] Hence we see right “libertarians” supporting sweat shops and opposing taxation — for, in the end, money (and the power that goes with it) counts far more in that ideology than ideals such as liberty, individual dignity, empowering, creative and productive work and so forth for all. The central flaw of right-libertarianism is that it does not recognise that the workings of the capitalist market can easily ensure that the majority end up becoming a resource for others in ways far worse than that associated with taxation. The legal rights of self-ownership supported by right-libertarians does not mean that people have the ability to avoid what is in effect enslavement to another (see sections 2 and 3).

Right-Libertarian theory is not based upon a libertarian methodology or perspective and so it is hardly surprising it results in support for authoritarian social relationships and, indeed, slavery (see section 2.6).

1.3 Is right-Libertarian theory scientific in nature?

Usually, no. The scientific approach is **inductive**, much of the right-libertarian approach is **deductive**. The first draws generalisations from the data, the second applies preconceived generalisations to the data. A completely deductive approach is pre-scientific, however, which is why many right-Libertarians cannot legitimately claim to use a scientific method. Deduction does occur in science, but the generalisations are primarily based on other data, not *a priori* assumptions, and are checked against data to see if they are accurate. Anarchists tend to fall into the inductive camp, as Kropotkin put it:

“Precisely this natural-scientific method applied to economic facts, enables us to prove that the so-called ‘laws’ of middle-class sociology, including also their political economy, are not laws at all, but simply guesses, or mere assertions which have never been verified at all.”
[Kropotkin’s Revolutionary Pamphlets, p. 153]

The idea that natural-scientific methods can be applied to economic and social life is one that many right-libertarians reject. Instead they favour the deductive (pre-scientific) approach (this we must note is not limited purely to Austrian economists, many more mainstream capitalist economists also embrace deduction over induction).

The tendency for right-Libertarianism to fall into dogmatism (or *a priori* theorems, as they call it) and its implications can best be seen from the work of Ludwig von Mises and other economists from the right-Libertarian “Austrian school.” Of course, not all right-libertarians necessarily subscribe to this approach (Murray Rothbard for one did) but its use by so many leading lights of both schools of thought is significant and worthy of comment. And as we are concentrating on **methodology** it is not essential to discuss the starting assumptions. The assumptions (such as, to use Rothbard’s words, the Austrian’s

“*fundamental axiom that individual human beings act*”) may be correct, incorrect or incomplete — but the method of using them advocated by von Mises ensures that such considerations are irrelevant.

Von Mises (a leading member of the Austrian school of economics) begins by noting that social and economic theory “*is not derived from experience; it is prior to experience. . .*” Which is back to front. It is obvious that experience of capitalism is necessary in order to develop a viable theory about how it works. Without the experience, any theory is just a flight of fantasy. The actual specific theory we develop is therefore derived from experience, informed by it and will have to get checked against reality to see if it is viable. This is the scientific method — any theory must be checked against the facts. However, von Mises goes on to argue at length that “*no kind of experience can ever force us to discard or modify a priori theorems; they are logically prior to it and cannot be either proved by corroborative experience or disproved by experience to the contrary . . .*”

And if this does not do justice to a full exposition of the phantasmagoria of von Mises’ *a priorism*, the reader may take some joy (or horror) from the following statement:

“If a contradiction appears between a theory and experience, we must always assume that a condition pre-supposed by the theory was not present, or else there is some error in our observation. The disagreement between the theory and the facts of experience frequently forces us to think through the problems of the theory again. But so long as a rethinking of the theory uncovers no errors in our thinking, we are not entitled to doubt its truth” [emphasis added — the quotes presented here are cited in **Ideology and Method in Economics** by Homa Katouzian, pp. 39–40]

In other words, if reality is in conflict with your ideas, do not adjust your views because reality must be at fault! The scientific method would be to revise the theory in light of the facts. It is not scientific to reject the facts in light of the theory! This anti-scientific perspective is at the heart of his economics as experience “*can never . . . prove or disprove any particular theorem*”:

“What assigns economics to its peculiar and unique position in the orbit of pure knowledge and of the practical utilisation of knowledge is the fact that its particular theorems are not open to any verification or falsification on the grounds of experience The ultimate yardstick of an economic theorem’s correctness or incorrectness is solely reason unaided by experience.” [**Human Action**, p. 858]

Von Mises rejects the scientific approach as do all Austrian Economists. Murray Rothbard states approvingly that “*Mises indeed held not only that economic theory does not need to be ‘tested’ by historical fact but also that it cannot be so tested.*” [“*Praxeology: The Methodology of Austrian Economics*” in **The Foundation of Modern Austrian Economics**, p. 32] Similarly, von Hayek wrote that economic theories can “*never be verified or falsified by reference to facts. All that we can and must verify is the presence of our assumptions in the particular case.*” [**Individualism and Economic Order**, p. 73]

This may seem somewhat strange to non-Austrians. How can we ignore reality when deciding whether a theory is a good one or not? If we cannot evaluate our ideas, how can we consider them anything but dogma? The Austrians maintain that we cannot use historical evidence because every historical situation is unique. Thus we cannot use “*complex heterogeneous historical facts as if they were repeatable homogeneous facts*” like those in a scientist’s experiment [Rothbard, **Op. Cit.**, p. 33]. While such a position **does** have an element of truth about it, the extreme *a priorism* that is drawn from this element is radically false (just as extreme empiricism is also false, but for different reasons).

Those who hold such a position ensure that their ideas cannot be evaluated beyond logical analysis. As Rothbard makes clear, “*since praxeology begins with a true axiom, A, all that can be deduced from this axiom must also be true. For if A implies B, and A is true, then B must also be true.*” [**Op. Cit.**, pp. 19–20] But such an approach makes the search for truth a game without rules. The Austrian economists (and other right-libertarians) who use this method are free to theorise anything they want, without such irritating constrictions as facts, statistics, data, history or experimental confirmation. Their only guide is logic. But this is no different from what religions do when they assert the logical existence of God. Theories ungrounded in facts and data are easily spun into any belief a person wants. Starting assumptions and trains of logic may contain inaccuracies so small as to be undetectable, yet will yield entirely false conclusions.

In addition, trains of logic may miss things which are only brought to light by actual experiences (after all, the human mind is not all knowing or all seeing). To ignore actual experience is to lose that input when evaluating a theory. Hence our comments on the irrelevance of the assumptions used — the methodology is such that incomplete or incorrect assumptions or steps cannot be identified in light of experience. This is because one way of discovering if a given chain of logic requires checking is to test its conclusions against available evidence (although von Mises did argue that the “*ultimate yardstick*” was “*solely reason unaided by experience*”). If we **do** take experience into account and rethink a given theory in the light of contradictory evidence, the problem remains that a given logical chain may be correct, but incomplete or concentrate on or stress inappropriate factors. In other words, our logical deductions may be correct but our starting place or steps wrong and as the facts are to be rejected in the light of the deductive method, we cannot revise our ideas.

Indeed, this approach could result in discarding (certain forms of) human behaviour as irrelevant (which the Austrian system claims using empirical evidence does). For there are too many variables that can have an influence upon individual acts to yield conclusive results explaining human behaviour. Indeed, the deductive approach may ignore as irrelevant certain human motivations which have a decisive impact on an outcome. There could be a strong tendency to project “right-libertarian person” onto the rest of society and history, for example, and draw inappropriate insights into the way human society works or has worked. This can be seen, for example, in attempts to claim pre-capitalist societies as examples of “anarcho”-capitalism in action.

Moreover, deductive reasoning cannot indicate the relative significance of assumptions or theoretical factors. That requires empirical study. It could be that a factor considered important in the theory actually turns out to have little effect in practice and so the derived axioms are so weak as to be seriously

misleading.

In such a purely ideal realm, observation and experience are distrusted (when not ignored) and instead theory is the lodestone. Given the bias of most theorists in this tradition, it is unsurprising that this style of economics can always be trusted to produce results proving free markets to be the finest principle of social organisation. And, as an added bonus, reality can be ignored as it is **never** “pure” enough according to the assumptions required by the theory. It could be argued, because of this, that many right-libertarians insulate their theories from criticism by refusing to test them or acknowledge the results of such testing (indeed, it could also be argued that much of right-libertarianism is more a religion than a political theory as it is set-up in such a way that it is either true or false, with this being determined not by evaluating facts but by whether you accept the assumptions and logical chains presented with them).

Strangely enough, while dismissing the “testability” of theories many right-Libertarians (including Murray Rothbard) **do** investigate historical situations and claim them as examples of how well their ideas work in practice. But why does historical fact suddenly become useful when it can be used to bolster the right-Libertarian argument? Any such example is just as “complex” as any other and the good results indicated may not be accountable to the assumptions and steps of the theory but to other factors totally ignored by it. If economic (or other) theory is untestable then **no** conclusions can be drawn from history, including claims for the superiority of laissez-faire capitalism. You cannot have it both ways — although we doubt that right-libertarians will stop using history as evidence that their ideas work.

Perhaps the Austrian desire to investigate history is not so strange after all. Clashes with reality make a-priori deductive systems implode as the falsifications run back up the deductive changes to shatter the structure built upon the original axioms. Thus the desire to find **some** example which proves their ideology must be tremendous. However, the deductive a-priori methodology makes them unwilling to admit to being mistaken — hence their attempts to downplay examples which refute their dogmas. Thus we have the desire for historical examples while at the same time they have extensive ideological justifications that ensure reality only enters their world-view when it agrees with them. In practice, the latter wins as real-life refuses to be boxed into their dogmas and deductions.

Of course it is sometimes argued that it is **complex** data that is the problem. Let us assume that this is the case. It is argued that when dealing with complex information it is impossible to use aggregate data without first having more simple assumptions (i.e. that “humans act”). Due to the complexity of the situation, it is argued, it is impossible to aggregate data because this hides the individual activities that creates it. Thus “complex” data cannot be used to invalidate assumptions or theories. Hence, according to Austrians, the axioms derived from the “simple fact” that “humans act” are the only basis for thinking about the economy.

Such a position is false in two ways.

Firstly, the aggregation of data **does** allow us to understand complex systems. If we look at a chair, we cannot find out whether it is comfortable, its colour, whether it is soft or hard by looking at the atoms that make it up. To suggest that you can is to imply the existence of green, soft, comfortable atoms. Similarly with gases. They are composed to countless individual atoms but sci-

entists do not study them by looking at those atoms and their actions. Within limits, this is also valid for human action. For example, it would be crazy to maintain from historical data that interest rates will be a certain percentage a week but it is valid to maintain that interest rates are known to be related to certain variables in certain ways. Or that certain experiences will tend to result in certain forms of psychological damage. General tendencies and “rules of thumb” can be evolved from such study and these can be used to **guide** current practice and theory. By aggregating data you can produce valid information, rules of thumb, theories and evidence which would be lost if you concentrated on “simple data” (such as “humans act”). Therefore, empirical study produces facts which vary across time and place, and yet underlying and important patterns can be generated (patterns which can be evaluated against **new** data and improved upon).

Secondly, the simple actions themselves influence and are influenced in turn by overall (complex) facts. People act in different ways in different circumstances (something we can agree with Austrians about, although we refuse to take it to their extreme position of rejecting empirical evidence as such). To use simple acts to understand complex systems means to miss the fact that these acts are not independent of their circumstances. For example, to claim that the capitalist market is “just” the resultant of bilateral exchanges ignores the fact that the market activity shapes the nature and form of these bilateral exchanges. The “simple” data is dependent on the “complex” system — and so the complex system **cannot** be understood by looking at the simple actions in isolation. To do so would be to draw incomplete and misleading conclusions (and it is due to these interrelations that we argue that aggregate data should be used critically). This is particularly important when looking at capitalism, where the “simple” acts of exchange in the labour market are dependent upon and shaped by circumstances outside these acts.

So to claim that (complex) data cannot be used to evaluate a theory is false. Data can be useful when seeing whether a theory is confirmed by reality. This is the nature of the scientific method — you compare the results expected by your theory to the facts and if they do not match you check your facts **and** check your theory. This may involve revising the assumptions, methodology and theories you use if the evidence is such as to bring them into question. For example, if you claim that capitalism is based on freedom but that the net result of capitalism is to produce relations of domination between people then it would be valid to revise, for example, your definition of freedom rather than deny that domination restricts freedom (see section 2 on this). But if actual experience is to be distrusted when evaluating theory, we effectively place ideology above people — after all, how the ideology affects people in **practice** is irrelevant as experiences cannot be used to evaluate the (logically sound but actually deeply flawed) theory.

Moreover, there is a slight arrogance in the “Austrian” dismissal of empirical evidence. If, as they argue, the economy is just too complex to allow us to generalise from experience then how can one person comprehend it sufficiently to create an economic ideology as the Austrians suggest? Surely no one mind (or series of minds) can produce a model which accurately reflects such a complex system? To suggest that one can deduce a theory for an exceedingly complex social system from the theoretical work based on an analysis technique which deliberately ignores that reality as being unreliable seems to require a deliberate

suspension of one's reasoning faculties. Of course, it may be argued that such a task is possible, given a small enough subset of economic activity. However, such a process is sure to lead its practitioners astray as the subset is not independent of the whole and, consequently, can be influenced in ways the ideologist does not (indeed, cannot) take into account. Simply put, even the greatest mind cannot comprehend the complexities of real life and so empirical evidence needs to inform any theory seeking to describe and explain it. To reject it is simply to retreat into dogmatism and ideology, which is precisely what right-wing libertarians generally do.

Ultimately, this dismissal of empirical evidence seems little more than self-serving. It's utility to the ideologist is obvious. It allows them to speculate to their hearts content, building models of the economy with no bearing to reality. Their models and the conclusions it generates need never be bothered with reality — nor the effects of their dogma. Which shows its utility to the powerful. It allows them to spout comments like “the free market benefits all” while the rich get richer and allows them to brush aside any one who points out such troublesome facts.

That this position is self-serving can be seen from the fact that most right libertarians are very selective about applying von Mises' argument. As a rule of thumb, it is only applied when the empirical evidence goes against capitalism. In such circumstances the fact that the current system is not a free market will also be mentioned. However, if the evidence seems to bolster the case for propertarianism then empirical evidence becomes all the rage. Needless to say, the fact that we do not have a free market will be conveniently forgotten. Depending on the needs of the moment, fundamental facts are dropped and retrieved to bolster the ideology.

As we indicated above (in section 1.2) and will discuss in more depth later (in section 11) most of the leading right-Libertarian theorists base themselves on such deductive methodologies, starting from assumptions and “logically” drawing conclusions from them. The religious undertones of such methodology can best be seen from the roots of right-Libertarian “Natural law” theory.

Carole Pateman, in her analysis of Liberal contract theory, indicates the religious nature of the “Natural Law” argument so loved by the theorists of the “Radical Right.” She notes that for Locke (the main source of the Libertarian Right's Natural Law cult) “*natural law*” was equivalent of “*God's Law*” and that “*God's law exists externally to and independently of individuals.*” [**The Problem of Political Obligation**, p. 154] No role for critical thought there, only obedience. Most modern day “Natural Law” supporters forget to mention this religious undercurrent and instead talk of about “Nature” (or “the market”) as the deity that creates Law, not God, in order to appear “rational.” So much for science.

Such a basis in dogma and religion can hardly be a firm foundation for liberty and indeed “Natural Law” is marked by a deep authoritarianism:

“Locke's traditional view of natural law provided individual's with an external standard which they could recognise, but which they did not voluntarily choose to order their political life.” [Pateman, **Op. Cit.**, p. 79]

In section 11 we discuss the authoritarian nature of “Natural Law” and will not do so here. However, here we must point out the political conclusions

Locke draws from his ideas. In Pateman's words, Locke believed that *"obedience lasts only as long as protection. His individuals are able to take action themselves to remedy their political lot... but this does not mean, as is often assumed, that Locke's theory gives direct support to present-day arguments for a right of civil disobedience... His theory allows for two alternatives only: either people go peacefully about their daily affairs under the protection of a liberal, constitutional government, or they are in revolt against a government which has ceased to be 'liberal' and has become arbitrary and tyrannical, so forfeiting its right to obedience."* [Op. Cit., p. 77]

Locke's "rebellion" exists purely to reform a **new** 'liberal' government, not to change the existing socio-economic structure which the 'liberal' government exists to protect. His theory, therefore, indicates the results of a priorism, namely a denial of any form of social dissent which may change the "natural law" as defined by Locke. This perspective can be found in Rothbard who lambasted the individualist anarchists for arguing that juries should judge the law as well as the facts. For Rothbard, the law would be drawn up by jurists and lawyers, not ordinary people (see section 1.4 for details). The idea that those subject to laws should have a say in forming them is rejected in favour of elite rule. As von Mises put it:

"The flowering of human society depends on two factors: the intellectual power of outstanding men to conceive sound social and economic theories, and the ability of these or other men to make these ideologies palatable to the majority." [Human Action, p. 864]

Yet such a task would require massive propaganda work and would only, ultimately, succeed by removing the majority from any say in the running of society. Once that is done then we have to believe that the ruling elite will be altruistic in the extreme and not abuse their position to create laws and processes which defended what **they** thought was "legitimate" property, property rights and what constitutes "aggression." Which, ironically, contradicts the key capitalist notion that people are driven by self-gain. The obvious conclusion from such argument is that any right-libertarian regime would have to exclude change. If people can change the regime they are under they may change it in ways that right libertarian's do not support. The provision for ending amendments to the regime or the law would effectively ban most opposition groups or parties as, by definition, they could do nothing once in office (for minimal state "libertarians") or in the market for "defence" agencies (for "anarcho"-capitalists). How this differs from a dictatorship is hard to say — after all, most dictatorships have parliamentary bodies which have no power but which can talk a lot. Perhaps the knowledge that it is **private** police enforcing **private** power will make those subject to the regime maximise their utility by keeping quiet and not protesting. Given this, von Mises' praise for fascism in the 1920s may be less contradictory than it first appears (see section 6.5) as it successfully "deterred democracy" by crushing the labour, socialist and anarchist movements across the world.

So, von Mises, von Hayek and most right-libertarians reject the scientific method in favour of ideological correctness — if the facts contradict your theory then they can be dismissed as too "complex" or "unique". Facts, however, should inform theory and any theory's methodology should take this into account. To dismiss facts out of hand is to promote dogma. This is not to suggest that a

theory should be modified very time new data comes along — that would be crazy as unique situations **do** exist, data can be wrong and so forth — but it does suggest that if your theory **continually** comes into conflict with reality, its time to rethink the theory and not assume that facts cannot invalidate it. A true libertarian would approach a contradiction between reality and theory by evaluating the facts available and changing the theory if this is required, not by ignoring reality or dismissing it as “complex”.

Thus, much of right-Libertarian theory is neither libertarian nor scientific. Much of right-libertarian thought is highly axiomatic, being logically deduced from such starting axioms as “*self-ownership*” or “*no one should initiate force against another*”. Hence the importance of our discussion of von Mises as this indicates the dangers of this approach, namely the tendency to ignore/dismiss the consequences of these logical chains and, indeed, to justify them in terms of these axioms rather than from the facts. In addition, the methodology used is such as that it would be fair to argue that right-libertarians get to critique reality but reality can never be used to critique right-libertarianism — for any empirical data presented as evidence as be dismissed as “too complex” or “unique” and so irrelevant (unless it can be used to support their claims, of course).

Hence W. Duncan Reekie’s argument (quoting leading Austrian economist Israel Kirzner) that “*empirical work ‘has the function of establishing the **applicability** of particular theorems, and thus **illustrating** their operation’ . . . Confirmation of theory is not possible because there is no constants in human action, nor is it necessary because theorems themselves describe relationships logically developed from hypothesised conditions. Failure of a logically derived axiom to fit the facts does not render it invalid, rather it ‘might merely indicate inapplicability’ to the circumstances of the case.’*” [Markets, Entrepreneurs and Liberty, p. 31]

So, if facts confirm your theory, your theory is right. If facts do not confirm your theory, it is still right but just not applicable in this case! Which has the handy side effect of ensuring that facts can **only** be used to support the ideology, **never** to refute it (which is, according to this perspective, impossible anyway). As Karl Popper argued, a “*theory which is not refutable by any conceivable event is non-scientific.*” [Conjectures and Refutations, p. 36] In other words (as we noted above), if reality contradicts your theory, ignore reality!

Kropotkin hoped “*that those who believe in [current economic doctrines] will themselves become convinced of their error as soon as they come to see the necessity of verifying their quantitative deductions by quantitative investigation.*” [Op. Cit., p. 178] However, the Austrian approach builds so many barriers to this that it is doubtful that this will occur. Indeed, right-libertarianism, with its focus on exchange rather than its consequences, seems to be based upon justifying domination in terms of their deductions than analysing what freedom actually means in terms of human existence (see section 2 for a fuller discussion).

The real question is why are such theories taken seriously and arouse such interest. Why are they not simply dismissed out of hand, given their methodology and the authoritarian conclusions they produce? The answer is, in part, that feeble arguments can easily pass for convincing when they are on the same side as the prevailing sentiment and social system. And, of course, there is the utility of such theories for ruling elites — “*[a]n ideological defence of privileges, exploitation, and private power will be welcomed, regardless of its merits.*” [Noam Chomsky, The Chomsky Reader, p. 188]

1.4 Is “anarcho”-capitalism a new form of individualist anarchism?

Some “anarcho”-capitalists shy away from the term, preferring such expressions as “market anarchist” or “individualist anarchist.” This suggests that there is some link between their ideology and that of Tucker. However, the founder of “anarcho”-capitalism, Murray Rothbard, refused that label for, while “*strongly tempted*,” he could not do so because “*Spooner and Tucker have in a sense pre-empted that name for their doctrine and that from that doctrine I have certain differences.*” Somewhat incredibly Rothbard argued that on the whole politically “*these differences are minor*,” economically “*the differences are substantial, and this means that my view of the consequences of putting our more of less common system into practice is very far from theirs.*” [“*The Spooner-Tucker Doctrine: An Economist’s View*”, **Journal of Libertarian Studies**, vol. 20, no. 1, p. 7]

What an understatement! Individualist anarchists advocated an economic system in which there would have been very little inequality of wealth and so of power (and the accumulation of capital would have been minimal without profit, interest and rent). Removing this social and economic basis would result in **substantially** different political regimes. This can be seen from the fate of Viking Iceland, where a substantially communal and anarchistic system was destroyed from within by increasing inequality and the rise of tenant farming (see section 9 for details). In other words, politics is not isolated from economics. As David Wieck put it, Rothbard “*writes of society as though some part of it (government) can be extracted and replaced by another arrangement while other things go on before, and he constructs a system of police and judicial power without any consideration of the influence of historical and economic context.*” [“*Anarchist Justice*,” in **Nomos XIX**, Pennock and Chapman, eds., p. 227]

Unsurprisingly, the political differences he highlights **are** significant, namely “*the role of law and the jury system*” and “*the land question.*” The former difference relates to the fact that the individualist anarchists “*allow[ed] each individual free-market court, and more specifically, each free-market jury, totally free rein over judicial decision.*” This horrified Rothbard. The reason is obvious, as it allows real people to judge the law as well as the facts, modifying the former as society changes and evolves. For Rothbard, the idea that ordinary people should have a say in the law is dismissed. Rather, “*it would not be a very difficult task for Libertarian lawyers and jurists to arrive at a rational and objective code of libertarian legal principles and procedures.*” [Op. Cit., p. 7–8] Of course, the fact that “*lawyers*” and “*jurists*” may have a radically different idea of what is just than those subject to their laws is not raised by Rothbard, never mind answered. While Rothbard notes that juries may defend the people against the state, the notion that they may defend the people against the authority and power of the rich is not even raised. That is why the rich have tended to oppose juries as well as popular assemblies.

Unsurprisingly, the few individualist anarchists that remained pointed this out. Laurance Labadie, the son of Tucker associate Joseph Labadie, argued in response to Rothbard as follows:

“Mere common sense would suggest that any court would be influenced by experience; and any free-market court or judge would in

the very nature of things have some precedents guiding them in their instructions to a jury. But since no case is exactly the same, a jury would have considerable say about the heinousness of the offence in each case, realising that circumstances alter cases, and prescribing penalty accordingly. This appeared to Spooner and Tucker to be a more flexible and equitable administration of justice possible or feasible, human beings being what they are. . .

*“But when Mr. Rothbard quibbles about the jurisprudential ideas of Spooner and Tucker, and at the same time upholds **presumably in his courts** the very economic evils which are at bottom the very reason for human contention and conflict, he would seem to be a man who chokes at a gnat while swallowing a camel.”* [quoted by Mildred J. Loomis and Mark A. Sullivan, “Laurance Labadie: Keeper Of The Flame”, pp. 116–30, **Benjamin R. Tucker and the Champions of Liberty**, Coughlin, Hamilton and Sullivan (eds.), p. 124]

In other words, to exclude the general population from any say in the law and how it changes is hardly a “*minor*” difference! Particularly if you are proposing an economic system which is based on inequalities of wealth, power and influence and the means of accumulating more. It is like a supporter of the state saying that it is a “*minor*” difference if you favour a dictatorship rather than a democratically elected government. As Tucker argued, “*it is precisely in the tempering of the rigidity of enforcement that one of the chief excellences of Anarchism consists . . . under Anarchism all rules and laws will be little more than suggestions for the guidance of juries, and that all disputes . . . will be submitted to juries which will judge not only the facts but the law, the justice of the law, its applicability to the given circumstances, and the penalty or damage to be inflicted because of its infraction . . . under Anarchism the law . . . will be regarded as **just** in proportion to its flexibility, instead of now in proportion to its rigidity.*” [The Individualist Anarchists, pp. 160–1] In others, the law will evolve to take into account changing social circumstances and, as a consequence, public opinion on specific events and rights. Tucker’s position is fundamentally **democratic** and evolutionary while Rothbard’s is autocratic and fossilised.

On the land question, Rothbard opposed the individualist position of “occupancy and use” as it “*would automatically abolish all rent payments for land.*” Which was **precisely** why the individualist anarchists advocated it! In a predominantly rural economy, this would result in a significant levelling of income and social power as well as bolstering the bargaining position of non-land workers by reducing unemployment. He bemoans that landlords cannot charge rent on their “*justly-acquired private property*” without noticing that is begging the question as anarchists deny that this is “*justly-acquired*” land. Unsurprising, Rothbard considers “*the property theory*” of land ownership as John Locke’s, ignoring the fact that the first self-proclaimed anarchist book was written to refute that kind of theory. His argument simply shows how far from anarchism his ideology is. For Rothbard, it goes without saying that the landlord’s “*freedom of contract*” tops the worker’s freedom to control their own work and live and, of course, their right to life. [Op. Cit., p. 8 and p. 9] However, for anarchists, “*the land is indispensable to our existence, consequently a common thing, consequently insusceptible of appropriation.*” [Proudhon, **What is Property?**, p.

The reason question is why Rothbard considers this a **political** difference rather than an economic one. Unfortunately, he does not explain. Perhaps because of the underlying **socialist** perspective behind the anarchist position? Or perhaps the fact that feudalism and monarchism was based on the owner of the land being its ruler suggests a political aspect to the ideology best left unexplored? Given that the idea of grounding rulership on land ownership receded during the Middle Ages, it may be unwise to note that under “anarcho”-capitalism the landlord and capitalist would, likewise, be sovereign over the land **and** those who used it? As we noted in section 1, this is the conclusion that Rothbard does draw. As such, there **is** a political aspect to this difference.

Moreover. *“the expropriation of the mass of the people from the soil forms the basis of the capitalist mode of production.”* [Marx, **Capital**, vol. 1, p. 934] For there are *“two ways of oppressing men: either directly by brute force, by physical violence; or indirectly by denying them the means of life and thus reducing them to a state of surrender.”* In the second case, government is *“an organised instrument to ensure that dominion and privilege will be in the hands of those who . . . have cornered all the means of life, first and foremost the land, which they make use of to keep the people in bondage and to make them work for their benefit.”* [Malatesta, **Anarchy**, p. 21] Privatising the coercive functions of said government hardly makes much difference.

Of course, Rothbard is simply skimming the surface. There are two main ways “anarcho”-capitalists differ from individualist anarchists. The first one is the fact that the individualist anarchists are socialists. The second is on whether equality is essential or not to anarchism. Each will be discussed in turn.

Unlike both Individualist (and social) anarchists, “anarcho”-capitalists support capitalism (a “pure” free market type, which has never existed although it has been approximated occasionally). This means that they reject totally the ideas of anarchists with regards to property and economic analysis. For example, like all supporters of capitalists they consider rent, profit and interest as valid incomes. In contrast, all Anarchists consider these as exploitation and agree with the Individualist Anarchist Benjamin Tucker when he argued that *“[w]hoever contributes to production is alone entitled. **What** has no rights that **who** is bound to respect. **What** is a thing. **Who** is a person. Things have no claims; they exist only to be claimed. The possession of a right cannot be predicted of dead material, but only a living person.”*[quoted by Wm. Gary Kline, **The Individualist Anarchists**, p. 73]

This, we must note, is the fundamental critique of the capitalist theory that capital is productive. In and of themselves, fixed costs do not create value. Rather value is creation depends on how investments are developed and used once in place. Because of this the Individualist Anarchists, like other anarchists, considered non-labour derived income as usury, unlike “anarcho”-capitalists. Similarly, anarchists reject the notion of capitalist property rights in favour of possession (including the full fruits of one’s labour). For example, anarchists reject private ownership of land in favour of a “occupancy and use” regime. In this we follow Proudhon’s **What is Property?** and argue that *“property is theft”*. Rothbard, as noted, rejected this perspective.

As these ideas are an **essential** part of anarchist politics, they cannot be removed without seriously damaging the rest of the theory. This can be seen from Tucker’s comments that *“**Liberty** insists . . . [on] the abolition of the State*

and the abolition of usury; on no more government of man by man, and no more exploitation of man by man.” [cited by Eunice Schuster in **Native American Anarchism**, p. 140]. He indicates that anarchism has specific economic and political ideas, that it opposes capitalism along with the state. Therefore anarchism was never purely a “political” concept, but always combined an opposition to oppression with an opposition to exploitation. The social anarchists made exactly the same point. Which means that when Tucker argued that “*Liberty insists on Socialism... — true Socialism, Anarchistic Socialism: the prevalence on earth of Liberty, Equality, and Solidarity*” he knew exactly what he was saying and meant it wholeheartedly. [**Instead of a Book**, p. 363]

So because “anarcho”-capitalists embrace capitalism and reject socialism, they cannot be considered anarchists or part of the anarchist tradition.

Which brings us nicely to the second point, namely a lack of concern for equality. In stark contrast to anarchists of all schools, inequality is not seen to be a problem with “anarcho”-capitalists (see section 3). However, it is a truism that not all “traders” are equally subject to the market (i.e. have the same market power). In many cases, a few have sufficient control of resources to influence or determine price and in such cases, all others must submit to those terms or not buy the commodity. When the commodity is labour power, even this option is lacking — workers have to accept a job in order to live. As we argue in section 10.2, workers are usually at a disadvantage on the labour market when compared to capitalists, and this forces them to sell their liberty in return for making profits for others. These profits increase inequality in society as the property owners receive the surplus value their workers produce. This increases inequality further, consolidating market power and so weakens the bargaining position of workers further, ensuring that even the freest competition possible could not eliminate class power and society (something B. Tucker recognised as occurring with the development of trusts within capitalism — see section G.4).

By removing the underlying commitment to abolish non-labour income, any “anarchist” capitalist society would have vast differences in wealth and so power. Instead of a government imposed monopolies in land, money and so on, the economic power flowing from private property and capital would ensure that the majority remained in (to use Spooner’s words) “*the condition of servants*” (see sections 2 and 3.1 for more on this). The Individualist Anarchists were aware of this danger and so supported economic ideas that opposed usury (i.e. rent, profit and interest) and ensured the worker the full value of her labour. While not all of them called these ideas “socialist” it is clear that these ideas **are** socialist in nature and in aim (similarly, not all the Individualist Anarchists called themselves anarchists but their ideas are clearly anarchist in nature and in aim).

This combination of the political and economic is essential as they mutually reinforce each other. Without the economic ideas, the political ideas would be meaningless as inequality would make a mockery of them. As Kline notes, the Individualist Anarchists’ “*proposals were designed to establish true equality of opportunity . . . and they expected this would result in a society without great wealth or poverty. In the absence of monopolistic factors which would distort competition, they expected a society largely of self-employed workmen with no significant disparity of wealth between any of them since all would be required to live at their own expense and not at the expense of exploited fellow human beings.*” [**Op. Cit.**, pp. 103–4]

Because of the evil effects of inequality on freedom, both social and individualist anarchists desired to create an environment in which circumstances would not drive people to sell their liberty to others at a disadvantage. In other words, they desired an equalisation of market power by opposing interest, rent and profit and capitalist definitions of private property. Kline summarises this by saying *“the American [individualist] anarchists exposed the tension existing in liberal thought between private property and the ideal of equal access. The Individual Anarchists were, at least, aware that existing conditions were far from ideal, that the system itself working against the majority of individuals in their efforts to attain its promises. Lack of capital, the means to creation and accumulation of wealth, usually doomed a labourer to a life of exploitation. This the anarchists knew and they abhorred such a system.”* [Op. Cit., p. 102]

And this desire for bargaining equality is reflected in their economic ideas and by removing these underlying economic ideas of the individualist anarchists, “anarcho”-capitalism makes a mockery of any ideas they do appropriate. Essentially, the Individualist Anarchists agreed with Rousseau that in order to prevent extreme inequality of fortunes you deprive people of the means to accumulate in the first place and **not** take away wealth from the rich. An important point which “anarcho”-capitalism fails to understand or appreciate.

There are, of course, overlaps between individualist anarchism and “anarcho”-capitalism, just as there are overlaps between it and Marxism (and social anarchism, of course). However, just as a similar analysis of capitalism does not make individualist anarchists Marxists, so apparent similarities between individualist anarchism does not make it a forerunner of “anarcho”-capitalism. For example, both schools support the idea of “free markets.” Yet the question of markets is fundamentally second to the issue of property rights for what is exchanged on the market is dependent on what is considered legitimate property. In this, as Rothbard notes, individualist anarchists and “anarcho”-capitalists differ and different property rights produce different market structures and dynamics. This means that capitalism is not the only economy with markets and so support for markets cannot be equated with support for capitalism. Equally, opposition to markets is **not** the defining characteristic of socialism (as we note in section G.2.1). As such, it is possible to be a market socialist (and many socialist are). This is because “markets” and “property” do not equate to capitalism:

“Political economy confuses, on principle, two very different kinds of private property, one of which rests on the labour of the producers himself, and the other on the exploitation of the labour of others. It forgets that the latter is not only the direct antithesis of the former, but grows on the former’s tomb and nowhere else.

“In Western Europe, the homeland of political economy, the process of primitive accumulation is more or less accomplished. . .

“It is otherwise in the colonies. There the capitalist regime constantly comes up against the obstacle presented by the producer, who, as owner of his own conditions of labour, employs that labour to enrich himself instead of the capitalist. The contradiction of these two diametrically opposed economic systems has its practical manifestation here in the struggle between them.” [Karl Marx, **Capital**, vol. 1, p. 931]

Individualist anarchism is obviously an aspect of this struggle between the system of peasant and artisan production of early America and the state encouraged system of private property and wage labour. “Anarcho”-capitalists, in contrast, assume that generalised wage labour would remain under their system (while paying lip-service to the possibilities of co-operatives — and if an “anarcho”-capitalist thinks that co-operative will become the dominant form of workplace organisation, then they are some kind of market socialist, **not** a capitalist). It is clear that their end point (a pure capitalism, i.e. generalised wage labour) is directly the opposite of that desired by anarchists. This was the case of the Individualist Anarchists who embraced the ideal of (non-capitalist) *laissez faire* competition — they did so, as noted, to **end** exploitation, **not** to maintain it. Indeed, their analysis of the change in American society from one of mainly independent producers into one based mainly upon wage labour has many parallels with, of all people, Karl Marx’s presented in chapter 33 of **Capital**. Marx, correctly, argues that “*the capitalist mode of production and accumulation, and therefore capitalist private property, have for their fundamental condition the annihilation of that private property which rests on the labour of the individual himself; in other words, the expropriation of the worker.*” [Op. Cit., p. 940] He notes that to achieve this, the state is used:

“How then can the anti-capitalistic cancer of the colonies be healed? ... Let the Government set an artificial price on the virgin soil, a price independent of the law of supply and demand, a price that compels the immigrant to work a long time for wages before he can earn enough money to buy land, and turn himself into an independent farmer.” [Op. Cit., p. 938]

Moreover, tariffs are introduced with “*the objective of manufacturing capitalists artificially*” for the “*system of protection was an artificial means of manufacturing manufacturers, or expropriating independent workers, of capitalising the national means of production and subsistence, and of forcibly cutting short the transition ... to the modern mode of production,*” to capitalism [Op. Cit., p. 932 and pp. 921–2]

It is this process which Individualist Anarchism protested against, the use of the state to favour the rising capitalist class. However, unlike social anarchists, many individualist anarchists were not consistently against wage labour. This is the other significant overlap between “anarcho”-capitalism and individualist anarchism. However, they were opposed to exploitation and argued (unlike “anarcho”-capitalism) that in their system workers bargaining powers would be raised to such a level that their wages would equal the full product of their labour. However, as we discuss in section G.1.1 the social context the individualist anarchists lived in must be remembered. America at the times was a predominantly rural society and industry was not as developed as it is now wage labour would have been minimised (Spooner, for example, explicitly envisioned a society made up mostly entirely of self-employed workers). As Kline argues:

“Committed as they were to equality in the pursuit of property, the objective for the anarchist became the construction of a society providing equal access to those things necessary for creating wealth. The goal of the anarchists who extolled mutualism and the abolition of all monopolies was, then, a society where everyone willing to work

would have the tools and raw materials necessary for production in a non-exploitative system . . . the dominant vision of the future society . . . [was] underpinned by individual, self-employed workers.” [Op. Cit., p. 95]

As such, a limited amount of wage labour within a predominantly self-employed economy does not make a given society capitalist any more than a small amount of governmental communities within an predominantly anarchist world would make it statist. As Marx argued, when “*the separation of the worker from the conditions of labour and from the soil . . . does not yet exist, or only sporadically, or on too limited a scale . . . Where, amongst such curious characters, is the ‘field of abstinence’ for the capitalists? . . . Today’s wage-labourer is tomorrow’s independent peasant or artisan, working for himself. He vanishes from the labour-market — but not into the workhouse.*” There is a “*constant transformation of wage-labourers into independent producers, who work for themselves instead of for capital*” and so “*the degree of exploitation of the wage-labourer remain[s] indecently low.*” In addition, the “*wage-labourer also loses, along with the relation of dependence, the feeling of dependence on the abstemious capitalist.*” [Op. Cit., pp. 935–6]

Saying that, as we discuss in section G.4, individualist anarchist support for wage labour is at odds with the ideas of Proudhon and, far more importantly, in contradiction to many of the stated principles of the individualist anarchists themselves. In particular, wage labour violates “occupancy and use” as well as having more than a passing similarity to the state. However, these problems can be solved by consistently applying the principles of individualist anarchism, unlike “anarcho”-capitalism, and that is why it is a real school of anarchism. In other words, a system of **generalised** wage labour would not be anarchist nor would it be non-exploitative. Moreover, the social context these ideas were developed in and would have been applied ensure that these contradictions would have been minimised. If they had been applied, a genuine anarchist society of self-employed workers would, in all likelihood, have been created (at least at first, whether the market would increase inequalities is a moot point — see section G.4).

We must stress that the social situation is important as it shows how apparently superficially similar arguments can have radically different aims and results depending on who suggests them and in what circumstances. As noted, during the rise of capitalism the bourgeoisie were not shy in urging state intervention against the masses. Unsurprisingly, working class people generally took an anti-state position during this period. The individualist anarchists were part of that tradition, opposing what Marx termed “*primitive accumulation*” in favour of the pre-capitalist forms of property and society it was destroying.

However, when capitalism found its feet and could do without such obvious intervention, the possibility of an “anti-state” capitalism could arise. Such a possibility became a definite once the state started to intervene in ways which, while benefiting the system as a whole, came into conflict with the property and power of individual members of the capitalist and landlord class. Thus social legislation which attempted to restrict the negative effects of unbridled exploitation and oppression on workers and the environment were having on the economy were the source of much outrage in certain bourgeois circles:

“Quite independently of these tendencies [of individualist anarchism]

*... the anti-state bourgeoisie (which is also anti-statist, being hostile to any social intervention on the part of the State to protect the victims of exploitation — in the matter of working hours, hygienic working conditions and so on), and the greed of unlimited exploitation, had stirred up in England a certain agitation in favour of pseudo-individualism, an unrestrained exploitation. To this end, they enlisted the services of a mercenary pseudo-literature . . . which played with doctrinaire and fanatical ideas in order to project a species of ‘individualism’ that was absolutely sterile, and a species of ‘non-interventionism’ that would let a man die of hunger rather than offend his dignity.” [Max Nettlau, **A Short History of Anarchism**, p. 39]*

This perspective can be seen when Tucker denounced Herbert Spencer as a champion of the capitalistic class for his vocal attacks on social legislation which claimed to benefit working class people but stays strangely silent on the laws passed to benefit (usually indirectly) capital and the rich. “Anarcho”-capitalism is part of that tradition, the tradition associated with a capitalism which no longer needs obvious state intervention as enough wealth as been accumulated to keep workers under control by means of market power.

As with the original nineteenth century British “anti-state” capitalists like Spencer and Herbert, Rothbard “*completely overlooks the role of the state in building and maintaining a capitalist economy in the West. Privileged to live in the twentieth century, long after the battles to establish capitalism have been fought and won, Rothbard sees the state solely as a burden on the market and a vehicle for imposing the still greater burden of socialism. He manifests a kind of historical nearsightedness that allows him to collapse many centuries of human experience into one long night of tyranny that ended only with the invention of the free market and its ‘spontaneous’ triumph over the past. It is pointless to argue, as Rothbard seems ready to do, that capitalism would have succeeded without the bourgeois state; the fact is that all capitalist nations have relied on the machinery of government to create and preserve the political and legal environments required by their economic system.*” That, of course, has not stopped him “*critis[ing] others for being unhistorical.*” [Stephen L Newman, **Liberalism at Wit’s End**, pp. 77–8 and p. 79]

In other words, there is substantial differences between the victims of a thief trying to stop being robbed and be left alone to enjoy their property and the successful thief doing the same! Individualist Anarchist’s were aware of this. For example, Victor Yarros stressed this key difference between individualist anarchism and the proto-“libertarian” capitalists of “voluntaryism”:

“[Auberon Herbert] believes in allowing people to retain all their possessions, no matter how unjustly and basely acquired, while getting them, so to speak, to swear off stealing and usurping and to promise to behave well in the future. We, on the other hand, while insisting on the principle of private property, in wealth honestly obtained under the reign of liberty, do not think it either unjust or unwise to dispossess the landlords who have monopolised natural wealth by force and fraud. We hold that the poor and disinherited toilers would be justified in expropriating, not alone the landlords, who notoriously

*have no equitable titles to their lands, but **all** the financial lords and rulers, all the millionaires and very wealthy individuals. . . Almost all possessors of great wealth enjoy neither what they nor their ancestors rightfully acquired (and if Mr. Herbert wishes to challenge the correctness of this statement, we are ready to go with him into a full discussion of the subject). . .*

“If he holds that the landlords are justly entitled to their lands, let him make a defence of the landlords or an attack on our unjust proposal.” [quoted by Carl Watner, “*The English Individualists As They Appear In Liberty*,” pp. 191–211, **Benjamin R. Tucker and the Champions of Liberty**, Coughlin, Hamilton and Sullivan (eds.), pp. 199–200]

Significantly, Tucker and other individualist anarchists saw state intervention has a result of capital manipulating legislation to gain an advantage on the so-called free market which allowed them to exploit labour and, as such, it benefited the **whole** capitalist class. Rothbard, at best, acknowledges that **some** sections of big business benefit from the current system and so fails to have the comprehensive understanding of the dynamics of capitalism as a **system** (rather as an ideology). This lack of understanding of capitalism as a historic and dynamic system rooted in class rule and economic power is important in evaluating “anarcho”-capitalist claims to anarchism. Marxists are not considered anarchists as they support the state as a means of transition to an anarchist society. Much the same logic can be applied to right-wing libertarians (even if they do call themselves “anarcho”-capitalists). This is because they do not seek to correct the inequalities produced by previous state action before ending it nor do they seek to change the definitions of “private property” imposed by the state. In effect, they argue that the “dictatorship of the bourgeoisie” should “wither away” and be limited to defending the property accumulated in a few hands. Needless to say, starting from the current (coercively produced) distribution of property and then eliminating “force” simply means defending the power and privilege of ruling minorities:

“The modern Individualism initiated by Herbert Spencer is, like the critical theory of Proudhon, a powerful indictment against the dangers and wrongs of government, but its practical solution of the social problem is miserable — so miserable as to lead us to inquire if the talk of ‘No force’ be merely an excuse for supporting landlord and capitalist domination.” [**Act For Yourself**, p. 98]

2 What do “anarcho”-capitalists mean by “freedom”?

For “anarcho”-capitalists, the concept of freedom is limited to the idea of “*freedom from*.” For them, freedom means simply freedom from the “*initiation of force*,” or the “*non-aggression against anyone’s person and property*.” [Murray Rothbard, **For a New Liberty**, p. 23] The notion that real freedom must combine both freedom “*to*” **and** freedom “*from*” is missing in their ideology, as is the social context of the so-called freedom they defend.

Before starting, it is useful to quote Alan Haworth when he notes that “[i]n fact, it is surprising how **little** close attention the concept of freedom receives from libertarian writers. Once again *Anarchy, State, and Utopia* is a case in point. The word ‘freedom’ doesn’t even appear in the index. The word ‘liberty’ appears, but only to refer the reader to the ‘Wilt Chamberlain’ passage. In a supposedly ‘libertarian’ work, this is more than surprising. It is truly remarkable.” [**Anti-Libertarianism**, p. 95]

Why this is the case can be seen from how the “anarcho”-capitalist defines freedom.

In a right-libertarian or “anarcho”-capitalist society, freedom is considered to be a product of property. As Murray Rothbard puts it, “*the libertarian defines the concept of ‘freedom’ or ‘liberty’... [as a] condition in which a person’s ownership rights in his body and his legitimate material property rights are not invaded, are not aggressed against... Freedom and unrestricted property rights go hand in hand.*” [**Op. Cit.**, p.41]

This definition has some problems, however. In such a society, one cannot (legitimately) do anything with or on another’s property if the owner prohibits it. This means that an individual’s only **guaranteed** freedom is determined by the amount of property that he or she owns. This has the consequence that someone with no property has no guaranteed freedom at all (beyond, of course, the freedom not to be murdered or otherwise harmed by the deliberate acts of others). In other words, a distribution of property is a distribution of freedom, as the right-libertarians themselves define it. It strikes anarchists as strange that an ideology that claims to be committed to promoting freedom entails the conclusion that some people should be more free than others. However, this is the logical implication of their view, which raises a serious doubt as to whether “anarcho”-capitalists are actually interested in freedom.

Looking at Rothbard’s definition of “liberty” quoted above, we can see that freedom is actually no longer considered to be a fundamental, independent concept. Instead, freedom is a derivative of something more fundamental, namely the “*legitimate rights*” of an individual, which are identified as property rights. In other words, given that “anarcho”-capitalists and right libertarians in general consider the right to property as “absolute,” it follows that freedom and property become one and the same. This suggests an alternative name for the right Libertarian, namely “**Propertarian.**” And, needless to say, if we do not accept the right-libertarians’ view of what constitutes “legitimate” “rights,” then their claim to be defenders of liberty is weak.

Another important implication of this “liberty as property” concept is that it produces a strangely alienated concept of freedom. Liberty, as we noted, is no longer considered absolute, but a derivative of property — which has the important consequence that you can “sell” your liberty and still be considered free by the ideology. This concept of liberty (namely “liberty as property”) is usually termed “self-ownership.” But, to state the obvious, I do not “own” myself, as if were an object somehow separable from my subjectivity — I **am** myself. However, the concept of “self-ownership” is handy for justifying various forms of domination and oppression — for by agreeing (usually under the force of circumstances, we must note) to certain contracts, an individual can “sell” (or rent out) themselves to others (for example, when workers sell their labour power to capitalists on the “free market”). In effect, “self-ownership” becomes the means of justifying treating people as objects — ironically, the very thing

the concept was created to stop! As L. Susan Brown notes, “[a]t the moment an individual ‘sells’ labour power to another, he/she loses self-determination and instead is treated as a subjectless instrument for the fulfilment of another’s will.” [The Politics of Individualism, p. 4]

Given that workers are paid to obey, you really have to wonder which planet Murray Rothbard is on when he argues that a person’s “labour service is alienable, but his *will* is not” and that he [sic!] “cannot alienate his *will*, more particularly his control over his own mind and body.” [The Ethics of Liberty, p. 40, p. 135] He contrasts private property and self-ownership by arguing that “[a]ll physical property owned by a person is alienable . . . I can give away or sell to another person my shoes, my house, my car, my money, etc. But there are certain vital things which, in natural fact and in the nature of man, are *inalienable* . . . [his] will and control over his own person are *inalienable*.” [Op. Cit., pp. 134–5]

But “labour services” are unlike the private possessions Rothbard lists as being alienable. As we argued in section B.1 (“Why do anarchists oppose hierarchy”) a person’s “labour services” and “will” cannot be divided — if you sell your labour services, you also have to give control of your body and mind to another person! If a worker does not obey the commands of her employer, she is fired. That Rothbard denies this indicates a total lack of common-sense. Perhaps Rothbard will argue that as the worker can quit at any time she does not alienate their will (this seems to be his case against slave contracts — see section 2.6). But this ignores the fact that between the signing and breaking of the contract and during work hours (and perhaps outside work hours, if the boss has mandatory drug testing or will fire workers who attend union or anarchist meetings or those who have an “unnatural” sexuality and so on) the worker **does** alienate his will and body. In the words of Rudolf Rocker, “under the realities of the capitalist economic form . . . there can be no talk of a ‘right over one’s own person,’ for that ends when one is compelled to submit to the economic dictation of another if he does not want to starve.” [Anarcho-Syndicalism, p. 17]

Ironically, the rights of property (which are said to flow from an individual’s self-ownership of themselves) becomes the means, under capitalism, by which self-ownership of non-property owners is denied. The foundational right (self-ownership) becomes denied by the derivative right (ownership of things). Under capitalism, a lack of property can be just as oppressive as a lack of legal rights because of the relationships of domination and subjection this situation creates.

So Rothbard’s argument (as well as being contradictory) misses the point (and the reality of capitalism). Yes, if we define freedom as “the absence of coercion” then the idea that wage labour does not restrict liberty is unavoidable, but such a definition is useless. This is because it hides structures of power and relations of domination and subordination. As Carole Pateman argues, “the contract in which the worker allegedly sells his labour power is a contract in which, since he cannot be separated from his capacities, he sells command over the use of his body and himself. . . . To sell command over the use of oneself for a specified period . . . is to be an unfree labourer.” [The Sexual Contract, p. 151]

In other words, contracts about property in the person inevitably create subordination. “Anarcho”-capitalism defines this source of unfreedom away, but it still exists and has a major impact on people’s liberty. Therefore freedom is better described as “self-government” or “self-management” — to be able

to govern ones own actions (if alone) or to participate in the determination of join activity (if part of a group). Freedom, to put it another way, is not an abstract legal concept, but the vital concrete possibility for every human being to bring to full development all their powers, capacities, and talents which nature has endowed them. A key aspect of this is to govern one own actions when within associations (self-management). If we look at freedom this way, we see that coercion is condemned but so is hierarchy (and so is capitalism for during working hours, people are not free to make their own plans and have a say in what affects them. They are order takers, **not** free individuals).

It is because anarchists have recognised the authoritarian nature of capitalist firms that they have opposed wage labour and capitalist property rights along with the state. They have desired to replace institutions structured by subordination with institutions constituted by free relationships (based, in other words, on self-management) in **all** areas of life, including economic organisations. Hence Proudhon's argument that the "*workmen's associations . . . are full of hope both as a protest against the wage system, and as an affirmation of reciprocity*" and that their importance lies "*in their denial of the rule of capitalists, money lenders and governments.*" [**The General Idea of the Revolution**, pp. 98–99]

Unlike anarchists, the "anarcho"-capitalist account of freedom allows an individual's freedom to be rented out to another while maintaining that the person is still free. It may seem strange that an ideology proclaiming its support for liberty sees nothing wrong with the alienation and denial of liberty but, in actual fact, it is unsurprising. After all, contract theory is a "*theoretical strategy that justifies subjection by presenting it as freedom*" and nothing more. Little wonder, then, that contract "*creates a relation of subordination*" and not of freedom [Carole Pateman, **Op. Cit.**, p. 39, p. 59]

Any attempt to build an ethical framework starting from the abstract individual (as Rothbard does with his "*legitimate rights*" method) will result in domination and oppression between people, **not** freedom. Indeed, Rothbard provides an example of the dangers of idealist philosophy that Bakunin warned about when he argued that while "*[m]aterialism denies free will and ends in the establishment of liberty; idealism, in the name of human dignity, proclaims free will, and on the ruins of every liberty founds authority.*" [**God and the State**, p. 48] This is the case with "anarcho"-capitalism can be seen from Rothbard's wholehearted support for wage labour and the rules imposed by property owners on those who use, but do not own, their property. Rothbard, basing himself on abstract individualism, cannot help but justify authority over liberty.

Overall, we can see that the logic of the right-libertarian definition of "freedom" ends up negating itself, because it results in the creation and encouragement of **authority**, which is an **opposite** of freedom. For example, as Ayn Rand points out, "*man has to sustain his life by his own effort, the man who has no right to the product of his effort has no means to sustain his life. The man who produces while others dispose of his product, is a slave.*" [**The Ayn Rand Lexicon: Objectivism from A to Z**, pp. 388–9] But, as was shown in section C, capitalism is based on, as Proudhon put it, workers working "*for an entrepreneur who pays them and keeps their products,*" and so is a form of **theft**. Thus, by "libertarian" capitalism's **own** logic, capitalism is based not on freedom, but on (wage) slavery; for interest, profit and rent are derived from a worker's **unpaid** labour, i.e. "*others dispose of his [sic] product.*"

And if a society **is** run on the wage- and profit-based system suggested by the “anarcho” and “libertarian” capitalists, freedom becomes a commodity. The more money you have, the more freedom you get. Then, since money is only available to those who earn it, Libertarianism is based on that classic saying “*work makes one free!*” (*Arbeit macht frei!*), which the Nazis placed on the gates of their concentration camps. Of course, since it is capitalism, this motto is somewhat different for those at the top. In this case it is “*other people’s work makes one free!*” — a truism in any society based on private property and the authority that stems from it.

Thus it is debatable that a libertarian or “anarcho” capitalist society would have less unfreedom or coercion in it than “actually existing capitalism.” In contrast to anarchism, “anarcho”-capitalism, with its narrow definitions, restricts freedom to only a few aspects of social life and ignores domination and authority beyond those aspects. As Peter Marshall points out, the right-libertarian’s “*definition of freedom is entirely negative. It calls for the absence of coercion but cannot guarantee the positive freedom of individual autonomy and independence.*” [**Demanding the Impossible**, p. 564] By confining freedom to such a narrow range of human action, “anarcho”-capitalism is clearly **not** a form of anarchism. Real anarchists support freedom in every aspect of an individual’s life.

2.1 What are the implications of defining liberty in terms of (property) rights?

The change from defending liberty to defending (property) rights has important implications. For one thing, it allows right libertarians to imply that private property is similar to a “fact of nature,” and so to conclude that the restrictions on freedom produced by it can be ignored. This can be seen in Robert Nozick’s argument that decisions are voluntary if the limitations on one’s actions are not caused by human action which infringe the rights of others. Thus, in a “pure” capitalist society the restrictions on freedom caused by wage slavery are not really restrictions because the worker voluntarily consents to the contract. The circumstances that drive a worker to make the contract are irrelevant because they are created by people exercising their rights and not violating other peoples’ ones (see the section on “*Voluntary Exchange*” in **Anarchy, State, and Utopia**, pp. 262–265).

This means that within a society “[w]hether a person’s actions are voluntary depends on what limits his alternatives. If facts of nature do so, the actions are voluntary. (I may voluntarily walk to someplace I would prefer to fly to unaided).” [**Anarchy, State, and Utopia**, p. 262] Similarly, the results of voluntary actions and the transference of property can be considered alongside the “facts of nature” (they are, after all, the resultants of “natural rights”). This means that the circumstances created by the existence and use of property can be considered, in essence, as a “natural” fact and so the actions we take in response to these circumstances are therefore “voluntary” and we are “free” (Nozick presents the example [p. 263] of someone who marries the only available person — all the more attractive people having already chosen others — as a case of an action that is voluntary despite removal of all but the least attractive alternative through the legitimate actions of others. Needless to say, the example can be — and is — extended to workers on the labour market — although, of

course, you do not starve to death if you decide not to marry).

However, such an argument fails to notice that property is different from gravity or biology. Of course not being able to fly does not restrict freedom. Neither does not being able to jump 10 feet into the air. But unlike gravity (for example), private property has to be protected by laws and the police. No one stops you from flying, but laws and police forces must exist to ensure that capitalist property (and the owners' authority over it) is respected. The claim, therefore, that private property in general, and capitalism in particular, can be considered as "facts of nature," like gravity, ignores an important fact: namely that the people involved in an economy must accept the rules of its operation — rules that, for example, allow contracts to be enforced; forbid using another's property without his or her consent ("theft," trespass, copyright infringement, etc.); prohibit "conspiracy," unlawful assembly, rioting, and so on; and create monopolies through regulation, licensing, charters, patents, etc. This means that capitalism has to include the mechanisms for deterring property crimes as well as mechanisms for compensation and punishment should such crimes be committed. In other words, capitalism is in fact far more than "voluntary bilateral exchange," because it **must** include the policing, arbitration, and legislating mechanisms required to ensure its operation. Hence, like the state, the capitalist market is a social institution, and the distributions of goods that result from its operation are therefore the distributions sanctioned by a capitalist society. As Benjamin Franklin pointed out, "*Private property . . . is a Creature of Society, and is subject to the Calls of that Society.*"

Thus, to claim with Sir Isaiah Berlin (the main, modern, source of the concepts of "*negative*" and "*positive*" freedom — although we must add that Berlin was not a right-Libertarian), that "[i]f my poverty were a kind of disease, which prevented me from buying bread . . . as lameness prevents me from running, this inability would not naturally be described as a lack of freedom" totally misses the point ["*Two Concepts of Liberty*", in **Four Essays on Liberty**, p. 123]. If you are lame, police officers do not come round to stop you running. They do not have to. However, they **are** required to protect property against the dispossessed and those who reject capitalist property rights.

This means that by using such concepts as "negative" liberty and ignoring the social nature of private property, right-libertarians are trying to turn the discussion away from liberty toward "biology" and other facts of nature. And conveniently, by placing property rights alongside gravity and other natural laws, they also succeed in reducing debate even about rights.

Of course, coercion and restriction of liberty **can** be resisted, unlike "natural forces" like gravity. So if, as Berlin argues, "*negative*" freedom means that you "*lack political freedom only if you are prevented from attaining a goal by human beings,*" then capitalism is indeed based on such a lack, since property rights need to be enforced by human beings ("*I am prevented by others from doing what I could otherwise do*"). After all, as Proudhon long ago noted, the market is manmade, hence any constraint it imposes is the coercion of man by man and so economic laws are not as inevitable as natural ones [see Alan Ritter's **The Political Thought of Pierre-Joseph Proudhon**, p. 122]. Or, to put it slightly differently, capitalism requires coercion in order to work, and hence, is **not** similar to a "fact of nature," regardless of Nozick's claims (i.e. property rights have to be defined and enforced by human beings, although the nature of the labour market resulting from capitalist property definitions is such that

direct coercion is usually not needed). This implication is actually recognised by right-libertarians, because they argue that the rights-framework of society should be set up in one way rather than another. In other words, they recognise that society is not independent of human interaction, and so can be changed.

Perhaps, as seems the case, the “anarcho”-capitalist or right-Libertarian will claim that it is only **deliberate** acts which violate your (libertarian defined) rights by other humans beings that cause unfreedom (“*we define freedom . . . as the **absence of invasion** by another man of an man’s person or property*” [Rothbard, **The Ethics of Liberty**, p. 41]) and so if no-one deliberately coerces you then you are free. In this way the workings of the capitalist market can be placed alongside the “facts of nature” and ignored as a source of unfreedom. However, a moments thought shows that this is not the case. Both deliberate and non-deliberate acts can leave individuals lacking freedom.

Let us assume (in an example paraphrased from Alan Haworth’s excellent book **Anti-Libertarianism**, p. 49) that someone kidnaps you and places you down a deep (naturally formed) pit, miles from anyway, which is impossible to climb up. No one would deny that you are unfree. Let us further assume that another person walks by and accidentally falls into the pit with you.

According to right-libertarianism, while you are unfree (i.e. subject to deliberate coercion) your fellow pit-dweller is perfectly free for they have subject to the “facts of nature” and not human action (deliberate or otherwise). Or, perhaps, they “voluntarily choose” to stay in the pit, after all, it is “only” the “facts of nature” limiting their actions. But, obviously, both of you are in **exactly the same position**, have **exactly the same choices** and so are **equally** unfree! Thus a definition of “liberty” that maintains that only deliberate acts of others — for example, coercion — reduces freedom misses the point totally.

Why is this example important? Let us consider Murray Rothbard’s analysis of the situation after the abolition of serfdom in Russia and slavery in America. He writes:

*“The **bodies** of the oppressed were freed, but the property which they had worked and eminently deserved to own, remained in the hands of their former oppressors. With economic power thus remaining in their hands, the former lords soon found themselves virtual masters once more of what were now free tenants or farm labourers. The serfs and slaves had tasted freedom, but had been cruelly deprived of its fruits.”* [**The Ethics of Liberty**, p. 74]

However, contrast this with Rothbard’s claims that if market forces (“voluntary exchanges”) result in the creation of free tenants or labourers then these labourers and tenants are free (see, for example, **The Ethics of Liberty**, pp. 221–2 on why “economic power” within capitalism does not exist). But the labourers dispossessed by market forces are in **exactly** the same situation as the former serfs and slaves. Rothbard sees the obvious “*economic power*” in the later case, but denies it in the former. But the **conditions** of the people in question are identical and it is these conditions that horrify us. It is only his ideology that stops Rothbard drawing the obvious conclusion — identical conditions produce identical social relationships and so if the formally “free” ex-serfs are subject to “*economic power*” and “*masters*” then so are the formally “free” labourers within capitalism! Both sets of workers may be formally free,

but their circumstances are such that they are “free” to “consent” to sell their freedom to others (i.e. economic power produces relationships of domination and unfreedom between formally free individuals).

Thus Rothbard’s definition of liberty in terms of rights fails to provide us with a realistic and viable understanding of freedom. Someone can be a virtual slave while still having her rights non-violated (conversely, someone can have their property rights violated and still be free; for example, the child who enters your backyard without your permission to get her ball hardly violates your liberty — indeed, you would never know that she has entered your property unless you happened to see her do it). So the idea that freedom means non-aggression against person and their legitimate material property justifies extensive **non-freedom** for the working class. The non-violation of property rights does **not** imply freedom, as Rothbard’s discussion of the former slaves shows. Anyone who, along with Rothbard, defines freedom “*as the **absence of invasion by another man of any man’s person or property***” in a deeply inequality society is supporting, and justifying, capitalist and landlord domination. As anarchists have long realised, in an unequal society, a contractarian starting point implies an absolutist conclusion.

Why is this? Simply because freedom is a result of **social** interaction, not the product of some isolated, abstract individual (Rothbard uses the model of Robinson Crusoe to construct his ideology). But as Bakunin argued, “*the freedom of the individual is a function of men in society, a necessary consequence of the collective development of mankind.*” He goes on to argue that “*man in isolation can have no awareness of his liberty . . . Liberty is therefore a feature not of isolation but of interaction, not of exclusion but rather of connection.*” [Selected Writings, p. 146, p. 147] Right Libertarians, by building their definition of freedom from the isolated person, end up by supporting restrictions of liberty due to a neglect of an adequate recognition of the actual interdependence of human beings, of the fact what each person does is effected by and affects others. People become aware of their humanity (liberty) in society, not outside it. It is the **social relationships** we take part in which determine how free we are and any definition of freedom which builds upon an individual without social ties is doomed to create relations of domination, not freedom, between individuals — as Rothbard’s theory does (to put it another way, voluntary association is a necessary, but not sufficient, condition for freedom. Which is why anarchists have always stressed the importance of equality — see section 3 for details).

So while facts of nature can restrict your options and freedom, it is the circumstances within which they act and the options they limit that are important (a person trapped at the bottom of a pit is unfree as the options available are so few; the lame person is free because their available options are extensive). In the same manner, the facts of society can and do restrict your freedom because they are the products of human action and are defined and protected by human institutions, it is the circumstances within which individuals make their decisions and the social relationships these decisions produce that are important (the worker driven by poverty to accept a slave contract in a sweat shop is unfree because the circumstances he faces have limited his options and the relations he accepts are based upon hierarchy; the person who decides to join an anarchist commune is free because the commune is non-hierarchical and she has the option of joining another commune, working alone and so forth).

All in all, the right-Libertarian concept of freedom is lacking. For an ideology that takes the name “Libertarianism” it seems happy to ignore actual liberty and instead concentrate on an abstract form of liberty which ignores so many sources of unfreedom as to narrow the concept until it becomes little more than a justification for authoritarianism. This can be seen from right-Libertarian attitudes about private property and its effects on liberty (as discussed in the next section).

2.2 How does private property affect freedom?

The right-libertarian does not address or even acknowledge that the (absolute) right of private property may lead to extensive control by property owners over those who use, but do not own, property (such as workers and tenants). Thus a free-market capitalist system leads to a very selective and class-based protection of “rights” and “freedoms.” For example, under capitalism, the “freedom” of employers inevitably conflicts with the “freedom” of employees. When stockholders or their managers exercise their “freedom of enterprise” to decide how their company will operate, they violate their employee’s right to decide how their labouring capacities will be utilised. In other words, under capitalism, the “property rights” of employers will conflict with and restrict the “human right” of employees to manage themselves. Capitalism allows the right of self-management only to the few, not to all. Or, alternatively, capitalism does not recognise certain human rights as **universal** which anarchism does.

This can be seen from Austrian Economist W. Duncan Reekie’s defence of wage labour. While referring to “*intra-firm labour markets*” as “*hierarchies*”, Reekie (in his best *ex cathedra* tone) states that “[t]here is nothing authoritarian, dictatorial or exploitative in the relationship. Employees order employers to pay them amounts specified in the hiring contract just as much as employers order employees to abide by the terms of the contract.” [**Markets, Entrepreneurs and Liberty**, p. 136, p. 137]. Given that “*the terms of contract*” involve the worker agreeing to obey the employers orders and that they will be fired if they do not, its pretty clear that the ordering that goes on in the “*intra-firm labour market*” is decidedly **one way**. Bosses have the power, workers are paid to obey. And this begs the question, **if** the employment contract creates a free worker, why must she abandon her liberty during work hours?

Reekie actually recognises this lack of freedom in a “round about” way when he notes that “*employees in a firm at any level in the hierarchy can exercise an entrepreneurial role. The area within which that role can be carried out increases the more authority the employee has.*” [**Op. Cit.**, p. 142] Which means workers **are** subject to control from above which restricts the activities they are allowed to do and so they are **not** free to act, make decisions, participate in the plans of the organisation, to create the future and so forth within working hours. And it is strange that while recognising the firm as a hierarchy, Reekie tries to deny that it is authoritarian or dictatorial — as if you could have a hierarchy without authoritarian structures or an unelected person in authority who is not a dictator. His confusion is shared by Austrian guru Ludwig von Mises, who asserts that the “*entrepreneur and capitalist are not irresponsible autocrats*” because they are “*unconditionally subject to the sovereignty of the consumer*” while, **on the next page**, admitting there is a “*managerial hierarchy*” which contains “*the average subordinate employee.*” [**Human Action**, p. 809 and p. 810] It

does not enter his mind that the capitalist may be subject to some consumer control while being an autocrat to their subordinated employees. Again, we find the right-“libertarian” acknowledging that the capitalist managerial structure is a hierarchy and workers are subordinated while denying it is autocratic to the workers! Thus we have “free” workers within a relationship distinctly **lacking** freedom (in the sense of self-government) — a strange paradox. Indeed, if your personal life were as closely monitored and regulated as the work life of millions of people across the world, you would rightly consider it oppression.

Perhaps Reekie (like most right-libertarians) will maintain that workers voluntarily agree (“consent”) to be subject to the bosses dictatorship (he writes that “*each will only enter into the contractual agreement known as a firm if each believes he will be better off thereby. The firm is simply another example of mutually beneficial exchange*” [Op. Cit., p. 137]). However, this does not stop the relationship being authoritarian or dictatorial (and so exploitative as it is **highly** unlikely that those at the top will not abuse their power). And as we argue further in the next section (and also see sections B.4, 3.1 and 10.2), in a capitalist society workers have the option of finding a job or facing abject poverty and/or starvation.

Little wonder, then, that people “voluntarily” sell their labour and “consent” to authoritarian structures! They have little option to do otherwise. So, **within** the labour market, workers **can** and **do** seek out the best working conditions possible, but that does not mean that the final contract agreed is “freely” accepted and not due to the force of circumstances, that both parties have equal bargaining power when drawing up the contract or that the freedom of both parties is ensured. Which means to argue (as many right-libertarians do) that freedom cannot be restricted by wage labour because people enter into relationships they consider will lead to improvements over their initial situation totally misses the points. As the initial situation is not considered relevant, their argument fails. After all, agreeing to work in a sweatshop 14 hours a day **is** an improvement over starving to death — but it does not mean that those who so agree are free when working there or actually **want** to be there. They are not and it is the circumstances, created and enforced by the law, that have ensured that they “consent” to such a regime (given the chance, they would desire to **change** that regime but cannot as this would violate their bosses property rights and they would be repressed for trying).

So the right-wing “libertarian” right is interested only in a narrow concept of freedom (rather than in “freedom” or “liberty” as such). This can be seen in the argument of Ayn Rand (a leading ideologue of “libertarian” capitalism) that “**Freedom**, in a political context, means freedom from government coercion. It does **not** mean freedom from the landlord, or freedom from the employer, or freedom from the laws of nature which do not provide men with automatic prosperity. It means freedom from the coercive power of the state — and nothing else!” [Capitalism: The Unknown Ideal, p. 192] By arguing in this way, right libertarians ignore the vast number of authoritarian social relationships that exist in capitalist society and, as Rand does here, imply that these social relationships are like “the laws of nature.” However, if one looks at the world without prejudice but with an eye to maximising freedom, the major coercive institution is seen to be not the state but capitalist social relationships (as indicated in section B.4).

The right “libertarian,” then, far from being a defender of freedom, is in

fact a keen defender of certain forms of authority and domination. As Peter Kropotkin noted, the *“modern Individualism initiated by Herbert Spencer is, like the critical theory of Proudhon, a powerful indictment against the dangers and wrongs of government, but its practical solution of the social problem is miserable — so miserable as to lead us to inquire if the talk of ‘No force’ be merely an excuse for supporting landlord and capitalist domination.”* [**Act For Yourselves**, p. 98]

To defend the “freedom” of property owners is to defend authority and privilege — in other words, statism. So, in considering the concept of liberty as “freedom from,” it is clear that by defending private property (as opposed to possession) the “anarcho”-capitalist is defending the power and authority of property owners to govern those who use “their” property. And also, we must note, defending all the petty tyrannies that make the work lives of so many people frustrating, stressful and unrewarding.

However, anarchism, by definition, is in favour of organisations and social relationships which are non-hierarchical and non-authoritarian. Otherwise, some people are more free than others. Failing to attack hierarchy leads to massive contradiction. For example, since the British Army is a volunteer one, it is an “anarchist” organisation! (see next section for a discussion on why the “anarcho”-capitalism concept of freedom also allows the state to appear “libertarian”).

In other words, “full capitalist property rights” do not protect freedom, in fact they actively deny it. But this lack of freedom is only inevitable if we accept capitalist private property rights. If we reject them, we can try and create a world based on freedom in all aspects of life, rather than just in a few.

2.3 Can “anarcho”-capitalist theory justify the state?

Ironically enough, “anarcho”-capitalist ideology actually allows the state to be justified along with capitalist hierarchy. This is because the reason why capitalist authority is acceptable to the “anarcho”-capitalist is because it is “voluntary” — no one forces the worker to join or remain within a specific company (force of circumstances are irrelevant in this viewpoint). Thus capitalist domination is not really domination at all. But the same can be said of all democratic states as well. Few such states bar exit for its citizens — they are free to leave at any time and join any other state that will have them (exactly as employees can with companies). Of course there **are** differences between the two kinds of authority — anarchists do not deny that — but the similarities are all too clear.

The “anarcho”-capitalist could argue that changing jobs is easier than changing states and, sometimes, this is correct — but not always. Yes, changing states does require the moving of home and possessions over great distances but so can changing job (indeed, if a worker has to move half-way across a country or even the world to get a job “anarcho”-capitalists would celebrate this as an example of the benefits of a “flexible” labour market). Yes, states often conscript citizens and send them into dangerous situations but bosses often force their employees to accept dangerous working environments on pain of firing. Yes, many states do restrict freedom of association and speech, but so do bosses. Yes, states tax their citizens but landlords and companies only let others use their property if they get money in return (i.e. rent or profits). Indeed, if the employee or tenant does not provide the employer or landlord with enough profits, they will quickly

be shown the door. Of course employees can start their own companies but citizens can start their own state if they convince an existing state (the owner of a set of resources) to sell/give land to them. Setting up a company also requires existing owners to sell/give resources to those who need them. Of course, in a democratic state citizens can influence the nature of laws and orders they obey. In a capitalist company, this is not the case.

This means that, logically, “anarcho”-capitalism must consider a series of freely exitable states as “anarchist” and not a source of domination. If consent (not leaving) is what is required to make capitalist domination not domination then the same can be said of statist domination. Stephen L. Newman makes the same point:

“The emphasis [right-wing] libertarians place on the opposition of liberty and political power tends to obscure the role of authority in their worldview . . . the authority exercised in private relationships, however — in the relationship between employer and employee, for instance — meets with no objection. . . [This] reveals a curious insensitivity to the use of private authority as a means of social control. Comparing public and private authority, we might well ask of the [right-wing] libertarians: When the price of exercising one’s freedom is terribly high, what practical difference is there between the commands of the state and those issued by one’s employer? . . . Though admittedly the circumstances are not identical, telling disgruntled empowers that they are always free to leave their jobs seems no different in principle from telling political dissidents that they are free to emigrate.” [**Liberalism at Wit’s End**, pp. 45–46]

Murray Rothbard, in his own way, agrees:

*“If the State may be said too properly **own** its territory, then it is proper for it to make rules for everyone who presumes to live in that area. It can legitimately seize or control private property because there **is** no private property in its area, because it really owns the entire land surface. **So long** as the State permits its subjects to leave its territory, then, it can be said to act as does any other owner who sets down rules for people living on his property.”* [**The Ethics of Liberty**, p. 170]

Rothbard’s argues that this is **not** the case simply because the state did not acquire its property in a “just” manner and that it claims rights over virgin land (both of which violates Rothbard’s “homesteading” theory of property — see section 4.1 for details and a critique). Rothbard argues that this defence of statism (the state as property owner) is unrealistic and ahistoric, but his account of the origins of property is equally unrealistic and ahistoric and that does not stop him supporting capitalism. People in glass houses should not throw stones!

Thus he claims that the state is evil and its claims to authority/power false simply because it acquired the resources it claims to own “unjustly” — for example, by violence and coercion (see **The Ethics of Liberty**, pp. 170–1, for Rothbard’s attempt to explain why the state should not be considered as the owner of land). And even **if** the state **was** the owner of its territory, it cannot

appropriate virgin land (although, as he notes elsewhere, the “*vast*” US frontier no longer exists “*and there is no point crying over the fact*” [Op. Cit., p. 240]).

So what makes hierarchy legitimate for Rothbard is whether the property it derives from was acquired justly or unjustly. Which leads us to a few **very** important points.

Firstly, Rothbard is explicitly acknowledging the similarities between statism and capitalism. He is arguing that **if** the state had developed in a “*just*” way, then it is perfectly justifiable in governing (“*set[ting] down rules*”) those who “consent” to live on its territory in **exactly** the same way a property owner does. In other words, private property can be considered as a “justly” created state! These similarities between property and statism have long been recognised by anarchists and that is why we reject private property along with the state (Proudhon did, after all, note that “*property is despotism*” and well as “*theft*”). But, according to Rothbard, something can look like a state (i.e. be a monopoly of decision making over an area) and act like a state (i.e. set down rules for people, govern them, impose a monopoly of force) but not be a state. But if it looks like a duck and sounds like a duck, it is a duck. Claiming that the origins of the thing are what counts is irrelevant — for example, a cloned duck is just as much a duck as a naturally born one. A statist organisation is authoritarian whether it comes from “*just*” or “*unjust*” origins. Does transforming the ownership of the land from states to capitalists **really** make the relations of domination created by the dispossession of the many less authoritarian and unfree? Of course not.

Secondly, much property in “actually existing” capitalism is the product (directly or indirectly) of state laws and violence (“*the emergence of both agrarian and industrial capitalism in Britain [and elsewhere, we must add] . . . could not have got off the ground without resources to state violence — legal or otherwise*” [Brian Morris, **Ecology & Anarchism**, p. 190]). If state claims of ownership are invalid due to their history, then so are many others (particularly those which claim to own land). As the initial creation was illegitimate, so are the transactions which have sprung from it. Thus if state claims of property rights are invalid, so are most (if not all) capitalist claims. If the laws of the state are illegitimate, so are the rules of the capitalist. If taxation is illegitimate, then so are rent, interest and profit. Rothbard’s “historical” argument against the state can also be applied to private property and if the one is unjustified, then so is the other.

Thirdly, **if** the state had evolved “justly” then Rothbard would actually have nothing against it! A strange position for an anarchist to take. Logically this means that if a system of corporate states evolved from the workings of the capitalist market then the “anarcho”-capitalist would have nothing against it. This can be seen from “anarcho”-capitalist support for company towns even though they have correctly been described as “*industrial feudalism*” (see section 6 for more on this).

Fourthly, Rothbard’s argument implies that similar circumstances producing similar relationships of domination and unfreedom are somehow different if they are created by “*just*” and “*unjust*” means. Rothbard claims that because the property is “*justly*” acquired it means the authority a capitalist over his employees is totally different from that of a state over its subject. But such a claim is false — both the subject/citizen and the employee are in a similar relationship of domination and authoritarianism. As we argued in section 2.2,

how a person got into a situation is irrelevant when considering how free they are. Thus, the person who “consents” to be governed by another because all available resources are privately owned is in exactly the same situation as a person who has to join a state because all available resources are owned by one state or another. Both are unfree and are part of authoritarian relationships based upon domination.

And, lastly, while “anarcho”-capitalism may be a “just” society, it is definitely **not** a free one. It will be marked by extensive hierarchy, unfreedom and government, but these restrictions of freedom will be of a private nature. As Rothbard indicates, the property owner and the state create/share the same authoritarian relationships. If statism is unfree, then so is capitalism. And, we must add, how “just” is a system which undermines liberty. Can “justice” ever be met in a society in which one class has more power and freedom than another. If one party is in an inferior position, then they have little choice but to agree to the disadvantageous terms offered by the superior party (see section 3.1). In such a situation, a “just” outcome will be unlikely as any contract agreed will be skewed to favour one side over the other.

The implications of these points are important. We can easily imagine a situation within “anarcho”-capitalism where a few companies/people start to buy up land and form company regions and towns. After all, this **has** happened continually throughout capitalism. Thus a “natural” process may develop where a few owners start to accumulate larger and larger tracks of land “justly”. Such a process does not need to result in **one** company owning the world. It is likely that a few hundred, perhaps a few thousand, could do so. But this is not a cause for rejoicing — after all the current “market” in “unjust” states also has a few hundred competitors in it. And even if there is a large multitude of property owners, the situation for the working class is exactly the same as the citizen under current statism! Does the fact that it is “justly” acquired property that faces the worker really change the fact she must submit to the government and rules of another to gain access to the means of life?

When faced with anarchist criticisms that **circumstances** force workers to accept wage slavery the “anarcho”-capitalist claims that these are to be considered as objective facts of nature and so wage labour is not domination. However, the same can be said of states — we are born into a world where states claim to own all the available land. If states are replaced by individuals or groups of individuals does this change the essential nature of our dispossession? Of course not.

Rothbard argues that “[o]bviously, in a free society, Smith has the ultimate decision-making power over his own just property, Jones over his, etc.” [Op. Cit., p. 173] and, equally obviously, this ultimate-decision making power extends to those who **use**, but do not own, such property. But how “free” is a free society where the majority have to sell their liberty to another in order to live? Rothbard (correctly) argues that the State “uses its monopoly of force . . . to control, regulate, and coerce its hapless subjects. Often it pushes its way into controlling the morality and the very lives of its subjects.” [Op. Cit., p. 171] However he fails to note that employers do exactly the same thing to their employees. This, from an anarchist perspective, is unsurprising, for (after all) the employer **is** “the ultimate decision-making power over his just property” just as the state is over its “unjust” property. That similar forms of control and regulation develop is not a surprise given the similar hierarchical relations in

both structures.

That there is a choice in available states does not make statism any less unjust and unfree. Similarly, just because we have a choice between employers does not make wage labour any less unjust or unfree. But trying to dismiss one form of domination as flowing from “just” property while attacking the other because it flows from “unjust” property is not seeing the wood for the trees. If one reduces liberty, so does the other. Whether the situation we are in resulted from “just” or “unjust” steps is irrelevant to the restrictions of freedom we face because of them (and as we argue in section 2.5, “unjust” situations can easily flow from “just” steps).

The “anarcho”-capitalist insistence that the voluntary nature of an association determines whether it is anarchistic is deeply flawed — so flawed in fact that states and state-like structures (such as capitalist firms) can be considered anarchistic! In contrast, anarchists think that the hierarchical nature of the associations we join is equally as important as its voluntary nature when determining whether it is anarchistic or statist. However this option is not available to the “anarcho”-capitalist as it logically entails that capitalist companies are to be opposed along with the state as sources of domination, oppression and exploitation.

2.4 But surely transactions on the market are voluntary?

Of course, it is usually maintained by “anarcho”-capitalists that no-one puts a gun to a worker’s head to join a specific company. Yes, indeed, this is true — workers can apply for any job they like. But the point is that the vast majority cannot avoid having to sell their liberty to others (self-employment and co-operatives **are** an option, but they account for less than 10% of the working population and are unlikely to spread due to the nature of capitalist market forces — see sections J.5.11 and J.5.12 for details). And as Bob Black pointed out, right libertarians argue that “*‘one can at least change jobs.’ but you can’t avoid having a job — just as under statism one can at least change nationalities but you can’t avoid subjection to one nation-state or another. But freedom means more than the right to change masters.*” [The Libertarian as Conservative]

So why do workers agree to join a company? Because circumstances force them to do so — circumstances created, we must note, by **human** actions and institutions and not some abstract “fact of nature.” And if the world that humans create by their activity is detrimental to what we should value most (individual liberty and individuality) then we should consider how to **change that world for the better**. Thus “circumstances” (current “objective reality”) is a valid source of unfreedom and for human investigation and creative activity — regardless of the claims of right-Libertarians.

Let us look at the circumstances created by capitalism. Capitalism is marked by a class of dispossessed labourers who have nothing to sell by their labour. They are legally barred from access to the means of life and so have little option but to take part in the labour market. As Alexander Berkman put it:

“The law says your employer does not sell anything from you, because it is done with your consent. You have agreed to work for your boss for certain pay, he to have all that you produce . . .

“But did you really consent?”

*“When the highway man holds his gun to your head, you turn your valuables over to him. You ‘consent’ all right, but you do so because you cannot help yourself, because you are **compelled** by his gun.*

*“Are you not **compelled** to work for an employer? Your need compels you just as the highwayman’s gun. You must live... You can’t work for yourself... The factories, machinery, and tools belong to the employing class, so you **must** hire yourself out to that class in order to work and live. Whatever you work at, whoever your employer may be, it is always comes to the same: you must work **for him**. You can’t help yourself. You are **compelled**.” [What is Communist Anarchism?, p. 9]*

Due to this class monopoly over the means of life, workers (usually) are at a disadvantage in terms of bargaining power — there are more workers than jobs (see sections B.4.3 and 10.2 for a discussion why this is the normal situation on the labour market).

As was indicated in section B.4 (How does capitalism affect liberty?), within capitalism there is no equality between owners and the dispossessed, and so property is a source of **power**. To claim that this power should be “left alone” or is “fair” is *“to the anarchists... preposterous. Once a State has been established, and most of the country’s capital privatised, the threat of physical force is no longer necessary to coerce workers into accepting jobs, even with low pay and poor conditions. To use Ayn Rand’s term, ‘initial force’ has **already taken place**, by those who now have capital against those who do not... In other words, if a thief died and willed his ‘ill-gotten gain’ to his children, would the children have a right to the stolen property? Not legally. So if ‘property is theft,’ to borrow Proudhon’s quip, and the fruit of exploited labour is simply legal theft, then the only factor giving the children of a deceased capitalist a right to inherit the ‘booty’ is the law, the State. As Bakunin wrote, ‘Ghosts should not rule and oppress this world, which belongs only to the living’”* [Jeff Draughn, **Between Anarchism and Libertarianism**].

Or, in other words, right-Libertarianism fails to *“meet the charge that normal operations of the market systematically places an entire class of persons (wage earners) in circumstances that compel them to accept the terms and conditions of labour dictated by those who offer work. While it is true that individuals are formally free to seek better jobs or withhold their labour in the hope of receiving higher wages, in the end their position in the market works against them; they cannot live if they do not find employment. When circumstances regularly bestow a relative disadvantage on one class of persons in their dealings with another class, members of the advantaged class have little need of coercive measures to get what they want.”* [Stephen L. Newman, **Liberalism at Wit’s End**, p. 130]

To ignore the circumstances which drive people to seek out the most “beneficial exchange” is to blind yourself to the power relationships inherent within capitalism — power relationships created by the unequal bargaining power of the parties involved (also see section 3.1). And to argue that “consent” ensures freedom is false; if you are “consenting” to be join a dictatorial organisation, you “consent” **not** to be free (and to paraphrase Rousseau, a person who renounces freedom renounces being human).

Which is why circumstances are important — if someone truly wants to join an authoritarian organisation, then so be it. It is their life. But if circumstances ensure their “consent” then they are not free. The danger is, of course, that people become **accustomed** to authoritarian relationships and end up viewing them as forms of freedom. This can be seen from the state, which the vast majority support and “consent” to. And this also applies to wage labour, which many workers today accept as a “necessary evil” (like the state) but, as we indicate in section 8.6, the first wave of workers viewed with horror as a form of (wage) slavery and did all that they could to avoid. In such situations all we can do is argue with them and convince them that certain forms of organisations (such as the state and capitalist firms) are an evil and urge them to change society to ensure their extinction.

So due to this lack of appreciation of circumstances (and the fact that people become accustomed to certain ways of life) “anarcho”-capitalism actively supports structures that restrict freedom for the many. And how is “anarcho”-capitalism **anarchist** if it generates extensive amounts of archy? It is for this reason that all anarchists support self-management within free association — that way we maximise freedom both inside **and** outside organisations. But only stressing freedom outside organisations, “anarcho”-capitalism ends up denying freedom as such (after all, we spend most of our waking hours at work). If “anarcho”-capitalists **really** desired freedom, they would reject capitalism and become anarchists — only in a libertarian socialist society would agreements to become a wage worker be truly voluntary as they would not be driven by circumstances to sell their liberty.

This means that while right-Libertarianism appears to make “choice” an ideal (which sounds good, liberating and positive) in practice it has become a “dismal politics,” a politics of choice where most of the choices are bad. And, to state the obvious, the choices we are “free” to make are shaped by the differences in wealth and power in society (see section 3.1) as well as such things as “isolation paradoxes” (see section B.6) and the laws and other human institutions that exist. If we ignore the context within which people make their choices then we glorify abstract processes at the expense of real people. And, as importantly, we must add that many of the choices we make under capitalism (shaped as they are by the circumstances within which they are made), such as employment contracts, result in our “choice” being narrowed to “love it or leave it” in the organisations we create/join as a result of these “free” choices.

This ideological blind spot flows from the “anarcho”-capitalist definition of “freedom” as “absence of coercion” — as workers “freely consent” to joining a specific workplace, their freedom is unrestricted. But to defend **only** “freedom from” in a capitalist society means to defend the power and authority of the few against the attempts of the many to claim their freedom and rights. To requote Emma Goldman, “*Rugged individualism*’ has meant all the ‘individualism’ for the masters . . . , in whose name political tyranny and social oppression are defended and held up as virtues’ while every aspiration and attempt of man to gain freedom . . . is denounced as . . . evil in the name of that same individualism.” [Red Emma Speaks, p. 112]

In other words, its all fine and well saying (as right-libertarians do) that you aim to abolish force from human relationships but if you support an economic system which creates hierarchy (and so domination and oppression) by its very workings, “defensive” force will always be required to maintain and enforce that

domination. Moreover, if one class has extensive power over another due to the systematic (and normal) workings of the market, any force used to defend that power is **automatically** “defensive”. Thus to argue against the use of force and ignore the power relationships that exist within and shape a society (and so also shape the individuals within it) is to defend and justify capitalist and landlord domination and denounce any attempts to resist that domination as “initiation of force.”

Anarchists, in contrast, oppose **hierarchy** (and so domination within relationships — bar S&M personal relationships, which are a totally different thing altogether; they are truly voluntary and they also do not attempt to hide the power relationships involved by using economic jargon). This opposition, while also including opposition to the use of force against equals (for example, anarchists are opposed to forcing workers and peasants to join a self-managed commune or syndicate), also includes support for the attempts of those subject to domination to end it (for example, workers striking for union recognition are not “initiating force”, they are fighting for their freedom).

In other words, apparently “voluntary” agreements can and do limit freedom and so the circumstances that drive people into them **must** be considered when deciding whether any such limitation is valid. By ignoring circumstances, “anarcho”-capitalism ends up by failing to deliver what it promises — a society of free individuals — and instead presents us with a society of masters and servants. The question is, what do we feel moved to insist that people enjoy? Formal, abstract (bourgeois) self-ownership (“freedom”) or a more substantive control over one’s life (i.e. autonomy)?

2.5 But surely circumstances are the result of liberty and so cannot be objected to?

It is often argued by right-libertarians that the circumstances we face within capitalism are the result of individual decisions (i.e. individual liberty) and so we must accept them as the expressions of these acts (the most famous example of this argument is in Nozick’s **Anarchy, State, and Utopia** pp. 161–163 where he maintains that “*liberty upsets patterns*”). This is because whatever situation evolves from a just situation by just (i.e. non-coercive steps) is also (by definition) just.

However, it is not apparent that adding just steps to a just situation will result in a just society. We will illustrate with a couple of banal examples. If you add chemicals which are non-combustible together you can create a new, combustible, chemical (i.e. X becomes not-X by adding new X to it). Similarly, if you have an odd number and add another odd number to it, it becomes even (again, X becomes not-X by adding a new X to it). So it **is** very possible to go from a just state to an unjust state by just step (and it is possible to remain in an unjust state by just acts; for example if we tried to implement “anarcho”-capitalism on the existing — unjustly created — situation of “actually existing” capitalism it would be like having an odd number and adding even numbers to it). In other words, the outcome of “just” steps can increase inequality within society and so ensure that some acquire an unacceptable amount of power over others, via their control over resources. Such an inequality of power would create an “unjust” situation where the major are free to sell their liberty to others due to inequality in power and resources on the “free” market.

Ignoring this objection, we could argue (as many “anarcho”-capitalists and right-libertarians do) that the unforeseen results of human action are fine unless we assume that these human actions are in themselves bad (i.e. that individual choice is evil).

Such an argument is false for three reasons.

First, when we make our choices the aggregate impact of these choices are unknown to us — and not on offer when we make our choices. Thus we cannot be said to “choose” these outcomes, outcomes which we may consider deeply undesirable, and so the fact that these outcomes are the result of individual choices is besides the point (if we knew the outcome we could refrain from doing them). The choices themselves, therefore, do not validate the outcome as the outcome was not part of the choices when they were made (i.e. the means do not justify the ends). In other words, private acts often have important public consequences (and “bilateral exchanges” often involve externalities for third parties). Secondly, if the outcome of individual choices is to deny or restrict individual choice on a wider scale at a later stage, then we are hardly arguing that individual choice is a bad thing. We want to arrange it so that the decisions we make now do not result in them restricting our ability to make choices in important areas of life at a latter stage. Which means we are in favour of individual choices and so liberty, not against them. Thirdly, the unforeseen or unplanned results of individual actions are not necessarily a good thing. If the aggregate outcome of individual choices harms individuals then we have a right to modify the circumstances within which choices are made and/or the aggregate results of these choices.

An example will show what we mean (again drawn from Haworth’s excellent **Anti-Libertarianism**, p. 35). Millions of people across the world bought deodorants which caused a hole to occur in the ozone layer surrounding the Earth. The resultant of these acts created a situation in which individuals and the eco-system they inhabited were in great danger. The actual acts themselves were by no means wrong, but the aggregate impact was. A similar argument can apply to any form of pollution. Now, unless the right-Libertarian argues that skin cancer or other forms of pollution related illness are fine, its clear that the resultant of individual acts can be harmful to individuals.

The right-Libertarian could argue that pollution is an “initiation of force” against an individual’s property-rights in their person and so individuals can sue the polluters. But hierarchy also harms the individual (see section B.1) — and so can be considered as an infringement of their “property-rights” (i.e. liberty, to get away from the insane property fetish of right-Libertarianism). The loss of autonomy can be just as harmful to an individual as lung cancer although very different in form. And the differences in wealth resulting from hierarchy is well known to have serious impacts on life-span and health.

As noted in section 2.1, the market is just as man-made as pollution. This means that the “circumstances” we face are due to aggregate of millions of individual acts and these acts occur within a specific framework of rights, institutions and ethics. Anarchists think that a transformation of our society and its rights and ideals is required so that the resultant of individual choices does not have the ironic effect of limiting individual choice (freedom) in many important ways (such as in work, for example).

In other words, the **circumstances** created by capitalist rights and institutions requires a **transformation** of these rights and institutions in such a

way as to maximise individual choice for all — namely, to abolish these rights and replace them with new ones (for example, replace property rights with use rights). Thus Nozick’s claims that “*Z does choose voluntarily if the other individuals A through Y each acted voluntarily and within their rights*” [Op. Cit., p. 263] misses the point — it is these rights that are in question (given that Nozick **assumes** these rights then his whole thesis is begging the question).

And we must add (before anyone points it out) that, yes, we are aware that many decisions will unavoidably limit current and future choices. For example, the decision to build a factory on a green-belt area will make it impossible for people to walk through the woods that are no longer there. But such “limitations” (if they can be called that) of choice are different from the limitations we are highlighting here, namely the lose of freedom that accompanies the circumstances created via exchange in the market. The human actions which build the factory modify reality but do not generate social relationships of domination between people in so doing. The human actions of market exchange, in contrast, modify the relative strengths of everyone in society and so has a distinct impact on the social relationships we “voluntarily” agree to create. Or, to put it another way, the decision to build on the green-belt site does “limit” choice in the abstract but it does **not** limit choice in the kind of relationships we form with other people nor create authoritarian relationships between people due to inequality influencing the content of the associations we form. However, the profits produced from using the factory increases inequality (and so market/economic power) and so weakens the position of the working class in respect to the capitalist class within society. This increased inequality will be reflected in the “free” contracts and working regimes that are created, with the weaker “trader” having to compromise far more than before.

So, to try and defend wage slavery and other forms of hierarchy by arguing that “circumstances” are created by individual liberty runs aground on its own logic. If the circumstances created by individual liberty results in pollution then the right-Libertarian will be the first to seek to change those circumstances. They recognise that the right to pollute while producing is secondary to our right to be healthy. Similarly, if the circumstances created by individual liberty results in hierarchy (pollution of the mind and our relationships with others as opposed to the body, although it affects that to) then we are entitled to change these circumstances too and the means by which we get there (namely the institutional and rights framework of society). Our right to liberty is more important than the rights of property — sadly, the right-Libertarian refuses to recognise this.

2.6 Do Libertarian-capitalists support slavery?

Yes. It may come as a surprise to many people, but right-Libertarianism is one of the few political theories that justifies slavery. For example, Robert Nozick asks whether “*a free system would allow [the individual] to sell himself into slavery*” and he answers “*I believe that it would.*” [Anarchy, State and Utopia, p. 371] While some right-Libertarians do not agree with Nozick, there is no logical basis in their ideology for such disagreement.

The logic is simple, you cannot really own something unless you can sell it. Self-ownership is one of the cornerstones of laissez-faire capitalist ideology. Therefore, since you own yourself you can sell yourself.

(For Murray Rothbard's claims of the "*unenforceability, in libertarian theory, of voluntary slave contracts*" see **The Ethics of Liberty**, pp. 134–135 — of course, **other** libertarian theorists claim the exact opposite so "*libertarian theory*" makes no such claims, but nevermind! Essentially, his point revolves around the assertion that a person "*cannot, in nature, sell himself into slavery and have this sale enforced — for this would mean that his future will over his own body was being surrendered in advance*" and that if a "*labourer remains totally subservient to his master's will voluntarily, he is not yet a slave since his submission is voluntary.*" [p. 40] However, as we noted in section 2, Rothbard emphasis on quitting fails to recognise that actual denial of will and control over ones own body that is explicit in wage labour. It is this failure that pro-slave contract "libertarians" stress — as we will see, they consider the slave contract as an extended wage contract. Moreover, a modern slave contract would likely take the form of a "*performance bond*" [p. 136] in which the slave agrees to perform X years labour or pay their master substantial damages. The threat of damages that enforces the contract and such a "contract" Rothbard does agree is enforceable — along with "*conditional exchange*" [p. 141] which could be another way of creating slave contracts.)

Nozick's defence of slavery should not come as a surprise to any one familiar with classical liberalism. An elitist ideology, its main rationale is to defend the liberty and power of property owners and justify unfree social relationships (such as government and wage labour) in terms of "consent." Nozick just takes it to its logical conclusion, a conclusion which Rothbard, while balking at the label used, does not actually disagree with.

This is because Nozick's argument is not new but, as with so many others, can be found in John Locke's work. The key difference is that Locke refused the term "*slavery*" and favoured "*drudgery*" as, for him, slavery mean a relationship "*between a lawful conqueror and a captive*" where the former has the power of life and death over the latter. Once a "*compact*" is agreed between them, "*an agreement for a limited power on the one side, and obedience on the other . . . slavery ceases.*" As long as the master could not kill the slave, then it was "*drudgery.*" Like Nozick, he acknowledges that "*men did sell themselves; but, it is plain, this was only to drudgery, not to slavery: for, it is evident, the person sold was not under an absolute, arbitrary, despotic power: for the master could not have power to kill him, at any time, whom, at a certain time, he was obliged to let go free out of his service.*" [Locke, **Second Treatise of Government**, Section 24] In other words, like Rothbard, voluntary slavery was fine but just call it something else.

Not that Locke was bothered by involuntary slavery. He was heavily involved in the slave trade. He owned shares in the "Royal Africa Company" which carried on the slave trade for England, making a profit when he sold them. He also held a significant share in another slave company, the "Bahama Adventurers." In the "*Second Treatise*", Locke justified slavery in terms of "*Captives taken in a just war.*" [Section 85] In other words, a war waged against aggressors. That, of course, had nothing to do with the **actual** slavery Locke profited from (slave raids were common, for example). Nor did his "liberal" principles stop him suggesting a constitution that would ensure that "*every freeman of Carolina shall have absolute power and authority over his Negro slaves.*" The constitution itself was typically autocratic and hierarchical, designed explicitly to "*avoid erecting a numerous democracy.*" [**The Works of John Locke**, vol. X, p. 196]

So the notion of contractual slavery has a long history within right-wing liberalism, although most refuse to call it by that name. It is of course simply embarrassment that stops Rothbard calling a spade a spade. He incorrectly assumes that slavery has to be involuntary. In fact, historically, voluntary slave contracts have been common (David Ellerman's **Property and Contract in Economics** has an excellent overview). Any new form of voluntary slavery would be a "civilised" form of slavery and could occur when an individual would "agree" to sell themselves to themselves to another (as when a starving worker would "agree" to become a slave in return for food). In addition, the contract would be able to be broken under certain conditions (perhaps in return for breaking the contract, the former slave would have pay damages to his or her master for the labour their master would lose — a sizeable amount no doubt and such a payment could result in debt slavery, which is the most common form of "civilised" slavery. Such damages may be agreed in the contract as a "performance bond" or "conditional exchange").

In summary, right-Libertarians are talking about "civilised" slavery (or, in other words, civil slavery) and not forced slavery. While some may have reservations about calling it slavery, they agree with the basic concept that since people own themselves they can sell themselves as well as selling their labour for a lifetime.

We must stress that this is no academic debate. "Voluntary" slavery has been a problem in many societies and still exists in many countries today (particularly third world ones where bonded labour — i.e. where debt is used to enslave people — is the most common form). With the rise of sweat shops and child labour in many "developed" countries such as the USA, "voluntary" slavery (perhaps via debt and bonded labour) may become common in all parts of the world — an ironic (if not surprising) result of "freeing" the market and being indifferent to the actual freedom of those within it.

And it is interesting to note that even Murray Rothbard is not against the selling of humans. He argued that children are the property of their parents. They can (bar actually murdering them by violence) do whatever they please with them, even sell them on a "*flourishing free child market.*" [**The Ethics of Liberty**, p. 102] Combined with a whole hearted support for child labour (after all, the child can leave its parents if it objects to working for them) such a "free child market" could easily become a "child slave market" — with entrepreneurs making a healthy profit selling infants to other entrepreneurs who could make profits from the toil of "their" children (and such a process did occur in 19th century Britain). Unsurprisingly, Rothbard ignores the possible nasty aspects of such a market in human flesh (such as children being sold to work in factories, homes and brothels). And, of course, such a market could see women "specialising" in producing children for it (the use of child labour during the Industrial Revolution actually made it economically sensible for families to have more children) and, perhaps, gluts and scarcities of babies due to changing market conditions. But this is besides the point.

Of course, this theoretical justification for slavery at the heart of an ideology calling itself "libertarianism" is hard for many right-Libertarians to accept. Some of the "anarcho"-capitalist type argue that such contracts would be very hard to enforce in their system of capitalism. This attempt to get out of the contradiction fails simply because it ignores the nature of the capitalist market. If there is a demand for slave contracts to be enforced, then companies will

develop to provide that “service” (and it would be interesting to see how two “protection” firms, one defending slave contracts and another not, could compromise and reach a peaceful agreement over whether slave contracts were valid). Thus we could see a so-called “anarchist” or “free” society producing companies whose specific purpose was to hunt down escaped slaves (i.e. individuals in slave contracts who have not paid damages to their owners for freedom). Of course, perhaps Rothbard would claim that such slave contracts would be “outlawed” under his “general libertarian law code” but this is a denial of market “freedom”. If slave contracts **are** “banned” then surely this is paternalism, stopping individuals from contracting out their “labour services” to whom and however long they “desire”. You cannot have it both ways.

So, ironically, an ideology proclaiming itself to support “liberty” ends up justifying and defending slavery. Indeed, for the right-libertarian the slave contract is an exemplification, not the denial, of the individual’s liberty! How is this possible? How can slavery be supported as an expression of liberty? Simple, right-Libertarian support for slavery is a symptom of a **deeper** authoritarianism, namely their uncritical acceptance of contract theory. The central claim of contract theory is that contract is the means to secure and enhance individual freedom. Slavery is the antithesis to freedom and so, in theory, contract and slavery must be mutually exclusive. However, as indicated above, some contract theorists (past and present) have included slave contracts among legitimate contracts. This suggests that contract theory cannot provide the theoretical support needed to secure and enhance individual freedom. Why is this?

As Carole Pateman argues, “*contract theory is primarily about a way of creating social relations constituted by subordination, not about exchange.*” Rather than undermining subordination, contract theorists justify modern subjection — “*contract doctrine has proclaimed that subjection to a master — a boss, a husband — is freedom.*” [**The Sexual Contract**, p. 40 and p. 146] The question central to contract theory (and so right-Libertarianism) is not “are people free” (as one would expect) but “are people free to subordinate themselves in any manner they please.” A radically different question and one only fitting to someone who does not know what liberty means.

Anarchists argue that not all contracts are legitimate and no free individual can make a contract that denies his or her own freedom. If an individual is able to express themselves by making free agreements then those free agreements must also be based upon freedom internally as well. Any agreement that creates domination or hierarchy negates the assumptions underlying the agreement and makes itself null and void. In other words, voluntary government is still government and the defining characteristic of an anarchy must be, surely, “no government” and “no rulers.”

This is most easily seen in the extreme case of the slave contract. John Stuart Mill stated that such a contract would be “null and void.” He argued that an individual may voluntarily choose to enter such a contract but in so doing “*he abdicates his liberty; he foregoes any future use of it beyond that single act. He therefore defeats, in his own case, the very purpose which is the justification of allowing him to dispose of himself. . . The principle of freedom cannot require that he should be free not to be free. It is not freedom, to be allowed to alienate his freedom.*” He adds that “*these reasons, the force of which is so conspicuous in this particular case, are evidently of far wider application.*” [quoted by Pateman,

Op. Cit., pp. 171–2]

And it is such an application that defenders of capitalism fear (Mill did in fact apply these reasons wider and unsurprisingly became a supporter of a market syndicalist form of socialism). If we reject slave contracts as illegitimate then, logically, we must also reject **all** contracts that express qualities similar to slavery (i.e. deny freedom) including wage slavery. Given that, as David Ellerman points out, “*the voluntary slave . . . and the employee cannot in fact take their will out of their intentional actions so that they could be ‘employed’ by the master or employer*” we are left with “*the rather implausible assertion that a person can vacate his or her will for eight or so hours a day for weeks, months, or years on end but cannot do so for a working lifetime.*” [**Property and Contract in Economics**, p. 58]

The implications of supporting voluntary slavery is quite devastating for all forms of right-wing “libertarianism.” This was proven by Ellerman when he wrote an extremely robust defence of it under the pseudonym “J. Philmore” called **The Libertarian Case for Slavery** (first published in **The Philosophical Forum**, xiv, 1982). This classic rebuttal takes the form of “proof by contradiction” (or **reductio ad absurdum**) whereby he takes the arguments of right-libertarianism to their logical end and shows how they reach the memorably conclusion that the “*time has come for liberal economic and political thinkers to stop dodging this issue and to critically re-examine their shared prejudices about certain voluntary social institutions . . . this critical process will inexorably drive liberalism to its only logical conclusion: libertarianism that finally lays the true moral foundation for economic and political slavery.*”

Ellerman shows how, from a right-“libertarian” perspective there is a “*fundamental contradiction*” in a modern liberal society for the state to prohibit slave contracts. He notes that there “*seems to be a basic shared prejudice of liberalism that slavery is inherently involuntary, so the issue of genuinely voluntary slavery has received little scrutiny. The perfectly valid liberal argument that involuntary slavery is inherently unjust is thus taken to include voluntary slavery (in which case, the argument, by definition, does not apply). This has resulted in an abridgment of the freedom of contract in modern liberal society.*” Thus it is possible to argue for a “*civilised form of contractual slavery.*” [“J. Philmore,” **Op. Cit.**]

So accurate and logical was Ellerman’s article that many of its readers were convinced it **was** written by a right-libertarian (including, we have to say, us!). One such writer was Carole Pateman, who correctly noted that “[t]here is a nice historical irony here. In the American South, slaves were emancipated and turned into wage labourers, and now American contractarians argue that all workers should have the opportunity to turn themselves into civil slaves.” [**Op. Cit.**, p. 63].

The aim of Ellerman’s article was to show the problems that employment (wage labour) presents for the concept of self-government and how contract need not result in social relationships based on freedom. As “Philmore” put it, “[a]ny thorough and decisive critique of voluntary slavery or constitutional nondemocratic government would carry over to the employment contract — which is the voluntary contractual basis for the free-market free-enterprise system. Such a critique would thus be a **reductio ad absurdum.**” As “contractual slavery” is an “*extension of the employer-employee contract,*” he shows that the difference between wage labour and slavery is the time scale rather than the principle

or social relationships involved. [Op. Cit.] This explains, firstly, the early workers' movement called capitalism "*wage slavery*" (anarchists still do) and, secondly, why capitalists like Rothbard support the concept but balk at the name. It exposes the unfree nature of the system they support! While it is possible to present wage labour as "freedom" due to its "consensual" nature, it becomes much harder to do so when talking about slavery or dictatorship. Then the contradictions are exposed for all to see and be horrified by.

All this does not mean that we must reject free agreement. Far from it! Free agreement is **essential** for a society based upon individual dignity and liberty. There are a variety of forms of free agreement and anarchists support those based upon co-operation and self-management (i.e. individuals working together as equals). Anarchists desire to create relationships which reflect (and so express) the liberty that is the basis of free agreement. Capitalism creates relationships that deny liberty. The opposition between autonomy and subjection can only be maintained by modifying or rejecting contract theory, something that capitalism cannot do and so the right-wing Libertarian rejects autonomy in favour of subjection (and so rejects socialism in favour of capitalism).

The real contrast between anarchism and right-Libertarianism is best expressed in their respective opinions on slavery. Anarchism is based upon the individual whose individuality depends upon the maintenance of free relationships with other individuals. If individuals deny their capacities for self-government from themselves through a contract the individuals bring about a qualitative change in their relationship to others — freedom is turned into mastery and subordination. For the anarchist, slavery is thus the paradigm of what freedom is **not**, instead of an exemplification of what it is (as right-Libertarians state). As Proudhon argued:

"If I were asked to answer the following question: What is slavery? and I should answer in one word, It is murder, my meaning would be understood at once. No extended argument would be required to show that the power to take from a man his thought, his will, his personality, is a power of life and death; and that to enslave a man is to kill him." [What is Property?, p. 37]

In contrast, the right-Libertarian effectively argues that "I support slavery because I believe in liberty." It is a sad reflection of the ethical and intellectual bankruptcy of our society that such an "argument" is actually taken seriously by (some) people. The concept of "slavery as freedom" is far too Orwellian to warrant a critique — we will leave it up to right Libertarians to corrupt our language and ethical standards with an attempt to prove it.

From the basic insight that slavery is the opposite of freedom, the anarchist rejection of authoritarian social relations quickly follows (the right-wing Libertarians fear):

"Liberty is inviolable. I can neither sell nor alienate my liberty; every contract, every condition of a contract, which has in view the alienation or suspension of liberty, is null: the slave, when he plants his foot upon the soil of liberty, at that moment becomes a free man. . . Liberty is the original condition of man; to renounce liberty is to renounce the nature of man: after that, how could we perform the acts of man?" [P.J. Proudhon, Op. Cit., p. 67]

The employment contract (i.e. wage slavery) abrogates liberty. It is based upon inequality of power and “*exploitation is a consequence of the fact that the sale of labour power entails the worker’s subordination.*” [Carole Pateman, **Op. Cit.**, P. 149] Hence Proudhon’s (and Mill’s) support of self-management and opposition to capitalism — any relationship that resembles slavery is illegitimate and no contract that creates a relationship of subordination is valid. Thus in a truly anarchistic society, slave contracts would be unenforceable — people in a truly free (i.e. non-capitalist) society would **never** tolerate such a horrible institution or consider it a valid agreement. If someone was silly enough to sign such a contract, they would simply have to say they now rejected it in order to be free — such contracts are made to be broken and without the force of a law system (and private defence firms) to back it up, such contracts will stay broken.

The right-Libertarian support for slave contracts (and wage slavery) indicates that their ideology has little to do with liberty and far more to do with justifying property and the oppression and exploitation it produces. Their support and theoretical support for slavery indicates a deeper authoritarianism which negates their claims to be libertarians.

2.7 But surely abolishing capitalism would restrict liberty?

Many “anarcho”-capitalists and other supporters of capitalism argue that it would be “authoritarian” to restrict the number of alternatives that people can choose between by abolishing capitalism. If workers become wage labourers, so it is argued, it is because they “value” other things more — otherwise they would not agree to the exchange. But such an argument ignores that reality of capitalism.

By **maintaining** capitalist private property, the options available to people **are** restricted. In a fully developed capitalist economy the vast majority have the “option” of selling their labour or starving/living in poverty — self-employed workers account for less than 10% of the working population. Usually, workers are at a disadvantage on the labour market due to the existence of unemployment and so accept wage labour because otherwise they would starve (see section 10.2 for a discussion on why this is the case). And as we argue in sections J.5.11 and J.5.12, even **if** the majority of the working population desired co-operative workplaces, a capitalist market will not provide them with that outcome due to the nature of the capitalist workplace (also see Juliet C. Schor’s excellent book **The Overworked American** for a discussion of why workers desire for more free time is not reflected in the labour market). In other words, it is a myth to claim that wage labour exists or that workplaces are hierarchical because workers value other things — they are hierarchical because bosses have more clout on the market than workers and, to use Schor’s expression, workers end up wanting what they get rather than getting what they want.

Looking at the reality of capitalism we find that because of inequality in resources (protected by the full might of the legal system, we should note) those with property get to govern those without it during working hours (and beyond in many cases). If the supporters of capitalism were actually concerned about liberty (as opposed to property) that situation would be abhorrent to them — after all, individuals can no longer exercise their ability to make decisions, choices, and are reduced to being order takers. If choice and liberty are

the things we value, then the ability to make choices in all aspects of life automatically follows (including during work hours). However, the authoritarian relationships and the continual violation of autonomy wage labour implies are irrelevant to “anarcho”-capitalists (indeed, attempts to change this situation are denounced as violations of the autonomy of the property owner!). By purely concentrating on the moment that a contract is signed they blind themselves to the restricts of liberty that wage contracts create.

Of course, anarchists have no desire to **ban** wage labour — we aim to create a society within which people are not forced by circumstances to sell their liberty to others. In order to do this, anarchists propose a modification of property and property rights to ensure true freedom of choice (a freedom of choice denied to us by capitalism). As we have noted many times, “bilateral exchanges” can and do adversely effect the position of third parties if they result in the build-up of power/money in the hands of a few. And one of these adverse effects can be the restriction of workers options due to economic power. Therefore it is the supporter of capitalist who restricts options by supporting an economic system and rights framework that by their very workings reduce the options available to the majority, who then are “free to choose” between those that remain (see also section B.4). Anarchists, in contrast, desire to expand the available options by abolishing capitalist private property rights and removing inequalities in wealth and power that help restrict our options and liberties artificially.

So does an anarchist society have much to fear from the spread of wage labour within it? Probably not. If we look at societies such as the early United States or the beginnings of the Industrial Revolution in Britain, for example, we find that, given the choice, most people preferred to work for themselves. Capitalists found it hard to find enough workers to employ and the amount of wages that had to be offered to hire workers were so high as to destroy any profit margins. Moreover, the mobility of workers and their “laziness” was frequently commented upon, with employers despairing at the fact workers would just work enough to make end meet and then disappear. Thus, left to the actions of the “free market,” it is doubtful that wage labour would have spread. But it was not left to the “free market”.

In response to these “problems”, the capitalists turned to the state and enforced various restrictions on society (the most important being the land, tariff and money monopolies — see sections B.3 and 8). In free competition between artisan and wage labour, wage labour only succeeded due to the use of state action to create the required circumstances to discipline the labour force and to accumulate enough capital to give capitalists an edge over artisan production (see section 8 for more details).

Thus an anarchist society would not have to fear the spreading of wage labour within it. This is simply because would-be capitalists (like those in the early United States) would have to offer such excellent conditions, workers’ control and high wages as to make the possibility of extensive profits from workers’ labour nearly impossible. Without the state to support them, they will not be able to accumulate enough capital to give them an advantage within a free society. Moreover, it is somewhat ironic to hear capitalists talking about anarchism denying choice when we oppose wage labour considering the fact workers were not given any choice when the capitalists used the state to develop wage labour in the first place!

2.8 Why should we reject the “anarcho”-capitalist definitions of freedom and justice?

Simply because they lead to the creation of authoritarian social relationships and so to restrictions on liberty. A political theory which, when consistently followed, has evil or iniquitous consequences, is a bad theory.

For example, any theory that can justify slavery is obviously a bad theory — slavery does not cease to stink the moment it is seen to follow your theory. As right-Libertarians can justify slave contracts as a type of wage labour (see section 2.6) as well as numerous other authoritarian social relationships, it is obviously a bad theory.

It is worth quoting Noam Chomsky at length on this subject:

“Consider, for example, the ‘entitlement theory of justice’... [a]ccording to this theory, a person has a right to whatever he has acquired by means that are just. If, by luck or labour or ingenuity, a person acquires such and such, then he is entitled to keep it and dispose of it as he wills, and a just society will not infringe on this right.

“One can easily determine where such a principle might lead. It is entirely possible that by legitimate means — say, luck supplemented by contractual arrangements ‘freely undertaken’ under pressure of need — one person might gain control of the necessities of life. Others are then free to sell themselves to this person as slaves, if he is willing to accept them. Otherwise, they are free to perish. Without extra question-begging conditions, the society is just.

*“The argument has all the merits of a proof that $2 + 2 = 5$. . . Suppose that some concept of a ‘just society’ is advanced that fails to characterise the situation just described as unjust. . . Then one of two conclusions is in order. We may conclude that the concept is simply unimportant and of no interest as a guide to thought or action, since it fails to apply properly even in such an elementary case as this. Or we may conclude that the concept advanced is to be dismissed in that it fails to correspond to the pretheoretical notion that it intends to capture in clear cases. If our intuitive concept of justice is clear enough to rule social arrangements of the sort described as grossly unjust, then the sole interest of a demonstration that this outcome might be ‘just’ under a given ‘theory of justice’ lies in the inference by **reductio ad absurdum** to the conclusion that the theory is hopelessly inadequate. While it may capture some partial intuition regarding justice, it evidently neglects others.*

“The real question to be raised about theories that fail so completely to capture the concept of justice in its significant and intuitive sense is why they arouse such interest. Why are they not simply dismissed out of hand on the grounds of this failure, which is striking in clear cases? Perhaps the answer is, in part, the one given by Edward Greenberg in a discussion of some recent work on the entitlement theory of justice. After reviewing empirical and conceptual shortcomings, he observes that such work ‘plays an important function in the process of . . . ‘blaming the victim,’ and of protecting property

against egalitarian onslaughts by various non-propertied groups.’ An ideological defence of privileges, exploitation, and private power will be welcomed, regardless of its merits.

“These matters are of no small importance to poor and oppressed people here and elsewhere.” [The Chomsky Reader, pp. 187–188]

It may be argued that the reductions in liberty associated with capitalism is not really an iniquitous outcome, but such an argument is hardly fitting for a theory proclaiming itself “libertarian.” And the results of these authoritarian social relationships? To quote Adam Smith, under the capitalist division of labour the worker “has no occasion to exert his understanding, or exercise his invention” and “he naturally loses, therefore, the habit of such exercise and generally becomes as stupid and ignorant as it is possible for a human creature to become.” The worker’s mind falls “into that drowsy stupidity, which, in a civilised society, seems to benumb the understanding of almost all of the inferior [sic!] ranks of people.” [cited by Chomsky, **Op. Cit.**, p. 186]

Of course, it may be argued that these evil effects of capitalist authority relations on individuals are also not iniquitous (or that the very real domination of workers by bosses is not really domination) but that suggests a desire to sacrifice real individuals, their hopes and dreams and lives to an abstract concept of liberty, the accumulative effect of which would be to impoverish all our lives. The kind of relationships we create **within** the organisations we join are of as great an importance as their voluntary nature. Social relations **shape** the individual in many ways, restricting their freedom, their perceptions of what freedom is and what their interests actually are. This means that, in order not to be farcical, any relationships we create must reflect in their internal workings the critical evaluation and self-government that created them in the first place. Sadly capitalist individualism masks structures of power and relations of domination and subordination within seemingly “voluntary” associations — it fails to note the relations of domination resulting from private property and so “what has been called ‘individualism’ up to now has been only a foolish egoism which belittles the individual. Foolish because it was not individualism at all. It did not lead to what was established as a goal; that is the complete, broad, and most perfectly attainable development of individuality.” [Peter Kropotkin, **Selected Writings**, p. 297]

This right-Libertarian lack of concern for concrete individual freedom and individuality is a reflection of their support for “free markets” (or “economic liberty” as they sometimes phrase it). However, as Max Stirner noted, this fails to understand that “[p]olitical liberty means that the **polis**, the State, is free; . . . not, therefore, that I am free of the State. . . It does not mean **my** liberty, but the liberty of a power that rules and subjugates me; it means that one of my **despots** . . . is free.” [The Ego and Its Own, p. 107] Thus the desire for “free markets” results in a blindness that while the market may be “free” the individuals within it may not be (as Stirner was well aware, “[u]nder the **regime** of the commonality the labourers always fall into the hands of the possessors . . . of the capitalists, therefore.” [Op. Cit., p. 115])

In other words, right-libertarians give the greatest importance to an abstract concept of freedom and fail to take into account the fact that real, concrete freedom is the outcome of self-managed activity, solidarity and voluntary co-operation. For liberty to be real it must exist in all aspects of our daily life

and cannot be contracted away without seriously effecting our minds, bodies and lives. Thus, the right-Libertarian's "*defence of freedom is undermined by their insistence on the concept of negative liberty, which all too easily translates in experience as the negation of liberty.*" [Stephan L. Newman, **Liberalism as Wit's End**, p. 161]

Thus right-Libertarian's fundamental fallacy is that "contract" does not result in the end of power or domination (particularly when the bargaining power or wealth of the would-be contractors is not equal). As Carole Pateman notes, "*[i]ronically, the contractarian ideal cannot encompass capitalist employment. Employment is not a continual series of discrete contracts between employer and worker, but . . . one contract in which a worker binds himself to enter an enterprise and follow the directions of the employer for the duration of the contract. As Huw Benyon has bluntly stated, 'workers are paid to obey.'*" [**The Sexual Contract**, p. 148] This means that "*the employment contract (like the marriage contract) is not an exchange; both contracts create social relations that endure over time — social relations of subordination.*" [**Ibid.**]

Authority impoverishes us all and must, therefore, be combated wherever it appears. That is why anarchists oppose capitalism, so that there shall be "*no more government of man by man, by means of accumulation of capital.*" [P-J Proudhon, cited by Woodcock in **Anarchism**, p. 110] If, as Murray Bookchin point it, "*the object of anarchism is to increase choice*" [**The Ecology of Freedom**, p. 70] then this applies both to when we are creating associations/relationships with others and when we are **within** these associations/relationships — i.e. that they are consistent with the liberty of all, and that implies participation and self-management **not** hierarchy. "Anarcho"-capitalism fails to understand this essential point and by concentrating purely on the first condition for liberty ensures a society based upon domination, oppression and hierarchy and not freedom.

It is unsurprising, therefore, to find that the basic unit of analysis of the "anarcho"-capitalist/right-libertarian is the transaction (the "trade," the "contract"). The freedom of the individual is seen as revolving around an act, the contract, and **not** in our relations with others. All the social facts and mechanisms that precede, surround and result from the transaction are omitted. In particular, the social relations that result from the transaction are ignored (those, and the circumstances that make people contract, are the two unmentionables of right-libertarianism).

For anarchists it seems strange to concentrate on the moment that a contract is signed and ignore the far longer time the contract is active for (as we noted in section A.2.14, if the worker is free when they sign a contract, slavery soon overtakes them). Yes, the voluntary nature of a decision is important, but so are the social relationships we experience due to those decisions.

For the anarchist, freedom is based upon the insight that other people, apart from (indeed, **because** of) having their own intrinsic value, also are "means to my end", that it is through their freedom that I gain my own — so enriching my life. As Bakunin put it:

"I who want to be free cannot be because all the men around me do not yet want to be free, and consequently they become tools of oppression against me." [quoted by Errico Malatesta in **Anarchy**, p. 27]

Therefore anarchists argue that we must reject the right-Libertarian theories of freedom and justice because they end up supporting the denial of liberty as the expression of liberty. What this fails to recognise is that freedom is a product of social life and that (in Bakunin's words) "[n]o man can achieve his own emancipation without at the same time working for the emancipation of all men around him. My freedom is the freedom of all since I am not truly free in thought and in fact, except when my freedom and my rights are confirmed and approved in the freedom and rights of all men who are my equals." [Ibid.]

Other people give us the possibilities to develop our full human potentiality and thereby our freedom, so when we destroy the freedom of others we limit our own. "To treat others and oneself as property," argues anarchist L. Susan Brown, "objectifies the human individual, denies the unity of subject and object and is a negation of individual will . . . even the freedom gained by the other is compromised by this relationship, for to negate the will of another to achieve one's own freedom destroys the very freedom one sought in the first place." [The Politics of Individualism, p. 3]

Fundamentally, it is for this reason that anarchists reject the right-Libertarian theories of freedom and justice — it just does not ensure individual freedom or individuality.

3 Why do anarcho"-capitalists place little or no value on "equality"?

Murray Rothbard argues that "the 'rightist' libertarian is not opposed to inequality." [For a New Liberty, p. 47] In contrast, "leftist" libertarians oppose inequality because it has harmful effects on individual liberty.

Part of the reason "anarcho"-capitalism places little or no value on "equality" derives from their definition of that term. Murray Rothbard defines equality as:

*"A and B are 'equal' if they are identical to each other with respect to a given attribute. . . There is one and only one way, then, in which any two people can really be 'equal' in the fullest sense: they must be identical in **all** their attributes."*

He then points out the obvious fact that "men are not uniform, . . . the species, mankind, is uniquely characterised by a high degree of variety, diversity, differentiation: in short, inequality." [Egalitarianism as a Revolt against Nature and Other Essays, p. 4, p.5]

In others words, every individual is unique. Something no egalitarian has ever denied. On the basis of this amazing insight, he concludes that equality is impossible (except "equality of rights") and that the attempt to achieve "equality" is a "revolt against nature" — as if any anarchist had ever advocated such a notion of equality as being identical!

And so, because we are all unique, the outcome of our actions will not be identical and so social inequality flows from natural differences and not due to the economic system we live under. Inequality of endowment implies inequality of outcome and so social inequality. As individual differences are a fact of nature, attempts to create a society based on "equality" (i.e. making everyone identical in terms of possessions and so forth) is impossible and "unnatural."

Before continuing, we must note that Rothbard is destroying language to make his point and that he is not the first to abuse language in this particular way. In George Orwell's **1984**, the expression "*all men are created equal*" could be translated into Newspeak, but it would make as much sense as saying "*all men have red hair*," an obvious falsehood (see "*The Principles of Newspeak*" Appendix). It's nice to know that "Mr. Libertarian" is stealing ideas from Big Brother, and for the same reason: to make critical thought impossible by restricting the meaning of words.

"Equality," in the context of political discussion, does not mean "identical," it usually means equality of rights, respect, worth, power and so forth. It does not imply treating everyone identically (for example, expecting an eighty year old man to do identical work to an eighteen year old violates treating both with respect as unique individuals). For anarchists, as Alexander Berkman writes, "*equality does not mean an equal amount but equal **opportunity**. . . Do not make the mistake of identifying equality in liberty with the forced equality of the convict camp. True anarchist equality implies freedom, not quantity. It does not mean that every one must eat, drink, or wear the same things, do the same work, or live in the same manner. Far from it: the very reverse, in fact. Individual needs and tastes differ, as appetites differ. It is **equal** opportunity to satisfy them that constitutes true equality. Far from levelling, such equality opens the door for the greatest possible variety of activity and development. For human character is diverse, and only the repression of this free diversity results in levelling, in uniformity and sameness. Free opportunity and acting out your individuality means development of natural dissimilarities and variations. . . Life in freedom, in anarchy will do more than liberate man merely from his present political and economic bondage. That will be only the first step, the preliminary to a truly human existence.*" [**The ABC of Anarchism**, p. 25]

Thus anarchists reject the Rothbardian-Newspeak definition of equality as meaningless within political discussion. No two people are identical and so imposing "identical" equality between them would mean treating them as **unequals**, i.e. not having equal worth or giving them equal respect as befits them as human beings and fellow unique individuals.

So what should we make of Rothbard's claim? It is tempting just to quote Rousseau when he argued "*it is . . . useless to inquire whether there is any essential connection between the two inequalities [social and natural]; for this would be only asking, in other words, whether those who command are necessarily better than those who obey, and if strength of body or of mind, wisdom, or virtue are always found in particular individuals, in proportion to their power or wealth: a question fit perhaps to be discussed by slaves in the hearing of their masters, but highly unbecoming to reasonable and free men in search of the truth.*" [**The Social Contract and Discourses**, p. 49] But a few more points should be raised.

The uniqueness of individuals has always existed but for the vast majority of human history we have lived in very egalitarian societies. If social inequality did, indeed, flow from natural inequalities then **all** societies would be marked by it. This is not the case. Indeed, taking a relatively recent example, many visitors to the early United States noted its egalitarian nature, something that soon changed with the rise of wage labour and industrial capitalism (a rise dependent upon state action, we must add, — see section 8). This implies that the society we live in (its rights framework, the social relationships it

generates and so forth) has a far more of a decisive impact on inequality than individual differences. Thus certain rights frameworks will tend to magnify “natural” inequalities (assuming that is the source of the initial inequality, rather than, say, violence and force). As Noam Chomsky argues:

“Presumably it is the case that in our ‘real world’ some combination of attributes is conducive to success in responding to ‘the demands of the economic system’ . . . One might suppose that some mixture of avarice, selfishness, lack of concern for others, aggressiveness, and similar characteristics play a part in getting ahead [in capitalism]. . . Whatever the correct collection of attributes may be, we may ask what follows from the fact, if it is a fact, that some partially inherited combination of attributes tends to material success? All that follows . . . is a comment on our particular social and economic arrangements . . . The egalitarian might respond, in all such cases, that the social order should be changes so that the collection of attributes that tends to bring success no longer do so . . .” [The Chomsky Reader, p. 190]

So, perhaps, if we change society then the social inequalities we see today would disappear. It is more than probable that natural difference has been long ago been replaced with **social** inequalities, especially inequalities of property (which will tend to increase, rather than decrease, inequality). And as we argue in section 8 these inequalities of property were initially the result of force, **not** differences in ability. Thus to claim that social inequality flows from natural differences is false as most social inequality has flown from violence and force. This initial inequality has been magnified by the framework of capitalist property rights and so the inequality within capitalism is far more dependent upon, say, the existence of wage labour, rather than “natural” differences between individuals.

If we look at capitalism, we see that in workplaces and across industries many, if not most, unique individuals receive identical wages for identical work (although this often is not the case for women and blacks, who receive less wages than male, white workers). Similarly, capitalists have deliberately introduced wage inequalities and hierarchies for no other reason than to divide (and so rule) the workforce (see section D.10). Thus, if we assume egalitarianism **is** a revolt against nature, then much of capitalist economic life is in such a revolt (and when it is not, the “natural” inequalities have been imposed artificially by those in power).

Thus “natural” differences do not necessarily result in inequality as such. Given a different social system, “natural” differences would be encouraged and celebrated far wider than they are under capitalism (where, as we argued in section B.1, hierarchy ensures the crushing of individuality rather than its encouragement) without any change in social equality. The claim that “natural” differences generates social inequalities is question begging in the extreme — it takes the rights framework of society as a given and ignores the initial source of inequality in property and power. Indeed, inequality of outcome or reward is more likely to be influenced by social conditions rather than individual differences (as would be the case in a society based on wage labour or other forms of exploitation).

Another reason for “anarcho”-capitalist lack of concern for equality is that they think that *“liberty upsets patterns”* (see section 2.5, for example). It is argued that equality can only be maintained by restricting individual freedom to make exchanges or by taxation of income. However, what this argument fails to acknowledge is that inequality also restricts individual freedom (see next section, for example) and that the capitalist property rights framework is not the only one possible. After all, money is power and inequalities in terms of power easily result in restrictions of liberty and the transformation of the majority into order takers rather than free producers. In other words, once a certain level of inequality is reached, property does not promote, but actually conflicts with, the ends which render private property legitimate. Moreover, Nozick (in his “liberty upsets patterns” argument) *“has produced . . . an argument for unrestricted private property using unrestricted private property, and thus he begs the question he tries to answer.”* [Andrew Kerhohan, “*Capitalism and Self-Ownership*”, from **Capitalism**, p. 71] For example, a worker employed by a capitalist cannot freely exchange the machines or raw materials they have been provided with to use but Nozick does not class this distribution of “restricted” property rights as infringing liberty (nor does he argue that wage slavery itself restricts freedom, of course).

So in response to the claim that equality could only be maintained by continuously interfering with people’s lives, anarchists would say that the inequalities produced by capitalist property rights also involve extensive and continuous interference with people’s lives. After all, as Bob Black notes *“[y]our foreman or supervisor gives you more or-else orders in a week than the police do in a decade”* nevermind the other effects of inequality such as stress, ill health and so on [**Libertarian as Conservative**]. Thus claims that equality involves infringing liberty ignores the fact that inequality also infringes liberty. A reorganisation of society could effectively minimise inequalities by eliminating the major source of such inequalities (wage labour) by self-management (see section I.5.12 for a discussion of “capitalistic acts” within an anarchist society). We have no desire to restrict free exchanges (after all, most anarchists desire to see the “gift economy” become a reality sooner or later) but we argue that free exchanges need not involve the unrestricted property rights Nozick assumes. As we argue in sections 2 and 3.1, inequality can easily led to the situation where self-ownership is used to justify its own negation and so unrestricted property rights may undermine the meaningful self-determination (what anarchists would usually call “freedom” rather than self-ownership) which many people intuitively understand by the term “self-ownership”.

Thus, for anarchists, the “anarcho”-capitalist opposition to equality misses the point and is extremely question begging. Anarchists do not desire to make humanity “identical” (which would be impossible and a total denial of liberty **and** equality) but to make the social relationships between individuals equal in **power**. In other words, they desire a situation where people interact together without institutionalised power or hierarchy and are influenced by each other “naturally,” in proportion to how the (individual) **differences** between (social) **equals** are applicable in a given context. To quote Michael Bakunin, *“[t]he greatest intelligence would not be equal to a comprehension of the whole. Thence results. . . the necessity of the division and association of labour. I receive and I give — such is human life. Each directs and is directed in his turn. Therefore there is no fixed and constant authority, but a continual exchange of mutual,*

temporary, and, above all, voluntary authority and subordination.” [God and the State, p. 33]

Such an environment can only exist within self-managed associations, for capitalism (i.e. wage labour) creates very specific relations and institutions of authority. It is for this reason anarchists are socialists (i.e. opposed to wage labour, the existence of a proletariat or working class). In other words, anarchists support equality precisely **because** we recognise that everyone is unique. If we are serious about “equality of rights” or “equal freedom” then conditions must be such that people can enjoy these rights and liberties. If we assume the right to develop one’s capacities to the fullest, for example, then inequality of resources and so power within society destroys that right simply because people do not have the means to freely exercise their capacities (they are subject to the authority of the boss, for example, during work hours).

So, in direct contrast to anarchism, right-Libertarianism is unconcerned about any form of equality except “equality of rights”. This blinds them to the realities of life; in particular, the impact of economic and social power on individuals within society and the social relationships of domination they create. Individuals may be “equal” before the law and in rights, but they may not be free due to the influence of social inequality, the relationships it creates and how it affects the law and the ability of the oppressed to use it. Because of this, all anarchists insist that equality is essential for freedom, including those in the Individualist Anarchist tradition the “anarcho”-capitalist tries to co-opt — *“Spooner and Godwin insist that inequality corrupts freedom. Their anarchism is directed as much against inequality as against tyranny”* and *“[w]hile sympathetic to Spooner’s individualist anarchism, they [Rothbard and David Friedman] fail to notice or conveniently overlook its egalitarian implications.”* [Stephen L. Newman, **Liberalism at Wit’s End**, p. 74, p. 76]

Why equality is important is discussed more fully in the next section. Here we just stress that without social equality, individual freedom is so restricted that it becomes a mockery (essentially limiting freedom of the majority to choosing **which** employer will govern them rather than being free within and outside work).

Of course, by defining “equality” in such a restrictive manner, Rothbard’s own ideology is proved to be nonsense. As L.A. Rollins notes, *“Libertarianism, the advocacy of ‘free society’ in which people enjoy ‘equal freedom’ and ‘equal rights,’ is actually a specific form of egalitarianism. As such, Libertarianism itself is a revolt against nature. If people, by their very biological nature, are unequal in all the attributes necessary to achieving, and preserving ‘freedom’ and ‘rights’... then there is no way that people can enjoy ‘equal freedom’ or ‘equal rights’. If a free society is conceived as a society of ‘equal freedom,’ then there ain’t no such thing as ‘a free society.’”* [**The Myth of Natural Law**, p. 36]

Under capitalism, freedom is a commodity like everything else. The more money you have, the greater your freedom. “Equal” freedom, in the Newspeak-Rothbardian sense, **cannot** exist! As for “equality before the law”, its clear that such a hope is always dashed against the rocks of wealth and market power (see next section for more on this). As far as rights go, of course, both the rich and the poor have an “equal right” to sleep under a bridge (assuming the bridge’s owner agrees of course!); but the owner of the bridge and the homeless have **different** rights, and so they cannot be said to have “equal rights” in the Newspeak-Rothbardian sense either. Needless to say, poor and rich will not

“equally” use the “right” to sleep under a bridge, either.

Bob Black observes in **The Libertarian as Conservative** that “[t]he time of your life is the one commodity you can sell but never buy back. Murray Rothbard thinks egalitarianism is a revolt against nature, but his day is 24 hours long, just like everybody else’s.”

By twisting the language of political debate, the vast differences in power in capitalist society can be “blamed” not on an unjust and authoritarian system but on “biology” (we are all unique individuals, after all). Unlike genes (although biotechnology corporations are working on this, too!), human society **can** be changed, by the individuals who comprise it, to reflect the basic features we all share in common — our humanity, our ability to think and feel, and our need for freedom.

3.1 Why is this disregard for equality important?

Simply because a disregard for equality soon ends with liberty for the majority being negated in many important ways. Most “anarcho”-capitalists and right-Libertarians deny (or at best ignore) market power. Rothbard, for example, claims that economic power does not exist; what people call “*economic power*” is “*simply the right under freedom to refuse to make an exchange*” [**The Ethics of Liberty**, p. 222] and so the concept is meaningless.

However, the fact is that there are substantial power centres in society (and so are the source of hierarchical power and authoritarian social relations) which are **not the state**. The central fallacy of “anarcho”-capitalism is the (unstated) assumption that the various actors within an economy have relatively equal power. This assumption has been noted by many readers of their works. For example, Peter Marshall notes that “‘*anarcho-capitalists*’ like Murray Rothbard assume individuals would have equal bargaining power in a [capitalist] market-based society” [**Demanding the Impossible**, p. 46] George Walford also makes this clear in his comments on David Friedman’s **The Machinery of Freedom**:

“The private ownership envisaged by the anarcho-capitalists would be very different from that which we know. It is hardly going too far to say that while the one is nasty, the other would be nice. In anarcho-capitalism there would be no National Insurance, no Social Security, no National Health Service and not even anything corresponding to the Poor Laws; there would be no public safety-nets at all. It would be a rigorously competitive society: work, beg or die. But as one reads on, learning that each individual would have to buy, personally, all goods and services needed, not only food, clothing and shelter but also education, medicine, sanitation, justice, police, all forms of security and insurance, even permission to use the streets (for these also would be privately owned), as one reads about all this a curious feature emerges: everybody always has enough money to buy all these things.”

“There are no public casual wards or hospitals or hospices, but neither is there anybody dying in the streets. There is no public educational system but no uneducated children, no public police service but nobody unable to buy the services of an efficient security firm, no

public law but nobody unable to buy the use of a private legal system. Neither is there anybody able to buy much more than anybody else; no person or group possesses economic power over others.

*“No explanation is offered. The anarcho-capitalists simply take it for granted that in their favoured society, although it possesses no machinery for restraining competition (for this would need to exercise authority over the competitors and it is an **anarcho-** capitalist society) competition would not be carried to the point where anybody actually suffered from it. While proclaiming their system to be a competitive one, in which private interest rules unchecked, they show it operating as a co-operative one, in which no person or group profits at the cost of another.” [On the Capitalist Anarchists]*

This assumption of (relative) equality comes to the fore in Murray Rothbard’s “Homesteading” concept of property (discussed in section 4.1). “Homesteading” paints a picture of individuals and families doing into the wilderness to make a home for themselves, fighting against the elements and so forth. It does **not** invoke the idea of transnational corporations employing tens of thousands of people or a population without land, resources and selling their labour to others. Indeed, Rothbard argues that economic power does not exist (at least under capitalism; as we saw in section 2.1 he does make — highly illogical — exceptions). Similarly, David Friedman’s example of a pro-death penalty and anti-death penalty “defence” firm coming to an agreement (see section 6.3) assumes that the firms have equal bargaining powers and resources — if not, then the bargaining process would be very one-sided and the smaller company would think twice before taking on the larger one in battle (the likely outcome if they cannot come to an agreement on this issue) and so compromise.

However, the right-libertarian denial of market power is unsurprising. The necessity, not the redundancy, of equality is required if the inherent problems of contract are not to become too obvious. If some individuals **are** assumed to have significantly more power than others, and if they are always self-interested, then a contract that creates equal partners is impossible — the pact will establish an association of masters and servants. Needless to say, the strong will present the contract as being to the advantage of both: the strong no longer have to labour (and become rich, i.e. even stronger) and the weak receive an income and so do not starve.

If freedom is considered as a function of ownership then it is very clear that individuals lacking property (outside their own body, of course) loses effective control over their own person and labour (which was, let’s not forget, the basis of their equal natural rights). When one’s bargaining power is weak (which is typically the case in the labour market) exchanges tend to magnify inequalities of wealth and power over time rather than working towards an equalisation.

In other words, “contract” need not replace power if the bargaining position and wealth of the would-be contractors are not equal (for, if the bargainers had equal power it is doubtful they would agree to sell control of their liberty/time to another). This means that “power” and “market” are not antithetical terms. While, in an abstract sense, all market relations are voluntary in practice this is not the case within a capitalist market. For example, a large company has a comparative advantage over small ones and communities which will definitely shape the outcome of any contract. For example, a large company or rich person

will have access to more funds and so stretch out litigations and strikes until their opponents resources are exhausted. Or, if a local company is polluting the environment, the local community may put up with the damage caused out of fear that the industry (which it depends upon) would relocate to another area. If members of the community **did** sue, then the company would be merely exercising its property rights when it threatened to move to another location. In such circumstances, the community would “freely” consent to its conditions or face massive economic and social disruption. And, similarly, “*the landlords’ agents who threaten to discharge agricultural workers and tenants who failed to vote the reactionary ticket*” in the 1936 Spanish election were just exercising their legitimate property rights when they threatened working people and their families with economic uncertainty and distress. [Murray Bookchin, **The Spanish Anarchists**, p. 260]

If we take the labour market, it is clear that the “buyers” and “sellers” of labour power are rarely on an equal footing (if they were, then capitalism would soon go into crisis — see section 10.2). In fact, competition “*in labour markets is typically skewed in favour of employers: it is a buyer’s market. And in a buyer’s, it is the sellers who compromise.*” [Juliet B. Schor, **The Overworked American**, p. 129] Thus the ability to refuse an exchange weighs most heavily on one class than another and so ensures that “free exchange” works to ensure the domination (and so exploitation) of one party by the other.

Inequality in the market ensures that the decisions of the majority of within it are shaped in accordance with that needs of the powerful, not the needs of all. It was for this reason that the Individual Anarchist J.K. Ingalls opposed Henry George’s proposal of nationalising the land. Ingalls was well aware that the rich could outbid the poor for leases on land and so the dispossession of the working classes would continue.

The market, therefore, does not end power or unfreedom — they are still there, but in different forms. And for an exchange to be truly voluntary, both parties must have equal power to accept, reject, or influence its terms. Unfortunately, these conditions are rarely met on the labour market or within the capitalist market in general. Thus Rothbard’s argument that economic power does not exist fails to acknowledge that the rich can out-bid the poor for resources and that a corporation generally has greater ability to refuse a contract (with an individual, union or community) than vice versa (and that the impact of such a refusal is such that it will encourage the others involved to “compromise” far sooner). And in such circumstances, formally free individuals will have to “consent” to be unfree in order to survive.

As Max Stirner pointed out in the 1840s, free competition “*is not ‘free,’ because I lack the things for competition.*” [**The Ego and Its Own**, p. 262] Due to this basic inequality of wealth (of “things”) we find that “[u]nder the **regime of the commonality the labourers always fall into the hands of the possessors . . . of the capitalists, therefore. The labourer cannot realise on his labour to the extent of the value that it has for the customer.” [**Op. Cit.**, p. 115] Its interesting to note that even Stirner recognises that capitalism results in exploitation. And we may add that value the labourer does not “realise” goes into the hands of the capitalists, who invest it in more “things” and which consolidates and increases their advantage in “free” competition.**

To quote Stephan L. Newman:

“Another disquieting aspect of the libertarians’ refusal to acknowledge power in the market is their failure to confront the tension between freedom and autonomy. . . Wage labour under capitalism is, of course, formally free labour. No one is forced to work at gun point. Economic circumstance, however, often has the effect of force; it compels the relatively poor to accept work under conditions dictated by owners and managers. The individual worker retains freedom [i.e. negative liberty] but loses autonomy [positive liberty].” [Liberalism at Wit’s End, pp. 122–123]

(As an aside, we should point out that the full Stirner quote cited above is “[u]nder the **regime** of the commonality the labourers always fall into the hands of the possessors, of those who have at their disposal some bit of the state domains (and everything possessible in State domain belongs to the State and is only a fief of the individual), especially money and land; of the capitalists, therefore. The labourer cannot **realise** on his labour to the extent of the value that it has for the customer.”

It could be argued that we misrepresenting Stirner by truncating the quote, but we feel that such a claim this is incorrect. Its clear from his book that Stirner is considering the “minimal” state (“*The State is a — commoners’ State . . . It protects man . . . according to whether the rights entrusted to him by the State are enjoyed and managed in accordance with the will, that is, laws, of the State.*” The State “looks on indifferently as one grows poor and the other rich, unruffled by this alternation. As **individuals** they are really equal before its face.” [Op. Cit., p. 115, p. 252]). As “anarcho”-capitalists consider their system to be one of rights and laws (particularly property rights), we feel that its fair to generalise Stirner’s comments into capitalism **as such** as opposed to “minimum state” capitalism. If we replace “State” by “libertarian law code” you will see what we mean. We have included this aside before any right-libertarians claim that we are misrepresenting Stirner’ argument.)

If we consider “equality before the law” it is obvious that this also has limitations in an (materially) unequal society. Brian Morris notes that for Ayn Rand, “[u]nder capitalism . . . politics (state) and economics (capitalism) are separated . . . This, of course, is pure ideology, for Rand’s justification of the state is that it ‘protects’ private property, that is, it supports and upholds the economic power of capitalists by coercive means.” [Ecology & Anarchism, p. 189] The same can be said of “anarcho”-capitalism and its “protection agencies” and “general libertarian law code.” If within a society a few own all the resources and the majority are dispossessed, then any law code which protects private property **automatically** empowers the owning class. Workers will **always** be initiating force if act against the code and so “equality before the law” reinforces inequality of power and wealth.

This means that a system of property rights protects the liberties of some people in a way which gives them an unacceptable degree of power over others. And this cannot be met merely by reaffirming the rights in question, we have to assess the relative importance of various kinds of liberty and other values we how dear.

Therefore right-libertarian disregard for equality is important because it allows “anarcho”-capitalism to ignore many important restrictions of freedom in society. In addition, it allows them to brush over the negative effects of their

system by painting an unreal picture of a capitalist society without vast extremes of wealth and power (indeed, they often construe capitalist society in terms of an ideal — namely artisan production — that is really **pre**-capitalist and whose social basis has been eroded by capitalist development). Inequality shapes the decisions we have available and what ones we make:

“An ‘incentive’ is always available in conditions of substantial social inequality that ensure that the ‘weak’ enter into a contract. When social inequality prevails, questions arises about what counts as voluntary entry into a contract . . . Men and women . . . are now juridically free and equal citizens, but, in unequal social conditions, the possibility cannot be ruled out that some or many contracts create relationships that bear uncomfortable resemblances to a slave contract.” [Carole Pateman, **The Sexual Contract**, p. 62]

This ideological confusion of right-libertarianism can also be seen from their opposition to taxation. On the one hand, they argue that taxation is wrong because it takes money from those who “earn” it and gives it to the poor. On the other hand, “free market” capitalism is assumed to be a more equal society! If taxation takes from the rich and gives to the poor, how will “anarcho”-capitalism be more egalitarian? That equalisation mechanism would be gone (of course, it could be claimed that all great riches are purely the result of state intervention skewing the “free market” but that places all their “rags to riches” stories in a strange position). Thus we have a problem, either we have relative equality or we do not. Either we have riches, and so market power, or we do not. And its clear from the likes of Rothbard, “anarcho”-capitalism will not be without its millionaires (there is, after all, apparently nothing un-libertarian about *“organisation, hierarchy, wage-work, granting of funds by libertarian millionaires, and a libertarian party”*). And so we are left with market power and so extensive unfreedom.

Thus, for a ideology that denounces egalitarianism as a *“revolt against nature”* it is pretty funny that they paint a picture of “anarcho”-capitalism as a society of (relative) equals. In other words, their propaganda is based on something that has never existed, and never will, namely an egalitarian capitalist society.

3.2 But what about “anarcho”-capitalist support for charity?

Yes, while being blind to impact of inequality in terms of economic and social power and influence, most right-libertarians **do** argue that the very poor could depend on charity in their system. But such a recognition of poverty does not reflect an awareness of the need for equality or the impact of inequality on the agreements we make. Quite the reverse in fact, as the existence of extensive inequality is assumed — after all, in a society of relative equals, poverty would not exist, nor would charity be needed.

Ignoring the fact that their ideology hardly promotes a charitable perspective, we will raise four points. Firstly, charity will not be enough to countermand the existence and impact of vast inequalities of wealth (and so power). Secondly, it will be likely that charities will be concerned with “improving” the

moral quality of the poor and so will divide them into the “deserving” (i.e. obedient) and “undeserving” (i.e. rebellious) poor. Charity will be forthcoming to the former, those who agree to busy-bodies sticking their noses into their lives. In this way charity could become another tool of economic and social power (see Oscar Wilde’s **The Soul of Man Under Socialism** for more on charity). Thirdly, it is unlikely that charity will be able to replace all the social spending conducted by the state — to do so would require a ten-fold increase in charitable donations (and given that most right-libertarians denounce the government for making them pay taxes to help the poor, it seems unlikely that they will turn round and **increase** the amount they give). And, lastly, charity is an implicate recognition that, under capitalism, no one has the right of life — its a privilege you have to pay for. That in itself is enough to reject the charity option. And, of course, in a system designed to secure the life and liberty of each person, how can it be deemed acceptable to leave the life and protection of even one individual to the charitable whims of others? (Perhaps it will be argued that individual’s have the right to life, but not a right to be a parasite. This ignores the fact some people **cannot** work — babies and some handicapped people — and that, in a functioning capitalist economy, many people cannot find work all the time. Is it this recognition of that babies cannot work that prompts many right-libertarians to turn them into property? Of course, rich folk who have never done a days work in their lives are never classed as parasites, even if they inherited all their money). All things considered, little wonder that Proudhon argued that:

“Even charitable institutions serve the ends of those in authority marvellously well.

“Charity is the strongest chain by which privilege and the Government, bound to protect them, holds down the lower classes. With charity, sweeter to the heart of men, more intelligible to the poor man than the abstruse laws of Political Economy, one may dispense with justice.” [**The General Idea of the Revolution**, pp. 69–70]

As noted, the right-libertarian (passing) acknowledgement of poverty does not mean that they recognise the existence of market power. They never ask themselves how can someone be free if their social situation is such that they are drowning in a sea of usury and have to sell their labour (and so liberty) to survive.

4 What is the right-libertarian position on private property?

Right libertarians are not interested in eliminating capitalist private property and thus the authority, oppression and exploitation which goes with it. It is true that they call for an end to the state, but this is not because they are concerned about workers being exploited or oppressed but because they don’t want the state to impede capitalists’ “freedom” to exploit and oppress workers even more than is the case now!

They make an idol of private property and claim to defend absolute, “unrestricted” property rights (i.e. that property owners can do anything they like

with their property, as long as it does not damage the property of others. In particular, taxation and theft are among the greatest evils possible as they involve coercion against “justly held” property). They agree with John Adams that “[t]he moment that idea is admitted into society that property is not as sacred as the Laws of God, and that there is not a force of law and public justice to protect it, anarchy and tyranny commence. Property must be sacred or liberty cannot exist.”

But in their celebration of property as the source of liberty they ignore the fact that private property is a source of “tyranny” in itself (see sections B.1 and B.4, for example — and please note that anarchists only object to private property, **not** individual possession, see section B.3.1). However, as much anarchists may disagree about other matters, they are united in condemning private property. Thus Proudhon argued that property was “theft” and “despotism” while Stirner indicated the religious and statist nature of private property and its impact on individual liberty when he wrote :

*“Property in the civic sense means **sacred** property, such that I must **respect** your property. . . Be it ever so little, if one only has somewhat of his own — to wit, a **respected** property: The more such owners. . . the more ‘free people and good patriots’ has the State.*

*“Political liberalism, like everything religious, counts on **respect**, humaneness, the virtues of love. . . For in practice people respect nothing, and everyday the small possessions are bought up again by greater proprietors, and the ‘free people’ change into day labourers.”*
[**The Ego and Its Own**, p. 248]

Thus “anarcho”-capitalists reject totally one of the common (and so defining) features of all anarchist traditions — the opposition to capitalist property. From Individualist Anarchists like Tucker to Communist-Anarchists like Bookchin, anarchists have been opposed to what Godwin termed “*accumulated property*.” This was because it was in “*direct contradiction*” to property in the form of “*the produce of his [the worker’s] own industry*” and so it allows “*one man. . . [to] dispose of the produce of another man’s industry.*” [**The Anarchist Reader**, pp. 129–131] Thus, for anarchists, capitalist property is a source exploitation and domination, **not** freedom (it undermines the freedom associated with possession by created relations of domination between owner and employee).

Hardly surprising then the fact that, according to Murray Bookchin, Murray Rothbard “*attacked me [Bookchin] as an anarchist with vigour because, as he put it, I am opposed to private property.*” [**The Raven**, no. 29, p. 343]

We will discuss Rothbard’s “homesteading” justification of property in the next section. However, we will note here one aspect of right-libertarian defence of “unrestricted” property rights, namely that it easily generates evil side effects such as hierarchy and starvation. As famine expert Amartya Sen notes:

“Take a theory of entitlements based on a set of rights of ‘ownership, transfer and rectification.’ In this system a set of holdings of different people are judged to be just (or unjust) by looking at past history, and not by checking the consequences of that set of holdings. But what if the consequences are recognisably terrible? . . . [R]efer[ing] to some empirical findings in a work on famines . . . evidence [is presented] to

indicate that in many large famines in the recent past, in which millions of people have died, there was no over-all decline in food availability at all, and the famines occurred precisely because of shifts in entitlement resulting from exercises of rights that are perfectly legitimate. . . [Can] famines . . . occur with a system of rights of the kind morally defended in various ethical theories, including Nozick's. I believe the answer is straightforwardly yes, since for many people the only resource that they legitimately possess, viz. their labour-power, may well turn out to be unsaleable in the market, giving the person no command over food . . . [i]f results such as starvations and famines were to occur, would the distribution of holdings still be morally acceptable despite their disastrous consequences? There is something deeply implausible in the affirmative answer." [Resources, Values and Development, pp. 311–2]

Thus “unrestricted” property rights can have seriously bad consequences and so the existence of “justly held” property need not imply a just or free society — far from it. The inequalities property can generate can have a serious on individual freedom (see section 3.1). Indeed, Murray Rothbard argued that the state was evil not because it restricted individual freedom but because the resources it claimed to own were not “justly” acquired. Thus right-libertarian theory judges property **not** on its impact on current freedom but by looking at past history. This has the interesting side effect of allowing its supporters to look at capitalist and statist hierarchies, acknowledge their similar negative effects on the liberty of those subjected to them but argue that one is legitimate and the other is not simply because of their history! As if this changed the domination and unfreedom that both inflict on people living today (see section 2.3 for further discussion and sections 2.8 and 4.2 for other examples of “justly acquired” property producing terrible consequences).

The defence of capitalist property does have one interesting side effect, namely the need arises to defend inequality and the authoritarian relationships inequality creates. In order to protect the private property needed by capitalists in order to continue exploiting the working class, “anarcho”-capitalists propose private security forces rather than state security forces (police and military) — a proposal that is equivalent to bringing back the state under another name.

Due to (capitalist) private property, wage labour would still exist under “anarcho”-capitalism (it is capitalism after all). This means that “defensive” force, a state, is required to “defend” exploitation, oppression, hierarchy and authority from those who suffer them. Inequality makes a mockery of free agreement and “consent” (see section 3.1). As Peter Kropotkin pointed out long ago:

“When a workman sells his labour to an employer . . . it is a mockery to call that a free contract. Modern economists may call it free, but the father of political economy — Adam Smith — was never guilty of such a misrepresentation. As long as three-quarters of humanity are compelled to enter into agreements of that description, force is, of course, necessary, both to enforce the supposed agreements and to maintain such a state of things. Force — and a good deal of force — is necessary to prevent the labourers from taking possession of

what they consider unjustly appropriated by the few... The Spence-rian party [proto-right-libertarians] perfectly well understand that; and while they advocate no force for changing the existing conditions, they advocate still more force than is now used for maintaining them. As to Anarchy, it is obviously as incompatible with plutocracy as with any other kind of -cracy. [Anarchism and Anarchist Communism, pp. 52–53]

Because of this need to defend privilege and power, “anarcho”-capitalism is best called “private-state” capitalism. This will be discussed in more detail in section 6.

By advocating private property, right libertarians contradict many of their other claims. For example, they say that they support the right of individuals to travel where they like. They make this claim because they assume that only the state limits free travel. But this is a false assumption. Owners must agree to let you on their land or property (*“people only have the right to move to those properties and lands where the owners desire to rent or sell to them.”* [Murray Rothbard, **The Ethics of Liberty**, p. 119]. There is no “freedom of travel” onto private property (including private roads). Therefore immigration may be just as hard under “anarcho”-capitalism as it is under statism (after all, the state, like the property owner, only lets people in whom it wants to let in). People will still have to get another property owner to agree to let them in before they can travel — exactly as now (and, of course, they also have to get the owners of the road to let them in as well). Private property, as can be seen from this simple example, is the state writ small.

One last point, this ignoring of (“politically incorrect”) economic and other views of dead political thinkers and activists while claiming them as “libertarians” seems to be commonplace in right-Libertarian circles. For example, Aristotle (beloved by Ayn Rand) *“thought that only living things could bear fruit. Money, not a living thing, was by its nature barren, and any attempt to make it bear fruit (tokos, in Greek, the same word used for interest) was a crime against nature.”* [Marcello de Cecco, quoted by Doug Henwood, **Wall Street**, p. 41] Such opposition to interest hardly fits well into capitalism, and so either goes unmentioned or gets classed as an “error” (although we could ask why Aristotle is in error while Rand is not). Similarly, individualist anarchist opposition to capitalist property and rent, interest and profits is ignored or dismissed as “bad economics” without realising that these ideas played a key role in their politics and in ensuring that an anarchy would not see freedom corrupted by inequality. To ignore such an important concept in a person’s ideas is to distort the remainder into something it is not.

4.1 What is wrong with a “homesteading” theory of property?

So how do “anarcho”-capitalists justify property? Looking at Murray Rothbard, we find that he proposes a *“homesteading theory of property”*. In this theory it is argued that property comes from occupancy and mixing labour with natural resources (which are assumed to be unowned). Thus the world is transformed into private property, for *“title to an unowned resource (such as land) comes*

properly only from the expenditure of labour to transform that resource into use." [The Ethics of Liberty, p. 63]

Rothbard paints a conceptual history of individuals and families forging a home in the wilderness by the sweat of their labour (its tempting to rename his theory the "*immaculate conception of property*" as his conceptual theory is somewhat at odds with actual historical fact).

Sadly for Murray Rothbard, his "homesteading" theory was refuted by Proudhon in **What is Property?** in 1840 (along with many other justifications of property). Proudhon rightly argues that "*if the liberty of man is sacred, it is equally sacred in all individuals; that, if it needs property for its objective action, that is, for its life, the appropriation of material is equally necessary for all . . . Does it not follow that if one individual cannot prevent another . . . from appropriating an amount of material equal to his own, no more can he prevent individuals to come.*" And if all the available resources are appropriated, and the owner "*draws boundaries, fences himself in . . . Here, then, is a piece of land upon which, henceforth, no one has a right to step, save the proprietor and his friends . . . Let [this] . . . multiply, and soon the people . . . will have nowhere to rest, no place to shelter, no ground to till. They will die at the proprietor's door, on the edge of that property which was their birthright.*" [What is Property?, pp. 84–85, p. 118]

As Rothbard himself noted in respect to the aftermath of slavery (see section 2.1), not having access to the means of life places one the position of unjust dependency on those who do. Rothbard's theory fails because for "*[w]e who belong to the proletarian class, property excommunicates us!*" [P-J Proudhon, **Op. Cit.**, p. 105] and so the vast majority of the population experience property as theft and despotism rather than as a source of liberty and empowerment (which possession gives). Thus, Rothbard's account fails to take into account the Lockean Proviso (see section B.3.4) and so, for all its intuitive appeal, ends up justifying capitalist and landlord domination (see next section on why the Lockean Proviso is important).

It also seems strange that while (correctly) attacking social contract theories of the state as invalid (because "*no past generation can bind later generations*" [Op. Cit., p. 145]) he fails to see he is doing **exactly that** with his support of private property (similarly, Ayn Rand argued that "*[a]ny alleged 'right' of one man, which necessitates the violation of the right of another, is not and cannot be a right*" [Capitalism: The Unknown Ideal, p. 325] but obviously appropriating land does violate the rights of others to walk, use or appropriate that land). Due to his support for appropriation and inheritance, he is clearly ensuring that future generations are **not** born as free as the first settlers were (after all, they cannot appropriate any land, it is all taken!). If future generations cannot be bound by past ones, this applies equally to resources and property rights. Something anarchists have long realised — there is no defensible reason why those who first acquired property should control its use by future generations.

However, if we take Rothbard's theory at face value we find numerous problems with it. If title to unowned resources comes via the "*expenditure of labour*" on it, how can rivers, lakes and the oceans be appropriated? The banks of the rivers can be transformed, but can the river itself? How can you mix your labour with water? "Anarcho"-capitalists usually blame pollution on the fact that rivers, oceans, and so forth are unowned, but how can an individual "trans-

form” water by their labour? Also, does fencing in land mean you have “mixed labour” with it? If so then transnational corporations can pay workers to fence in vast tracks of virgin land (such as rainforest) and so come to “own” it. Rothbard argues that this is not the case (he expresses opposition to “*arbitrary claims*”). He notes that it is **not** the case that “*the first discoverer . . . could properly lay claim to [a piece of land] . . . [by] laying out a boundary for the area.*” He thinks that “*their claim would still be no more than the boundary **itself**, and not to any of the land within, for only the boundary will have been transformed and used by men*” [Op. Cit., p. 50f]

However, if the boundary **is** private property and the owner refuses others permission to cross it, then the enclosed land is inaccessible to others! If an “enterprising” right-libertarian builds a fence around the only oasis in a desert and refuses permission to cross it to travellers unless they pay his price (which is everything they own) then the person **has** appropriated the oasis without “transforming” it by his labour. The travellers have the choice of paying the price or dying (and the oasis owner is well within his rights letting them die). Given Rothbard’s comments, it is probable that he will claim that such a boundary is null and void as it allows “arbitrary” claims — although this position is not at all clear. After all, the fence builder **has** transformed the boundary and “unrestricted” property rights is what right-libertarianism is all about.

And, of course, Rothbard ignores the fact of economic power — a transnational corporation can “transform” far more virgin resources in a day than a family could in a year. Transnational’s “mixing their labour” with the land does not spring into mind reading Rothbard’s account of property growth, but in the real world that is what will happen.

If we take the question of wilderness (a topic close to many eco-anarchists’ and deep ecologists’ hearts) we run into similar problems. Rothbard states clearly that “*libertarian theory must invalidate [any] claim to ownership*” of land that has “*never been transformed from its natural state*” (he presents an example of an owner who has left a piece of his “*legally owned*” land untouched). If another person appears who **does** transform the land, it becomes “*justly owned by another*” and the original owner cannot stop her (and should the original owner “*use violence to prevent another settler from entering this never-used land and transforming it into use*” they also become a “*criminal aggressor*”). Rothbard also stresses that he is **not** saying that land must continually be in use to be valid property [Op. Cit., pp. 63–64] (after all, that would justify landless workers seizing the land from landowners during a depression and working it themselves).

Now, where does that leave wilderness? In response to ecologists who oppose the destruction of the rainforest, “anarcho”-capitalists suggest that they put their money where their mouth is and **buy** rainforest land. In this way, it is claimed, rainforest will be protected (see section B.5 for why such arguments are nonsense). As ecologists desire the rainforest **because it is wilderness** they are unlikely to “transform” it by human labour (its precisely that they want to stop). From Rothbard’s arguments it is fair to ask whether logging companies have a right to “transform” the virgin wilderness owned by ecologists, after all it meets Rothbard’s criteria (it is still wilderness). Perhaps it will be claimed that fencing off land “transforms” it (hardly what you imagine “mixing labour” with to mean, but nevermind) — but that allows large companies and rich individuals to hire workers to fence in vast tracks of land (and recreate the land

monopoly by a “libertarian” route). But as we noted above, fencing off land does not seem to imply that it becomes property in Rothbard’s theory. And, of course, fencing in areas of rainforest disrupts the local eco-system — animals cannot freely travel, for example — which, again, is what ecologists desire to stop. Would Rothbard accept a piece of paper as “transforming” land? We doubt it (after all, in his example the wilderness owner **did** legally own it) — and so most ecologists will have a hard time in “anarcho”-capitalism (wilderness is just not an option).

As an aside, we must note that Rothbard fails to realise — and this comes from his worship of the market and his “Austrian economics” — is that people value many things which do not appear on the market. He claims that wilderness is “*valueless unused natural objects*” (for it people valued them, they would use — i.e. appropriate — them). But unused things may be of **considerable** value to people, wilderness being a classic example. And if something **cannot** be transformed into private property, does that mean people do not value it? For example, people value community, stress free working environments, meaningful work — if the market cannot provide these, does that mean they do not value them? Of course not (see Juliet Schor’s **The Overworked American** on how working people’s desire for shorter working hours was not transformed into options on the market).

Moreover, Rothbard’s “homesteading” theory actually violates his support for unrestricted property rights. What if a property owner **wants** part of her land to remain wilderness? Their desires are violated by the “homesteading” theory (unless, of course, fencing things off equals “transforming” them, which it apparently does not). How can companies provide wilderness holidays to people if they have no right to stop settlers (including large companies) “homesteading” that wilderness? And, of course, where does Rothbard’s theory leave hunter-gather or nomad societies. They **use** the resources of the wilderness, but they do not “transform” them (in this case you cannot easily tell if virgin land is empty or being used as a resource). If a troop of nomads find its traditionally used, but natural, oasis appropriated by a homesteader what are they to do? If they ignore the homesteaders claims he can call upon his “defence” firm to stop them — and then, in true Rothbardian fashion, the homesteader can refuse to supply water to them unless they hand over all their possessions (see section 4.2 on this). And if the history of the United States (which is obviously the model for Rothbard’s theory) is anything to go by, such people will become “criminal aggressors” and removed from the picture.

Which is another problem with Rothbard’s account. It is completely ahistoric (and so, as we noted above, is more like an “*immaculate conception of property*”). He has transported “capitalist man” into the dawn of time and constructed a history of property based upon what he is trying to justify (not surprising, as he does this with his “Natural Law” theory too — see section 7). What **is** interesting to note, though, is that the **actual** experience of life on the US frontier (the historic example Rothbard seems to want to claim) was far from the individualistic framework he builds upon it and (ironically enough) it was destroyed by the development of capitalism.

As Murray Bookchin notes, “*the independence that the New England yeomanry enjoyed was itself a function of the co-operative social base from which it emerged. To barter home-grown goods and objects, to share tools and implements, to engage in common labour during harvesting time in a system of mutual*

aid, indeed, to help new-comers in barn-raising, corn-husking, log-rolling, and the like, was the indispensable cement that bound scattered farmsteads into a united community.” [The Third Revolution, vol. 1, p. 233] Bookchin quotes David P. Szatmary (author of a book on Shay’ Rebellion) stating that it was a society based upon “*co-operative, community orientated interchanges*” and not a “*basically competitive society.*” [Ibid.]

Into this non-capitalist society came capitalist elements. Market forces and economic power soon resulted in the transformation of this society. Merchants asked for payment in specie which (and along with taxes) soon resulted in indebtedness and the dispossession of the homesteaders from their land and goods. In response Shay’s rebellion started, a rebellion which was an important factor in the centralisation of state power in America to ensure that popular input and control over government were marginalised and that the wealthy elite and their property rights were protected against the many (see Bookchin, **Op. Cit.**, for details). Thus the homestead system was undermined, essentially, by the need to pay for services in specie (as demanded by merchants).

So while Rothbard’s theory as a certain appeal (reinforced by watching too many Westerns, we imagine) it fails to justify the “unrestricted” property rights theory (and the theory of freedom Rothbard derives from it). All it does is to end up justifying capitalist and landlord domination (which is probably what it was intended to do).

4.2 Why is the “Lockean Proviso” important?

Robert Nozick, in his work **Anarchy, State, and Utopia** presented a case for private property rights that was based on what he termed the “*Lockean Proviso*” — namely that common (or unowned) land and resources could be appropriated by individuals as long as the position of others is not worsen by so doing. However, if we **do** take this Proviso seriously private property rights cannot be defined (see section B.3.4 for details). Thus Nozick’s arguments in favour of property rights fail.

Some right-libertarians, particularly those associated with the Austrian school of economics argue that we must reject the Lockean Proviso (probably due to the fact it can be used to undermine the case for absolute property rights). Their argument goes as follows: if an individual appropriates and uses a previously unused resource, it is because it has value to him/her, as an individual, to engage in such action. The individual has stolen nothing because it was previously unowned and we cannot know if other people are better or worse off, all we know is that, for whatever reason, they did not appropriate the resource (“*If latecomers are worse off, well then that is their proper assumption of risk in this free and uncertain world. There is no longer a vast frontier in the United States, and there is no point crying over the fact.*” [Murray Rothbard, **The Ethics of Liberty**, p. 240]).

Hence the appropriation of resources is an essentially individualistic, asocial act — the requirements of others are either irrelevant or unknown. However, such an argument fails to take into account **why** the Lockean Proviso has such an appeal. When we do this we see that rejecting it leads to massive injustice, even slavery.

However, let us start with a defence of rejecting the Proviso from a leading Austrian economist:

*“Consider . . . the case . . . of the unheld sole water hole in the desert (which **everyone** in a group of travellers knows about), which one of the travellers, by racing ahead of the others, succeeds in appropriating . . . [This] clearly and unjustly violates the Lockean proviso. . . For use, however, this view is by no means the only one possible. We notice that the energetic traveller who appropriated all the water was not doing anything which (always ignoring, of course, prohibitions resting on the Lockean proviso itself) the other travellers were not equally free to do. The other travellers, too, could have raced ahead . . . [they] did **not** bother to race for the water . . . It does not seem obvious that these other travellers can claim that they were **hurt** by an action which they could themselves have easily taken” [Israel M. Kirzner, “Entrepreneurship, Entitlement, and Economic Justice”, pp. 385–413, in **Reading Nozick**, p. 406]*

Murray Rothbard, we should note, takes a similar position in a similar example, arguing that *“the owner [of the sole oasis] is scarcely being ‘coercive’; in fact he is supplying a vital service, and should have the right to refuse a sale or charge whatever the customers will pay. The situation may be unfortunate for the customers, as are many situations in life.”* [**The Ethics of Liberty**, p. 221] (Rothbard, we should note, is relying to the right-libertarian von Hayek who — to his credit — does maintain that this is a coercive situation; but as others, including other right-libertarians, point out, he has to change his definition of coercion/freedom to do so — see Stephan L. Newman’s **Liberalism at Wit’s End**, pp. 130–134 for an excellent summary of this debate).

Now, we could be tempted just to rant about the evils of the right libertarian mind-frame but we will try to present a clam analysis of this position. Now, what Kirzner (and Rothbard et al) fails to note is that without the water the other travellers will die in a matter of days. The monopolist has the power of life and death over his fellow travellers. Perhaps he hates one of them and so raced ahead to ensure their death. Perhaps he just recognised the vast power that his appropriation would give him and so, correctly, sees that the other travellers would give up all their possessions and property to him in return for enough water to survive.

Either way, its clear that perhaps the other travellers did not *“race ahead”* because they were ethical people — they would not desire to inflict such tyranny on others because they would not like it inflicted upon them.

Thus we can answer Kirzner’s question — *“What . . . is so obviously acceptable about the Lockean proviso. . . ?”* [**Ibid.**]

It is the means by which human actions are held accountable to social standards and ethics. It is the means by which the greediest, most evil and debased humans are stopped from dragging the rest of humanity down to their level (via a “race to the bottom”) and inflicting untold tyranny and domination on their fellow humans. An ideology that could consider the oppression which could result from such an appropriation as “supplying a vital service” and any act to remove this tyranny as “coercion” is obviously a very sick ideology. And we may note that the right-libertarian position on this example is a good illustration of the dangers of deductive logic from assumptions (see section 1.3 for more on this right-libertarian methodology) — after all W. Duncan Reekie, in his introduction to *Austrian Economics*, states that *“[t]o be intellectually consistent*

one must concede his absolute right to the oasis.” [Markets, Entrepreneurs and Liberty, p. 181] To place ideology before people is to ensure humanity is placed on a Procrustean bed.

Which brings us to another point. Often right-libertarians say that anarchists and other socialists are “lazy” or “do not want to work”. You could interpret Kirzner’s example as saying that the other travellers are “lazy” for not rushing ahead and appropriating the oasis. But this is false. For under capitalism you can only get rich by exploiting the labour of others via wage slavery or, within a company, get better pay by taking “positions of responsibility” (i.e. management positions). If you have an ethical objection to treating others as objects (“means to an end”) then these options are unavailable to you. Thus anarchists and other socialists are not “lazy” because they are not rich — they just have no desire to get rich off the labour and liberty of others (as expressed in their opposition to private property and the relations of domination it creates). In other words, Anarchism is not the “politics of envy”; it is the politics of liberty and the desire to treat others as “ends in themselves”.

Rothbard is aware of what is involved in accepting the Lockean Proviso — namely the existence of private property (“*Locke’s proviso may lead to the outlawry of all private property of land, since one can always say that the reduction of available land leaves everyone else . . . worse off*”, **The Ethics of Liberty**, p. 240 — see section B.3.4 for a discussion on why the Proviso **does** imply the end of capitalist property rights). Which is why he, and other right-libertarians, reject it. Its simple. Either you reject the Proviso and embrace capitalist property rights (and so allow one class of people to be dispossessed and another empowered at their expense) or you reject private property in favour of possession and liberty. Anarchists, obviously, favour the latter option.

As an aside, we should point out that (following Stirner) the would-be monopolist is doing nothing wrong (as such) in attempting to monopolise the oasis. He is, after all, following his self-interest. However, what is objectionable is the right-libertarian attempt to turn this act into a “right” which must be respected by the other travellers. Simply put, if the other travellers gang up and dispose of this would be tyrant then they are right to do so — to argue that this is a violation of the monopolists “rights” is insane and an indication of a slave mentality (or, following Rousseau, that the others are “*simple*”). Of course, if the would-be monopolist has the necessary **force** to withstand the other travellers then his property then the matter is closed — might makes right. But to worship rights, even when they obviously result in despotism, is definitely a case of “*spooks in the head*” and “man is created for the Sabbath” not “the Sabbath is created for man.”

4.3 How does private property effect individualism?

Private property is usually associated by “anarcho”-capitalism with individualism. Usually private property is seen as the key way of ensuring individualism and individual freedom (and that private property is the expression of individualism). Therefore it is useful to indicate how private property can have a serious impact on individualism.

Usually right-libertarians contrast the joys of “individualism” with the evils of “collectivism” in which the individual is sub-merged into the group or collective and is made to work for the benefit of the group (see any Ayn Rand book

or essay on the evils of collectivism).

But what is ironic is that right-libertarian ideology creates a view of industry which would (perhaps) shame even the most die-hard fan of Stalin. What do we mean? Simply that right-libertarians stress the abilities of the people at the top of the company, the owner, the entrepreneur, and tend to ignore the very real subordination of those lower down the hierarchy (see, again, any Ayn Rand book on the worship of business leaders). In the Austrian school of economics, for example, the entrepreneur is considered the driving force of the market process and tend to abstract away from the organisations they govern. This approach is usually followed by right-libertarians. Often you get the impression that the accomplishments of a firm are the personal triumphs of the capitalists, as though their subordinates are merely tools not unlike the machines on which they labour.

We should not, of course, interpret this to mean that right-libertarians believe that entrepreneurs run their companies single-handedly (although you do get that impression sometimes!). But these abstractions help hide the fact that the economy is overwhelmingly interdependent and organised hierarchically within industry. Even in their primary role as organisers, entrepreneurs depend on the group. A company president can only issue general guidelines to his managers, who must inevitably organise and direct much of their departments on their own. The larger a company gets, the less personal and direct control an entrepreneur has over it. They must delegate out an increasing share of authority and responsibility, and is more dependent than ever on others to help him run things, investigate conditions, inform policy, and make recommendations. Moreover, the authority structures are from the “top-down” — indeed the firm is essentially a command economy, with all members part of a collective working on a common plan to achieve a common goal (i.e. it is essentially collectivist in nature — which means it is not too unsurprising that Lenin argued that state socialism could be considered as one big firm or office and why the system he built on that model was so horrific).

So the firm (the key component of the capitalist economy) is marked by a distinct **lack** of individualism, a lack usually ignored by right libertarians (or, at best, considered as “unavoidable”). As these firms are hierarchical structures and workers are paid to obey, it does make **some** sense — in a capitalist environment — to assume that the entrepreneur is the main actor, but as an individualistic model of activity it fails totally. Perhaps it would not be unfair to say that capitalist individualism celebrates the entrepreneur because this reflects a hierarchical system in which for the one to flourish, the many must obey? (Also see section 1.1).

Capitalist individualism does not recognise the power structures that exist within capitalism and how they affect individuals. In Brian Morris’ words, what they fail “*to recognise is that most productive relations under capitalism allow little scope for creativity and self-expression on the part of workers; that such relationships are not equitable; nor are they freely engaged in for the mutual benefit of both parties, for workers have no control over the production process or over the product of their labour. Rand [like other right-libertarians] misleadingly equates trade, artistic production and wage-slavery... [but] wage-slavery... is quite different from the trade principle*” as it is a form of “*exploitation.*” [Ecology & Anarchism, p. 190]

He further notes that “[s]o called trade relations involving human labour are

contrary to the egoist values Rand [and other capitalist individualists] espouses — they involve little in the way of independence, freedom, integrity or justice.” [Ibid., p. 191]

Moreover, capitalist individualism actually **supports** authority and hierarchy. As Joshua Chen and Joel Rogers point out, the “*achievement of short-run material satisfaction often makes it irrational [from an individualist perspective] to engage in more radical struggle, since that struggle is by definition against those institutions which provide one’s current gain.*” In other words, to rise up the company structure, to “better oneself,” (or even get a good reference) you cannot be a pain in the side of management — obedient workers do well, rebel workers do not.

Thus the hierarchical structures help develop an “individualistic” perspective which actually reinforces those authority structures. This, as Cohn and Rogers notes, means that “*the structure in which [workers] find themselves yields less than optimal social results from their isolated but economically rational decisions.*” [quoted by Alfie Kohn, **No Contest**, p. 67, p. 260f]

Steve Biko, a black activist murdered by the South African police in the 1970s, argued that “*the most potent weapon of the oppressor is the mind of the oppressed.*” And this is something capitalists have long recognised. Their investment in “Public Relations” and “education” programmes for their employees shows this clearly, as does the hierarchical nature of the firm. By having a ladder to climb, the firm rewards obedience and penalises rebellion. This aims at creating a mind-set which views hierarchy as good and so helps produce servile people.

This is why anarchists would agree with Alfie Kohn when he argues that “*the individualist worldview is a profoundly conservative doctrine: it inherently stifles change.*” [Ibid., p. 67] So, what is the best way for a boss to maintain his or her power? Create a hierarchical workplace and encourage capitalist individualism (as capitalist individualism actually works **against** attempts to increase freedom from hierarchy). Needless to say, such a technique cannot work forever — hierarchy also encourages revolt — but such divide and conquer can be **very** effective.

And as anarchist author Michael Moorcock put it, “*Rugged individualism also goes hand in hand with a strong faith in paternalism — albeit a tolerant and somewhat distant paternalism — and many otherwise sharp-witted libertarians seem to see nothing in the morality of a John Wayne Western to conflict with their views. Heinlein’s paternalism is at heart the same as Wayne’s... To be an anarchist, surely, is to reject authority but to accept self-discipline and community responsibility. To be a rugged individualist a la Heinlein and others is to be forever a child who must obey, charm and cajole to be tolerated by some benign, omniscient father: Rooster Coburn shuffling his feet in front of a judge he respects for his office (but not necessarily himself) in True Grit.*” [**Starship Stormtroopers**]

One last thing, don’t be fooled into thinking that individualism or concern about individuality — not **quite** the same thing — is restricted to the right, they are not. For example, the “*individualist theory of society ... might be advanced in a capitalist or in an anti-capitalist form ... the theory as developed by critics of capitalism such as Hodgskin and the anarchist Tucker saw ownership of capital by a few as an obstacle to genuine individualism, and the individualist ideal was realisable only through the free association of labourers (Hodgskin)*

or independent proprietorship (Tucker).” [David Miller, **Social Justice**, pp. 290–1]

And the reason why social anarchists oppose capitalism is that it creates a **false** individualism, an abstract one which crushes the individuality of the many and justifies (and supports) hierarchical and authoritarian social relations. In Kropotkin’s words, “*what has been called ‘individualism’ up to now has been only a foolish egoism which belittles the individual. It did not led to what it was established as a goal: that is the complete, broad, and most perfectly attainable development of individuality.*” The new individualism desired by Kropotkin “*will not consist . . . in the oppression of one’s neighbour . . . [as this] reduced the [individualist] . . . to the level of an animal in a herd.*” [Selected Writings, p, 295, p. 296]

4.4 How does private property affect relationships?

Obviously, capitalist private property affects relationships between people by creating structures of power. Property, as we have argued all through this FAQ, creates relationships based upon domination — and this cannot help but produce servile tendencies within those subject to them (it also produces rebellious tendencies as well, the actual ratio between the two tendencies dependent on the individual in question and the community they are in). As anarchists have long recognised, power corrupts — both those subjected to it and those who exercise it.
